THE military autocar of Mr. E. J. Pennington, the English inventor, is mounted on wheels with four-inch solid rubber tires, is driven by a 16 horse-power engine, and carries two rapid-firing guns, with suitable shields for the two operators. A speed of 45 miles an hour is said to be possible, the guns—each provided with 500 rounds of ammunition—being capable of firing at the variable rate of 50 to 700 rounds a minute, with the car in motion or at rest. If desired, the guns can be rotated automatically during firing, and, in case of the operators being shot after firing is commenced, they will continue in operation until the ammunition is exhausted.

POST AND TELEGRAPH OFFICE.

THE Director of Posts and Telegraphs requests the publication of the following information:—For the steamers which call at Kobe we are dispatching a supplementary mail by the trains mentioned below to overtake her at Kobe, but they are subject to alteration:—

English Mail (when she leaves here on Sunday day-light) by 1.26 p.m. Monday.

German Mail (when she leaves on Friday morning at 10) by 1.25 p.m. Sunday.

French Mail (when she leaves on Sunday 9 a.m.) by 10.55 p.m. Sunday.

SILK.

THE following are the shipments of Raw Silk per R. M. S. *Empress of India*, leaving here to-day at noon:—Messrs. Siber, Brenwald & Co., 290 bales; Bavier & Co., 59 bales; Middleton & Smith, 55 bales; Sieber & Co., 121 bales; C. & J. Trading Co., 25 bales; Fraser, Farley & Co., 10 bales; Vivanti Bros., 66 bales; Mitsui Bussan Kaisha, 69 bales; Kiito Kaisha, 125 bales; Doshin Kaisha, 48 bales; and Jardine, Matheson & Co., 122 bales; Total, 990 bales.

THE QUEEN'S RECORD REIGN.

IN the course of a speech, which he delivered on January, 12th H.R.H. the Prince of Wales said that he left assured that the celebrations which were to take place in June next, to mark the completion of the sixtieth year of the Queen's reign would include efforts to ameliorate the condition of the poor.

NEW SPANISH CONSULATES.

SPAIN, whose interests at Kobe have heretofore been watched by H.B.M.'s Consul, is establishing a Consulate there. Sig. Ernesto Freyre has already arrived, says the *Kobe Herald*, and is staying at the Oriental Hotel for the time being. A new Spanish Consul has also arrived at Nagasaki.

NIPPON GINKO.

The 29th regular general meeting of the Nippon Ginko was held at the Bank on Saturday afternoon. Fifty-nine shareholders were present, besides Baron Tajiri, Vice-Minister of Finance; Mr. Matsuo, Chief of the Banking Bureau; and Mr. Iida, Chief of the Imperial Household Treasury. Baron Iwasaki, President of the Bank, occupied the chair. A clerk having read the business report for the past year, the opinion of those present was taken as to the rate of dividend to be declared. The rate recommended by the President was adopted unanimously. For the two vacancies created among the Managers, Messrs. Yamamoto Tatsuo, Usui Yoshihisa, and Kawakami Kinichi received the largest number of votes, while Baron Iwasaki Hisaya, and Messrs. Kawasaki Shozo, and Sumitomo Kichiyemon came next. Subject to the approval of the Minister of Finance, the vacancies are to be filled from among the six candidates.

The President, after some formal preliminary remarks, observed that, in the first two months of last year, probably on account of the near approach of the period of paying calls on shares in various Companies and banks, the money market became very stringent. This feeling was subsequently relaxed, and, till the end of May, the market was quiet, the ruling interest on money gradually falling. Coming to June, the approach of the silk season, the consequent greater demand for money; the calling in of subscriptions on potential shares, and a large demand for funds in Hokkaido, the bank raised the rate of interest somewhat. Turning to the general aspect of foreign commerce, the falling off in the silk-trade and the increased demand for foreign goods caused the balance of trade to oscillate in favour of imports, and by the time that the first half-year drew to a close, the excess of imports over exports aggregated more than 26 million *yen*. This was indeed very remarkable, and had it happened in ordinary times specie must have flowed from the country in enormous sums. Fortunately, the Government held a portion of the Indemnity in London, and this was used in adjusting exchange. The result was, that not only no exodus of specie occurred, but an influx of specie amounting to a large sum was brought about. However, the specie that flowed in had to go to the Treasury and not to the market at large, while whatever sum taken from the Indemnity and used in adjusting the balance of exchange was withdrawn from the market and flowed into the Treasury vaults. These things all tended to lessen the volume of currency in circulation. The Government entertained grave anxiety for the future, and so they transferred a large sum from the Treasury to the keeping of the Bank, to be used in making advances to the market. In this way relief was effected and business operations were facilitated. Still it was considered advisable to be careful, and hence, on September 7th, the rate of interest on advances was raised by 1.10 per cent. In reviewing, in greater detail, the aspect of the money market in 1896, it ought to be stated that up to June the market felt a certain tightness, and ominous rumours were afloat among the public. However, these lived only for a short time, and in September tranquillity was restored. Consequently the raising by the Bank of the

rate of interest caused no perceptible impression. Shortly after, alarming news arrived from various localities, reporting the visitation of gales and the out-break of floods. These calamities considerably upset the public pulse and temporarily suspended the means of communication. They also threw business transactions entirely out of gear, and occasioned an unexpected demand for money. The disastrous aspect of foreign trade became worse than ever, and as the calling in of subscriptions on shares became larger and larger, the market grew alarmed. The obstructions in the money market were specially felt in certain quarters, and from the end of September to October, three banks in Osaka suspended payment, the Osaka Clearing House was thrown into confusion, while cotton cloth merchants in Tokyo failed to redeem their promissory notes. These disagreeable incidents naturally placed bankers on their guard. But the misfortunes being limited in scope and not particularly serious when considered in connection with the economic world as a whole, they need not now be regarded as of grave import. None the less, a local disaster, if suffered to follow its natural course, or neglected, may gradually affect other localities. Hence, with regard to the particular case under review, the merchants concerned took steps calculated to adjust the difficulties of the cotton cloth dealers, while with regard to the Osaka Clearing House the Bank consented to various remedial measures. Subsequently, bankers relaxed their caution, and gradually a normal condition was restored. Thus it will be seen that last year the market wore a peaceful aspect during the first six months, and a generally tight condition prevailed in the latter six. It was fortunate that the Bank, having had funds placed at its disposal by the Treasury, was able to relieve the market from serious trouble. The employment of these funds naturally swelled the volume of currency, and during the month of December it stood at over 202,940,000 *yen*, an increment of about 40 million *yen* as compared with the amount circulating prior to the war. As a set-off to this, however, the expansion of business and enterprise must be taken into consideration. Thus the volume of foreign trade aggregated over 289½ million *yen*, an increase of over 24,140,000 *yen* as compared with the previous year's figures; and the outstanding loans of the Tokyo and Osaka Union Banks totalled 127,170,000 *yen*, an increment of about 21,830,000 *yen*; while the volume of exchange aggregated as much as 486,050,000 *yen*, an increase of about 83,660,000 *yen* as compared with the previous year. Add to these the increased subscription to companies, an increase in State expenditures, and so forth, and it is not unreasonable to conclude that the volume of currency is not unwarrantably excessive. The rise in the market price of commodities has attracted public attention this year. It is true that, in the spring, probably as a result of reaction, the market slightly fell. But coming to the second half of last year, in spite of the tightening of the money market, prices rose steadily, so that quotations at the end of the year were, in general, 30 per cent. higher as compared with prices ruling before the war. In fact, the rising tendency in the market price of commodities—naturally attendant upon the fall in the gold price of silver,—to which we must add the awakening of

the public mind in consequence of the victorious issue of the War, the expansion of enterprises, the increased purchasing power of farmers, and so forth—these matters considerably swelled the scope of demand and tended to enhance prices. In December, 1895, the Bank was commissioned by the Treasury to take charge of the Indemnity. In February the London Branch Office of the Specie Bank of Yokohama was ordered to undertake that business on behalf of the Bank, and the work was started shortly afterwards. The matter being one of grave moment and vitally connected with the welfare of the country, the Bank despatched Mr. Yamamoto Tatsu, Chief of the Business Department of the Nippon Ginko, as an examiner into the actual condition of financial affairs in London. The Treasury's business in Formosa was initiated in October in Taipei, and sub-branches were opened at four other places. The building of the new premises of the Bank, started in 1890, having been completed in February of last year, the new offices were opened on April 10th. The building of a Branch Office in Moji was started during last year, while the want of sufficient accommodation of the Osaka Branch Office has convinced the managers of the necessity of rebuilding there. In conclusion, the President deeply regretted the death of his predecessor, Baron Kawada, passing high eulogy upon his merits. The profit and loss account of the Nippon Ginko stands thus:—

Total profits	3,868,490.421
Expenses	1,950,338.754
Net profits	1,909,151.670
Carried over from previous account	140,125.825
Total	2,099,277.495
Dividend (6 per cent.)	675,000.000
Balance	1,424,277.495
Reserves	400,000.000
Rewards and allowances	98,000.000
Balance	926,277.495
Second Dividend (7 per cent.)	787,500.000
Carried to next account	138,777.495

THE GOLD STANDARD AND PUBLIC OPINION.

The vernacular papers have begun to undertake the useful task of interviewing leading economists and financiers to ascertain the opinions that they hold on the currency problem of the day.

Interviewed by a representative of the *Fiji Shimpō*, Mr. Taguchi declared that he was opposed to the measure as contemplated by the Government. In the first place, the ratio of 1 to 32 is considered by him quite extraordinary; something unparalleled in any other country. Economists at large are seeking to restore the ratio to the original 1 to 16, or, at least, 1 to 24. Japan's idea of fixing it at 1 to 32 is, therefore, open to the charge of extravagance. In the second place, this artificial depreciation of the gold price of silver will invite an influx of gold into Japan. At present a hundred *yen* in gold are equivalent to about a hundred and ninety-three *yen* in silver, but if the rate be fixed at 1 to 32, a hundred *yen* in gold will become equivalent to 200 *yen* in silver. In other words, a person possessing a hundred *yen* in gold would be

enabled to clear a profit of about seven *yen*, that is to say, a profit of 35,000 *yen* per 1,000,000 *yen* in gold. Therefore, foreign capitalists will compete with each other in importing gold for minting at Osaka. Thus Japan would lose, and foreigners gain, about 7 *yen* per 100 *yen* in gold, and a serious effect would be produced not only on the market of Japan but also on that of the world. In short, the silver currency of about 100 million *yen* now in circulation would be taken out of the country, and replaced by gold. The Government, it is said, intend to stop the free coinage of silver on the eve of adopting gold monometallism. But that is entirely a needless measure. No one would desire to have his silver coined merely to incur a loss of 3½ per cent. The Government ought rather to stop the free coinage of gold. Though no very serious change would be produced in the market for commodities in consequence of the adoption of the gold standard, still prices that previously stood at about 193 *yen* would rise to 200 *yen*. Therefore the Government's Expenditures would be augmented to that extent. It is generally understood that the Government has conceived this project mainly with the idea of facilitating the sale of Japanese bonds in England. Mr. Taguchi is against selling the bonds abroad. If they be converted into gold bonds, they will easily tempt investors in England or elsewhere, though the rate of interest be reduced to 4 or 3½ per cent. But if the bonds have once passed into the hands of foreign capitalists, the latter will not easily consent to any scheme on Japan's part to convert them into securities bearing a lower rate of interest. Therefore, it would be better that the Public Undertakings Loan of about 200 million *yen*, to be raised hereafter, should be floated in London at an interest of about 3 per cent. on a gold basis. In short, Mr. Taguchi declares the Government's plan to be, not gold monometallism, but in reality bimetalism of a most radical character.

Mr. Shibuzawa Eiichi is also inclined to oppose the Government's measure. The object lesson afforded by India indicates the danger of meddling with an affair so grave as the currency system. Mr. Shibuzawa suggests that the present system be left untouched, until the time when, by universal consent, bimetalism is adopted in Europe and America. This veteran banker finds three sources of misgiving in connexion with the adoption of gold monometallism. In the first place, he doubts whether a gold reserve necessary for the purpose can be procured. There is the Indemnity, but the uses to which it is to be applied are already determined. Whence, then, is the reserve to be obtained? Some may think that the balance of trade will hereafter be in favour of Japan, and that gold will consequently flow into the country in large quantities. Mr. Shibuzawa is inclined to be pessimistic in this respect. He thinks that the balance of trade will be against the country, and that gold will be exported rather than imported; a contingency which constitutes the second cause of his misgivings. Thirdly, at present a specie reserve amounting to one-third of the volume of the currency in circulation is considered sufficient, but a reserve of about one-half, or even more, will be necessary if gold monometallism is adopted. If all these difficulties can be shown to rest on

no sound basis, Mr. Shibuzawa would not hesitate to declare in favour of the gold standard.

Mr. Kaneko Kentaro, Vice-Minister of Agriculture and Commerce, is also opposed to gold monometallism, not in principle, but chiefly because he can not bring himself to think that the time for such a step is yet mature. One principal reason why Japan's industrial products can compete successfully with Western products in Eastern markets, is that while she uses silver for currency purposes, the Occident uses gold. It is essential that Japan should adhere to the present system if she desires to extend her trade with neighbouring countries and in the South Sea. The adoption of the gold standard would deprive her of a formidable weapon, the possession of which enables her to enjoy great influence in Eastern markets. It is true that the adoption of the gold standard would facilitate her import trade, but that benefit can not bear comparison with the injury consequent on the crippling of her trade in Eastern markets. Another deterrent is the danger of an excessive influx of foreigners into Japan and of their taking control of Japan's industry and commerce, a contingency that need not be apprehended so long as the present system is continued.

Count Okuma is one of the most earnest advocates of gold monometallism. He admits, of course, the apparent prudence of deferring any change in the monetary system of the country until bimetalism is adopted all over the world. But that result can not be hoped for within one or two generations. Hence Japan must adopt the monetary system prevailing in the Occident, the system least fraught with risk and danger. The objection that Japan's commerce would be crippled were the gold standard adopted, does not count for much, seeing that her commerce with silver-using countries does not exceed 20 per cent. of the total volume of her foreign trade, the remaining 80 per cent. being with gold-using countries. A specie reserve sufficient for carrying out the new system is now in Japan's possession, but it may be dissipated if time is spent in hesitation. No such opportunity as the present can be expected to recur. According to the plan in contemplation by the Authorities, the gold *yen* now in nominal circulation is to become equivalent to two silver *yen*. That will involve a small depreciation of silver, but the ratio is considered advisable for guaranteeing the stability of the gold standard, and also in view of the fact that such a ratio would save much trouble in calculation, and obviate the necessity of re-minting the silver coins now in use. The change of the monetary standard is not expected to cause any disturbance in the market, seeing that the ratio between the two metals is to be based on the lowest probable gold price of silver. It seems likely that the benefits accruing from silver monometallism have now reached their climax, and that no further advantage can attend the continuation of that system of currency. The adoption of the gold standard will not in any way lessen the benefit that Japan has thus far enjoyed in her commerce.

Mr. Shoda Heigoro is also an advocate of gold monometallism. He is inclined to think that whatever change may occur in the gold price of silver, it will be a change in the direction of appreciation. Now, a

rise in the gold-price of silver would be followed by a depreciation of the market price of commodities, with injurious results to Japan's industry and commerce, and grave disturbance to her economy. The adoption of gold monometallism is the only safeguard against the danger. Any injury that Japan's commerce with China may suffer is so limited that it should not deter the adoption of the new system. Mr. Shoda is opposed to the rumoured Government project of using silver side by side with gold. He is in favour of the use of gold alone, and of relegating silver to the rank of a subsidiary coin. The weight of the present gold *yen* should be reduced by one half, approximately, and with that reduced weight as a standard, the gold unit should be fixed at 5 *yen*, and only two kinds of gold coins, 5 *yen* and 10 *yen*, must be struck. The free coinage of silver ought to be stopped. As to the question of the sufficiency or insufficiency of the gold reserve, Mr. Shoda thinks the Bank of Japan will be embarrassed by a superfluity rather than by a deficiency of gold, for on the eve of the adoption of the gold standard, Japanese bonds will certainly be quoted at a higher price, probably 120, whereas the quotation now stands at about 104. The result will be the influx of a large quantity of gold into Japan.

Mr. Yamamoto Tatsuo, chief of the Business Department of the Bank of Japan, is another gold man: He thinks that gold sufficient to form a reserve is now in the possession of the country. Some 90 million *yen* worth of gold coin and bullion is now lying in the vaults of the Bank of Japan, and there remains a sum of over 60 million *yen* from the Indemnity hitherto received. Further, Japan has still to be paid a sum of about 300 million *yen* by China. The time is therefore fully ripe for the scheme. One source of apprehension is that foreign capital may be introduced in large quantities, and that Japan's industries might be inflated so that the profits reaped by the Companies now in existence will be reduced. Should that take place to such an extent that the margin of profit exceeds, by only a small amount, the per-centage—five per cent.—at which foreign capital can be introduced, the result will be serious. But that is the view of pessimists. It is not likely that foreign capital will be introduced largely.

VISCOUNT YURI ON CURRENCY.

Viscount Yuri's name is widely known in this country as the financier who undertook the difficult task of arranging Japan's finances at, and subsequent to, the Restoration. What he has to say on the now absorbing problem of the day is therefore worth reproducing. Japan, observes the Viscount, was a gold-using country in olden times. One of the greatest warriors and statesmen she ever produced, Toyotomi Hideyoshi, was an earnest gold advocate. A man of unusual foresight, the *Taiko* conceived the plan of circulating gold coins among the 30 million people that Japan held at the period. But Hideyoshi found that, although he issued gold coins to the utmost extent of Japan's resources, his achievement in the matter fell short by one-third of his desires. So he despatched an expedition to Korea, famed at that period of Japan's history for the abundance of its gold. Gold and silver in large quantities were brought over to Japan as a result of the expedition, but

still the result fell short of the *Taiko's* original programme. He next determined on a change in policy, and adopted a negative instead of a positive currency principle. With characteristic shrewdness, he caused investigations to be carried out regarding the gold and silver markets of England, France, and Russia, and, by averaging the results obtained, determined that one *ryo* should consist of 4 *momme* of gold or 10 *momme* of silver. He also adopted the plan advocated by Okuro Sakuyemon, and sanctioned the circulation of the so-called *cho-gin*, silver tokens that circulated by weight. This was the beginning of the use of subsidiary coins in Japan. Besides the silver tokens there was a copper coin, but in small quantity. In fact, the commercial activity that sprang up with China and the influx into Japan of Chinese copper coins made it unnecessary to specially mint copper coins in this Empire. Japan's currency was, therefore, on a gold basis, and only as a result of the exodus of gold and the influx of silver after the country was opened to foreign commerce, was she obliged to adopt a silver standard. However, the rehabilitation of Japanese currency to its original status was ever kept in view by Japanese financiers. For this purpose the situation now prevailing must be said to be most opportune. It can not be expected to recur. Viscount Yuri declares that the adoption of the gold standard will tend to further develop Japan's agricultural and industrial activity; the idea that gold might leave the empire as a result of the disparity between imports and exports being beneath contempt. Negative economy will prove ruinous to Japan in the long run. The downfall of the Tokugawa Shogunate was traceable to the adoption of a negative policy by Mizuno Echizen-no-kami. In Fukui, Sakakibara, and other districts a similar policy was pursued with similarly ruinous results. National economy must not be confounded with individual economy. For the latter, the saving of a portion of the income may be necessary, but for the former, rather than accumulate a surplus, efforts should be directed towards promoting the wealth of the people. The foundation of economy is credit, and currency is the servant of the latter. Hence it must be stable and free from fluctuations in value.

IMPERIAL ORDINANCES AND POST-FACTO APPROVAL.

It will be remembered that within a few days of the opening of the present session of the Diet, the Government rescinded an Imperial Ordinance issued last year, imposing certain restrictions upon the travel of Japanese subjects to Korea. The Ordinance having been promulgated originally as a measure of urgency, ought, according to the Constitution, to have been submitted to the Diet in the ensuing session for *post-facto* approval or disapproval. But, in consequence of its rescission before the Diet met, it was practically removed beyond the purview of that body. Mr. Komuro Shigehiro and other members, considering such a course unconstitutional, addressed a Question to the Government. Their contention was that, according to the spirit of the Constitution, the Diet ought to be given an opportunity of expressing its opinion about every urgency Ordinance, and that to rescind an Ordinance on the very eve of the time when, in the ordinary routine, it

would have been submitted to the judgment of the House, was an unconstitutional act. The Government's reply was given on the 24th instant, in the following terms:—

The submission of an Urgency Imperial Ordinance to the Diet for *post facto* consent is done only when the continued enforcement of the Ordinance appears necessary. When the Government, perceiving no further occasion for an Ordinance, rescinds it, its presentation to the Diet becomes superfluous. Hence the fact that Ordinance No 204 was not submitted to the Diet, presents, apparently, no unconstitutional feature. The Government having recognised that no need existed any longer for the operation of the Ordinance, its immediate rescission, so far from being unconstitutional, was the only proper course. That it was rescinded at a time very close to the opening of the Diet's session, had nothing whatever to do with the constitutionality of the act. If the House considers that such a law is necessary, a Bill in that sense can be introduced, so that the Imperial Diet's prerogative of discussion is not in any way impaired. The Government abolished the Ordinance and restored freedom of travel to Korea because it believed not only that restrictions had ceased to be necessary, but even that freedom had become essentially desirable.

(Minister of Home Affairs).
COUNT OKUMA
(Minister of Foreign Affairs).

THE EUROPEAN SITUATION.

The news from Europe does not bear a seriously alarming complexion, so far as we can judge. It is true that Greece has practically thrown her gauntlet into Turkey's face, but inasmuch as the Great Powers will certainly not let Greece and Turkey fight, were such a contest conceivable, there is no apparent reason to anticipate extreme results. It seems to us that Greece is trading on her weakness and on the sympathy that her cause inspires among civilized nations. Resolved that things shall not be suffered to drift in Crete, as they have been, and are still, suffered to drift in Armenia, she has struck a blow with the deliberate intention of precipitating a settlement. She knew that no final appeal to the sword would be permitted, so she unsheathed the weapon temporarily as the strongest possible form of appeal against the singular helplessness to which the Great States are condemned by their mutual distrust. That she did not immediately obey the mandate of the commander of the allied squadrons to withdraw her ships from Cretan waters, but rather persisted in adopting warlike measures, was probably because she felt that her protest, to be effective, must be stubborn. It is now nine days since London telegrams announced that three transports with Greek troops had sailed for Crete; that the Greek reserves had been called out, and that Turkey was despatching a naval force for the scene of the troubles. In fact, on the 16th of February, the situation had reached such a stage that a conclusive issue could not have been long deferred. No telegrams, however, have yet reached Tokyo that dangerous complications have ensued, or are likely to ensue, and it seems a reasonable inference that an amicable solution has been found. If the Powers have entertained Russia's alleged proposal for a mixed European occupation of the towns in Crete, the issue will probably be the inclusion of the island in the Kingdom of Greece, which would certainly be a consummation desirable in the sense of withdrawing one portion, at any rate, from the sphere of Turkish misrule.

ENLIVENING THE DIET.

Not an ineffective method to enliven parliamentary proceedings is for a member to remind the House that he called a Government Delegate a "fool" during a previous sitting, and that he is prepared to prove the accusation to the Delegate's face. That is what Mr. Inouye Kakugoro did in the House of Representatives last Wednesday. The deadly dullness of the House's doings this session is fatal to him. It deprives him of all opportunity to air the eloquence for which he is conspicuous. So he seems to have lost patience, and to have set about creating an occasion from which some notoriety, at all events, might be extracted, fame not being in sight. But certainly his usual sagacity forsook him when he selected Mr. Kaneko Kentaro as the target for his shafts of sarcasm. If there be one member of officialdom more than another to whom the epithet "fool" is ludicrously inadequate, that member is the Vice-Minister of Agriculture and Commerce and former Chief Secretary of the House of Peers. Mr. Kaneko is among the most distinguished Japanese of his era. The range of his knowledge is extraordinary, his perception is of the keenest, his power of marshalling and synthesizing facts commands the admiration of all that come into contact with him, and his judgment appears to be guaranteed against error. No Japanese has done more to enhance the reputation of his nationals abroad, and when Mr. Inouye Kakugoro undertakes to call Mr. Kaneko a fool, there can be little doubt as to the side on which the folly really lies.

But the astonishing thing is that the President of the House should permit the use of such epithets? On the whole, we doubt whether any parliament in any country has conducted itself with more decorum than the Japanese parliament. One or two foreign local journalists, who had never, probably, been within the walls of the House of Representatives, and who could not have comprehended a syllable of the proceedings had they gone there, spoke of the House, in the early days, as "a bear garden." They might have called it a vegetable garden with equal appositeness. We are bound to confess, however, that the complaisance of the President has often surprised us. Professor Hatoyama, of all men, ought to know what expressions fall within the range of parliamentary language, yet he allows one of the most conspicuous members not only to call a Government Delegate a "fool," but to repeat the expression in cold blood, and announce his readiness to prove its justice. The incident is quite childish. Mr. Inouye Kakugoro can not be so fatuous as to imagine that a Vice-Minister of State will deliberately engage in a discussion for the set purpose of proving whether or not he, the Vice-Minister, is a fool. What the Vice-Minister can do, and what we trust he will do, is to appeal to the President to direct Mr. Inouye to withdraw the term, or to accept the alternative of suspension. If even men like Mr. Inouye lose sight of what is due to the dignity of the House, and if the President fails to correct them, of his own motion, Mr. Kaneko is precisely the official from whom we look to hear a wholesome protest.

THE GERMAN MINISTER'S AFFAIR.

On the 23rd instant, the Minister for Foreign Affairs sent to the House of Representatives a written Reply to the Question presented by Mr. Suzuki Jubi and others, with reference to the much-talked-of affair of the German Representative and the students of the Preparatory Military School. The following is a translation of the Reply:—

A petition was addressed to the Metropolitan Police Board by Mayeda Masaichi and Arikado Shunji, Students of the Seijo School, to the effect that, at about 2.40 p.m. on the 30th of December, as they were descending the hill in front of No. 20, compound, Kami-nibancho, Kojimachi, a two-horse carriage, driven by a foreigner, came up the hill, and that when about 7 feet distant, the driver raised his whip, and tried to strike Mayeda, who happened to be the nearer of the two; but that, failing in the attempt, he again raised the whip and struck Arikado on the cap and face, pushing the whip three times into his face; that he then drove on rapidly and entered the compound of a large brick house; and that the students followed, and learned from the policeman on duty near the gate that the gentleman was the German Representative.

The above petition having been forwarded to me (the Minister of State for Foreign Affairs) I at once sent it to the German Representative, with a covering letter, asking him to inform me of the circumstances. His Excellency replied to the effect that he had not struck any one with his whip on the day in question; that he had met one or two students in the street, and without any intention of hurting or humiliating them, had shaken his whip before them in joke; that if, in doing so, he had touched them with the whip or put them to shame in any way, he should regret it greatly, and that he desired me to inform the youths that he had not intended anything wrong. I communicated these explanations to the youths through the Chief of the Metropolitan Police.

(Signed) Count OKUMA,
(Minister of State for Foreign Affairs.)

OSAKA AND THE GOLD STANDARD.

Contrary to all expectation, the business men of Osaka have declared in favour of the gold standard. We read in the *Tokyo Asahi* that, with the solitary exception of Mr. Hamada, the Chief Secretary, every member of the Osaka Chamber of Commerce approves the project. The views of the business men, as quoted by our contemporary, are these:—First, that when the currency is placed on a gold basis, foreign capital will be introduced. Secondly, that the inflow of foreign capital will tend to reduce the rate of interest and to make money accessible. Thirdly, that as the rate of interest falls, the market price of public bonds will rise. Fourthly, that the profits derived by brokers and bankers in connexion with exchange operations will cease to be a tax upon international trade. Fifthly, that the adoption of the new standard will not produce any depreciation of prices, but that on the contrary, silver being cheapened below its market rate, the tendency of prices will be to appreciate in terms of the white metal.

As to the cotton-yarn manufacturers, who were supposed to be specially hostile to the programme, it is now alleged that they raise no objection, for the great bulk of their sales being made to their own nationals, they will suffer no inconvenience from the change. On the other hand, they expect to get their raw cotton at lower rates.

THE CABINET.

Many rumours about a change of Ministers have been in circulation of late. One is to the effect that the Satsuma statesmen desire to have the Cabinet entirely to themselves, and that they insist upon the retirement of Count Okuma. Nothing of that kind is credible, we think. The *Tokyo Shimpō* (Liberal organ) has a more conceivable story. It says that Count Matsukata recently expressed a strong desire to confine himself to financial affairs, being of the opinion that the tasks of introducing the gold standard and of conducting the *post-bellum* measures were sufficient to occupy his whole time and attention. He proposed, therefore, to surrender the presidency of the Cabinet to Marquis Yamagata, and the project being approved by Marquis Ito, Count Inouye endeavoured to obtain Marquis Yamagata's consent. But the Field-Marshal could not be persuaded. He insisted that Count Matsukata, having accepted the premiership, had better continue to hold it, and the Count had no choice but to abide by that decision. It is alleged that Count Kabayama was willing to relieve Count Matsukata of the presidency, his object being to assert Satsuma influence, but Count Matsukata did not consider that such a change would conduce to the stability of the Cabinet.

THE SPEECH OF COUNT OKUMA.

We have already published an epitome of the speech delivered by Count Okuma in the House of Representatives on the 15th instant, and we now give a full and accurate translation:—

GENTLEMEN.—It is for the first time that I now address this august House and it gives me the greatest gratification to come before you here and explain my views. When, the other day, at a sitting of the Budget Committee, various questions arose in connection with the expenditures of the Foreign Office, a desire was expressed to be informed as to our foreign policy, but foreign policy not being directly connected with the Budget, though there is an indirect relation between the two, I decided that my reply on the subject at the Committee meeting should be limited to points directly related to the Budget, leaving a fuller exposition to be made before the whole House in session. I propose, therefore, to make a general statement to-day respecting our foreign policy. As you are aware, Ministers of State have frequently, since the first session of the Diet, stated to the House that our foreign policy is based on the principle of opening the country, or, more accurately, of opening and developing the country. I am assured that this foreign policy, or rather national policy, having been fixed and unchanged since the first years of *Meiji*, the principle of opening and developing the country is unalterable either now or in the future. But I consider it necessary to make more or less additions to what has hitherto been stated. If we enquire what points are practically most important in the foreign policy that may be regarded as the national policy of the *Meiji* era, we find that to attain an equal footing with other Powers, as declared in the Imperial Edict at the Restoration, has been the impulse underlying all the national changes that have taken place. It was perceived that in order to attain an equal footing with the Powers, it was necessary to change the national institutions, learning, and education. Hence the replacement of clans by prefectures took place, as well as coinage reform, enforcement of the conscription law, revision of various other laws and promulgation of new ones, establishment of local assemblies, and the granting of local self-government, steps that led at length to the proclamation of the Constitution. This national policy, this so-called opening and development of the country, or in other words, this principle of attaining an equal footing with the Powers, was, I firmly believe, the motive that has enabled Japan to become a nation advanced in civilisation and respected by the world.

What I now desire to add to previous statements

on this subject is that foreign intercourse is a very difficult affair, not to be regulated at will by a single country, and that it has now undergone gradual but great changes. Gentlemen, the foreign intercourse of former years was, as you are aware, really of narrow limits, being concerned with the relations between one country and another or a few others. But now, through the enormous development of facilities of transportation and communication, and the close interaction of the world's interests, foreign relations have been greatly transformed. In the affair between England and Venezuela last year, you are aware that the dispute was about a narrow strip of marshy, uninhabited frontier territory, and that the parties to the controversy were, on the one side, England, the greatest Power in the world, with colonial possessions of over ten million square miles in area, and, on the other, the little South American republic of Venezuela. Why, gentlemen, one imagines that it would have cost England, with her great strength, scarcely an effort to overcome the little Venezuela. But it was by no means so easy, for the United States of America immediately interfered. The affair thenceforth was no longer one between England and Venezuela alone, but between England and North and South America. The ground of that interference was the Monroe doctrine, which, as you are aware, was enunciated long ago, with the object of averting the spread of European influence in North and South America. Thus the affair no longer concerned the two Americas and England alone: it became a general international question, for the exclusion of European influence from America was naturally a matter of grave importance to Europe, which has many colonial possessions in the New World. Thus a question that originally concerned a small colony came to assume a general international character.

Take another instance, also relating to England. Last year, a dispute arose between England and the Transvaal. It was due simply to an attempt by travellers, or employees of a company, to effect a revolution in the Transvaal. The affair itself was trivial; but though it arose in a little South African republic, a country having almost the character of a British protected State, it gave rise to complications between Germany and England, and at one time threatened almost to involve the two Powers in war. This dispute between Germany and England was not confined for long to those two countries. It extended apparently to the German Triple Alliance and other Powers, and thus became also a general international affair. In truth, the limits of foreign intercourse have gradually widened to such an extent that a very small affair becomes of concern to the whole world. The war with China in the 27th and 28th year of *Meiji* originally concerned only Japan and China, and did not touch other Powers in any way. But even this led, in the latter year, to the interference of the three of the most influential Powers of continental Europe. Thus it also became a general international question. In consequence of the war between Japan and China, it has come to pass that, whereas the expression "Eastern Question" used to apply only to the world-famed problem of Eastern Europe, it now possesses the dual significance of the near-Eastern, or the Far-Eastern, Question. In a word, the sphere of foreign intercourse has so greatly widened that the slightest incident may effect the interests of the whole world.

I desire here to emphasize the facts that foreign intercourse must above all things be planned on a large scale, for all diplomatic projects have immediate interest for the whole world, and that, since foreign policy, or rather national policy, must be fixed, unchanged, and continuous, the best method of diplomacy is to adhere strictly to the principles of International Law. Now, to adhere to the principles of International Law, diplomacy must be based on justice. The power of justice is great, for it is sure to enlist the sympathy of the whole world. Having devoted herself for years with ardour and diligence to national progress, and having come to enjoy the great friendship of the Powers of Europe and America, Japan, which for forty years past has been fettered with disadvantageous treaties, has now advanced to such a position that, in accordance with the principles of International Law, she is recognised as a truly independent Power, and, in conformity with international usage, is accorded the treatment of an equal. This is, in fact, the result of her own progress; and of England's consent, in precedence of the rest of the world to a revision of the existing Treaties; consent which was followed by a similar ample expression of good-will and agreement to Treaty Revision by the other Powers of Europe and America. Thus Treaty Revision, which has for decades been a great object with us, has been accomplished, the only Power that has not yet effected Revision being Austro-Hungary, and the

negotiations with her are sure, sooner or later, to be successfully concluded. Japan will thus have attained a position of equality with the world.

It has hitherto been contended, as you are aware, even by great jurists, that extra-territoriality should be exercised in all non-Christian countries and among all other than white races. But that theory has gradually been abandoned, and Japan, having based her progress upon justice, and received the just support of the world, has, though outside the pale of Christendom and the white races, succeeded in attaining a position of equality with them. If, therefore, we would reap all the fruits of Treaty Revision, we must make still greater efforts to develop our country. There is no doubt that the country will progress, and its advance will go hand in hand with diplomacy. We must adopt that best type of diplomacy which, based on justice, approaches most closely to International Law. This is not a mere statement of my own, that is to say, of Okuma individually. It is my declaration as a representative of the polity of the *Meiji* era. The kind of diplomacy that changes with its director is most pernicious and dangerous. There have been many instances of temporary success obtained by extraordinary genius, or through extraordinary diplomacy; but such successes are as fragile as towers built on the sand. That is what I mean by saying that foreign policy is fixed, immovable, and unchangeable, and that foreign policy which changes with its director is pernicious. This has been the definite and settled view held since the first years of the *Meiji* era, though there may have been occasional errors. It is my intention to follow loyally and sincerely the principle I have just referred to, with due regard for the national Constitution, and in obedience to the spirit of progress, and I do not think there can be much error in carrying out such a policy.

Happily our foreign relations are at present very cordial. I am assured that whatever slight differences may exist, will be readily settled. These foreign relations will, in my opinion, eventually lead to a most cordial friendship towards Japan. Powers that, up to the present, have felt more or less coldly towards us, will turn out to be the most friendly.

In respect of the general policy, that is, the policy of the *Meiji* Government, I have made but slight observations in addition to what has already been frequently stated. Before closing, I desire to make a few more remarks. Since Japan, as I have already said, has entered the comity of nations, there is no doubt that all her foreign affairs will be more complicated than ever; and as Japanese interests, commerce, and other matters abroad must extend, the expenses for legations and consulates, which are essentials of diplomacy, can not be avoided. The Budget Committee having recommended more or less reductions in the estimates, I should be glad if possible, to bow to its decision and accept the reductions. But since Japan's position in the world has risen, the work she must do abroad is daily augmenting, and the nation is ceaselessly expanding, so that her flag is to be seen in Europe and America. She is now no longer what she was in the days of her seclusion. I believe it really necessary that her diplomatic expenditures should gradually increase; and though our present finances are by no means ample and every possible economy is necessary, I earnestly desire that, in view of their urgent necessity, the expenditures struck out by the Budget Committee, be restored by the House.

Finally, allow me to add that, in reference to the question put by Mr. Suzuki Jubi and others regarding the arrangement between Japan and Russia, I intend to give a reply, but as it concerns another Power besides Japan, we are consulting that Power on the subject. I believe there will be no objection to the publication of that arrangement. Though newspapers state that the publication will be made in a secret session, I do not desire secrecy, but will give publicly and fully a reply when the time comes.

THE FINDING OF THE KOREAN SUPREME COURT.

In the judgment pronounced by the Supreme Court of Korea, after investigation of the charge preferred against a number of officers and others who were accused of plotting to remove the King from the Russian Legation, we find it stated that the plot was formed last October, and should have been carried out on the 19th of November. The accused had prepared three royal edicts, one of which was to have been sent to the Russian Legation

after the King's return to his own palace, thanking the Russian Minister for the protection afforded to His Majesty; another was to have been sent to a Foreign Legation which is not named, asking for the assistance of a company of soldiers; and the third was a notification to the people telling them of the King's return. Mention is also made of a note to the Foreign Legations, conveying intelligence of the same fact. The plot, according to the finding of the Court, included the assassination of several Ministers of State—prominently, the Ministers of Home Affairs, of War, and of Education—and foreign assassins were to have been employed, but the judgment does not indicate their nationality. It is alleged that the failure to carry out the plan on the appointed day was due to the inability of the conspirators to procure uniforms for these hired assassins—a most pregnant commentary on the pettiness of the whole affair. Meanwhile, the plotters learned that another party of "patriots" were engaged in elaborating measures of the same kind, and being much concerned lest they should be forestalled, they concluded to set about the business of assassination forthwith, whatever delay might occur in carrying out the other items of their programme. While they were holding a consultation in that sense at the Independent Club—the recent organization of which is doubtless fresh in our readers' recollection—intelligence reached them that two of their associates had been arrested. Thereupon the leaders, who, it seems, have not yet been apprehended, tore up the forged documents mentioned above, and threw them away, after which the meeting broke up in confusion. The fragments of the documents, and four swords that had been left behind by the plotters, were found, and produced in evidence at the trial. In a recent issue we stated the result of the trial, namely, that six of the accused were released owing to insufficient evidence; three were pardoned, having turned informers, and five were sentenced to receive 100 blows, and be banished for 15 years.

THE INSURRECTION IN MANILA.

The Government's troops continue their successful operations against the insurgents in Manila. The following telegram, received on the 20th inst. at the Spanish Legation in Tokyo and kindly handed to us for publication, shows that the rebellion is being steadily stamped out:—

Manila, Feb. 19th, 1897.

His Excellency the Captain-General telegraphs as follows under the above date:—

The first part of the plan of operations has been successfully carried out. The efforts of the Army, the Navy, and the country have been crowned with success. Silang has been taken. Our losses were small, in spite of the strength of the defences. The Spanish colours were raised over the Convent at half-past eleven in the forenoon, and were duly saluted, amid great enthusiasm.

We are not in a position to lay before our readers any accurate account of the plan of operations referred to in the above telegram. Speaking broadly, however, Captain-General Palavieja's object from the outset seems to have been the localization of the rebellion. In pursuance of that purpose, General Rios was directed to advance on Macaayan, driving the rebels from the province of Bulacan towards Cavite. He appears to have been entirely successful in that operation, for, by the middle of January, Bulacan was

reported quiescent. Several detachments of troops were also despatched across the frontiers of the Laguna to free it from insurgents, and by the time that the final advance was commenced, practically the whole of the rebels were collected in Cavite. It is evident from the telegrams received at the Spanish Legation in Tokyo that events have not justified the predictions of newspaper correspondents in Manila, who thought that the youth and rawness of the Spanish soldiers would render them incapable of standing up against the rebels, and that their want of familiarity with the Mauser rifle recently put into their hands would deprive their fire of any deadliness. These so-called "lads" appear to be fighting with great dash and valour, and there is little doubt that their initial successes will inspire them with confidence. Still the nature of the country may greatly prolong the complete suppression of the rebellion, for whereas the mangrove swamps and sugarcane plantations are familiar to the natives, who traverse them without difficulty, or hide in them with great skill, they present terrible obstacles to the passage of foreign troops. According to statements apparently trustworthy, the Captain-General was able to muster about twenty thousand troops for the advance against Cavite, and the attack was to take place from three sides. The passes between the Laguna and the sea, which give access to the provinces of Bulacan, Zambales, and Morong, had been entrenched and strongly guarded, so as to cut off the retreat of the rebels.

WASTE-PAPER BASKETS.

It has always seemed to us that the Crown Advocate struck the true note in his defence of Miss Jacob's visits to the waste-paper basket of her employer. Various attempts to extenuate her fault have been made by various people, but, in our opinion, Mr. Wilkinson's insight was the keenest of all. No defence can be complete. Such an act of espionage must be emphatically condemned. The mitigating circumstances, however, may be of greatly different force in different cases, and in this particular case they were decidedly strong from the Crown Advocate's point of view. A girl educated and accustomed to live according to the strict rules of English domestic life, may well have found her situation extremely perplexing in a household such as No. 169, Bluff, Yokohama, seems to have been. We need not enter into particulars. Of the heads of that household, one lies in our churchyard; the other is dead to the world. Their deeds had better be buried with them. But while those deeds were in actual and vivid performance under the eyes of a girl not yet fully opened to, let us say, the light of liberty that shines in some nooks and corners of every community, the spectacle may have been embarrassing. To remain quiescent was to risk the discredit of acquiescence, if not the suspicion of participation. A strong-minded man deals with such conditions in a very simple way: he turns his back on them; shakes the dust off his feet before any of it has time to cling. But that is not a woman's way; at least, it is not the way of most women. Physically, they are hampered by difficulties that do not present themselves to a man; morally, they incline to expedients that involve no resolute effort of will. It would probably occur to a girl situated

as Miss Jacob appears to have been situated, that her wisest plan was to endeavour to collect evidence sufficiently incriminatory of others to differentiate herself from their doings. It would probably occur to her that, without such evidence, even the plain device of removing herself from the atmosphere of danger, could not be justified to her relatives and friends. She knew her employer's careless confidence in the secretive capacities of a waste-paper basket, and in that carelessness she saw her own means of protection. All that is very comprehensible, very human, and, above all, very woman-like. Miss Jacob chose to offer the explanation that she approached the waste-paper basket apprehensive lest some letters for herself might have been consigned to that receptacle. If she had the remotest ground for suspecting anything of the kind, she has never made it manifest, and with every disposition to furnish for her error the exculpation that it seems to deserve, we cannot choose but think that her explanation savours of precisely the want of moral virility that originally betrayed her into the course she took. To visit a man's library with the hope of finding there a book of one's own constitutes no manner of excuse for carrying away volumes that one knows to be his. But the first step alone hurt her, and so, again woman-like, she limited her defence to the first step. She was placed in a difficult position; passed, not altogether scathless through a trying ordeal, and has emerged a local heroine. Does the fitness of things permit that much more should be said about her?

SHORT HISTORY OF EXCHANGE IN JAPAN.

The *Oriental Economist* publishes the following history of Japanese exchanges based on information furnished by Mr. Minomura Rihei, Manager of the Bank of Japan. When the Shogunate first collected taxes from fiefs immediately under its control, taxes were either in cash or in kind, and were transferred on horse-back or by men to Yedo. This caused considerable trouble to people living on the Yedo routes, and, to avoid the inconvenience, the system of exchange was evolved. During the *Kyoho* (1715-1735 A.D.) era, the Mitsui-gumi and "Ten-men-Guild" undertook the business of Government exchange. The Mitsui discharged the business for the Shogunate fiefs in Yamashiro, Settsu, and Omi, and the Ten-men Guild for other localities. The Mitsui kept the taxes collected at Kyoto, and paid their equivalent into the Shogun's Treasury in Yedo within 60 days after the collection. A dry goods store that the Mitsui kept in Yedo enabled them to undertake other business of a profitable nature. Taxes collected by a taxmaster in the Shogun's fiefs were exchangeable for dry-goods in Yedo, and the profits realized at the Yedo shop were enormous. The "Ten-men-Guild," or Jyunin-gumi, originated in Yedo, and was chiefly concerned in advancing money to the Treasury. Just prior to the Restoration, the Mitsui-gumi declined to undertake business for the Shogunate, and the profits realized at the firm's store in Yedo were transported on horse-back to Kyoto. One after another of the Jyunin-gumi gave up business through bankruptcy and other circumstances, and only the Ono-gumi and Shimada-gumi con-

tinued to flourish. After the Restoration, an exchange business was established in the Department of Finance, and the Mitsui and the Ono were appointed managers. When, in 1874, the Ono-gumi was declared bankrupt, its business was transferred to the 1st National Bank, started at that time. The mode of exchange was very simple. Tax collectors in each locality deposited their takings in the banks of the *Kawase-kata*, who were subject to the direction of the Treasury. These undertook official disbursements. At the end of the year, the balances remaining were paid to the Treasury. This system was in vogue up till twenty years ago. It may easily be conceived that a bill of over 1,000 *yen* was rarely to be seen either in Tokyo or Osaka, while interest was quoted up to 25 or even 30 *sen* daily per 100 *yen*. When the 1st Bank and the Mitsui Bank established branch offices in Osaka, exchange business was considerably augmented, but it was only after the opening of the Nippon Ginko that the interest fell to 4 *sen*.

THE JIYU-TO.

The disintegration of the Liberal Party (Jiyu-to) proceeds apace. Day after day the vernacular press reports the secession of one parliamentary representative after another, and now the once most powerful political organization in the country, which formerly had the Lower House completely under its influence, can only boast of 20 members within the walls of Parliament. The most conspicuous of the recent seceders are Mr. Kono Hironaka, who represents a Fukushima constituency, and Mr. Ishida Kanosuke, M.P. for a division of Hyogo Prefecture. The history of the Liberals has been inseparably connected with Mr. Kono's dominant personality for the last two decades, and when he left the Party all the political coteries in the capital and elsewhere were on the *qui vive* to hear the reasons for such a decided step. Mr. Kono has satisfied public curiosity by issuing a manifesto. It is a long and windy document, but the gist of it can be compressed into a few words. Mr. Kono can "no longer serve in the ranks of a Party that has become subservient to the selfish tactics of clan statesmen." He is too proud to bow the neck at the bidding of the statesmen who now occupy positions in the Cabinet, and therefore withdraws from a Party that has become nothing better than the tool of the Ministers in power. He will stand aloof from any such unholy alliance, and, if needs must, will fight the battle of pure constitutional politics alone.

The Liberal Party has issued a counter manifesto. This address to the people at large expresses surprise at hearing a complaint of the kind from the pen of Mr. Kono, seeing that he was the most energetic of all in advocating an *entente* between the Liberal Party and Marquis Ito. It was he who was equally eager, in spite of the hesitation displayed by his many political friends, that Count Itagaki should enter the Cabinet. Yet when the Count resigned, it was the same Mr. Kono that lauded the Count's resolution, declaring that such a step would brighten the Party's prospects materially. Thus, if it were erroneous on the part of the Party to have expected an *entente* with Marquis Ito, Mr. Kono must at least bear some of the responsibility. Can the attitude now assumed by him be

regarded as worthy of a man of sincere views and conscientious loyalty? If he were really convinced of the Party's error, why did he not confess it earlier and ask for pardon, before he severed connection with them? What did he do? He simply sent a letter to the Party Office enclosing his note of resignation. This letter briefly explained the resignation. That was all the trouble he thought necessary to take before severing connection with a Party whom he had led for many long years and whose dominating influence he was. What satisfactory explanation of his present attitude could he give if asked for it by some of the sincere political friends he made during all those years of commandship? There must be deeper motives than he has chosen to divulge to the public.

The same issue of the *Tokyo Shimbu* that publishes the above, contains also a long note detailing how Messrs. Matsuda and Hayashi, two of the three General Party Commissioners—Mr. Kono having been the third—strove to interview Mr. Kono to remonstrate with him against his intentions. Mr. Kono eluded them and others, making a mystery of his whereabouts for a few days. The step taken by Mr. Kono is said to be entirely unexpected by his fellow commissioners and others.

Mr. Kono's procedure has obtained the endorsement of his constituents in Fukushima Prefecture. Three members of Parliament from the same locality have sent in their resignations from the Party, and the Liberal partisans in their respective localities have also withdrawn. Mr. Kono and his fellow-seceders will remain independent in future.

The Liberal Party lost another influential member in the person of Mr. Ishida, Chairman of the Council. He has not yet published an explanation of his reasons for retiring from the Party. Some time ago, he was reported to be feeling umbrage at the dominant influence of the Tosa section, and that dissatisfaction seems to be the proximate cause of his secession. Other Liberal members of Parliament representing constituencies in Hyogo have not yet followed Mr. Ishida.

At a general council of Liberals holding seats in Parliament, a suggestion was made as to the advisability of severing connexion with Marquis Ito and his adherents, but this was overruled by a large majority, and the relations between the Party and Marquis Ito's followers will remain unaltered. Rumour has it that Mr. Ishisaka Shoko, now Governor of Gumma Ken, will resign, with a view to organizing and leading the new Liberal Party, which will be composed of about a dozen or so of the present Liberal seceders.

DR. RIZAL'S ANCESTORS.

The *China Gazette* contains the following about the celebrated Dr. Rizal:—

It is a curious fact, and one not generally known even in the Philippines, that Dr. Rizal was on his father's side of pure Japanese descent, his grandfather a Japanese trader having emigrated to Manila some 70 years ago, and married an Indian woman. The family name was Rin, which gradually grew into Rizal. The father of the doctor was a lawyer in Manila, and took a large share in the politics of his day. Formerly there were a considerable number of Japanese in the archipelago. To-day there are barely half-a-dozen—all in Manila. By the new treaty just concluded between Japan and Spain, the latter concedes "most-favoured nation" treatment to Japanese subjects in the Philippines, and agrees to impose no restrictions upon immigrants from the Land of Rising Sun, whereas the Chinese, the most industrious and enterprising traders and workmen in the islands, are heavily taxed, openly squeezed, and poll-taxed. They pay \$30 each on entering, but no one knows except themselves how much they have to disgorge when they wish to return to China.

COUNT OKUMA'S SPEECH.

THE reception afforded to Count OKUMA'S speech, delivered in the House of Representatives on the 15th inst., is a good illustration of the fact that if a statesman speaks above the heads of his audience, he must be content to wait a little before the true import of his words descends to the level of ordinary intelligences. As yet we do not find a single Japanese critic who seems to have looked below the surface of the speech, and the only foreign journalist that has made it the text of lengthy comment, is as shallow-sighted as the most flippant of his native contemporaries. Yet it seems scarcely possible to miss the true import of the Count's remarks. If there is one lesson more than another that needs inculcating among the politicians of Japan at present, it is the lesson that a civilized Government can not localize its diplomacy; can not limit the scope of its international action to a particular country, or a particular problem. Complete oblivion of that essential fact disfigures ninety-nine hundredths of the articles published by the vernacular press, and of the addresses delivered by Japanese party leaders. Journalists and politicians, finding something unsatisfactory, something derogatory, as they suppose, to the dignity of their country, in one page of the empire's foreign relations, imagine that their diplomats should be able to get at that special page and effect erasures or corrections without opening the whole book. If China shows undue hesitation in completing a promised treaty, they denounce their own Government as incompetent and invertebrate because it does not immediately present an ultimatum to the neighbouring empire. If Korean affairs enter a groove from which Japanese influence is excluded, they write and speak as though their Cabinet should be able to re-establish the national prestige by some heroic method against which a feeble little State like Korea could enter no effective protest. It is to dispel delusions of that kind that Count OKUMA raises a voice of warning. He reminds the members of the House of Representatives that the tendency of modern civilization has been to articulate the body of a country's foreign relations, so that, if one part be touched, the whole frame feels the shock. In former times, when a very large section of the world lay entirely beyond the sphere of the Occident's general interests, it was quite possible for one Great European Power to take action in remote regions without any risk of interference from other Western States; and it was correspondingly possible for Oriental countries to settle their mutual difficulties, even by recourse to the sword, without attracting the practical attention of the Occident. But that era of differentiated and independent relations is past. If Japan stretches

out her hand in China or Korea to-day, it is not Chinese or Korean contact alone that she has to anticipate. She must be prepared to find herself immediately involved in a plexus of conflicting interests and varied interactions, the outcome of which may have incomparably more importance than the issue originally at stake. That is what the irresponsible representatives of the *Kyōhō-shugi* school forget. They talk glibly about a "strong foreign policy," but they lose "sight of the essential fact that every movement made by Japan is keenly watched from Europe, and that if, without extreme circumspection, she stirs up any Eastern bush, she may rouse a dozen Western snakes. From Venezuela *via* the Transvaal to Liaotung is a suggestive route, along which Count OKUMA adroitly led his hearers, and if, at the end of the journey, they failed to apprehend his meaning, failed to perceive that international problems which to their inexperienced eyes seem limited in scope and easy of adjustment, may really form part of a great net-work of many-hued interests, the only comment to be made is that though Count OKUMA can furnish striking object-lessons for their instruction, he can not furnish them with intelligence to profit by his teaching.

The speech contained, also, a statement of much interest to foreigners. Count OKUMA said that the desire to attain the level upon which the Powers of the Occident stand had inspired all Japan's progressive efforts during the *Meiji* era. We are carried back thirty years when we read his words; carried back to the days when Japanese *Samurai*, some of high rank—which they laid aside for the moment—some, evidently, of the slenderest resources, but all impelled by the most eager yet, at the same time, the most courteous inquisitiveness, used to visit Yokohama in parties of ten or a dozen, seeking to familiarize themselves with the machinery of Western civilization. It was impossible to be long in the company of any of these adult students without discovering the goal of their efforts. Personal ambition did not appear to be an effective factor in their conduct. Their unique aim was to contrive that their country should get her shoulders level with those of the Occident—*Seiyo to kata wo naraberu*, as they invariably expressed it. Do they think that they have fully succeeded? Count OKUMA did not actually formulate that question: he merely suggested it. But, at the same time, he supplied materials for constructing a reply. Japan has only just obtained admission to the comity of Western nations. As yet, the feat is confined to documents: it has not become a practical reality. Her task is not nearly finished. She has to prove that the confidence extended to her is not misplaced. What she has thus far gained is the reward of adherence to the principles of justice in

international dealings and the recognition of her allegiance to the civilization of Christendom. If, at this stage, her policy, the policy uniformly pursued by her *Meiji* statesmen, should fail in continuity, she may forfeit in a month what she has spent more than a quarter of a century in acquiring. It is fortunate for her that her affairs are directed by men who recognise these facts.

THE NEW ENGLISH PAPER IN TOKYO.

THERE appears to be no question that an English daily newspaper will soon be started in Tokyo. The chief projector is Mr. YAMADA, a gentleman of large means, who served as a director of the Nippon Yusen Kaisha, during 15 years, in Kobe, Nagasaki, Shimonoseki, and Korea. Relations of a special character are said to exist between Mr. YAMADA and the Japanese that are to act as editors and managers of the new journal—relations based on benefits conferred and gratitude remaining to be shown. It would seem that Mr. YAMADA has always entertained the hope of starting some business in association with these young friends, and that, acting chiefly upon the advice of Mr. FUKUZAWA, his idea has finally taken the present shape. The Japanese editor-in-chief is to be Mr. ZUMOTO, who, for many years, acted as principal translator for the *Japan Mail*, and subsequently proceeded to the Liaotung Peninsula and Weihaiwei in the capacity of our war correspondent. The assistant editor—we do not profess to give the titles correctly—will be Mr. TAKENOBU, who, also, for some twelve years, has been principal or assistant translator to the *Japan Mail*, and who, in fact, leaves our office, not at all by our desire, to take up the duties of his new post. Mr. ZUMOTO'S connexion with the *Mail* was severed in 1895, when he received the appointment of Private Secretary to Marquis ITO. On the fall of the ITO Cabinet, he resigned his official position, and was sent to America and Europe, by Marquis ITO, we believe, to observe the Presidential election and for other purposes. His official connections have now been completely severed we believe. Both he and Mr. TAKENOBU are excellent English scholars, and there can be no doubt that they possess a good knowledge of the kind of matter requisite for journalistic purposes. The staff is also to include an English editor, an English reporter, for Yokohama news, and an English proof-reader. The editor, we believe, has already been found in the person of Mr. T. COWEN, who has had considerable experience in the East, having been reporter to the Singapore *Free Press*, sub-editor of the *China Mail*, acting editor of the *Kobe Chronicle*, and *Times*' correspondent during the war between Japan and China.

It will be seen from all this that the enterprise is on lines of considerable magnitude. We confess that the probability of its pecuniary success does not seem very clear, neither can we fully appreciate its *raison d'être*. The two principal sources of a newspaper's income are subscriptions and advertisements. As to subscriptions, it is plain that such a journal can not look far beyond the foreign communities at the open ports. Among the Japanese it will have no appreciable *clientèle*. The Japanese do not care to hear what their own nationals, writing in English, have to say about Japan. They much prefer to hear what foreigners have to say about it. But, of course, the foreign staff of the *Japan Times*—so the new journal is to be called, we believe—will not be commissioned to discuss Japanese affairs. That will be entirely outside their province. They will have to do solely with correcting any solecisms in the English of their Japanese confrères, and with preparing epitomes of foreign news. Hence it is pretty plain that the new journal must look for subscribers among the foreign residents only. Will it find many? We are all glad to learn the ideas entertained by the Japanese, but already many sources for obtaining that kind of information are available: the *Sun*, the *Far East*, the *Yoroku Choho*, the *Hansei Zasshi*, and copious translations published by the foreign local press from Japanese journals. None of the English magazines under Japanese editorship has made such a mark as to suggest that the foreign appetite can be greatly tickled by such viands. However, there is no gauging the elasticity of foreign liberality where newspapers are concerned. Until four years ago, it used to be imagined that Yokohama was over-burdened with three daily journals. It has six now, and they manage to exist, some how or other. Perhaps it can support a seventh. The question of advertisements is still more problematical. Could the *Japan Times* offer a fair prospect of large, or even tolerable, circulation among the Japanese, foreigners might be willing to advertise in it. But it has no outlook of the kind, and we fail to see why advertisers should prefer it to mediums already circulating freely in the same field. These are ideas that must present themselves to any thinking foreigner. On the other hand, there is the contingency that the staff of the *Japan Times* may develop some remarkable journalistic aptitudes. That remain to be seen.

One point connected with this enterprise deserves notice. Will foreigners be competent to publish newspapers in Japan after the Revised Treaties go into operation? If not, then the *Japan Times* may suddenly be found to be the only English daily newspaper in this country. That is a question concerning which no official verdict has yet been obtained, so far as we know. But it appears plain, on a cursory

examination of the matter, that since the only privileges enjoyable by foreigners in Japan under the new Treaties will be such privileges as are not forbidden by law, and since the Japanese Press Law recognises Japanese subjects alone in the capacity of newspaper proprietors, there is a possibility that foreign subjects or citizens may see themselves debarred. We do not anticipate anything of the kind, but assuredly the question stands staring us in the face frankly enough, and when we remember the kind of treatment that Japan and the Japanese have received at the hands of the local foreign press, we are bound to admit that they would be more than human if they went out of their way to prolong the existence of their supercilious and unfriendly critics. Of course, should the apprehension prove well founded, all the foreign local papers would suffer alike. But there is an evident and easy exit from the dilemma, even though the country's law-givers show themselves illiberal.

YOKOHAMA'S TELEGRAPHIC SERVICE.

The Agent of Reuter's Telegram Company at this port has issued the following circular:—

Yokohama, Feb. 16th, 1897.

Dear Sir,—The contracts entered into last year with the *Japan Gazette* and *Japan Mail* for a service of press telegrams having expired, I shall be glad to learn if you are willing to enter your name as a subscriber, for one year, to a fresh service of news telegrams.

My proposal is that, should sufficient private support be forthcoming at \$100 per annum for each subscriber, arrangements might be made with the press of Yokohama, Kobe, and perhaps, with the leading native papers of Tokio, by which we should be enabled to supply a regular daily service of news of sufficient fullness to cover the chief events of the world.

Experience has shown that it is beyond the means of the foreign papers of Yokohama alone to bear the expense of a daily telegraphic service of European and American news, and it is therefore only by the support of the leading members of the community that a telegraphic service, such as is received in all the principal towns of the Far East, with the exception of those in Japan, can be maintained.

Each subscriber to the service will receive a copy of the telegrams, for his own private information, prior to their publication in the columns of the daily papers.

Requesting your favourable consideration of the above proposal, and soliciting an early expression of your views.

I remain, dear Sir, yours faithfully,

J. K. TRAFFORD, Agent.

A word of explanation seems desirable. During the past year the public has received telegrams from Shanghai, representing an outlay of six hundred *yen* monthly. Of that amount, four hundred *yen* was paid by the *Japan Gazette*, the *Japan Herald*, and various private subscribers, and two hundred *yen* by the *Japan Mail*. We ourselves never believed in the wisdom of the arrangement. Japan lies outside the circle of telegraphic facilities. It costs four times as much to have a message wired from Shanghai to Yokohama as it costs Shanghai to procure the same message from Hongkong. Shanghai, in short, lies at the end of a chain of stations—Hongkong, Singapore, Colombo, and so forth—each of which contributes to defray the expense of transmitting a commonly useful telegram from London, and

all have the advantage of a special press rate. One obvious result is that these places receive from Europe items of news not too dear at six-pence a word. When, however, Yokohama is invited to pay two shillings a word for the same intelligence, sent across from Shanghai, the question whether corresponding value is obtained for the quadrupled charge becomes well worth considering. The experience of the past twelve months seems sufficient to furnish an answer. Has the community received a fair equivalent, or anything like a fair equivalent, for the heavy outlay involved? Of course Reuter's Agents in Shanghai and Yokohama have spared no pains in performing the service, but the point is that the material available for transmission to Yokohama was, in great part, not worth the cost of transmitting it. So long as the present scale of rates remains unchanged, the sensible plan, we venture to think, is to procure the cream only of the Shanghai telegrams. If the whole of the telegraphic news received there from London were forwarded to Japan, the expense would be about a thousand *yen* monthly. Yokohama has, therefore, been getting six-tenths of the service approximately, during the past year, and has been paying for it nearly two and a half times as much as Shanghai pays for the whole. A careful examination of the telegrams received here under the arrangement just terminated, shows, we think, that, on the most favourable estimate, not one half of them were worth what they cost. Now that fresh subscriptions are invited, these facts ought to be taken into consideration.

THE SCHISM IN THE OTANI SECT.

The development of the schism in the Otani Sect of Buddhism was interrupted, ostensibly at least, by the period of mourning for the Empress Dowager. But that interruption having ceased to exist, the malcontents held a meeting at the Kyoraku-ken, in Kyoto, on the 13th instant, for the purpose of inaugurating the National Reform Union. About 500 persons attended, including priests and laymen, and no less than 15 addresses were delivered by representatives of ten different provinces. All that were present subsequently inscribed their names as projectors of the movement. Afterwards, a draft of regulations was adopted, and managers, councillors, and treasurers were elected. The meeting was in the act of debating the expediency of presenting a petition to the Hongwan-ji authorities, when a notification was received to the effect that the Lord High Abbot would make a statement in person in the *Shinden* at 10 p.m. on the 14th instant, and that all were invited to attend. At the appointed time, the priests, professors, councillors, and officers of the temple assembled in the great hall of the celebrated temple. The Lord Abbot, after thanking them for their presence, proceeded to pronounce the following decision:—"There have been some so evil as to spread false reports about the use of the Educational Fund, and to criticise our acts in various respects. We have spared no pains to instruct them, but, instead of obeying, they continue to disturb the people. No alternative remains but to inflict punishment on them. It had been our intention to form a Religious Educational Council within the month, and to extend the *Gisei-Kai*, but the Imperial obsequies have interfered with the con-

summation of these projects. Due notice will be given as to the opening of these two bodies' session. It is our earnest hope that you will devote your energies to promoting the cause of the temple."

On the same day, the six men who have acted as leaders of the reform movement—namely, Messrs. Kiyosawa, Inaba, Imagawa, Kiyokawa, Tsukumi, and Inouye—were summoned to appear before Otani Shoyen and Adachi Hoko, and the following sentence was pronounced against them:—

You have persisted in attempts to change our form of religious administration, and have published your own views on the subject in a magazine, traducing our administrative methods, and greatly disturbing our dependent parishes. Your conduct shows that you do not understand how you are situated, and that you have forgotten your religious duties. Therefore, in accordance with the Regulations for the Control of the Sect, you are hereby excommunicated.

In addition to the above, Professor Murakami Sensei, who cooperated with the six offenders, was deprived of all his religious titles and privileges.

NATUROPATHY.

The Naturopathic Institute, which is situated at No. 74, Leadenhall-street, London, is apparently achieving success. The salient point in the system of treatment adopted by the Institute is to abolish the taking of medicine in any form, and to combat diseases solely by diatetics, that is to say, by hygienic nourishment. Professor Blitz, of London, is the head and front of this Institution, and of the system followed there. The Professor began his researches in 1871, being then attached to one of the government colleges in Austria. Fermentation was the line of study that he chose, and the result of long labour was the conclusion that medicine, as administered by ordinary physicians, attacks diseased cells or parasitic microbes, but leaves untouched the cause that has produced them. "The most noxious and even poisonous drugs," he says, "the most deadly chemicals, are prescribed by ordinary medical practitioners for the suffering as medicine, although the prescribing physician has not the slightest idea of what becomes of it all in the patient, nor indeed knows whether it will work for good or evil; so, one day he prescribes this, by way of experiment, and, if that does not seem to agree with the patient, then he tries something else, until the time comes that he has nothing new to offer. This fundamental error of the modern school of medicine is traceable to the circumstance that physicians either cannot, or will not, understand that before a cell—a leucocyte—can become diseased, the substance from which it arises and derives its sustenance must have first become deranged. And again, even if it were possible to attack diseased cells or microbes directly by chemical means, it would avail us nothing; for the same state which called the anomalous or diseased cells into existence would immediately reconstruct others in place of those destroyed, as may be seen where cancer cells are removed and new ones grow in their place; so that healing by such methods would also be impossible without first bringing the vital substance to a normal condition."

With regard to his own method, Professor Blitz writes:—

I first examine the state of the fermentation process in my patient, and thus obtain data for

determining the composition of his vital substance, not ignoring whatever bodily deformities may exist. I then give him a prescription specifying what he must eat and drink until equilibrium is established in his or her system. Thus the recovery of the patient is in every instance obtained by means of the recuperative power of the normal fermentation process stimulated by proper food. For my patients there is accordingly no *materia medica* and no *drugs*—nothing but food, for by food alone I obtain the surest results, because I understand the nature and the laws of the life-substances, and so begin the cure at the very foundation. In my system there is no complex pedigree of diseases, but whosoever suffers is sick, because his vital activity is abnormal, and that sick person need not understand either Latin or Greek to know his remedy, but he must be able to distinguish what kind of nourishment relieves him from his ailment, and when he has found this and lives according to prescribed hygienic laws, he not only regains full health but continues healthy until the wear of old age terminates his vital functioning.

We take all this from the *Medical Reformer*, a periodical devoted to popularizing the new system.

CALENDARS.

The Norwich Union Fire Insurance Company (Yokohama Agents, Messrs. Cornes & Co.) celebrates its centenary this year. It is a lusty enterprise. The premiums issued by it at present represent an aggregate sum of three hundred and thirty-five millions sterling; the total losses paid by it are over 11½ millions, and its premium income exceeds nine hundred thousand pounds. It issues four calendars this year; the first, a block calendar in red and gold, the central cards of light *cladon*; the second, a blotting book, with the calendar on the back cover; the third a portly sheet, with a really beautiful central design, showing the celebrated cathedral of Norwich in the glow of a summer's evening; and the fourth, a pocket calendar, with a pretty view of Norwich town on the front cover, and a picture of the Company's Norwich offices on the back. All these calendars are admirable specimens of decorative designing.

The Lancashire Fire and Life Insurance Company, for which also Messrs. Cornes & Co. are the Yokohama Agents, sends out two calendars, a blotting book and a hanging card. These are of less ornate character than the publications of the Norwich Union, but, in their line, they are not less artistic. The blotting book has, on both covers, a delicately tinted view of the Company's handsome head offices, and contains, inside, much information useful for letter writing purposes. The Lancashire's capital is three millions sterling, and its paid-up capital and funds aggregate over a million and a half.

A decidedly attractive card is that of the Royal Exchange Fire Insurance (Messrs. Butterfield & Swire, Yokohama Agents). A richly coloured street scene in London, showing the Royal Exchange and the adjacent buildings, constitutes the decoration occupying the upper part of the card, the lower being devoted to the calendar, which is printed in black, red, and gold, on a *cladon* ground, and has a leaf-scroll border in buff and gold surrounded by a field of dark blue. The harmony of colours is excellent. This is one of the huge insurance enterprises. Its funds amount to four millions sterling, and it has paid claims aggregating thirty-seven millions.

The calendar of the Liverpool, London, and Globe Insurance Company (Yokohama Agents, Messrs. Mollison & Co.), is more business-like than ornamental. Its decoration consists of three circular medallions, one containing the Company's trade-design; the other two, front and lateral views of the head offices. This Company makes only one financial statement on its calendar, namely, that its invested funds aggregate \$45,336,000.

IMPERIAL DIET.

SATURDAY, FEBRUARY 20TH.

HOUSE OF PEERS.

The House met at 10.15 a.m., the Order of the Day being:—

- 1.—Leave of absence for Count Sakai and Baron Obata.
- 2.—First Reading of a Government Bill relating to the Law applicable to the Irrigation Guild Regulations and Local Education Regulations of Cities, Towns, and Districts.
- 3.—Continuation of the First Reading of a Government Bill relating to an increase of the Fixed Working Funds of the Tokyo and Osaka Arsenals (sent up from the Lower House).
- 4.—Continuation of the First Reading of a Government Bill relating to an increase of the Fixed Working Fund of the Senju Woollen Factory (sent up from Lower House).
- 5.—First Reading of a Government Bill for altering the date for paying interest on the Railway Loan, the Public Undertakings Loan, and the Hokkaido Railway Loan.

The Bill standing first on the Order was for rescinding a provision in the Local Government System for Cities, Towns, and Districts, namely, the provision that the sanction of the Emperor must be sought in connexion with the Irrigation Guild Regulations and the Local Education Regulations. The Bill provided that the power of sanction should be entrusted to Local Governors under Imperial Ordinance. Mr. Misaki Kamenosuke, Chief of the Local Administration Bureau and Government Delegate, explained that the main aim of the Bill was to simplify the official business of Local and Central Offices, and that as the Local Systems had been in force for about eight years, no special necessity existed any longer to seek the sanction of the Emperor through the medium of the Central Office.

Viscount Tani and Mr. Kubota Yuzuru doubted whether, if local educational affairs were left to the charge of Local Governors, there might not be danger of local education falling under the control of a dominant local party, an evil already apparent in not a few localities.

The Government Delegate replied that, as the Home Office would not fail to exercise its right of superintendence, and as officials would be despatched from the Central Government, precautions could be adopted against any such vicious tendency. The Bill was entrusted to a Special Committee.

Viscount Soga, on behalf of the Special Committee appointed to consider and report on the Bill standing second on the Order, reported that the Committee did not at first think it necessary to augment the fixed working fund of the Tokyo Arsenal from 700,000 to a million *yen*, or to add some 330,000 *yen* to the Fund of the Osaka Arsenal, bringing it to 1½ millions, as asked by the Government. But the Government Delegate's explanation had made it clear that the Government did not intend merely to increase the output of rifles and ordnance, but also to lay in a stock of materials needed for the manufacture of those arms and of powder; materials that could not be purchased in time of war. The result of the respective increments would be to double the productive capacity of the two Arsenals, and the Osaka Arsenal would be enabled to cast big ordnance for coast defence, ordnance that could not hitherto be made in Japan. In consequence of having received such satisfactory information from the Delegate, the Committee had unanimously decided to recommend the Bill.

Baron Kawada, Government Delegate, in reply to Baron Funakoshi, said that the Government was not certain whether the Imperial Iron Foundry could be made to manufacture steel for arms and projectiles. The Government thought that it would be necessary to import such steel for the next three to five years.

The Bill was passed, the Second and Third Readings being abridged.

Viscount Soga, on behalf of the Special Committee, reported on the next Bill also, and explained that the idea of the Bill was to add a sum of 210,000 *yen* to the Senju Woollen Factory Working Fund, which now amounted to 380,000 *yen*. The Fund being increased to the extent proposed by the Government, the Factory would be able to turn out 1,680 yards of woollen cloth and 194 blankets per diem.

The Bill was passed in the same manner as the preceding.

Baron Tajiri, Vice-Minister of Finance, explained the next Bill. He stated that, in consequence of the number of loans having been considerably increased, the Government would experience more or less embarrassment if interest on all the Loans had to be paid in the months of June and December. In the 28th fiscal year, the interest would aggregate 13,090,000 yen, and the paying out of such a large sum at one time might disturb the market. Hence the Government proposed to alter the months to March and September for the Loans specified in the Bill. The Bill being one of urgency, the Committee appointed to consider it was enjoined to present its report by Monday, the 22nd instant.

The House rose at 11.50 a.m.

MONDAY, FEBRUARY 22ND.

HOUSE OF PEERS.

The House met at 10 a.m., the Order of the Day being—

- 1.—Leave of absence.
- 2.—The General Budget and Special Finance of the 30th fiscal year.
- 3.—Conclusion of contracts not covered by the Budget.
- 4.—First Reading of a Government Bill relating to the Auditing of Formosa Finance (sent up from the Lower House).
- 5.—First Reading of a Government Bill for changing the period of collecting Taxes in Kawabe and Oshima Gun, in Kagoshima Prefecture (sent up from the Lower House).
- 6.—Continuation of the First Reading of a Government Bill for altering the period of paying interest on Railway Bonds and Public Undertakings Bonds (sent up from the Lower House).

The President announced that, as the Premier wished to address the House before the Bills standing second and third on the Order were taken, it might be more convenient to commence the debate with the 4th Bill.

Mr. Komuchi Chijyo (Government Delegate) explained that in view of the want of a building in Formosa for use as an Auditing Office, the Government had determined to Amend Law No. 92, issued in 1896, in the sense that the auditing of Formosan accounts might be undertaken at the Audit Board's Office in Tokyo. At present the Government could ill spare a sum of about 300,000 yen for constructing an auditing office in Formosa, not to speak of about 100,000 yen required to defray the current expenses of such an establishment if created.

Mr. Kubota Yuzoro could not understand how the building of an office employing only some 10 officials could require 300,000. A sum of 20,000 to 30,000 yen ought to be enough.

The Government Delegate replied that, higher officials and clerks taken together, the staff would aggregate 55. Hence, whatever economy were exercised it would be impossible to build an office for a sum so small as that suggested by Mr. Kubota. Besides, the work would require time. From every point of view, it had seemed better to the Government not to ask for money on account of construction during the next fiscal year. If the Formosan accounts were audited at the Tokyo Central Office, and officials of the Audit Board being occasionally despatched to the island, there would be a saving of some 60 to 70 per cent., as compared with the expense of establishing a separate office. After the Bill had been approved, the Government would have to ask for a sum of 33,000 yen or so, as travelling expenses.

In answer to a question from Baron Yasuba, the Delegate replied that, for auditing the Formosan Accounts 5 higher officials and 30 clerks must devote themselves to the work, and that a staff of that size would prove sufficient for the purpose.

The Bill was entrusted to a Special Committee.

A colloquy that took place between two Government Delegates, on behalf of the Department of Finance, on the one side, and members of the House, on the other, in connexion with the 5th Bill, showed that the land tax in Oshima-gun amounted to 12,000 yen,

and that in Kawata-gun to 42 yen, approximately.

The Bill was handed to a Special Committee. The Premier having appeared in the Chamber and taken his seat on the ministerial bench, the original Order of the Day was resumed, and the Budget with its correlated Bills were taken.

The Premier explained that he did not think it unreasonable for the House to feel uneasy about the sudden increase of State Expenditures. But the increase was chiefly the result of the financial programme endorsed by the Diet last session, the only new items being those connected with diplomacy, education, Hokkaido, and Formosan affairs. A sudden growth of expenditure was to be avoided as far as possible, but, on the other hand, a programme once decided upon must not be easily altered, for such procedure would not only impair the credit of the State, but also involve waste of money. The chief items of increment in the State expenditures must already be familiar to the House. They consisted of the expansion of the National Defences, the interest on Loans, Pensions, and Formosan outlays. The extraordinary expenditures on account of Government undertakings also showed a considerable increase, but when military and naval affairs and other *post-bellum* measures had been in progress for a few years, and things had been placed on a normal basis, the Ordinary Expenditures would not exceed 140 or 150 million yen. The House of Representatives, after deliberate discussion, had passed the Budget virtually in the form as proposed by the Government, and the Premier hoped that the Upper House would treat it similarly.

The Budget and the Bill standing next on the Order were handed to the Budget Committee, who were instructed to report the result of their investigations by March 8th.

Prince Tokugawa wished to introduce an urgency motion in the sense that the Formosan Special Account Bill, sent from the Lower House and already investigated by a Special Committee appointed by the House of Peers, should be at once brought up for debate. The motion was passed, and the House proceeded to consider the Bill.

The Prince, in the capacity of Chairman of the Special Committee, reported that, out of six Committee men, four were in favour of the Bill and two against it. Mr. Takei Morimasa, on behalf of the minority of the Committee, explained the reasons that obliged him to oppose the Bill. The Government's idea in placing Formosan Finances on a special footing was to facilitate the development of the new dominion. He could not endorse that opinion. He doubted whether Formosa could yield a revenue of 8,300,000 yen, as the Government estimated. The yield might be only one-half of that sum. In that case, the affairs of Formosa, assuming that the system of special accounts were adopted for it, must be conducted in accordance with that diminished revenue. Thus the adoption of the special system could not conduce to the better development of Formosa.

Mr. Sakatani Yoshio (Government Delegate) replied that the revenue of 8,300,000 yen from Formosa was estimated after most trustworthy investigations. For instance, whereas opium smokers, who would contribute most to the State Revenue, really totalled about 550,000 persons, they were estimated at only 55,000 in framing the Budget. Hence no apprehension need be entertained as to the contingency of the Revenue's falling short of the estimates.

Asked by Mr. Shibahara about the expenses thus far defrayed by the Government on account of Formosa, Mr. Sakatani replied that a sum of over 30 millions had been spent in the fiscal year 1895-6; and 22 millions in 1896-7, whereas the estimated expenditure for the fiscal year 1897-1898 aggregated a little over 24 million yen.

The Bill was passed, the Second and Third Readings being dispensed with.

The House rose at 8 minutes past 12.

HOUSE OF REPRESENTATIVES.

The House was engaged on Committee work only.

WEDNESDAY, FEBRUARY 24TH.

HOUSE OF PEERS.

The House did not sit.

HOUSE OF REPRESENTATIVES.

The House met at 1.30 p.m., the Order of the Day being:—

- 1.—Supplementary General Budget No. 5 for the fiscal year 1896-1897.
- 2.—Supplementary Special Budget No. 3 for the fiscal year 1896-1897.
- 3.—Supplementary General Budget No. 6 for the fiscal year 1896-1897.
- 4.—Continuation of First Reading of the Railway Construction Law Amendment Bill.
- 5.—First Reading of a Government Bill relating to the Amendment of Official Undertakings Finance Law.
- 6.—First Reading of a Government Bill relating to the collection of Hunting License Fees.
- 7.—First Reading of a Government Bill relating to the Relief Fund Law.
- 8.—Continuation of the First Reading of a Private Bill relating to the Pensions Adjustment Law.
- 9.—Continuation of the First Reading of a Private Bill relating to the Pensions Adjustment Loan.
- 10.—Continuation of the First Reading of a Private Bill relating to the Pensions Adjustment Law.
- 11.—Report of the Chairman of the Special Committee commissioned to investigate a Representation relating to Rehabilitation and Amenity.
- 12.—First Reading of a Private Bill relating to the readjustment of the Boundary between Ibaraki and Chiba Prefectures.
- 13.—Representation for granting aid to the Koku-gaku-in (National Literature Institution).
- 14.—First Reading of a Private Bill relating to the amendment of a portion of the Law of Finance.
- 15, 16, 17, 18, 19.—Report of the Chairman of the Petitions Committee on Petitions for controlling the Sale of Adulterated Fertilizers; Re-construction of the Shonai River, and so forth.

The debate was opened by Mr. Motoda Hajime, who explained a question introduced by him. It related to jurisdiction in legal disputes connected with patents and trade-marks, pending the operation of the Revised Treaties. Two points were raised by Mr. Motoda. In the first place, he doubted whether Count Okuma had been exactly correct in informing the introducer of the question on the 17th inst. that this particular jurisdiction did not belong to Japan. According to Mr. Motoda's interpretation, a passage in the protocol of the Revised Treaty between Japan and Germany, bearing on the point at issue, must be interpreted in a sense contrary to Count Okuma's rendering. The jurisdiction must belong to Japan. It was not so, and if German Consular Courts were to adjudicate disputes about patents and trade-marks, pending the operation of the Revised Treaties, then Japan would be subjected to considerable disadvantage, and the period during which she would have to suffer from it might be of long duration. It meant, in short, that Japan was to concede another point to Germany and other Powers over and above the extraterritorial jurisdiction, which was already such an incubus to Japan. Two years hence, the Revised Treaties were expected to go into effect. But too great confidence must not be placed in that expectation, for, from this or that unexpected cause, the period might be prolonged to five or even eight years. Such an idea was intolerable. Was it not, therefore, a blunder or oversight on Count Okuma's part when he informed the introducer of the question that jurisdiction with reference to patents and trade-marks did not belong to Japan?

The second point raised by Mr. Motoda was whether Viscount Aoki, Japanese Minister to Germany, did not deserve a reprimand for having concluded such a Treaty with Germany. If the present Cabinet were faithful to its declaration of policy, and were resolved to maintain official discipline, why was the Japanese Minister to Germany left unpunished at his post?

The Supplementary General Budget No. 5, standing first on the Order, was then taken, as follows:—

EXTRAORDINARY REVENUE.	
V.—Appropriation from the Central Relief Fund	963,510.227
EXTRAORDINARY EXPENDITURE.	
XII.—Aids to repair of damages caused by floods, earthquake, and so forth (Home Department)	7,118,077.154
I.—Aids to Central Relief Fund (Finance Department)	1,194,127.435

The Supplementary Special Budget No. 3, standing next on the Order, related to a sum of 962,648.50 yen, representing Receipts to the

Central Relief Fund (Finance Office), and an outlay of 963,510.227 yen, on account of aids to local relief funds.

Supplementary General Budget No. 6 referred to an extraordinary outlay of 25,000 yen on account of rinderpest and so forth.

The three Budgets were passed, the second and third readings being dispensed with.

The Bill standing next on the Order was also passed with similar expedition. Its provisions have already been explained.

The next Bill provided that expenditures whether directly or indirectly connected with Official Undertakings, should be included in the Undertakings Account (N.B.—Expenditures directly connected with such undertakings have alone been included in that Account hitherto.)

The Bill was entrusted to a Special Committee nominated by the President.

The Bill standing sixth on the Order provided that Fees for Hunting Licenses must be paid in stamps, a sum corresponding to the Fee being affixed to an application for a License. The object of the Bill, as explained by Mr. Megata Tanetaro, Government Delegate, was to simplify the process of paying and collecting such licenses. The law, if enacted, was to go into force from the beginning of the next fiscal year, that is, April 1st, 1897.

The Bill was handed to a Special Committee.

The seventh Bill ran as follows:—

The object of this Law is to continue the operation of the Famine Relief Fund Law, the term of which is to expire in the 33rd year of Meiji and also to lay by a fund in each locality for giving relief to sufferers from calamities. This Law is to be put into force for 20 years from April 1st of 1897, so that each locality may have in reserve funds sufficient to give relief to sufferers, without seeking aid from the Central Relief Fund, which has been nearly exhausted in consequence of seismic disasters and inundations last year in various districts. The Relief Fund is to be formed from local taxes and aids from the Treasury, which, during a period of 10 years, calculated from the date of enforcing this Law, will appropriate an annual grant of 300,000 yen, to be distributed among the various localities, in proportion to the sums appropriated from the local taxes to the local fund. A local fund shall not be allowed to fall below 500,000 yen, and shall be raised at least to a sum twenty times the average amount appropriated towards the fund for ten years, from the 20th fiscal year of Meiji, in accordance with the Relief Fund Law. When a sum corresponding to over 1/10 of the Relief Fund existing at the beginning of the year has been defrayed for the purpose of relief, the Treasury shall contribute a third of the fund's excess over the lowest limit. The relief to be given with the fund shall take the form of food, clothing, medical expenses, construction of temporary shelters, aids of money for initiating business, and aids, or loans, of money for paying taxes.

Baron Tajiri, Vice-Minister of Finance, briefly explained that the Central Relief Fund being exhausted, it was necessary to create another fund of the kind, and that this necessity was specially indispensable in a country like Japan. The Bill now under discussion was intended to create such a Fund.

The Bill was handed to a Special Committee. The Bills Nos. 8, 9, and 10, on the Order were explained by Mr. Tada Sakubei (Liberal), in the capacity of Chairman of the Special Committee appointed to investigate them. He said the opinion of the minority of the Committee was that the investigation for readjusting old pensions must go back to the time when the fiefs were surrendered to the Imperial Court, whereas the majority held that, as the time when that event occurred had fallen in pre-Restoration days and therefore came under the régime of the Shogunate, it would not be proper to go back so far. The inauguration of the Han System of Local Administration was the beginning of the new era, and it would suffice to date the investigation from that period. Besides, there would be great difficulty in carrying the investigation back to the time

advocated by the minority. If the decision of the majority be endorsed by the House, a sum of about 7 million yen would suffice to readjust all miscalculations and arrears connected with the old pensions.

After Mr. Kotagari Genkai (*Shimpo-to*) had spoken on behalf of the minority, the Bill was put to the vote and passed as recommended by the majority.

The Representation relating to Rehabilitation and Amnesty was somewhat out of date, seeing that the recent act of clemency on the part of the Imperial Court and the Government, in connexion with the death of the Empress Dowager, had released a large number of the criminals for whose sake the Representation had been submitted. Nevertheless, the Representation was adopted for presentation to the Government.

The Bill standing next on the Order was entrusted to a Special Committee, without any particular explanation from the introducers or any question from the House.

A Representation that a sum not exceeding 10,000 yen a year should be granted as aid to the National Literature Institution, for the space of a few years, had already been discussed and endorsed by the House in a previous session. This second Representation was merely intended to urge the Government to act upon the former advice of the House.

The 14th Bill, introduced by Mr. Motoda Hajime, provided that the Reserves in the Budget must be excluded from the ordinary items. His reason was that the first reserve according to the Law of Finance, was intended to meet outlays in excess of the Budgetary estimates; and the second reserve was a sum set apart over and above the estimates. Hence these Reserves should not be included among the ordinary items of the Budget, as had hitherto been the case.

The Bill was entrusted to a Special Committee.

After a short explanation from the Chairman of the Petitions Committee with reference to the last five Bills, the House rose at 4.20 p.m.

It ought to be added that, after Mr. Motoda Hajime had explained his question about jurisdiction in legal disputes connected with patents and trade-marks, much time was lost owing to Mr. Konishi Jinnoake (Independent), a member from Shikoku, who raised a discussion about a technical point connected with the President's ruling a few days previously, when the Budget was under discussion. The President had ruled that a speech bearing on only a portion of the Budget could not be allowed. Mr. Konishi exposed, at tedious length, a number of objections to that ruling. His proposal that the Order of the Day should be changed to consider the matter, involved the trouble of a closed ballot, for, on a show of hands being taken, the President's ruling that the "noes" were in the majority, was objected to. The ballot resulted in favour of changing the Order, but Mr. Konishi's motion fell to the ground for want of support.

The Bill standing seventh on the Order having been dealt with, Mr. Yoshimoto (Liberal) wished to introduce an urgency motion in the sense that the Order of the Day should be altered and that a Bill relating to the amendment of the District System, a copy of which had been distributed to the members that day, should be taken, with the view of handing it over to the Special Committee already engaged on the Local Government System Bill. The motion was adopted, and the Bill was handed over.

Mr. Inouye Kakugoro (Independent) wished to caution the President about a rumour that Mr. Kaneko, Vice-Minister of Agriculture and Commerce, intended to demand that Mr. Inouye should withdraw an abusive epithet used by him against Mr. Kaneko a few days previously. Mr. Inouye had called Mr. Kaneko a "fool," and if any such demand reached the President, Mr. Inouye begged that it should not be treated in a conciliatory manner, for he was determined to prove the truth of his accusation to Mr. Kaneko's face.

THE GOLD STANDARD IN JAPAN.

AN ADDRESS DELIVERED TO THE "KIZAI KYOKAI" (ECONOMIC SOCIETY) SATURDAY, FEB. 20TH, 1897.

It was my purpose to address this Society on a somewhat abstract question of monetary science,—a question not, however, entirely disconnected with certain practical consequences, especially in relation to the monetary policy which a country is to adopt at the present time. The subject I had thought of speaking to you about was the effect of an appreciating or depreciating currency on the industrial and commercial interests of a country. This subject, which I firmly believe is at the basis of all intelligent discussion of monetary principles, I thought might prove less interesting at the present moment than the more practical and specific question of the monetary standards—a question which, after agitating nearly every civilized country during the past twenty-five years, has at last been brought to the doors of Japan for solution. The issue is an important one. It has divided political parties into new camps. It has brought economists into the field of active controversy. It has vastly increased the amount of monetary literature, and threatens to reconstruct the whole theory of money that has prevailed throughout the world for the most part since the days of Adam Smith. The question has been taken out of the field of purely academic discussion, and if I treat it in what may seem to you a somewhat partisan manner I can only affirm that I have given to it as great a measure of honest and impartial thought as my mind is capable of.

It is quite impossible at this stage of the proceedings, when the details of the proposed change of standard from silver to gold in Japan are yet unknown, to discuss the finer points of the measure. But in its broad outlines the matter seems to be fairly clear. I shall take it for granted that the following changes will be made:

1. That the Japanese Government will suspend the free coinage of the silver yen.
2. That the new standard unit of money will be the gold yen.
3. That free coinage will be given in the mint only to gold, some multiple of the gold yen being chosen for this purpose, for the obvious reason that the gold yen is too small for convenience and therefore unfit for purposes of coinage.
4. That the new unit will approximately contain one-half of the amount of gold in the former gold yen, that is, instead of containing 25.72 grains of gold 9/10 fine, it will contain nearly, or precisely, 12.84 grains of gold 9/10 fine.
5. That both gold and silver coins, excluding, however, subsidiary coinage, will be as heretofore full legal tender. The substance of the change is that Japan proposes to make gold the standard of value, and that Japanese silver coins, though convertible into gold, will no longer be coined freely in the mint of the Empire. As such, the proposed currency of Japan may be roughly compared to the currency now existing in Holland, France, and the United States.

Before proceeding to state my objections to this monetary scheme, I propose to give, as fairly as possible, what I conceive to be its chief merits in the minds of those who aim to carry it through. These merits I believe to be the following:—

First, by adopting the gold standard, Japan will secure a stable par of exchange with those countries with which she now transacts more than a moiety of her business. It is estimated that 7/10 of Japanese imports and exports are transacted with countries under the gold standard. Exchange with these countries is always a matter of uncertainty—higher to-day, lower to-morrow, and this uncertainty transforms almost every merchant into a speculator in exchange. This element of risk in the ordinary business of export and import is a highly injurious element in the economic affairs of a nation, and forces even the most careful business man more or less into the vortex of speculation.

Second.—By adopting a gold standard, Japan

will be saved from the disadvantages of further depreciation. Just as an over issue of inconvertible paper leads to high prices, reckless extravagance, and the predominance of speculation over the productive interests of a country, so the depreciation of silver leads *pro tanto* to the same result. All economists agree that an excessive depreciation of money by over issue is one of the greatest evils that can be inflicted upon a country. It invariably makes the rich richer and the poor poorer. It draws men away from the more sober methods of wealth production into the more seductive avenues of fortune hunting. Like excessive dram-drinking, it first induces a crazy enthusiasm, then a stupor, and finally a most painful and miserable awakening. The gold standard, in the opinion of its advocates, is certainly not a depreciating standard, and will save Japan from any further rise of prices.

Third.—By adopting the gold standard, Japan can secure the influx of capital from those nations which have a superabundance of that indispensable aid to wealth. Japan is a country with considerable resources, with an industrious population, and an excellent situation, but she is poor in capital. The rate of interest is too high to enable her capitalists fairly to compete with foreign enterprises of the same kind. It is difficult for her to find a market for her securities abroad. She cannot get English or Continental investors to look at her securities, because she is on a silver basis, which is constantly fluctuating in terms of gold. But, once established on the gold standard, Japan will find no difficulty in securing the importation of foreign capital. Foreign investors will then be certain that their investments are as secure in Japan as in their own country. The credit of Japan has an excellent reputation abroad. Her government has always been scrupulously honest in the performance of monetary obligations, and she has never failed to meet the interest of her debt at the proper moment. But the great bar at present in the way of securing foreign capital is the difference of the standards, and so long as this difference lasts, so long will the wealthy capital-lending nations look with suspicion on the securities of Japan, whether they be those of national or local governments or of private corporations. As soon, therefore, as Japan places herself on a gold basis we may expect, in the opinion of the gold party, a large increase in the enterprise of the country, its manufactures and commerce, a fall in the rate of interest, and a higher price for all securities.

Fourth.—By adopting the gold standard Japan will be saved from the reproach of having a currency inferior to that of other civilized countries. In the opinion of foreign financiers, silver is a discredited metal, fit only for half-civilized nations. It is the common opinion of a large class of men, the so-called gold monometallic party of Europe and America, that as economic civilization advances, so also does the standard of value progress from the cheaper to the dearer metal. Barbarous people may use copper or iron, higher civilizations may have silver, but the true money of civilization must be gold because it is the rarest metal of all. It combines the greatest value in the least bulk. Japan can not afford to suffer from the reproach of having an inferior money system. So long as she clings to the silver standard she will be classed with countries like China and Mexico—a contingency she is most desirous of avoiding.

These four reasons are, in my opinion, the chief arguments in favour of adopting a gold standard in Japan. I have stated them as fairly as I can, without trying to minimize their importance or wishing to cast upon them one iota of reproach. Indeed, a man might well argue that Japan was only presumptuous in fighting against the prevailing tendency of civilized nations. If nearly all the progressive and enlightened nations of the world are doing their best either to make the single gold standard a fixture in their monetary system, or trying to establish it in lieu of some other less accredited standard, why should Japan presume to swim against the current and separate herself from

the interests of civilization? If Japan has adopted her military and her naval armaments, her banking system, and her education, her prisons, and her ships, from Europe and America, why should she remain isolated in only one important feature of her civilization, so far as it is a matter of world-wide and not national concern?

Before offering my reasons why I believe these arguments of the gold party in Japan insufficient, I should like to urge a point that will bring out my objection to the intended change more clearly. It is agreed that the unit of the proposed gold standard is to be not the old gold *yen* containing 25.72 grains $\frac{9}{10}$ fine, but an entirely new unit containing only one-half of the gold *yen* that was the unit of Japanese coinage about twenty-five years ago. During these twenty-five years the silver *yen* and the gold *yen*, starting with practical equivalence, have gradually parted company, until at present the former is valued at only one-half of the latter. This gradual transformation of value is obviously not in any way due to the action of the Japanese Government. It is due to world-wide movements, which, though a matter of much dispute, I hold to be caused by the silver demonetizing policy of Germany, France, Italy, the United States, and other countries. Japan, by resuming specie payment in 1886 in silver, after an era of inconvertible paper, accepted all the consequences, good or bad, of the adoption of silver as the standard. Silver in terms of gold fell in value, first gradually, then, after the closing of the Indian mints and the repeal of the Sherman Act in the United States in 1893, with greater speed. It would not have been entirely impossible in 1886 for the Japanese Government to have resumed in gold instead of silver. Even in 1890, when the Sherman Act went into operation, the Japanese Government could, had a strong determination existed, have altered its standard from silver to gold, and probably could have succeeded in making the old gold *yen* the unit. But it did not do so, and now we have the result that the silver *yen* is equal in value roughly to only one-half of the gold *yen*. I should like to ask whether any number of Japanese regret the failure to adopt the old gold unit. What would have happened to industrial Japan had she resumed about the year 1885-6 in gold instead of silver? Does any one believe that Japanese industry and commerce would stand where they are to-day under a gold standard composed of that unit? Does any one believe that the rapid strides which Japan has taken in the past ten years in every direction of industrial enterprise would have taken place had the yellow metal stood at the basis of her monetary system? If the gold party in Japan hold this view of the matter, then why not resume the gold standard at the present time in terms of the old gold *yen* of 25.72 grains instead of one-half that amount? If the resumption of specie payments in terms of gold would have been a mistake in 1885-6, and would have proved an injury to Japanese industry and commerce, what was the precise nature of that injury and why will not resumption from silver to gold to-day be *pro tanto* an equal injury? And, if it was a mistake at that time to have adopted silver instead of gold as the standard, then a further question arises why not resume to-day in terms of the old gold unit, the *yen* of 25.72 grains.

During the past seventeen years, the United States has stood upon an inflexible gold standard and has had all the advantages and disadvantages of that standard. Had the United States Government proposed to make the gold unit of value one-half of the existing gold dollar, the attempt would have been heralded throughout the world as national repudiation. Yet that is what Japan has practically accomplished. It is quite unnecessary for me to state that Japan has not been guilty of the slightest wrong in this respect. The point is only this, that she has in the course of two decades really existed under a standard which permitted the monetary unit to decline in value from a practical equality with the American gold dollar to one-half that value, while the United States has stood under a unit that

still contains the same amount of gold as it did two decades ago. At the very foundation of the controversy now going on in Japan with regard to the change of standards, is the question whether the United States has benefited by clinging to the gold dollar as its unit, or whether Japan has benefited by having a unit which in terms of gold has been steadily declining in value.

I wish to give a few reasons why I believe that Japan has gained by standing on a silver basis and the United States lost by standing on a gold basis during the past twenty years and these reasons will furnish a general explanation of my opposition to any change of standard at present in Japan. The real reason why Japan has derived an unmixed advantage from her silver standard is that silver has been a relatively stable standard of value, while gold has been steadily appreciating in the past twenty or twenty-five years throughout the civilized world. In 1871, there was only one commercial country of the world on an exclusive gold basis, all the other countries having either a bimetallic standard, as France and Belgium, or a silver standard as Germany and Holland, or a currency of inconvertible paper as Italy, the United States, Austria, and Russia. Since then all of these countries have ceased coining silver except in trifling amounts, and have opened their mints freely to gold alone. This demand for gold has been so great that it has become almost a craze. Every Government of Europe as well as that of the United States is watching its gold reserves and piling them up with the greatest anxiety. Therefore, in spite of the increased annual supply of gold, there has been a steady appreciation of its value. This appreciation is proved by the steady fall of prices that has been going on in Europe and America ever since 1873—a fall that is unparalleled in modern history. It is further proved by the long series of monetary difficulties into which almost every country, and especially the debtor countries, have been plunged since 1873. The United States is a rich country, with an industrious and active population, and it has enjoyed a long series of prolific crops that are the astonishment of other nations. Yet what is its condition? It is suffering from extreme depression, and great numbers of men in America can find no employment on almost any terms. Many of its railways cannot pay their bonded indebtedness and many of the strongest banking institutions have gone to the wall. The same is true of Australia, another rich country, and Italy and Greece, all debtor countries. In the other countries of Europe, even in England, there is general complaint of extreme depression in many industries. I believe the fall in prices, these monetary difficulties throughout Europe and America, this extreme depression, to prove unmistakably that gold has vastly appreciated in the past twenty-five years. The fall in prices since 1872 is estimated by most competent authorities at nearly 50 per cent., or nearly the same as the so-called decline of silver.

But if gold has appreciated, has silver depreciated? My answer is that it has depreciated very little or not at all, except in terms of gold. Silver is still the money of more than half the people of the world, and these people are of so conservative a nature that they resist changes much more powerfully than the people of Europe and America. The people of India have been attached to silver since the beginning of history, and they will continue to use silver in spite of every effort to break them of the habit. The force of immemorial custom in India and in China has had a wonderfully steadying effect on the value of silver, and therefore I hold that though silver has been discarded in the mints of Europe and America, its continued use by the vast populations of India and China has not permitted any real fall in its value. I could quote dozens of scientific men who have carefully and impartially studied the question of gold and silver, who have come to the conclusion that it is not silver that has depreciated, but gold that has appreciated.

This is the deliberate conclusion of Mr. Jamieson, British Consul at Shanghai, whose

studies of prices in China are held in high esteem by all students of money. And Prof. Marshall, in his testimony before the Herschell Commission, in 1888, says:—"As regards the depreciation of silver, I am rather puzzled by the statement in the Warrant appointing the Commission, that it is to inquire into the depreciation of silver. I do not admit that silver has depreciated, in the sense of having less purchasing power. I think it has appreciated, and has now a higher purchasing power as regards commodities than it had before."

If this opinion regarding the relative stability of silver be correct, Japan has been entirely right in holding to the steadier and less fluctuating standard of value. In proposing to adopt a unit of gold containing only about half the amount of gold in the old gold *yen*, Japan has acted with entire propriety and has unconsciously given to the world an object lesson in measuring the amount of appreciation that gold has suffered in the past twenty-five years. She has had the good fortune to be able to cut her unit in two and to call each moiety a new unit without incurring the risk of the cry of repudiation from the creditor class or from neighbouring countries. But had Japan clung to the gold *yen* of 25.72 grains (9/10 fine), she would have been in even a worse condition than other countries like the United States, Italy, and Australia are to-day. All her public obligations would have appreciated and have constituted an enormous addition to the burden of the people. All private debts, especially of the agricultural classes, would have augmented and would have proved an extreme hardship to these classes. All fixed charges and prices would have advanced and would have drained the productive power of the country. In the United States, every postage stamp, every railway fare, every fixed tax and fee is double the amount it was twenty years ago. Japan is not a country with the great resources of the United States, and had Japan stood on a gold basis during the past twenty or twenty-five years these augmentations to the burdens of the country would have proved an insuperable bar to industrial enterprise and progress. It is even questionable whether Japan could have stood the strain of such a steady increase of indebtedness—whether her whole financial system would not have broken down as it has so nearly done in certain countries of the West.

I am now in a position where I can state my objections to the various arguments of the gold party in Japan. These innovators urge that this reform of the standard will free Japanese and foreign merchants dealing in exports and imports with western nations from the fluctuations of exchange. Undoubtedly, it will accomplish this result. But it is a noticeable fact that these fluctuations are to-day comparatively slight and do not cover a wider range at present than the fluctuations of exchange between two gold countries. That this condition of comparative quiescence may not last long is indeed possible, but it is dangerous to predict the future. It now appears as though no new movement for or against silver will be undertaken for many years to come, and if this proves to be so, exchange will vary but little between gold and silver countries. But, on the other hand, suppose Japan adopts the gold standard. Then, though she is secure of a stable par of exchange with gold countries she is almost certain to incur considerable variations of exchange with the countries of the East, as China, Hongkong, the Philippines, and the Strait Settlements, with whom she transacts a considerable and ever increasing amount of business. It is a natural and entirely legitimate desire on the part of the Japanese to aim to be the dominant commercial power of the East. Is it reasonable to suppose that they can succeed in this undertaking by breaking away from the prevailing monetary standard of the East? When India closed her mints to the free coinage of silver, did that act benefit herself, or did it benefit Japan and the other silver using countries of the East? Is it not generally conceded that India has derived no advantage whatever from that measure, and that she has made it easier

for competing nations in the East to undersell her in those commodities which they produce in common?

It may be answered that Japan by adopting the gold standard will not necessarily throw her exchanges out of gear with the silver countries of the East. I am inclined, however, to dissent strongly from this view. The result of Japan's action will be to make a further demand on the world's gold supply and to restrict the demand for silver, and, although this double action of increasing the demand for one metal and denying the use of the other may have no important effect at first, yet, finally, it will certainly result in producing a further divergence of value between the two metals and consequently a difference of exchange between Japan and the other silver using nations of the East. Every little counts. Nation after nation has entered the circle of gold-using countries during the past twenty-five years, and with every addition to the category silver has fallen in its relation to gold. If Japan steps out of the number of silver countries and puts her monetary system on a gold basis she will be no exception to the rule. Silver will further decline in terms of gold, or rather the latter will still further appreciate, and in that event Japan will lose all the advantages she now possesses of a stable exchange with the Eastern silver standard nations. While Japan by her action may therefore slightly diminish the element of risk in her commerce with Europe and America, she will undoubtedly increase it with those nations with which she has a most active trade and close political and commercial relations.

But further, if a disparity of exchange begins to appear between Japan and the other silver using nations of the East, Japanese manufacturers, merchants, and producers will lose all those advantages which they have had up to the present time as against European nations. European producers in order to compete with Japanese products in the East have had constantly to lower the prices of their commodities. Take for instance the article beer. It is not so many years ago that German beer held the markets of the entire East. It was imported on a large scale into the cities of Japan as well as Shanghai, Hongkong, Singapore, Manila, and other places. To-day the breweries of Japan are gradually driving out all competing beers, and it will not very long before they have secured all the markets of the East. The demand for the beer produced in Japan is so great that the breweries can scarcely satisfy it. They are all enlarging their capacity. Their profits are extraordinary, at least from a Western point of view, and promise to be still greater in the future. But if Japan once establishes the gold standard, the European beer producer need no longer reduce his prices in order to compete with the Japanese product. Let him once secure his market in the East, and it will be for Japanese brewers to submit to lower prices and smaller rates of profit. Many other instances could be mentioned to the same effect. For instance, the prosperity of Japanese cotton manufactures depends almost entirely upon the so-called low price of silver. English and American cotton mills are undoubtedly better equipped and more economically conducted. But they suffer from an appreciating standard, and, so long as this condition remains, Japanese manufacturers have nothing to fear. But let Japan once be drawn into the vortex of this appreciating monetary system and a blow to the prosperity of Japanese cotton manufactures will be inflicted. The factories now building in China need not fear the competition of Japan, if a discrepancy between the silver standard of China and the gold standard of Japan begins to assert itself. At the present time when business is run on a very narrow margin of profit, it requires but a trifling advantage to overthrow a rival manufacturer. A difference of 5 per cent. or 10 per cent. in exchange in favour of China would be a great obstacle to the further introduction of Japanese yarns in face of Chinese competition.

It will require but a few words to dispose of the second point advanced by the gold party in Japan, viz., that Japan is suffering from a de-

preciating currency, as I have already in a general way adduced my objections to it. I do not believe that silver has depreciated to any considerable degree, if at all, but, on the contrary, that gold has appreciated. If it be urged that prices have risen in Japan, my answer is that this rise of prices is not general in all silver countries but is at present only to be found in Japan, and is a result of the expansive movement of commerce and industry produced by the successes of the recent war with China and by the payment of the Chinese Indemnity. Precisely the same phenomenon was observable in Germany in 1871 and 1872 after the close of the Franco-German War. Then, also, was to be seen a rapid rise in prices, a vast speculative movement, and a heavy investment of capital, culminating at last in the crisis of 1873. In the language of economics, this movement is accompanied by a transfer of circulating into fixed capital, and this experience Japan is now undergoing. As a proof of this, it is to be noted that before the war broke out exchange with Europe and America was even lower than it is to-day, yet no noticeable rise of prices or increase of speculation was to be seen. It is only since the war that the upward tendency in prices, whether of commodities or securities, has prevailed, and even at present a movement in the opposite direction is said to be under way. It may be noted, too, that Japan, as a heavy buyer of commodities from Europe and America, as raw cotton, oil, steamships, men-of-war, and machinery, is paying a larger price than is necessary because of the silver standard. But those whose urge this point forget that prices have been steadily falling in Europe and America during the past twenty-five years. Steel rails, for instance, are cheaper to-day in silver prices than they were twenty or even fifteen years ago. I doubt whether there is a single commodity of any importance imported into Japan from Europe and America that can not be had in Japan to-day in silver prices cheaper than it could twenty years ago. Oil is cheaper, flour is cheaper, iron and steel are cheaper, and cotton is cheaper. And if these commodities are not dearer now than fifteen or twenty years ago in silver the Japanese have no cause for complaint, and the charge that Japan is suffering from the evils of a depreciated currency falls to the ground.

But even granting that the silver currency of Japan has depreciated to some slight extent, is that evil to be compared with the dangers of an appreciating currency? Provided a money is entirely trusted by the people and the credit institutions of a country are well organized; and provided, further, that the depreciation is neither excessive nor very sudden, is a general rise of prices due to this cause any cause of regret or complaint? Many economists have considered this point and have compared the results of a contraction with those of an expansion of the metallic currency of a country. I can recall the now classic words of the great philosopher and economist, David Hume, on this point, where he shows that a rise of prices due to this cause stimulates economic energy and enterprise. The economist, J. R. McCulloch, says that an increase of metallic currency in a country may be compared to rain after a long period of dry weather. Chevalier, one of the keenest economists of France, says that such a change will benefit those who live by current labour; and Jevons speaks in the strongest terms to the same effect. To this list of illustrious names I can add that of Gen. F. B. Walker, but lately deceased, and many others; but perhaps the best comparison of the effect of an appreciating with that of a slightly depreciating currency is made in the Reports of the Royal Commission on the Depression of Trade appointed in 1885. The Commission, after declaring their belief that there had been a continuous fall of prices since 1873 caused by the appreciation of the standard of value, state:—

"There can be little doubt that production and commercial enterprise are stimulated to a greater extent by rising than by falling prices. Whatever may be the inconveniences of a rise in prices, it certainly encourages a greater

activity in production and an extension of credit. When prices are rising, capital is constantly endeavouring to find new means of employment; and a spirit of enterprise animates all the classes engaged in commercial operations. In times when prices are falling, on the other hand, speculation, even of a perfectly legitimate kind, is checked and production tends to languish. Suppose a manufacturer to borrow a fixed sum at a fixed rate of interest. This he has to repay, whatever the result of his operations may be. Meanwhile, prices may fall. Not only does he buy his raw material at the higher price and sell his goods at the lower; but he has also to pay interest and repay principal on the higher value; and in addition to this, it is found that wages do not respond to such movements as quickly as the prices of commodities. The trader, too, is affected in the same way; he does not know what the value of his stock will be at the year's end, or what profit he will be able to secure upon his capital; and when trade is crippled, it is natural that production should halt."

The third point mentioned by the gold metallists of Japan as an argument in favour of a change of standards is certainly curious. They wish to render it easier for foreign capital to enter Japan and thus to foster Japanese industrial development. This reasoning has certainly an odd look. For many years the Japanese Government has made every effort to prevent foreign capital from entering the country. Foreigners have been prohibited by law from investing their capital in Japanese bonds (with a single exception), they have been prohibited by law from holding the shares of any railway or industrial enterprise, they have been forbidden the ownership of land or the means to carry on any business outside of certain specified places. Yet at the present moment these admirers of the gold standard suddenly urge as an objection to silver that it prevents the influx of foreign capital! Certainly this is a paradoxical complaint and smacks of inconsistency. If these partisans of foreign capital wish to stimulate the influx of that useful commodity into Japan, they might first insist upon trying to change the laws that now act as a barrier to any such movement. Furthermore, if it is an objection to the silver standard that it prevents Japan from selling her bonds abroad, the objection can easily be met by the simple guarantee of the Japanese Government that she will fix the gold price of exchange for bonds. But if Japan is really anxious to get at the reserves of European capital a still more economical method is at hand. The lowest rate of interest on Japanese bonds floated within the empire is 5 per cent. Were the Government, however, to raise a gold loan abroad it undoubtedly could float a foreign loan at 4 per cent. or possibly even less—thus providing a means of saving a considerable amount of interest to the State. On the other hand if foreign capitalists voluntarily invest their capital in Japanese industrial enterprises they will demand under any monetary system whatever a considerably higher rate of profit than they can secure at home, say 10 per cent. or 20 per cent. The very cheapest and most economical method would be to issue a foreign gold loan. In this way Japan would have all the advantages of a cheap market to borrow in without incurring any risks to her monetary standard. The gold party may indeed insist that Japan does run a risk in floating a foreign loan, because the silver market may still further decline and in that case Japan would suffer from the depreciation in exchange. But there is hardly much strength in this point, as it is more than likely that if Japan retains the present standard silver will not decline further in terms of gold. But even if such an event should occur, it is not so great a calamity to the finances of the country as an appreciating standard would be. An appreciating standard of value is a silent, yet pervading tax on every industrial enterprise and every form of productivity. Such a tax would be far more difficult to bear than a slight increase in the amount of a foreign payment. By assuming the gold standard, Japan in fact does not avoid the danger, which she is so anxious to

escape. She only hides the danger, but the real risk is much greater than though she suffered from a fall in exchange in repaying her indebtedness, because under the silver standard the prosperity of her industry, which is the true source of taxation, is unimpaired.

I fancy that few partisans of the gold standard in Japan would confess to be influenced by the argument I have last mentioned. The belief that gold is superior to silver or that silver is in some inscrutable way an inferior money to gold, they would urge, is a merely sentimental consideration and it would therefore have no place in a monetary scheme, which ought to be governed entirely by considerations of utility. But much as the partisans of the gold standard in Japan deny the charge, I am convinced that this sentimental, illusory, and I think temporary, belief in gold has much influence in certain high and authoritative quarters. It may be a half unconscious admiration; yet though not clear to their minds it is certainly one of the most powerful motives actuating them. In 1893, when the India mints were closed to silver, one of Japan's greatest statesmen, at present a confessed partisan of the gold standard, expressed great admiration of England's action in barring the further coinage of silver in India. Now that act was condemned by nearly every English authority on monetary questions. It was apologized for by nearly every English statesman at the time, and was defended by the Indian Government only on the ground that it was an experimental attempt to discover whether it was not the lesser of two great evils. Since then the closing of the Indian mints has proved confessedly a failure, and it finds scarcely a defender even in England herself. Again, only a few months ago when the political campaign was actively going on in America, another statesman of Japan wrote of the monetary system of the United States *i.e.* the gold standard, as "the sensible coinage measure now in force there." Now it is acknowledged by the overwhelming majority of both parties, Republicans as well as Democrats, that the present monetary system of the United States is not "a sensible coinage measure." The leaders of both parties wish to substitute bimetalism for the present system and the only point of difference between them is how to alter the present standard for a better one. It is clear to my own mind that when two statesmen of Japan go out of their way to express admiration for a system which is not acceptable even to the people who, to avoid a worse evil, make a virtue of necessity and therefore submit to it, they are under the influence of a delusion. This delusion may be defined as a species of mania for the yellow metal, almost as inexplicable and as potent as the craze for tulip bulbs in Holland in the 17th century.

This is not the first instance of a similar irrational admiration for a particular species of money. After the great discoveries of gold in California and Australia during the decade 1850-1860, there was almost, though not quite, a similar craze in favour of silver in Europe and America. About the middle of the decade an American writer contributed an article to the *North American Review*, in which he took a most alarmist view of the situation. He declared that the new gold would swamp the markets of Europe and America and he strongly urged measures to protect the small stock of silver still in existence. How this new supply of gold affected the imagination of certain European statesmen will be best shown by quoting what General Walker says in this latest work, *International Bimetalism*, p. 123:—"The nations of Europe," he says, "were prompt to take alarm at the menace to industry, finance, and even the social structure (from the rapid increase of gold supplied)." "Ten years ago," wrote M. Léon Faucher in 1852, "every one was frightened at the prospect of the depreciation of silver; during the last eighteen months it is the diminution in the price of gold that has been alarming the public." In June, 1850, Holland demonetized the gold florin piece and the guillonne. Portugal prohibited any gold from having current value, except English sovereigns. Belgium demonetized its gold

circulation; Russia prohibited the export of silver, as the metal likely to become the very stay and staff of the national existence. Austria, which was then on a basis of inconvertible paper, thought that the cheapening of gold offered a favourable opportunity to come to a metallic basis, and called the German states to meet in a monetary conference at Vienna. The other states feared the depreciating gold and insisted on the single silver standard. The most that Austria could do was to secure the concession of the coinage of gold crowns, as *trade pieces*.

"In some other countries shops sought to attract trade by offering to receive gold at par. M. de Lavelaye states that traders hung out the sign, 'L'or est reçu sans perte!' (Gold received with discount). 'Even in England,' wrote Chevalier, 'some persons have put forth the advice that the standard should be altered, and that silver should be substituted for gold. They ground their opinion, primarily, upon the plea of principle, in maintaining that, gold having ceased for an interval of time, which may be possibly rather long, to satisfy the essential condition of having a value relatively stable, it thereby loses its aptitude for the functions of money.' So respected an author as Mr. James MacLaren, author of the 'History of the Currency,' put forth a proposal that life insurance companies should be placed on a silver basis. Certain American Corporations in the same period, sought to safeguard themselves by similar arrangements; and to this day have the satisfaction of receiving, every month, a certain number of ounces of fine silver, paid in for rents under contracts then made. One English financier is quoted as declaring that gold would soon only be 'fit for the dust-pan.' Lately, while reading the life of Burton, the Great English traveller, I was interested in a long report he sent home to his Government on certain gold mines which he thought could be worked to great advantage by his countrymen. His report was answered by the noble lord and statesman then in power at the Foreign Office by the remark that 'England has too much gold already.' This was written about the time that the gold panic prevailed in Europe.

Very few people living to-day are unwilling to confess that this sudden admiration of silver in 1850-60 was a mistake, a mistake founded on an irrational desire for something which might become scarce. At present, however, the tables are turned and the universal mania is for gold. To-day Russia takes almost precisely the same measure against silver that she formerly took for it. Austria refuses to resume on a silver basis. One wonders to-day what the definition of money is. Economists tell us that it should be a convenient medium of exchange and a stable measure of value, but this definition by no means satisfies the partisans of the gold standard. 'What they seem to desiderate is the most valuable medium of exchange and an appreciating measure of value, and that must be of a yellow colour. The craze to-day for gold is paralleled by the mania for silver forty years ago—a mania that would have proved just as disastrous to the gold interests then, had it not been for the remarkable and courageous action of France in keeping open her mints to the coinage of both metals.

But the danger of the present craze is not over. It was begun by Germany in 1871 and since then it has drawn nearly every country of Europe and America into its vortex. Now Japan proposes to enter the charmed circle. Will she come out of it unscathed? I do not believe so. If Japan establishes herself on a gold standard her industrial development may not be injured at first. There will undoubtedly be wisecracks who will point out the unflinching prosperity of Japan. But as soon as the gold contracting movement again starts up Japan will suffer with the rest of the gold countries and then these wisecracks will not confess their error. They will attribute her depression and her disasters not to the true cause, but to bad banking, to bad crops, to the acts of God, or some equally remote reason. Japan, in spite of crop failures, tidal waves, destructive earthquakes, and a costly war is the only important commercial country in the world that has escaped panic or severe depression during the

past seven years. Is not that sufficient? Do the Japanese wish prosperity or do they wish gold? If the former then stick to the silver standard, if the latter then indulge in the prevailing madness of the hour.

There are those I know who talk much of the cost of production of gold and silver, who say that the demand for gold will be met by increased supplies, and that silver production having largely ceased in the world will no longer depreciate in value. But I cannot follow this reasoning. There is no regular cost of production of gold or of silver. The element of cost does not affect the value of the two metals. The use of gold as money gives it its substantial value. The use of silver as money, also gives it its substantial value. Diminish the use of one and its value declines in terms of the other. Augment the use of one and its value increases in terms of the other. The supplies of gold and silver are nearly constant. It is the demand that changes and is changing to-day, and the bulk of the demand for these two metals is derived from their function as a monetary standard. Abolish that function from one of the two metals and its value, that its valency, or relative strength, must droop. Strengthen that function and its relative weakness tends to disappear. This is the law of metallic money. Will Japan, in the midst of as great a measure of prosperity as, to-day under her system of production she can possibly enjoy, jeopardize her interests and voluntarily inflict a wound in her most vital part by overthrowing a standard that more than anything else has contributed to her prosperity and economic health, and invite a standard which has injured the interests of every country that has adopted it in the past twenty-five years? Science, commonsense, and prosperity lean to the side of silver; prejudice, vested interests, and calamity to the side of gold. Will Japan in the face of ten years of material success on a silver basis change to a standard that has, without exaggeration, inflicted and is still inflicting, countless miseries upon the world? For myself, I frankly confess I should like to see Japan accept the gold standard, if for no other reason than to have a prophecy fulfilled, or the pleasure of saying within a decade, "I told you so."

GARRETT DROPPERS.

YOKOHAMA JIZEN-KAI BIOIN.

In submitting this yearly report—from July 1895 to June 1896—we (the Committee) beg to offer our most grateful thanks for the many kind subscriptions and donations that have been so generously given in aid of the Negishi Jizen-kai Bioin. We are happy to state that the work has been most successful in helping the sick poor of Yokohama. Owing to unavoidable circumstances, Mrs. Okoshi has resigned her position as Secretary and Treasurer. Her place has been filled by Miss Masuda, 68, Honcho-dori, Shichome; Mrs. Minomiya, and Mrs. Satoyoshi, Treasurers; and Mrs. Konishi, and Mrs. Fukusawa, Secretaries. The honorary visiting doctors are Dr. Rokaku and Dr. Tokunaga. The house doctor is Dr. Takai.

The fees for paying patients including food and medical treatment are as follows:—

1st. Class 1 Yen per diem	6 Yen 50 sen week
2nd. Class 75 sen do	5 Yen do do
3rd. Class 50 sen do	3 Yen do do

The number of patients who have received treatment in the hospital, during the year, from June 30th, 1895, to June 30th, 1896, are as follows:—

Paying Indoor Patients.	Free Indoor Patients.
Left entirely cured	75
Left before recovery	22
Died	18
Remaining	1

Outdoor Patients	114
Total	452
Outdoor Patients	14
Total	73
Total	566
Total	86

The subscriptions and donations, were \$645.699; from which expenses were deducted of \$396.665, leaving a balance of \$249.034. To recapitulate:—Balance from

June 1895, and receipts from hospital \$581.164; receipts from in-patients, \$1,046.505; receipts from outdoor patients, \$123.495; donations and subscriptions, \$277.30; Mrs. Lindsley, \$50.00; Total receipts, \$2,078.464; Total expenditure, \$1,828.483; Balance in hand, \$249.98.1. Besides the above, the proceeds from the Charity Concert (June the 18th), for the benefit of the Hospital, after deducting sundry expenses, amounted to \$295.855, which has been added to the Hospital fund.

JAPANESE STUDENTS OF METALLURGY.

The *British Trade Journal* says:—"There are now in this country a number of Japanese experts appointed by their Government to study the iron and steel making processes and plant of the leading European and American works. They will leave shortly for the continent, to examine the principal iron and steel centres of France, Belgium, and Germany, and probably of Austria and Sweden, returning to this country to visit South Wales prior to their departure for Japan *via* the United States. At the end of their tour they are to decide upon the processes and plant best adapted for the production of steel and iron from Japanese coal and ore, the Japanese Government having voted 500,000*l.* for the establishment of works for this purpose near Shimonoseki. The building of these is to begin next autumn, and they will, when finished, have an output of 100,000 tons a year."

THE INVENTOR OF THE "JINRIKISHA."

We stated in a recent issue that a petition had been presented to the Diet, urging the propriety of recognising, by a grant of public money, the benefit bestowed on the nation by Izumi Yosaku, who was described in the petition as the inventor of the *jirikisha*. But subsequent investigations have shown that the real inventor was one Nishida Torajiro, and that Izumi's part was simply that of capitalist. A petition amended in the above sense has been presented to the House of Representatives by Mr. Seki, formerly editor of the *Nichi Nichi Shimbun*. If, as is alleged in *Young Japan*, the Rev. Mr. Goble, an American missionary, was the designer of the "one-man perambulator," it were well that his representatives or friends should offer some protest against the title set up on behalf of Nishida Torajiro.

EARTHQUAKES AND FIRE.

About ten minutes to six o'clock this morning a very long, and at one time very heavy, shock of earthquake was experienced in Yokohama. Starting with a slight undulatory motion, it gradually gathered energy, and then slackened towards its close. It must have lasted fully three minutes, but owing to the slight vertical movement that accompanied it, no damage of consequence was done. Clocks were stopped both on the Bluff and in the Settlement; pictures were thrown awry, and small ornaments displaced. A few minutes afterward the fire alarms started ringing, calling attention to a fire that had broken out at the rear of a coal seller's in Yoshihama-cho. This is a densely crowded and very poor district, the buildings there consisting principally of tenements of the humblest description. Some scores of these tiny homes were swept away before the fire was got under control. About nine o'clock two further shocks of earthquake were felt.

Mr. Rikayei, the Korean Ambassador, has received the First Class of Merit and the Grand Cordon of the Rising Sun; Mr. Kan Yeigen, the Fourth Class of Merit and the Single Cordon of the Rising Sun; and Mr. Kin Seiyen, the Fifth Class of Merit and the Double Cordon of the Rising Sun.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE POST OFFICE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If you can obtain the ear of the advisers of the Japanese Government, won't you please speak into it a suggestion that if they would dispense with even just one of their smallest gunboats, and spend the same money on the Postal service, it would be likely to cultivate a deal more loyalty and patriotism in the hearts of her subjects, and also increase the friendship and goodwill of resident foreigners. I think this year I shall keep a record of the postal disasters which occur to me, or to members of my household. I kept account of the letters lost, or delayed for weeks, coming to or going from this household, until there were six or eight some months ago, and the number has gone on steadily increasing since. Some of the most vexatious instances have been the following. One member of my household was, in the summer time, temporarily in a Chiba village, caring for her sick father, while herself far from well. To help strengthen her immediately for her arduous work, and because she could not get proper food, I sent her from Kobe (though I was coming myself in a few days to Tokyo), by what I thought the speediest way possible, a bottle of Murdoch's Food by Parcels Post, and at the same time a money order for twenty yen. Before it reached Chiba she had removed her father to a hospital in Tokyo. She made two special trips from Tokyo to Chiba to receive what I had sent her. The medicine had reached the post office, but they said they could not let her have it without a "hoshonin," but as she did not know a single individual in the town—her father having lived at some distance from the town and then only temporarily—she could not produce a "hoshonin," and on neither trip would they allow her to have the package, but inconsistently let her have the twenty yen without a "hoshonin." It was a full month after that before we got that package of medicine, after a series of letters to Kobe, Chiba, and Tokyo. It was finally received at Karuizawa, having cost us nearly three yen to get it, and my friend's great need for it had passed. I had about decided that the postal service of Japan needed Murdoch's Liquid Food itself. Over ninety-nine days ago a money order was sent from this place to Tokyo. The addressee never received it, through no fault of the sender. It was gathered, after considerable correspondence, that the money had not been drawn, showing probably that the money order had not been stolen, only lost. But no one at either end of the line has yet been able to get that money, which certainly does not belong to the Post Office, and was lost through no fault of the sender or would-be receiver, only by carelessness of the public servants—the post office. How much longer do you suppose we will have to wait to get what belongs to us? What possible right have the public servants to keep our money so long? They say something about a law, and 120 days elapsing in such a case, but where is the right to add annoyance and inconvenience to their own mistakes? The Tokyo main office was written to once telling of the numerous letters that had been lost in coming or going to this household. A bland answer came saying the writer thought it could not be as stated. Perhaps he did think so, but others knew it was true. The amount of precious time one has to waste, too, in sending off a money order or post parcel is annoying. I have waited an hour by the clock to get a simple package started. It is weighed and reweighed; books are consulted and consulted again. Consultations between some five or six persons are held, questions as to its contents are solemnly propounded, almost invariably has to be opened and the contents inspected, though I have never told them any lies as to the contents of a package. Sometimes I am told that a package will not go, then that it will, only to have it returned to me after some days. Apparently not knowing their business very well they are willing kindly to take no end of pains to study it up for our benefit, but they seem to forget it all before the next time, so that a trip to the post office nearly always means a long waste of time. Many hours, and some patience, have been wasted that way. Recently five Christmas packages were sent off, all exactly alike, of which fact the official was assured, but every one had to be opened. We have never lied to them, yet confidence in human—foreign or Japanese—veracity seems not to have come into their mental spectrum. I am writing now to see what will be the result concerning two money or-

der sent on the 22nd ult. to Tokyo and Yokohama respectively. Of one I have heard nothing, of the other it has been announced that it was received, but owing to a mistake on the part of the sender the money could not be drawn, on account of which it was returned to the sender, who, however, has seen nothing of it yet. To be sure these orders, like the previous one lost, were not registered, being not large; but is it a foregone conclusion that all orders not registered are stolen? A card sent last month to Yokohama took about ten days to reach its destination, which is only one of many such instances, beside the letters lost entirely this past year. I trust that this letter will reach you in time for some future number of your valuable paper, before the new treaties go into effect. I should be thankful to you for making these facts public.

Yours, &c.,

F.

TACOMA MAIL AGAIN.

TO THE EDITOR OF THE "JAPAN MAIL,"
SIR,—I have to-day received from Worcester, Mass., a letter via Tacoma post-marked at Worcester Jan. 11th, and at Tacoma, Jan. 19th!

In view of the facts that a letter from a country village in that same State, mailed one week later (January 18th), reached me via San Francisco just twelve days ago, and that the letter just received is an important business letter, it does seem as if the Tacoma mail might almost be called a "nuisance."

Yours, etc.,

L.

Kyoto, February 23rd, 1897.

MCKINLEY'S CABINET.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The last mail from America confirms my supposition, published in the *Mail* early in this month, that "Banker Gage," who is to be President McKinley's Secretary of the Treasury, is Lyman J. Gage, of Chicago. It is also true, as I supposed, that he has affiliated with the Republican party, except that he voted for Cleveland in 1892, and has been non-partisan in local politics. His appointment is hailed with general satisfaction.

The latest news about the Cabinet constructs it as follows:—

Secretary of State—John Sherman, of Ohio.
Secretary of the Treasury—Lyman J. Gage, of Illinois.
Secretary of War—Russell H. Alger, of Michigan.
Secretary of the Navy—John D. Long, of Massachusetts.
Secretary of the Interior—Joseph McKenna, of California.
Attorney-General—Nathan Goff, of West Virginia.
Postmaster-General—Henry C. Payne, of Wisconsin.
Secretary of Agriculture—James Wilson, of Iowa.

If any change is made in that list, it will probably be in the way of putting a New York man in place of Cornelius N. Bliss, who declined to accept a portfolio. In the above list, the East is in a minority; and the Middle West holds a remarkable preponderance.

UNCAS.

February 23rd, 1897.

"STUDENTEN LIEBE!"

When far removed from busy haunts of men,
And public gardens redolent of beer,
The knapsack in the hand that held the pen,
Then, German Maid, thy presence seems most near.

And as I pace thro' woodland and thro' glen,
The lark seems carolling thy name above—
The hills take up the echo and repeat,
"Margretel, oh! Margretel," girl I love.

When last I saw you at your daily work
Among the kitchen-pots and pans and tins,
The sun shone brightly on your golden hair,
And danced and sparkled on your curling pins!

I fondly think upon our parting hour:
You murmured softly, "Must it be so soon?"
Your little face looked pale and white—(with flour),

And in your hand you held a kitchen spoon.

I kissed you! yes I did Margretel, mine—
(And onions mingled with your sweeter breath).
That meat prepared by you was most divine!
(Though, to be sure the meat was done to death).

We're parted! but though parted are not sad—
You gave your heart to me, and I, instead,
Have left with you, my dear, the best I had:
—A little sugar heart, tied up with red!"

F. V. H.

MISS JACOB'S TESTIMONIAL.

The following letters have been handed to us for publication:—

Yokohama, February 19, 1897.

Dear Miss JACOB,—I have great pleasure in handing you enclosed, a cheque for \$2,500, the amount of which has been subscribed for by friends who have sympathized with you in the unwarranted and unfounded charge of murder, that was brought against you.

I trust that you will accept this as a mark of the great sympathy that the subscribers have felt on your behalf, and that it may help you to think kindly of Yokohama, notwithstanding the great trouble and mental anxiety to which you have been subjected.

It has been a source of great satisfaction to the subscribers, that Mr. Lowder has publicly acknowledged, that the charge which he brought against you was unfounded, and as your character has now been thoroughly cleared, I hope that your past trials may soon be forgotten.

I remain, yours faithfully,

F. S. JAMES,
for the subscribers.

No. 2 Bluff, February 19th, 1897.

Dear Mr. JAMES,—I have received your letter this afternoon and the cheque for \$2,500, subscribed for by friends and sympathizers.

Nothing I can write will express the deep gratitude I feel towards those who have acted so nobly, in coming forward spontaneously to aid me, in this time of necessity; and I accept with thankfulness this substantial proof of their sympathy and generosity.

The remembrance of the bitter experience through which I have passed, will lose much of its poignancy when I think of the kindly feeling evinced towards me by so many in Yokohama.

Again thanking all and each of those who have interested themselves on my behalf.

I am, yours very gratefully,

MARY E. JACOB.

CHRIST CHURCH, YOKOHAMA.

ANNUAL MEETING.

The annual meeting of seat-holders and members of Christ Church, Yokohama, was held on Friday afternoon at Keil's Building. There were present, Mr. J. A. Fraser, in the Chair; Messrs. J. Dodds, E. Whittall, E. J. Moss, and C. Guinness.

The reading of the minutes of the last general meeting was dispensed with at the suggestion of the Chairman; Mr. Guinness then moved, and Mr. Whittall seconded, the adoption of the Committee's report and accounts. This was carried. The Chairman next announced that the Committee would remain in office for another year, and that any vacancies that might occur during the interval would be filled up by them. The meeting then closed. Following is the report:—

REPORT.

In laying the report and accounts for the past year before the Seat-holders, it is satisfactory to be able to point to a balance, though a small one, in the hands of the Hon. Treas., on the 31st December.

Compared with the preceding year, there has been an increase in the receipts from Pew Rents and the Offertory of \$98.70 and \$161.14 respectively, but in spite of the slightly larger revenue from these two sources, there would still have been a deficit in the accounts, had it not been for assistance derived from external sources.

To obviate, if possible, the necessity for frequent appeals for aid, which are more or less of a tax on the time and patience of members of the congregation, the Trustees decided to revert at the beginning of the next year to the old scale of Pew Rents, and hope that an increased revenue may thus be obtained, sufficient to place the finances of the Church on a sounder footing.

The item on the revenue side of the Hon. Treas. account under the heading of offertories, amounting to \$1,340.67, includes the following special ones, viz. \$147.78 collected on the first Sunday in each month, and distributed by the Rev. E. C. Irvine during the year among poor people, in the shape of food, clothing, fuel, medicine, &c.; \$27.94 collected at the children's afternoon services and remitted to Dr. Barnado for the benefit of his Homes; \$36.81 contributed to the S. P. G. Mission to Japanese in Yokohama, and \$165.32 collected for the Tidal Wave Relief Fund in the month of June.

Deducting the total of the Special Offertories, viz., \$407.85, from the sum mentioned above, we have a balance of \$932.85, which is the amount of revenue derived by the Church from the offertory this past year, against \$771.68 in 1895.

In their last report the Committee stated that it was in contemplation to effect some improvement in the

side aisles, if it could be done, but they were obliged to give up the idea after receiving an unfavourable report from an architect who had made a careful examination of the structure, and who very kindly made no charge for his trouble.

Inability to carry out this proposed alteration did away with the necessity of any outlay on account of it, and in respect of repairs to Church building generally, there has been fortunately no occasion for any expenditure of consequence during the year.

The Services held during 1896 have amounted to 261, and in addition there have been 17 Baptisms, 11 Marriages, and 13 Funerals conducted in Christ Church. The number of Communicants present at Celebrations of Holy Communion was 677.

Mr. J. T. Griffin has presided at the organ during the year, and the thanks of the Committee and Congregation are due to him for the work he has done; also to the Honorary Organist, Miss Leach and to those Ladies and Gentlemen who have kindly assisted in the Choir.

The thanks of the Committee are accorded to Mrs. James Walter for her kindness in organizing a Concert in the month of October, the proceeds of which were divided equally between the Church, and the *Illis* fund. Those ladies and gentlemen who assisted at the Concert, are also cordially thanked by the Committee.

Some theatrical performances of a very successful nature, arranged by Mrs. G. K. Dinsdale, with the assistance of a number of Ladies and Gentlemen, members of the Congregation and others, were given at the close of the year, and the beginning of 1897, and the sum of \$670, resulting therefrom, was handed to the Hon. Treasurer of the Church, but as the payment was not made till January, it will only appear in the accounts for 1897. The Committee, however, take this opportunity of gratefully thanking Mrs. Dinsdale and those Ladies and Gentlemen who lent her their aid, for such a handsome contribution to the funds of the Church, due to their kind efforts on its behalf.

J. A. FRASER, Chairman.

JAMES WALTER,

E. WHITTALL,

JAMES DODDS,

E. J. MOSS,

KENNETH WILSON, Hon. Treasurer.

I have examined the Accounts with Vouchers, and found them correct.

J. A. FRASER.

THE HONGKONG FIRE INSURANCE COMPANY, LIMITED.

The following is the report for presentation to the shareholders at the Twenty-eighth Ordinary General Meeting, to be held at the offices of the General Managers, (Messrs. Jardine, Matheson & Co.) on Friday, the 26th inst.:—

The general managers and consulting committee have pleasure in laying before the shareholders the twenty-eighth annual report of the company.

1895 ACCOUNT.—This account, which is now finally closed, shows a profit of \$216,879.93, which sum, with the approval of the consulting committee, it is proposed to deal with as follows:—

Bonus to contributing shareholders, \$19,191.93; addition to reserve fund, \$21,688.00; dividend of \$22 per share, \$176,000.00—\$216,879.93.

1896 ACCOUNT.—The balance at credit of this account is \$304,817.76.

MORTGAGES.—The general managers and consulting committee are satisfied, from the valuations made by the company's surveyors in Hongkong and Shanghai, that the properties held by the company are good for the advances made.

CONSULTING COMMITTEE.—Mr. S. G. Bird having left the Colony, Mr. F. Maitland was nominated to the vacant seat, and his appointment requires to be confirmed. The present members, Messrs. Chater, Lewis, Ezekiel, Ross, and Maitland, retire, but offer themselves for re-election.

AUDITORS.—The Accounts have been audited by Messrs. Fullerton Henderson and A. Coxon, whose re-election is recommended.

BALANCE SHEET, 31ST DECEMBER, 1896.

LIABILITIES.—Dr.	
Capital Subscribed...	\$5,000,000.00

TREATY OF COMMERCE AND NAVIGATION BETWEEN JAPAN AND THE REPUBLIC OF PERU.

SIGNED AT WASHINGTON, 20TH DAY OF THE 3RD MONTH, 28TH YEAR OF MEIJI.

His Majesty the Emperor of Japan and His Excellency the President of the Republic of Peru, being equally desirous of maintaining the relations of good understanding which happily exist between them, by extending the intercourse between their respective States, and being convinced that this object cannot better be accomplished than by revising the Treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon principles of equity and mutual benefit, and, for that purpose, have named as their Plenipotentiaries, that is to say: His Majesty the Emperor of Japan, Jushii Shinichiro Kurino, of the Order of the Sacred Treasure and of the Fourth Class, and His Envoy Extraordinary and Minister Plenipotentiary near the Government of the United States of America, and His Excellency the President of the Republic of Peru, Don José M. Yrigoyen, *Chargé d'Affaires* of the Republic of Peru in Washington; who, after having communicated to each other their Full Powers, found

to be in good and due form, have agreed upon and concluded the following Articles:—

Art. I.—The subjects or citizens of the two High Contracting Parties shall have full liberty to enter, travel, or reside in any part of the territories of the other Contracting Party, and shall enjoy full and perfect protection for their persons and property.

They shall have free and easy access to the Courts of Justice in pursuit and defence of their rights; they shall be at liberty equally with native subjects or citizens to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such Courts, and in all other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native subjects or citizens.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will or otherwise, and the disposal of property of any sort and in any manner whatsoever which they may lawfully acquire, the subjects or citizens of each Contracting Party shall enjoy in the territories of the other the same privileges, and rights, and shall be subject to no higher imposts or charges in these respects than native subjects or citizens, or subjects or citizens of the most favoured nation. The subjects or citizens of each of the Contracting Parties shall enjoy in the territories of the other entire liberty of conscience, and, subject to the laws, ordinances, and regulations, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled, under any pretext whatsoever, to pay any charges or taxes other or higher than those that are, or may be paid by native subjects or citizens, or subjects or citizens of the most favoured nation.

The subjects or citizens of either of the Contracting Parties residing in the territories of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, national guard, or militia; from all contributions imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

Art. II.—There shall be reciprocal freedom of commerce and navigation between the territories of the two High Contracting Parties.

The subjects or citizens of each of the Contracting Parties may trade in any part of the territories of the other by wholesale or retail in all kinds of produce, manufactures, and merchandise of lawful commerce, either in person or by agents, singly or in partnerships with foreigners or native subjects or citizens; and they may there own or hire and occupy houses, manufactories, warehouses, shops and premises and lease land for residential and commercial purposes, conforming themselves to the laws, police and customs regulations of the country like native subjects or citizens.

They shall have liberty freely to come with their ships and cargoes to all places, ports, and rivers in the territories of the other, which are or may be opened to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native subjects or citizens or subjects or citizens of the most favoured nation, without having to pay taxes, imposts or duties, of whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, corporations, or establishments of any kind, other or greater than those paid by native subjects or citizens or subjects or citizens of the most favoured nation.

It is, however, understood that the stipulations contained in this and the preceding Article do not in any way affect the special laws, ordinances, and regulations with regard to trade, police and public security in force in each of the two countries and applicable to all foreigners in general.

Art. III.—The dwellings, manufactories, warehouses, and shops of the subjects or citizens of each of the High Contracting Parties in the territories of the other, and all premises appertaining thereto destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to, such dwelling and premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the laws, ordinances and regulations for subjects of the country.

Art. IV.—No other or higher duties shall be imposed on the importation into Peru of any article, the produce or manufacture of the territories of His Majesty the Emperor of Japan, from whatever place arriving; and no other or higher duties shall be imposed on the importation into the territories of His Majesty the Emperor of

Japan of any article, the produce or manufacture of Peru, from whatever place arriving than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any article, the produce or manufacture of the territories of either of the High Contracting Parties, into the territories of the other, from whatever place arriving, which shall not equally extend to the importation of the like article, being the produce or manufacture of any other country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons, or of cattle, or of plants useful to agriculture.

Art. V.—No other or higher duties or charges shall be imposed in the territories of either of the High Contracting Parties on the exportation of any article to the territories of the other than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the territories of either of the two Contracting Parties to the territories of the other which shall not equally extend to the exportation of the like article to any other country.

Art. VI.—The subjects or citizens of each of the High Contracting Parties shall enjoy in the territories of the other exemption from all transit duties, and a perfect equality of treatment with native subjects or citizens in all that relates to warehousing, bounties, facilities, and drawbacks.

Art. VII.—All articles which are or may be legally imported into the ports of the territories of His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in Peruvian vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels; and, reciprocally, all articles which are or may be legally imported into the ports of Peru in Peruvian vessels may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Peruvian vessels. Such reciprocity of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place.

In the same manner, there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid, and the same bounties and drawbacks allowed, in the territories of either of the High Contracting Parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese vessels or in Peruvian vessels, and whatever may be the place of destination, whether a port of either of the High Contracting Parties or of any third Power.

Art. VIII.—No duties of tonnage, harbour, pilotage, light-house, quarantine, or other similar or corresponding duties of whatever nature, or under whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, corporations, or establishments of any kind, shall be imposed in the ports of the territories of either country upon the vessels of the other country which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

Art. IX.—In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the territories of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the High Contracting Parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

Art. X.—The coasting trade of both the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the laws, ordinances, and regulations of Japan and of Peru respectively. It is, however, understood that Japanese subjects in the territories of Peru and Peruvian citizens in the territories of His Majesty the Emperor of Japan, shall enjoy in this respect the rights which are, or may be, granted under such laws, ordinances, and regulations to the subjects or citizens of any other country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the territories of Peru and a Peruvian vessel laden in a foreign country with cargo destined for two or more ports in the territories of His Majesty the Emperor of Japan, may discharge a portion of her cargo at one port, and continue her voyage to the other ports of destination where foreign trade

is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the laws and customs regulations of the two countries.

Art. XI.—Any ship-of-war or merchant vessel of either of the High Contracting Parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again, without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his cargo in order to defray the expenses, he shall be bound to conform to the Regulations and Tariffs of the place to which he may have come. If any ship-of-war or merchant vessel of one of the High Contracting Parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the district of the occurrence, or, if there be no such Consular officers, they shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of Peru shall take place in accordance with the laws of Peru; and reciprocally, all measures of salvage relative to Peruvian vessels wrecked or cast on shore in the territorial waters of His Majesty the Emperor of Japan, shall take place in accordance with the laws, ordinances, and regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereto, and all goods and merchandise saved therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents, when claimed by them. If such owners or agents are not on the spot, the same shall be delivered to the respective Consul-General, Consul, Vice-Consul, or Consular Agents upon being claimed by them within the period fixed by the laws, ordinances, and regulations of the country, and such Consular officers, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all the duties of the Customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When a ship or vessel belonging to the subjects or citizens of one of the High Contracting Parties is stranded or wrecked in the territories of the other, the respective Consul-General, Consul, Vice-Consul, and Consular Agents shall be authorized, in case the owner or master, or other agent of the owner, is not present, to lend their official assistance in order to afford the necessary assistance to the subjects or citizens of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

Art. XII.—All vessels which, according to Japanese law, are to be deemed Japanese vessels, and all vessels which, according to Peruvian law, are to be deemed Peruvian vessels, shall, for the purposes of this Treaty, be deemed Japanese and Peruvian vessels respectively.

Art. XIII.—If any seaman should desert from any vessel of war or merchant ship belonging to either of the High Contracting Parties within the territories of the other, the local authorities shall be bound to give every assistance in their power for the apprehension and handing over of such deserter, on application to that effect being made to them by the Consul of the country to which the vessel or ship of the deserter may belong, or by the deputy or representative of the Consul, accompanied by proof from the ships' roll or other public document that the person so demanded is one of the crew of the vessel from which he is alleged to have deserted.

It is understood that this stipulation shall not apply to the subjects or citizens of the country where the desertion takes place.

Art. XIV.—The High Contracting Parties agree that, in all that concerns commerce and navigation, any privilege, favour, or immunity which either High Contracting Party has actually granted, or may hereafter grant, to the Government, ship, subjects, or citizens of any other State shall be extended to the Government, ships, subjects or citizens of the other High Contracting Party, gratuitously, if the concession in favour of that other State shall have been gratuitous, and upon the same or equivalent

conditions if the concession shall have been conditional, it being their intention that the trade and navigation of each country shall be placed, in all respects, by the other upon the footing of the most favoured nation.

Art. XV.—Each of the High Contracting Parties may appoint Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents, in all the ports, cities, and places of the other, except in those where it may not be convenient to recognize such officers.

This exception, however, shall not be made in regard to one of the High Contracting Parties without being made likewise in regard to every other Power.

The Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents may exercise all functions, and shall enjoy all privileges, exemptions and immunities which are, or may hereafter be, granted to Consular officers of the most favoured nation.

Art. XVI.—The subjects or citizens of each of the High Contracting Parties shall enjoy in the territories of the other the same protection as native subjects or citizens in regard to patents, trademarks, and designs, upon fulfilment of the formalities prescribed by law.

Art. XVII.—The present Treaty shall, from the date it comes into force, be substituted in place of the Preliminary Treaty of Peace, Friendship, Commerce, and Navigation concluded on the 21st day of the 8th month of the 6th year of Meiji, corresponding to the 21st day of August, 1873, and all Arrangements and Agreements subsidiary thereto concluded or existing between the High Contracting Parties, and from the same date the said Treaty and all such Arrangements and Agreements shall cease to be binding, and, in consequence, the jurisdiction then exercised by Peruvian Courts in Japan and all the exceptional privileges, exemptions and immunities then enjoyed by citizens of Peru as a part of, or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

Art. XVIII.—The present Treaty shall go into operation upon the 17th day of July, 1899, and shall remain in force for the period of seven years from that date.

Either Contracting Party shall have the right, at any time after six years shall have elapsed from the date this Treaty takes effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice shall have been given this Treaty shall wholly cease and determine.

Art. XIX.—The present Treaty shall be ratified by His Majesty the Emperor of Japan and by His Excellency the President of the Republic of Peru after being approved by the Peruvian Congress, and the ratifications thereof shall be exchanged at Washington as soon as possible, and not later than eight months after its signature.

In witness thereof, the respective Plenipotentiaries have signed the present Treaty in duplicate and have thereunto affixed their seals.

Done at the City of Washington the 20th day of the third month of the 28th year of Meiji, corresponding to the 20th day of March in the Eighteen hundred and ninety-fifth year of the Christian Era.

(Signed) SHINICHIRO KURINO [L.S.]
His Imperial Japanese Majesty's Envoy
Extraordinary and Minister
Plenipotentiary.
JOSÉ M. YRIGORÉN [L.S.]
Chargé d'Affaires of the Republic of Peru.
PROTOCOL.

The Government of His Majesty the Emperor of Japan and the Government of Peru, in view of the desire of the former Power to bring a new tariff into operation before the Treaty of Commerce and Navigation signed this day takes effect, have, through their respective Plenipotentiaries, agreed upon the following stipulations:—

Article V. of the Treaty of the 21st day of the 8th month of the 6th year of Meiji, corresponding to the 21st day of August, 1873, shall, from the date of the exchange of the ratifications of the Treaty signed this day, cease to be binding, and thereupon the Government of His Majesty the Emperor of Japan shall be at full liberty, equally with the Government of Peru, to fix the rates of import and export duties in respect of the commerce passing between the two countries.

It is, however, understood that no other or higher duties shall be imposed in either country upon goods or merchandise imported from, or exported to, the other than such as are, or may hereafter be imposed upon the like articles imported from, or exported to, the most favoured nation.

This Protocol shall be submitted to the two Contracting Parties at the same time as the Treaty signed this day, and when the said Treaty is ratified the agreement contained in this Protocol shall also equally be considered as approved, without the necessity of further formal ratification.

In witness whereof the respective Plenipotentiaries have signed the present Protocol and have thereunto affixed their seals.

Done at the City of Washington, the 20th day of the 3rd month of the 28th year of Meiji, corresponding to the 20th day of March in the Eighteen hundred and ninety-fifth year of the Christian Era.

(Signed.) SHINICHIRO KURINO [L.S.]
His Imperial Japanese Majesty's
Envoy Extraordinary and
Minister Plenipotentiary.
JOSÉ M. YRIGORÉN [L.S.]
Chargé d'Affaires of the Republic of Peru.

LETTER FROM FORMOSA.

(FROM OUR SPECIAL CORRESPONDENT.)

Taipeifu, Formosa, Feb. 10th.

The rainy season has at last arrived in earnest, for we have had continual rain during the last ten days, which, if it does make travelling as well as outdoor exercise impossible, brings joy to the farmer who with its aid can make possible a good spring crop. The farmer had much to contend with last year, not the least of his troubles the host of bandits that infest the island.

Following the plague, which has now wholly disappeared, comes the cattle pest which is even of more concern to the Chinese in general. It has necessitated the Japanese issuing a regulation calling for cattle inspection to avoid the markets being filled with diseased meat. The Chinese have consequently come forward with their usual howl and taken every means to defeat the ordinance. Some time ago, the Government constructed a fine covered market where all Chinese could obtain space if they desired. It was with the intention of freeing the principal street in Taipeifu from the host of Chinese who were accustomed to squat with their pigs, chickens, fish, and vegetables and all sorts of movable stands and small sheds which they construct with great speed in a most mysterious way from an innocent bundle containing a few bamboo rods, pieces of board, and some cloth, to such an extent that the street was actually useless as a thoroughfare. To avoid the market being filled by a class of unfortunates who might think it good shelter, a small fee of a few *sen* a day was required from each dealer, when "lo and behold" after the land had been secured and substantial buildings erected at no small cost, the Chinese refused to a man to enter it unless the demand for a fee—which in reality was scarcely large enough to pay for the up-keep of the place—was rescinded. The study of the history of Hongkong might be of assistance to the Japanese, as I note, in a sketch on that subject, that Hongkong had for several years the same difficulties, including the pest of bandits.

The police are unfortunately not affording the Government the assistance to be expected. Although they are few in numbers, it does seem that the entrance of an armed body of bandits and the kidnapping of the son of a rich man from a house on one of the principal streets of Twatutia, distant perhaps eight blocks from the wall of the capital city, might at least have been known to the police and the alarm given before the morning. A few days ago, a police officer having occasion to be displeased with the conduct of a small boy attached to one of the foreign hongs, the comrade of that establishment called the police officer to explain to him the difficulty, whereupon the latter, probably displeased with the interference, caught the comrade by the queue, kicked him, and then striking at him, broke a finger of the unfortunate Chinese while he was trying to guard himself. It is hoped that the Government will investigate the case and punish the officer as he deserves. It seems that the Government at Tokio would avoid much trouble if they would raise the pay of the Formosa officers a notch and then select the 1,500 police which the Governor-General has called for more carefully.

The following appointments have been made at the Admiralty:—Lieutenant R. M. T. Stephens, to the *Iphigenia*, Jan. 19; Sub-Lieutenant the Hon. H. Meade, to the *Iphigenia*, to date Jan. 19; Assistant Clerks H. A. Madge and E. P. Jones, to the *Centurion*, to date Jan. 15.

INTERPORT FOOTBALL MATCH.

YOKOHAMA WINS BY 4 GOALS TO NOTHING.

Another Interport football match has been played between Yokohama and Kobe, and the northern port comes off victorious in the encounter by four goals to *nil*. Considering the low ebb to which football had fallen in Yokohama this season, such a result is certainly extraordinary. Yet it only proves the more conclusively the truth of the old adage—it is always the unexpected that happens. Kobe selected at first a splendid team: then Hutton was hurt and was placed *hors de combat*; next Scrymgeour found it impossible to get away; and a fresh combination had to be arranged, until finally, Friday, Feb. 19th, arrived and the team was not definitely selected. In the afternoon of that day, Mr. Lightfoot managed to get his men together, but had still to wait on the off chance of Wilkinson arriving in time at noon on Saturday. If Kobe suffered in this manner, Yokohama was not much better off, Mair being laid up at the last moment by a kick, while Edwards, the Captain of Football, has had to take to his bed. But at the eleventh hour, Mr. B. Hyde Pearson came to the rescue and took the affair in hand, and he finally arranged a team. So much for the teams. Now we have to turn to another element of discomfiture. Monday, Tuesday, and Wednesday were balmy, spring-like days in Yokohama, and hopes ran high that genial weather would favour the Interport Match. But man proposes. Thursday opened with a chill north wind, and by Friday noon snow was falling. Hour after hour went by and still the fleecy particles fell, until by 6 o'clock on Saturday morning a record fall for Yokohama was experienced. Nothing daunted, the Committee of the Yokohama Cricket and Athletic Club determined to play the match. Here we must join issue with the Honorary Secretary. Snow had ceased to fall before breakfast, and if men had been set to work to clear the ground at 9 o'clock, the field might have been decently fit to play on at 2.30 p.m. But, with the exception of the centre of the cricket field—the pitch in fact—nothing was done, the excuse put forward being that no coolies were to be had. How sufficient such an explanation is we leave onlookers to determine. The result of it all was that at 2.30 o'clock, when the players and spectators began to assemble, the field was some three inches deep in snow, while big balls of the same lay scattered here and there where the *mon-ban* and his men had left them at the midday recess. With right good-will everyone set to work to roll the snow away, and by 3.30 p.m. a fairly clear field was made. But at each end, and particularly at the corners, the snow lay deep, while along the lines were piled up huge mounds of rolled or carted snow. Tamamura, the photographer, was asked to photograph the field, and we hope for the sake of historical record that he succeeded in obtaining a satisfactory picture. Meanwhile, the teams were duly photographed against the rustic hut near the Pavilion, in accordance with time honoured custom. They were:—

YOKOHAMA.

GOAL.

F. J. Hall.

BACKS.

G. C. Allcock. M. F. Stephens.

HALF BACKS.

W. B. Mason. H. Pinckney. W. Goddard.

FORWARDS.

Right wing. Centre. Left wing.
A. M. Watt. B. Hyde Pearson. H. S. Goddard.
E. J. Libeaud. W. N. Page.

GOAL.

F. L. Marshall.

BACKS.

C. H. Lightfoot. W. Braess.

HALF BACKS.

J. Abell. W. Kerr. W. Meek.

FORWARDS.

Right wing. Centre. Left wing.
E. T. Bethell. E. H. Summers. A. W. Crombie.
F. Tavernier. F. E. Wilkinson.

By this time a goodly crowd had gathered on the ground, the schoolboys amongst them occupying themselves with a rare good game of "I am king of the castle," on top of the various snow mounds. Snowballing also was generally indulged in by everybody. Mrs. B. Hyde Pearson and Mrs. C. H. Lightfoot, wives of the respective Captains, faced the inclement elements; and Mrs. Vladimir Blad watched the encounter from the snug eminence of a dog-cart, alongside her genial husband. With these exceptions the crowd of partisans was

composed solely of representatives of the masculine gender.

Soon after 3.30 p.m. the game started, Summers kicking off for Kobe. The air was absolutely still, not a breath of wind stirring, while solitary snowflakes stole down at intervals. At once Yokohama secured the leather and carried it down the ground, Libeaud dribbling prettily. Wilkinson managed to secure the ball from a scrimmage in front of goal, and the leather quickly traversed the ground. Unfortunately, Watt, of Yokohama, was given "off-side," and in the sequel the leather returned to the centre of the field. Soon afterwards, a rush by the Yokohama forwards was saved by Marshall, and within a minute "hands" was called by Pearson off Lightfoot. The Umpire, Mr. F. E. White, did not heed, and the game continued. Then Wilkinson woke up, and indulging in a piece of tricky play—such as he alone can accomplish—fooled the Yokohama wing completely. But Pinckney was awaiting him, and the sphere was soon worked back. This time the other wing got the brunt of the play, and Bethell secured the ball, only to be repulsed by Allcock, who passed to Libeaud. The latter made a rush down the ground, but was finely stopped by Marshall, who came out of his goal to meet him. Libeaud then made a shot at goal: Marshall threw the ball out and Libeaud punted, only to send the leather over the bar. The crowd cheered thinking that a point had been scored. Soon afterwards, Goddard made a shot at goal, but it went wide. Then play was transferred to the centre of the field and some pretty tactics were indulged in by Crombie and Meek, Watt and Allcock. In the sequel, hands were given off Libeaud, and Kobe threw in. Wilkinson kicked it out of touch and Yokohama obtained a throw in. Then the home eleven worked the leather down the ground again and at 10 minutes past 4 o'clock, H. Goddard—who received the ball from Pearson—made the first score of the game from his wing—Yokohama 1, Kobe *nil*. On restarting, Yokohama at once rushed the ball down into the Kobe territory, but were beaten back. Then Kobe obtained the sphere and pressed hard. Allcock relieved, but within a few seconds Bethell made a fine run down the side: and shot for goal, but the ball went wide. The Yokohama back division—Stephens and Allcock—were invincible and to their steady, cool play much of the success of the match is due. Kobe obtained one or two throws in, but did not make much of them, the ball being very heavy and clogged with snow, while in the corner play it was greatly a game of "mud-larks." Just before half-time, Yokohama collared the ball, and rushed it down the ground. Pearson passed to Goddard and the latter shot at goal. It passed over, then Kobe obtained "hands" off Goddard, but nothing resulted. Some pretty play among the forwards followed, Goddard playing capitally. Kerr made the best of the slippery ground, but his long kicks were of no avail, the ball being only too swiftly returned. Lightfoot was also a tower of strength, but luck did not follow his efforts. At half-time the game stood—Yokohama, 1 goal; Kobe, *nil*.

Some changes were made in the Kobe eleven on restarting. Lightfoot coming up to centre, Meek, taking his place, and Summers taking Meek's position. Directly the ball was set rolling again Yokohama pursued their usual tactics, rushing the ball at once into the visitors' territory, Libeaud and Watt—who played a capital game—passing very prettily. From now on, Yokohama had the better of the game—which they certainly had not in the first half—and, although inferior to Kobe in passing and dribbling, managed to maintain a better combination. Pearson seemed to be able to keep his men more together than did the Kobe Captain, Crombie, perhaps, being the biggest sinner in this respect, though allowance must be made for him as a few minutes after commencing play he received a nasty kick on the knee, while Wilkinson appeared disinclined after one "tuck-up," to risk falls on the slippery snow. Yet every now and then Kobe woke up, and the excitement grew intense as they worked the ball, time and again, down to the half-back line, only to be repulsed by Stephens and Allcock, the ever-wary. Abel played a capital game in the second half. Once the defence was broken and Hall had all he could do to save; but again W. Goddard cleared the lines at a critical moment. Page, who played a plucky game all through, once secured the ball and made a shot at goal. His effort failed, owing greatly to the snow, and the ball ran along the top of the bar, falling outside. Pearson, within a couple of minutes, overshot the mark, and then again play became general. At 34 minutes past 4 o'clock, Pearson secured the second goal for Yokohama—Yokohama, 2 goals; Kobe, *nil*. On resuming, the home team again rushed for the visitors' lines and Page made a shot at scoring. The ball rebound-

ed off Marshall on to Pearson, who kicked it through. This was at 36 minutes past four. Next, Kobe secured the sphere and made a hot charge at Yokohama's goal, only to send the leather behind. Lightfoot then pulled his men together and a strong attack was made, the combination being the best shown during the whole match. But Kobe was wearied of the continual trampling over the snow, and Yokohama, perhaps, more than usually elated at the unexpected success that the gods had decreed, "bucked-up" in a splendid rally, and the visitors failed to score. At 4.44 p.m. Goddard scored the fourth and the last goal of the match, thus leaving Yokohama victorious by four goals to nothing.

Our description of the game will give a sufficient indication of the players who bore the burden of the fight and we need not particularise further. All we wish is better luck to Kobe next time: and may Yokohama always play as gallant a game.

The Umpire was Mr. F. E. White, the old Hurstpierpoint boy, and Interport player; Mr. K. F. Crawford (Clifton), and Mr. H. R. Mair (Winchester), being the linesmen.

In the evening the teams sat down to dinner at Wright's Hotel, under the presidency of Mr. J. P. Mollison. The repast was capitally served and the "smoker" that followed very enjoyable.

A SHINTO FUNERAL.

Among the advisers who in this generation have surrounded the throne of Japan there have been none more valued by both Emperor and people, none who, by wise counsels and devoted loyalty, have contributed more to raise the ancient empire to the position which it occupies to-day, than Prince Taruhito Arisugawa, whose death caused universal mourning throughout the land.

A man of high principle, and steadfast, upright, honest character, he joined to the ardent patriotism which is a Japanese characteristic a warm personal affection for the Emperor; and by his caution and wisdom he was a constant influence for good in all state affairs. A prince of the blood, but by birth no nearer than a fourth cousin of the Emperor, the Japanese custom of adoption gave him the position of uncle to the latter, and he was heir presumptive to the throne next in succession to the crown prince.

When, at the beginning of the war with China, Hiroshima was fixed on as the head-quarters of the army, he accompanied the Emperor thither and, as chief of the general staff, was ever in his place at the counsels of war, and working indefatigably for the success of the plans which his wisdom did so much to formulate.

If we reckon, as we surely must do, among the brave men who have given their lives for their country those whom disease has stricken down while they were leading armies to victory, Prince Arisugawa's name must be included in the number. The staff at Hiroshima, following in that the example set them by the Emperor, kept constantly before their minds the hardships and privations endured by the troops, and regulated their own lives by a standard which they strove to approximate to that which was possible for their soldiers.

Prince Arisugawa was sixty-one; not an old man, but still past the age when such exertions and privations can be undergone with impunity, and there appears to be no doubt that when, in December, he was attacked by typhoid fever, the strain to which his constitution had been subjected during the preceding months had so far undermined it as to make recovery impossible. He was at once moved from Hiroshima to his summer palace at Maiko, near Kobe, and there he was tenderly nursed by his wife and by his daughter-in-law, the wife of his adopted son (and younger brother) Prince Takehito Arisugawa, until the end came.

Prince Takehito, who is hardly more than half the age of the late Prince, young enough to be in reality his son, holds the rank of commander in the navy, and was at his post on board the *Matsushima Kan*, Admiral Ito's flagship, off Port Arthur. Though he had been ordered home by the Emperor, he arrived too late. The body had been embalmed in order that he might look once more on his father's face, the funeral ceremonies delayed that he might conduct them, and so he, with the princesses and their suite, brought their dead home to his palace in Tokyo.

The long, smooth, easy journey by the well-worked railway, forces our thoughts back by contrast, though it is but a short way back as to time, and suggests to us what, thirty or forty years ago, would have been the magnificent progress of this dead prince, borne to his burial up the Tokaido.

The special train was timed to reach Tokyo at one o'clock in the morning, so as to avoid any

publicity; and not till the next day, when the body lay in the Arisugawa palace, was the official announcement of the death made. The coffin was placed in an inner chamber, and there came the grand master of ceremonies, bearing gifts for the dead, and a last message from the Emperor. This is a touching and very ancient custom. The body of the dead prince lay robed in the old traditional court dress of richest white, with his mourning family round him. First the gifts, rolls of red and white silk, were presented; then, standing in front of the coffin, the messenger read, or rather intoned, the last greetings of his master:—

We wish to express to you, Taruhito, our sense of our many and great obligations to you for your many and great services to us and to our country during your whole life. At the time of the great restoration you took an active part, and by your wise counsel, assisted us greatly. During the present war you have again done us great and good service by your assistance in our deliberations. You have been a pillar of support to us. To our infinite sorrow you have not lived to see the end of the war. Unfortunately it has pleased God to remove you from us, from your country and from your family.

The scene was profoundly touching and impressive, never to be forgotten by those who witnessed it. The prince was of the Shinto religion, the recognised state religion of Japan, one characteristic of which is a dignified simplicity of form, colour, and ceremonial. There was no public lying in state. The Emperor's gifts were placed in the coffin of pure white wood, which was then closed, and watched day and night by all the members of the family and by Shinto priests, who, twice a day, said "masses" for the repose of the soul of the dead prince. While this solemn watch was being kept in the inner chamber, crowds came to express their condolences to the living and their respect for the dead, inscribing their names in a volume laid out in the "genka" or entrance hall. The whole city was in mourning. In the streets, lately so gay with decorations for the new year, no flag or lantern was to be seen. All music was strictly forbidden. The accustomed tinkle of the *koto* behind the paper slides of the houses was not heard; nor the notes of the piano from the schools and homes where young girls labour with patient diligence to add the graces and accomplishments of the West to those which are their birthright; nor the twang of the *samisen*, played at the street corners by old women with an *air faux* of poverty about them, which is more potent than their strains to charm a *sen* or two from passers-by. All were silent, and, as is so often the case, their absence seemed more noticeable than their presence had ever been.

The funeral was a national one, twenty thousand dollars having been voted by the Diet for the purpose. The ceremonial to be observed was arranged by a special commission appointed by the Emperor. The imperial burying-ground is more than four miles distant from the Arisugawa palace, and early in the morning the entire route was packed on either side with crowds so quiet and orderly that the gendarmes and police who were there to keep the road did not seem to find any exercise of control necessary.

Tora no-mon and Sakurada-misuke are two of the many gates guarding bridges over the moats, which are the great distinctive features of Tokyo. In the wide, open space between these two gates the crowd was perhaps greatest, for here the procession may be said to have been formed. The palace stood at a little distance only, halfway up a steep hill, at the foot of which is the open space just mentioned. Many carriages and *jinrikishas* waited below, and, with more than one regiment of soldiers, filled the centre of the space. Crowded round these, save where the road was kept free for the passing of the procession, were those who had come to see the great man borne to his burial.

It was an ideal winter morning, the clear frosty air and the sunshine combining to make all bright things brighter and to light up even the most sombre. Men, tall on their high wooden *geta*, held up their children on their shoulders. Girls with brilliant holiday sashes, and with elaborate *kansashi* in their hair, where whole scenes of naval and military glory are condensed on the top of a hairpin, flitted about hand in hand, too shy to push, looking in vain for a peep-hole or a coin of vantage. Here, a small boy in a *happi*, bearing in one hand the flag of his country in miniature, and in the other a huge tin trumpet, is hastily checked by his guardians at the moment when he is beginning an inappropriate and unlawful blast on his instrument. There, a very small girl, smiling patiently among the skirts and legs which threaten to smother her and the smaller and equally patient baby bound on her back, is rescued and pulled into a position of some advantage by a very raw recruit who seems to have hardly settled into his unaccustomed uniform.

The *jinrikisha* men are there in crowds, standing up in their vehicles, which are drawn up close under the brick wall which surrounds the buildings of the Diet. They are mostly elderly and broken-down men, for their stronger fellows are with the armies. Some more daring spirits among the crowd have climbed to the top of the wall; but they are young and something more than thoughtless, for any such over-looking is contrary to good manners, and has been known to give serious offence.

For the most part a solemn silence prevailed, and sadness and awe marked all faces as the enormous procession passed on with all the pomp and circumstance of a military funeral. At a little distance in front of the procession were carried a number of stands of flowers, about twelve hundred in all. The flowers were of many colours, arranged in cones eight or ten feet high, with stands or stems of bamboo, by means of which they were afterwards planted round the grave. Each of these twelve hundred cones was carried by a man in the ancient mourner's dress, namely, a long *kimono* of white linen and a tall black cap with a backward curve in its long peak. Following these came a company of mounted police, with dress and appointments as modern as those of the others were archaic; fine men, with the resolute patience of the drilled policeman very visibly expressed in face and bearing. The *sakaki* came next—the *clayera japonica*, the sacred tree of the Shinto religion. These were in great numbers, with roots intact and of considerable size, the gifts of the Emperor and of members of the imperial family—a moving forest, whose dark green boughs were relieved by streamers of paper, red and white, bearing on them sacred inscription and prayers for the soul's repose.

Then followed many tall standards, red and white—last, towering above the rest twenty feet or more, gleaming and glancing in the sunshine, the standard of the princes of the blood, displaying its brocade of white and gold unadorned, where the name and fame of a meaner man would have been set forth. Next followed a band of spearmen bearing *hoko*, an ancient weapon with a white silk banneret depending from it. Behind these was borne a large coffer of white wood containing the offerings of food to be made to the dead at the grave; its stand and silken coverings followed. Then came the orders and decorations of the prince; first, the star, ribbon, and collar of the Chrysanthemum; then the foreign orders, fifteen in all, each carried on a cushion of black velvet by an officer of high military rank.

A solitary white-robed mourner, bearing a pair of *geta*, high wooden shoes, preceded the coffin. These shoes are for the weary feet of the dead on the last, long journey. On the coffin were laid the uniform, hat, and coat of the prince, his sword being carried by officers.

A roof or tabernacle of beautifully wrought wood, with closely shut bamboo blinds, concealed the coffin from view during the procession. The bier on which the coffin rested was carried by twenty-four men in the white robes of mourners, under the escort of numerous officers in full uniform.

Behind came the chief mourners, Prince Takehito on foot, in the old mourning garb of Japan—wide *hakama* trousers of black linen, with an overdress of white, and ceremonial black hat. With rough straw sandals on his feet, and a tall staff of bamboo to guide his pilgrim steps, he was a striking and pathetic figure, this mourner brother-son; at once so representative of all that is oldest and all that is newest in this land of sharp contrasts.

Both preceding and following the bier were many mounted Shinto priests in their white robes, not very unlike those of the mourners, but with certain distinctive features. The master of the Arisugawa household and gentlemen in waiting followed, in grey linen *hakama*, and the horses of the prince, their trappings veiled in crape, were led by the grooms. The widowed princess and other ladies of the family came after, in close carriages. They wore yellow dresses partly veiled in black. More distant relations wore red and white. High officials in full court dress covered with decorations made this part of the procession most brilliant. Hundreds of carriages and *jinrikishas* followed. The troops were the Imperial Body Guards preceding the procession, and the Tokyo garrison following—ten thousand men in all.

To the north-west of the city, at the top of a steep, richly wooded hill, is the cemetery of the imperial family. Set apart for the purpose on the removal of the court from Kyoto, twenty-five years ago, no emperor has as yet been laid in it; but several members of the imperial family are buried there, surrounded by ever-increasing groves of the sacred *sakaki*.

At the foot of the hill, and just inside the gates of the cemetery, the procession paused. Here large tents had been erected, in which food was

served to the whole of the vast assembly in little square boxes, each furnished with chopsticks. Crowds of poor people outside afterwards shared in the repast. Beyond these tents a temporary temple had been erected, still at the foot of the ascent, judged too steep to be surmounted by a crowd so immense. This temple, in accordance with the canons of pure Shintoism, was of fair white wood, relieved on the steep roof by gleams of gold. In front of it stretched a broad, square platform, with chairs six deep ranged round it under the shelter of an overhanging roof. Here were seated the guests, all the members of the *corps diplomatique*, a few other foreigners, and all that was most distinguished and representative of Japan.

On an altar in front of the temple stood the coffin, the decorations and orders of the prince being arranged on a table beside it. All around rose, as in a moment, the ring of sacred *sakaki* trees. Up the platform came the chain of Shinto singers in their rich white silk garb, followed by the pathetic figure of the pilgrim mourner; representatives of the Emperor and Empress, scions of the imperial family, great nobles and foreign ministers, ranged themselves in order in their appointed places. The whole formed a scene not to be forgotten. Against the darkback ground of the pine-clad hill, under the clear pale sky and in the sunshine of the perfect winter's day, rose the artistic white temple. Around it were the tall bright banners and the innumerable cones of brighter flowers. The quaint old-world garments of mourners, priests, and choristers formed a startling contrast to the brilliant uniforms, many of them blazing with decorations, which suited well with the martial bearing and keen, set faces of the men who wore them—the makers of the new Japan, who yet are the very conscious inheritors of the unforgotten traditions of the old.

Around all these swayed the huge crowd, hushed in the extreme solemnity. The weird notes of the ancient Shinto music sounded, swelling and falling in inflections, strange to Western ears, and inexpressibly doleful. Then the chief priest advanced to the coffin and presented the offerings—fish, birds, vegetables, fruit, cakes, rice, and wines. A prayer was intoned, after which the priest read from a scroll the eulogium of the prince, setting forth his services to the State, and enumerating his honours and rewards. It concluded thus: "The deep grief of their imperial majesties and of every member of the imperial family is great. They have sent each one his messenger to present prayers and offerings. Deign graciously, O soul, to accept these offerings, and sleep, O body, unmolested in the depths of this sacred ground." The reading was followed by the offering of the *gohai*, folded streamers of paper fastened to small branches of the *sakaki*. What inward and spiritual grace is signified and conveyed by these outward symbols is a matter not to be lightly expounded; but they are sacramental tokens never far absent from the lives of the people, and their presentation is the supreme act of worship at each crisis of life wherever the Shinto rites prevail. In measured order—imperial representatives first, their *gohai* bound round with crimson silk, then mourners and friends—each received from the hands of the priest the branch with its waving zigzags of paper, laid it, deeply bowing, upon the altar, and turned away conducted by the chamberlains.

An endless ceremony it seemed; but nothing tires the patience of a Japanese assembly, least of all a function so solemn as this. At last it was over; the crowd dispersed slowly, and as the short day closed in, the mourners bore the coffin up the steep ascent to where, deep and granite-lined, the open grave awaited it, under the shelter of yet another newly erected temple. Slowly, and with many prayers, it was lowered, the pilgrim's shoes and the warrior's sword resting together on the top, along with a handful of coins, and a plate of copper bearing a long inscription, in which expressions of grief, eulogy, and reverential worship of the departed all found place. The widow stood by the head of the grave while the mound was heaped high, ten feet or more, about it. The darkness fell before the last prayers were said and the last mourners moved away, save those who took the first turns in the unceasing watch to be kept for fifty days beside the dead.

For this watching, begun in the death chamber, is continued for so long. Priests occupy the temporary houses erected near the grave, and offer up unceasing prayers, not to be dead, although his deification has been recognised in these writings and speeches. We must not be too logical, or we may miss after all the meaning which we and they feel after *Kami Sama*, the great God whose judgment follows the deeds done in the body. At the end of these fifty days it will be delivered, and the prayers and alms of the survivors will help to weigh down the scale of his

virtues; and thus it is that day by day, the men unshaven, and the women with their long black hair floating unbound, those who love him, come and worship at his grave. After the fifty days are over the mourning is relaxed, but there is a monthly celebration at the grave during the first year, and an annual commemoration during seven years or longer.

Prince Takehito has laid aside his sandals and his pilgrim garb and is again at his post on the *Matushima Kan*, making history. As yet the old order and the new go on side by side. The old is rooted deep in the national life. The new? He who lives will see.—*ALTHEA YATENO SANNOMIYA* in the *Nineteenth Century* for March, 1896.

LATEST TELEGRAMS.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hakodate, Feb. 23, 1.55 p.m.

About noon a slow but prolonged shock of earthquake was experienced here. No damage has yet been reported.

[SPECIAL TELEGRAM TO "KORE CHRONICLE."]

Nagasaki, Feb. 22nd, 11.25 a.m.

A Reuter's telegram states:—Greece has asserted her determination to pursue an active policy in defiance of all the Powers of Europe. She has informed the Ambassadors that she will continue dispatching troops to Crete.

Greek troops have captured a fort at Aghia, and four hundred Mussulman soldiers have been made prisoners.

The commanders of the allied fleets of foreign Powers have ordered the Commodore of the Greek flotilla to leave Cretan waters immediately. No reply has been given, and foreign marines now occupy Canea, the principal city.

In the British Parliament, Ministers have been pressed to make a statement on the situation. The Right Hon. A. J. Balfour, replying for the Government, pleaded that if the Ministry were compelled to make any statement of policy, the premature disclosure would involve danger of disruption in the concerted action of united Europe, and that this concert alone could avert the total dissolution of Turkey by precipitating a great European war.

(FROM THE "N.C. DAILY NEWS.")

London, February 16.

Three steamers with Greek troops have sailed for Crete having been previously reviewed by the Crown Prince.

The Greek reserves have been called out.

Prince Nicholas of Greece, with a regiment of artillery, has gone to Thessaly.

The Greek Government, in replying to the Powers, accepts the full responsibility of its action.

One hundred thousand Turkish reinforcements are going to Macedonia.

The Powers are discussing a proposal made by Russia for a mixed European occupation of the towns in Crete.

Hongkong, February 16.

The agreement for the opening of the West River has been signed. Wuchon and another port, and four ports of call, are to be opened to trade on the first of June next.

London, 17th February.

The Naval Brigade which is advancing on Benin is being stubbornly opposed, and Commander Pritchard (of H.M.S. *Alecto*) has been killed, and Lieutenant Edward Hunt and Capt. Coe have been wounded.

London, February 19.

Baron von Rosen, Russian Minister at Belgrade, has been appointed to Tokio.

Turkey is sending four men-of-war and ten torpedo-boats to Crete *instantly*, and a second squadron is to follow.

The Turkish Military and Naval Reserves have been called out.

(FROM TONKIN PAPERS.)

Paris, February 5.

Several villages have been burnt in the course of the disturbances round Canea.

February 6.

The Mahomedans of Canea have attacked the Christians in the streets. It is believed that the victims number three hundred.

A part of the town has been fired. Foreign seamen have been lauded to extinguish the conflagration.

February 7.

A lively agitation is in progress in Greece for the union with Crete.

February 8.

The fire at Canea has been got under. Several villages in the environs have been burnt.

February 9.

The Cretan insurgents have proclaimed a union with Greece.

Troubles continue in various parts.

(FROM "LE COURRIER D'HAIPOHONG.")

Paris, February 7.

The strike at Hamburg is at an end. The British steamer *City of Sova* (?) has been wrecked on the coast of Spain, and a large number of lives lost.

Plague has broken out at Kandahar. The Russians have established a military cordon in Amoodaria.

Paris, February 8.

At the request of the Chinese Government, a French mission is leaving for Foochow to take over the supervision of the arsenal.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

STEINITZ-LASKER MATCH.

We reprint from the *St. James's Budget*, of 8th January, a further selection of the games, with Gunsberg's comments thereon.

The only two games won by Steinitz—the twelfth and thirteenth—were gained by the veteran through his rushing an attack early in the play. How very much like this mental struggle is to a physical combat carried on between opponents with a proportionate difference in age, where the older man has no chance unless he can knock out his opponent early in the fight! It follows from this that Steinitz was weakest in a long game. It must, however, also be stated that in the end game, where Steinitz got fatigued, his opponent invariably showed his best form. His strength lies chiefly in a clear view of the board in simple methods, and in playing for position only. Lasker conducted these with consummate skill, and it is to this coincidence of Lasker showing his best form at that stage of the game at which physical fatigue weakened the veteran's powers, that the young champion is indebted for a large number of his victories.

38-Resigns.

NAGASAKI VERSUS KOBE.

This correspondence-match (by telegram) of two simultaneous games goes on. We print below the score, so far as it has reached us, with a few comments.

Here is what the *Kobe Herald* says as to the conduct of the match:—"The Nagasaki player appears to have a slight advantage in both games. The Committee in charge of the K.C.C. games

consists of Messrs. Bardens, V. Abraham, de Havilland, Hazeland, Cowen, and Bethell, but not all of these are taking the same amount of interest in the match. This is not as it should be."

GAME A.

VIENNA OPENING.

WHITE.
Mr. Jordan.
1-P to K 4
2-Kt to Q B 3
3-P to K B 4

BLACK.
Kobe Chess Club.
1-P to K 4
2-Kt to K B 3

White offers the Steinits gambit which Black declines, suffering White to gain a pawn instead. Not a very good augury for their success.

4-P takes K P
This is a showy move but unsound, and not likely to catch our Japan Steinits napping.

5-P to Q 4!
6-Q to K B 3!
White already shows his mettle by moves 5 and 6 and Kobe and that they have a foe worthy of their steel.

7-Q takes P
8-B to Q B 4
White keeps the pawn with a fine position and a good game, in spite of Black's threat of a King side attack.

GAME B.

BISHOP'S OPENING.

WHITE.
Kobe Chess Club.
1-P to K 4
2-B to Q B 4
Mr. Jordan adopts the "Berlin Defence," and soon shows that he knows how to defend as well as how to attack.

BLACK.
Mr. Jordan.
1-P to K 4
2-Kt to K B 3
3-Kt takes P
4-Q to K B 3 (P)

White 4th move appears threatening but they evidently overlooked Black's easy rejoinder. Why not 4-Kt takes Kt? Probably Kobe wanted to take the game into a by-path and they have succeeded. But *qui bene?* Nagasaki meets them well with their own weapons.

5-P to Q 3
Kobe again has made Nagasaki a present of a pawn. This might have paid them in the end had they not followed it up by exchanging Bishop for Knight, that seems to be suicidal. Had they retired the Bishop the game might have proceeded as under:

5-B to Kt 3
This was perhaps what they would have expected, but we think Black would have been wary enough to avoid the trap and play 5-B to K 5 which would have upset the little scheme.

6-Kt takes P
7-P to Q 4
8-Q to R 5 ch.
9-Q to R 4
10-Q to R 4
11-B to R 6
12-Kt takes Q
13-B takes Kt and White has the best development besides regaining his pawn. But this is only one of the things that might have been.

6-P takes Kt
7-Kt to K 2
8-B to K 3
And here also Nagasaki has a pawn plus with an excellent game ahead.

CHESS NOTES.

(FROM THE "SAN FRANCISCO CHRONICLE," OF 30TH JANUARY.)
It is expected that Pillsbury and Showalter will to-day sign articles and complete all arrangements for their championship match, which is scheduled to commence on Monday. Showalter has been indulging in considerable practice work at Philadelphia, and according to present appearances is in as fine trim as he ever was in his life. A few days ago he was opposed to an unusually strong team of Franklin Chess Club experts, including Kaiser, Stuart, Shipley and Ferris, and out of sixteen games played he won twelve, lost three, and drew one in four hours of play. He has also played a number of interesting game with Kemeny and other Philadelphia experts, almost all of which have resulted in the Kentuckian's favour.

Pillsbury is spending his time advantageously in the metropolitan city and is not losing any sleep as a result of anticipating the outcome of the match.

The composition of the team which is to do battle against the English in the forthcoming cable match has practically been determined upon, and the following players may be expected to participate in the struggle for international supremacy: Pillsbury, Showalter, Burille, Barry, Hymes, Hodges, Teed, Helms, Delmar and J. W. Baird of New York.

One of the players who represented England on the occasion of the last match, Burn, is, it is understood, unwilling to lend a hand at this time and no one has as yet been fixed upon to take his place at the boards. Blackburne, Atkins, Bellingham, Locock and Lawrence are pretty sure to be selected as members of the English team, and the remaining players will be chosen from the following: Bird, Lee, Tinsley, Jackson, Jacobs, Trenchard, Cole, Blake, Mills, Harvey and Smith.

The Brooklyn Club have sent out invitations to many prominent citizens to witness the contest, including President Cleveland and President-elect

McKinley, the Governors of the various States, Secretary Olney and other Cabinet officers, and to various Senators and Representatives at Washington, for whom seats and the boxes at the Academy will be reserved.

W. E. Napier, the young player of the Brooklyn Club, is well in the lead for the championship honours of his club. He is but 16 years of age and four years ago was not even familiar with the moves of the pieces.

Lasker and Tschigorin will play a match for 4,000 roubles a side and the championship of the world in St. Petersburg.

The chess tournament which began in Berlin, on January 18th was finished on Thursday 28th. Bardeleben won the first prize, Charousek the second, and Mieses and Cohen divided the third and fourth prizes.

GAME No. 666.

"A PENDANT TASSEL."
(FROM THE "CLIPPER," NEW YORK)
DUTCH DEFENCE.

The following skit shows that even an astute practitioner sometimes gets so intent on catching a sprat that he loses a whale.

WHITE.
Mr. Teed.
1-P to Q 4
2-Q B to Kt 5
3-Q B to R 4
4-B to Kt 3
5-P to K 3
6-K B to Q 3

BLACK.
Mr. Delmar.
1-P to K B 4
2-P to K R 3
3-P to K Kt 5
4-P to K B 5
5-P to K R 4
6-R to K R 3

and White mates in two moves!! The termination of this singularly original and curious chesskin savours somewhat of "The Grab Gambit."

STEINITZ LOQUITUR.

Steinitz, in a letter dated December 17th, admit that he is beaten. He says:—

"Why am I so badly beaten? In the first place; because Lasker is the greatest player I ever met, perhaps the greatest who ever lived. To say so positively would be like making excuses for myself and disparaging other rivals at a time when I am incapable to compete in the first rank. 'A Chess-master has no more right to be ill than a general on the battlefield,' or words to that effect, I once wrote; and I adhere to that. I may state that my fearful breakdown is chiefly due, as usual, to sleeplessness and nervous exhaustion."

TOKYO CHESS CLUB.

This institution is mourning the loss of one of its best players, and most active members, Mr. E. Krug, who has recently gone to live in Osaka. *Per contra* they may hope for a new recruit in Mr. Cowen, the journalist; who, *on dit*, is soon to remove from Kobe to Tokyo. Mr. Cowen is one of the best players in the Kobe Chess Club, and will be a great acquisition to the Club in the capital.

LATEST COMMERCIAL.

IMPORTS.

At last we are able to chronicle a welcome change in this market, especially in staples. Yarn—A fair business in "Plain" with large purchases of "Gassed." Shirts—Fine business, and about 150,000 pieces have been sold "to arrive." It seems the trade has at last realised that prices will not recede further; so dealers have operated as above. Fancies—Turkey Reds and Velvets in favour, others dull. Woollens—Sales comprise 5,000 pieces Italian Cloth; all else quiet.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirtings—8 1/2 yds, 35 inches	\$2.40 to 2.75
Grey Shirtings—9 1/2 yds, 35 inches	2.70 to 3.15

Wire Nails, assorted	5.50 to 6.50
Fin Plates, per box	5.30 to 6.00
Pig Iron, No. 3	1.85 to 1.90

KEROSENE.

Market weak, especially for "futures." "Spot" is scarce; but buyers are not to be scared into operating just now.

American	\$2.20 to 2.35
Russian	2.15 to 2.20
Langkat	—

SUGAR.

Brown—Some business done in Manila and China sorts at quotations, but the market closes easy with a tendency in buyers' favour. New Takao is offered "to arrive" at \$4, but without finding takers. White—Quiet market, prices fairly steady.

	PER PICUL.
Brown Takao	\$4.00 to 4.10
Brown Manila	4.40 to 5.00
Brown Daitong	3.70 to 3.80
Brown Canton	3.70 to 4.60
White Java and Penang	6.70 to 6.80
White Refined	7.00 to 9.00

EXPORTS. RAW SILK.

Rather better news from consumers and holders are firm at quotations. Stock on the market here is reduced, by the late heavy buying, to 11,000 piculs.

	QUOTATIONS.

BISSET & URE'S SHARE REPORT.

Yokohama, February 23rd.
Business generally has been quieter during the last eight days, sellers asking as a rule advanced rates for stocks and buyers the quoted rate.

LOCAL STOCKS.

E. & I. Works.—With a firm offer, we think a small lot might be obtained at \$135. Breweries continue in demand and offers of shares are wanted. Grand Hotels are still wanted at \$195, but holders will not part under \$197.50. Club Hotels unchanged; sellers at \$67.50. Bretts are obtainable at \$8. Langfeldts.—We have to record a further rise in this stock, business having been done at \$190 and \$195. There are now no sellers under \$200. The Nagasaki Hotel, Ltd.—We have received prospectuses from the Directors of this Company who propose to erect a Hotel on the Bund at Nagasaki adjoining the H. & S. Bank, with capital of \$130,000. Applications for shares close on the 15th of March, payment for which is to be made in six instalments, the last of which is not due till the 1st of March, 1898. Copies of prospectuses can be had at this office. The Directors are Messrs. Ringer, F. G. Stone, M. Ginsburg, D. Robertson, and M. E. Paul. Debentures.—Japan Breweries are enquired for at \$10 and Club Hotels remain unchanged as per last quotation. Bretts are wanted at 4 per cent. premium.

Yokohama, February 26th.
We have to report business in North Chinas from Shanghai at \$195 and in Hongkong Ropes from Hongkong at \$160. H. & S. Banks have changed ownership at 176.50 per cent. premium and Punjion Mines have been secured from Hongkong for a local holder at \$10.50. Hongkong Lands have been sold to China to-day at \$76.

In local stocks, Langfeldts have again changed hands at \$195, Club Hotels at \$67.50 and Japan Breweries have risen further with sales at \$305. Oriental Hotels are wanted at \$140. Iron Works might be had at \$135.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Couper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1896

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, MAR. 6TH, 1897.

MARRIAGE.

On the 27th inst. at Christ Church, Yokohama, by the Rev. E. Champneys Irwine, M.A., HERBERT, second son of Mr. W. Pinckney, Milford Hill, Salisbury, to MARY, eldest daughter of Major Hunter, late of Auchterarder, Perthshire, N.B.

SUMMARY OF NEWS.

THE Plague is decreasing in India.

THE football season in Yokohama has closed.

JUDGE MOWAT is seriously indisposed at Nagasaki.

MAJOR OYAMA SUKRO, of the General Staff, has been ordered to Europe.

THE Second Marine Products Exhibition will be held at Kobe this year.

THE new currency law has been presented to the House of Representatives.

A FAREWELL dinner was given to the Baron d'Anethan by the Tokyo Club on the 1st inst.

THE proposal to build a Memorial Episcopal

Church in Yokohama to mark the diamond jubilee is finding favour.

THE first sealing schooner to leave Yokohama this season is the *Pointer*, that flies the American flag.

MR. MCKINLEY was duly inaugurated President of the United States of North America on Thursday.

On Wednesday the German and Belgian representatives had farewell audiences with the Emperor and Empress.

WAR Loan Bonds for yen 300,000 were offered for subscription on the 26th ult. by order of the Minister of Finance.

AN English sailor has been committed for trial by H.B.M. Assize Judge on a charge of biting off another sailor's ear.

SMALL-POX is still rife in Yokohama. Singapore has declared Yokohama and Kobe infected ports in consequence.

THE Town Council have decided to tax the telephone and electric light posts in Yokohama at a rate of 20 sen per post.

THE *Kanagawa Maru*, built in England for the Nippon Yusen Kaisha, is expected to arrive in Japan in a fortnight's time.

THE new Treaty between Turkey and Japan, will be based on the lines of other treaties recently concluded with Japan.

THE Authorities announce that an Exhibition of Trades and Crafts will be held at the Department of Agriculture and Commerce from the 5th inst.

OWING to the open character of the past winter it is feared that the supply of ice collected in and around Yokohama will be exhausted before August.

AN interesting lecture by Dr. Gordon Munro on the X-Rays, was given at the fortnightly meeting of the Yokohama Literary Society on Friday evening.

THE Cretans having fired on the town of Canes, the men-of-war of Great Britain, Russia, and Germany, bombarded them for 25 minutes. The crisis is now over.

THE Commander and officers of the Russian flagship *Admiral Nakhimoff* were entertained at dinner by the Commander of the Yokosuka port Admiralty on Tuesday.

BARON SHIRANE, ex-Minister of Communications, now in hospital at the Imperial University, received a visit from Count Itagaki, the leader of the *Yi-to*, on Thursday last.

THE Emperor, Empress, and Crown Prince will proceed to Kyoto to take part in the services set apart for the celebration of the 100th day after the death of the Empress Dowager.

THE finances of the foreign municipality of Kobe being in a very straitened condition, the municipal body has decided to sell their property at No. 38, Concession.

KOREA has already appointed a delegate to visit London on the occasion of Queen Victoria's diamond jubilee. It is expected that Marshal Marquis Yamagata will represent Japan on the auspicious occasion.

THE amount subscribed to the Indian Famine Fund by the communities of Yokohama and Tokyo, totals \$11,247, half of which has been

collected by the Bank of Japan from Japanese subscribers.

A CONFERENCE of mining inspectors will be held in the course of this month at the Department of Agriculture and Commerce.

LAST Sunday, in Tokyo, some drunken soldiers assaulted a carriage that was conveying the daughter of the Russian *Chargé d'Affaires*. The soldiers have been told off for trial by court martial.

THE Powers, having decided on granting autonomy to Crete on the basis of full equality of rights for Mussulmans and Christians, will probably send, on March 2, a Joint Note to the Greek Government announcing the above decision.

THE newly appointed Russian Minister to Japan, Baron Rosen, will arrive about the end of May next. Mr. de Speyer, now in charge of the Russian Legation, will remove to Seoul, Korea, and Mr. Waeber, will be appointed to Mexico.

A STEAMER conveying 395 bags of postal matter and seven passengers, together with a crew of four, that left the Saigo Post Office, Shimane Prefecture, for the Mihoseki Post Office, Idsu Province, on the 28th January, encountered a storm during the voyage and was lost.

MR. KATAOKA CHOKUON, President of the Nippon Kairiku Hoken Kaisha (Japanese Sea and Land Insurance Company), will leave Osaka for Europe on the 16th inst. with some officials of the Nippon Seimei Hoken Kaisha (Japanese Life Assurance Company).

SEÑOR DON JOSE DE LA RICA Y CALVO, Spanish Minister in Tokyo, has informed the Government that Don Hilarión Gonzalez del Castillo, has been appointed Spanish Consul at Nagasaki; Don Ernesto Freyre is appointed Consul at Osaka and Kobe; and Don Enrique Ortiz y Pi to Formosa.

MR. OI KENTARO and other promoters are starting the Chuyetau Railway Company, to run from Teradomari, Niigata Ken, to Nibitau, via Yahiko, Shirano, and Kosodo. There will be two branch lines, the total length of the tracks being 40 miles. The Company has a capital of yen 1,800,000.

JUST as Importers were beginning to pull themselves out of the groove of depression in which they have been living these past three months, a sudden drop occurs in Exchange, while prices have gone up in Manchester and the West generally, and now they cannot accept the offers that come in. The contemplated change in the currency of Japan has undoubtedly caused this weakness in Silver, but the rise in Manchester prices can be set down to increased demand at home and abroad for piece and cotton goods generally. There are signs, certainly, that buyers here will come round in time to hold-ers views, but meanwhile little business of a satisfactory character can be put through. Yarns are slow, Shirts dull; Fancies and Woollens without change. There is no great demand for Metals, though the large arrivals of Pig have depressed prices. In Kerosene holders are firm in view of the falling exchange, though the arrival of 170,000 cases of Chester has brought rates to \$2.00 and \$2.05. A fair business has been done in Brown Sugars, prices hardening for Manila and China sorts. Whites are steady, with no great sales. A good trade is to be noted in the leading export, both Europe and America buying freely. The stock is down to 9,500 piculs now. A very small demand is reported in Waste. Tea is almost stagnant, awaiting new crop rumours.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The problem of adopting the gold standard in Japan is apparently matured, at least within the Cabinet. A Government Bill on the subject will, it is expected, be placed in the hands of the members of the Lower House at a very early date.

Though approving in principle, the *Nichi Nichi* condemns the Government's procedure as open to the charge of hastiness, and for that reason is obliged to oppose the contemplated change. Our contemporary enumerates four measures which, in its opinion, should be taken as preliminary essentials to settling the question. In the first place, a Special Committee must be re-appointed to examine the problem. A Monetary Investigation Committee, appointed four years ago, during the Ito Cabinet's tenure of power forwarded a report of its deliberations in July, 1895. The majority of the Committee were then opposed to any change in the currency system. Circumstances are very different now from what they were then, and it is necessary to appoint another Special Committee, as the old one no longer exists.

In the second place, negotiations should be opened with neighbouring countries and with countries of the Occident, the former with the view of persuading China and others to adopt the gold standard, and the latter with the view of ascertaining the opinion of the Western world about the currency question in general and the contemplated change of the Japanese currency in particular. Japan must endeavour to be in close financial touch with Europe and America in the matter of currency and to that end the use of gold is essential, gold being, after all, a universal medium of exchange the world over. Thirdly, Government Loans must be re-adjusted before changing the monetary system, for there is no reason why Japan should pay interest at the rate of 5 per cent. on her Bonds after the gold standard is adopted. Fourthly and lastly, the most careful researches should be carried out before fixing the ratio between gold and silver, so that whatever figure is least liable to fluctuation may be obtained. The Government's plan of fixing the ratio at 1 of gold to 32 of silver can not be considered a wise decision, inasmuch as it artificially reduces silver to a price of 200 yen as against gold that is really worth only 192 to 193 yen. Unless all those preliminary points be most conscientiously attended to, the *Nichi Nichi* can not bring itself to approve the Government's plan.

The *Nippon* also gives conditional consent to the change of the currency system, but we are perplexed to comprehend its first condition, namely, that commercial transactions with silver-using countries, as China and Korea, and with gold countries, as Europe and America, should be safe-guarded. Its second condition is that the public must be assured of the baselessness of its suspicion that the adoption of the gold standard is merely for the purpose of facilitating the raising of a foreign loan, and that gold will flow from the country as a result of the expansion of the national defences.

The *Kokumin* urges the Cabinet to disregard any clamour raised by the Opposition papers. They endeavour to throw discredit on the scheme lest the adoption of gold monometallism should add to the stability of the Matsukata Cabinet. The only course open to the Cabinet is to resolutely carry out the scheme.

The *Osaka Asahi* is not so eager as the *Kokumin* to see the change effected. It declares that before a decision is taken, experts must be invited to employ matured judgment, business-men must be asked to formulate their views as to the effect that the adoption of the gold standard would have upon Japan's commerce and industry; and, lastly, an appeal

should be made to the verdict of the public at large. Meanwhile, however, the Government must not delay about placing a Bill before the Diet, not necessarily to hasten the consummation of the change, but chiefly to dispose of various rumours now publicly circulating, and also to enable the nation to form a clear judgment on the subject.

The *Shogyo* argues that the most important point to be settled before any definite conclusion can be arrived at is whether the gold price of silver is likely to fall hereafter, or whether it can safely be considered to have reached its lowest point, so that any change to be anticipated in the future will be in the direction of appreciation.

The *Sekai-no-Nippon* makes a curious observation. Though itself not particularly opposed to the adoption of gold monometallism, rather, indeed, desirous, on the whole, of that consummation, it feels some misgivings when it observes the public so universally infatuated about the gold standard. Our contemporary seems to have forgotten that such influential business-men as Mr. Nakamigawa and Mr. Shibuzawa Eiichi are not in favour of the proposed change, and that the Opposition papers are all against the Government's measure.

The *Tokyo Economist's* article on the subject is somewhat enigmatical and leaves much unsaid which the public must be eager to hear. It alleges that, judging by observations of the market for the two decades ended in 1893, the fluctuations in the prices of commodities were greater in gold than in silver, and that it is consequently inexplicable why the more unstable gold should be substituted for the less unstable silver. The silver price of gold has been pushed to an abnormal point, chiefly as a result of artificial operations. But there is no gain-

saying that the ratio between the metals will sooner or later be restored to something like the old figure. Hence, in adopting the gold standard, the greatest circumspection must be employed in fixing that ratio. A short note appended at the end of the last number of this periodical observes that, if the gold standard be adopted merely to facilitate the raising of foreign loans, nothing could be more thoughtless and absurd. The measure, as contemplated by the Cabinet, does not seem to confer any benefit upon the people, and consequently the problem does not appear to call for such urgent solution. The idea of the Japanese Treasury must be called heroic, inasmuch as, by fixing the ratio between gold and silver at the abnormal figure of 1 to 32, it proposes to throw the gold and silver market of the world out of order.

The return of the Korean King to his Palace pleases vernacular papers. Whatever motive be really entertained by Russia, writes the *Nippon*, if His Majesty's return was a result of the Russo-Japanese convention, the action of the Great Northern Power, in this instance, at any rate, must be regarded with favour. Whether Russia really intends to respect the sovereignty of Korea remains to be seen. The nomination of Kim Pyong-si as Premier, on the day of the King's return, is another satisfactory incident, for Kim refused to accept the nomination because the residence of the King in a foreign legation not only was in itself derogatory, but also involved the grave evil of the Cabinet's being overshadowed by the Court, or rather, by unprincipled favourites of the King. More or less hope may now be entertained for the disappearance of that evil.

Since the organization of the Matsukata Cabinet, argues the *Kokumin*, Japan has gradually succeeded, or rather the natural course of events has enabled Japan to succeed, in winning the increased friendship of England and America in connection with her Korean policy. The return of the King to his Palace is a result of the natural course of events rather than an

achievement of the Matsukata Cabinet. None the less, this emergence of Japan from her isolation in connection with Korean affairs, isolation to which she was reduced when the Ito Cabinet held office, is creditable to the foreign policy of the Matsukata Cabinet, as compared with that of the Ito Cabinet, and to the diplomatic ability of Count Okuma as compared with that of his predecessor.

The *Osaka Asahi* publishes two articles in connexion with Japan's diplomacy. The first relates to Count Okuma's first speech before the House of Representatives; the second, to the return of the Korean King to his Palace. The *Osaka* journal appreciates highly the Count's declaration that the best diplomacy must be based on justice and must conform with the principles of the law of nations. Our contemporary, reversing the hackneyed aphorism declares that right is might; an axiom from which a country's true foreign policy may easily be deduced. The second article deals with the general Korean policy of Japan as much as with the particular event of the King's return. The latter is attributed to Russia's having become convinced of the unwisdom of interfering too much in Korean affairs, and having resolved, in consequence, to compass her ends by less direct and more circumspect methods. At the same time, now that Russia is understood to have obtained the consent of China to carry her Siberian Railway through Manchuria, she need not attach to Korea the same importance as before. Concerning the attitude that Japan should assume towards Korea, it must in future be negative. Her list of positive policies in the peninsula has been exhausted, and not one of them has borne satisfactory fruit. She must, therefore, direct her energies towards maintaining and defending the rights she has acquired from Korea, and towards promoting her social and commercial relations with that country.

The *Sekai-no-Nippon* doubts whether the text of the Russo-Japanese convention, as lately published by the Foreign Office, is complete. The ground of its doubt is the absence of any provision about drilling Korean soldiers. That is a matter involving grave issues, and it is exceedingly improbable that any Japanese envoy accredited to conclude a convention of the kind should have overlooked such a point; above all an envoy like Marshal Yamagata.

The *Mainichi* regrets that Count Okuma should have preferred to leave the House of Representatives on the last occasion before the questions to be put to him were exhausted, as they would evidently have been had he remained a few minutes longer. He was on the point of setting a good example to the Cabinet Ministers, but his intention was marred on the very threshold of consummation. Moreover, the President's ruling to pass to the Order of the Day before the discussion evoked by Count Okuma's remark to a certain member had been concluded, was not proper. As to the part played by a section of the members with regard to the Count's remark, it was not less reckless than ignominious.

The *Yiji* offers a suggestion to politicians. It is that they should no longer adopt the principles of progress or freedom as a platform, for these are things that can not be monopolized by any one party. In Japan, the creation of castes or Peers furnishes good material to be used as a platform, for this business is peculiar to Japan and, unlike the custom of other countries, is used or abused for rewarding Government officials alone, whereas the same distinction should be extended to merit at large. Whether the *Yiji* is serious in this criticism we can not clearly decipher.

We have to record the sudden death of Rear-Admiral Dupuis, which occurred at Curdridge Grange, Botley, Hampshire. Admiral Dupuis greatly distinguished himself during the China War of 1857, being present in many actions on the Canton River, Fatshan Creek, and at the final assault of Canton.

OPINIONS OF THE VERNACULAR
PRESS ON THE NEW COINAGE
SYSTEM.

The *Nichi Nichi Shimbun* strongly opposes the adoption of gold monometallism, as proposed by the Government. It justly says that the system of national currency is too vitally important to be touched without extreme circumspection, and it denounces the idea of meddling with such a matter merely for the sake of tiding over a temporary financial difficulty. Others may regard this recourse to gold monometallism as a measure dictated by considerations of permanent national advantage, but the *Nichi Nichi* persists in viewing it as an ephemeral expedient and nothing more. Besides, it will not, according to our contemporary, achieve even the passing purpose contemplated by the Government. The gold standard itself may not be objectionable, but the precipitancy displayed by the Authorities in dealing with a question that touches the very vitality of commercial and industrial progress can not be too strongly denounced, and is, in point of fact, denounced by all the leading economists and savants in Japan. The plain duty of the Cabinet, before committing the country to a step of such far-reaching consequences, was to refer the question to the best talent available. Only the year before last, a carefully organized committee, selected and appointed under the auspices of the Ito Cabinet, declared, as its deliberate conviction, that the time had not come for attempting to change the system of silver monometallism prevailing in Japan. To that declaration the Matsukata Cabinet has paid no manner of attention. Then, again, there is the High Council of Agriculture and Commerce. Its views have not been consulted. Neither have the Chambers of Commerce been invited to formulate their ideas. In short, a question of importance that can not be over-estimated, is rushed forward to solution with haste and airiness that would be surprising even in the case of an insignificant problem.

In another article the same paper attacks the Statement of Reasons attached to the Bill. In that Statement it is alleged that the disadvantages of the silver standard are recognised by the world and have made themselves felt in Japan's commercial and industrial development. Nothing could be falsier. The opinions of financiers and political economists, the world over, are rapidly turning in the direction of silver. Adherence to gold monometallism has inflicted serious ills on Occidental countries, whereas Japan owes much of her prosperity to the use of silver. The facts could scarcely be more flagrantly misrepresented than they are in the Government's Statement of Reasons. It is utterly giddy on Japan's part to suddenly declare her allegiance to a system that is rapidly becoming discredited in the eyes of the leading economical experts of the world. Further, the language of the Statement plainly suggests that the adoption of gold monometallism will facilitate the entry of foreign capital into Japan. That is more than doubtful. So long as India was a silver-using principality, Englishmen, Germans, and Frenchmen vied with one another in placing capital at her disposal, but, so soon as she closed her mints to the coinage of silver, the financial unwisdom of the step shook foreign confidence and money ceased to be easily

procurable from abroad. Japan's experience will probably be similar. She has prospered under a silver system, and the world, believing in her prosperity, would be quite willing to supply her with capital. But if she strikes the buttress of her prosperity, it is exceedingly questionable whether her future may not be judged too gloomy to warrant the confidence of foreign capitalists. It is further alleged in the Statement of Reasons that an exceptionally favourable opportunity now offers for adopting the gold standard, inasmuch as the Chinese indemnity will serve as a gold reserve. Nothing could be more misleading. One half of the indemnity has been used, and the uses of the other half are already fixed. It is to be devoted to purposes of naval and military expansion, and the greater part of it will have to be sent abroad to pay for ships, guns, and munitions of war. Surely the Government must think that it has an audience of children when it tells the public that money, the expenditure of which is already pledged, can be laid by as a reserve for a system of gold currency.

The *Hochi Shimbun* is strongly in favour of the Bill. It says that the advocates of bimetalism are confined to academical ranks, and that gold monometallism has the approval of all practical economists. Moreover, to pretend that the solution of the problem is being undertaken with undue haste, is an exaggeration. In point of fact; the question has been before the nation for at least four years, and men are now as fully qualified as they will ever be to come to a decision. The gold system ought to be adopted without delay.

The *Kokumin Shimbun* believes that practically all the statesmen, political economists, and business men of the empire, not excluding those engaged, directly or indirectly, in foreign trade, favour the proposed change. Its opponents are an insignificant minority. Since the beginning of the *Meiji* era, no great problem has found such unanimity of opinion throughout the nation, and it is the plain duty of the Government to respond to the nation's wishes. The *Kokumin* does not attempt to expose any arguments for this general faith in gold, but merely calls upon the Diet to give effect to the people's will. It has no doubt that the Lower House will do its duty in the matter, but it fears that the Ito supporters in the Upper House may treat this great national question in a party spirit, unwilling that the credit of introducing such a signal reform should fall to the Matsukata Cabinet. The ratio between gold and silver is notably favourable now for the proposed change. Silver-using countries have reaped all the advantages that can accrue from the depreciation of the white metal. Moreover, Japan is never likely to have in hand, without any effort, such a large quantity of gold available for a currency reserve. Patriotic men of all parties should unite to prevent the loss of such a unique opportunity. As to the Government's programme, it seems to be excellent in every respect. Some people are disposed to think that unless the exchange of 1-yen silver coins be rapidly effected, changes in the gold-price of the white metal may cause much inconvenience. But the quantity of such coins to be dealt with is small. Those circulating in Japan do not exceed from 20 to 30 million yen, and

those circulating abroad seem to be very few in number. There may be some in the hands of the Chinese, but, as a rule, they have been stamped or otherwise defaced, so that, according to the coinage regulations, they cease to be ranked as currency.

The *Nippon's* tone suggests that it attributes this change of the monetary system primarily to what it calls "the abnormal programme of military and naval expansion inaugurated by the Ito Cabinet." Count Matsukata, it was expected, would have modified that programme, but the interval at his disposal before the meeting of the Diet was too short to permit of the elaboration of any sweeping change. He concluded that the best and most moderate plan was to follow on the lines of his predecessors, and to save the situation by means of currency reform. The time is ripe for such a reform. The opinion of the world favours it, and the progress of Japan's commerce and industry demands it. The direct result of the programme of military and naval expansion has been to add to the taxation burdens of the people; the indirect result has been to increase the national debts. The raising of additional divisions for the Army has withdrawn a number of wealth-winners from productive to unproductive operations. Cries of distress are heard from all sides. Having dwelt at considerable length upon apparently irrelevant details connected with military and naval affairs, the *Nippon* lapses into a characteristic diatribe about the necessity of preferring the *Samurai* spirit to the mercantile spirit, and dismisses the currency problem in that fashion.

Public opinion, writes the *Fiji Shimpō*, was for a time undecided about this question of the standards, but of late the majority have undoubtedly ranged themselves on the side of gold, and the Government being unanimously in favour of the yellow metal it may be taken for granted the change will be effected. The general reason assigned is that the civilized world has definitely pronounced in favour of gold as the standard of value. All the great countries of the world use that metal and have come to regard silver as merely subsidiary to gold. To hold by the silver standard under such circumstances is to stand apart from the sphere of the recognised financial authorities, and to employ an inferior medium of exchange. Such reasoning is, of course, somewhat vague. If the subject be examined more minutely, other arguments are found to exist. For many years Japan has been favoured by chance. She has been using a money that constantly depreciated with regard not only to commodities but also to the money of Western nations, and the consequence is that, on the one hand, the cost of her labour has been decreasing relatively and the price commanded by its productions increasing. She has prospered greatly by that happy chance. But the benefits derived from it had about reached their maximum when the war with China broke out, and she now finds herself confronted by two difficulties. The first is that she has to find large sums for purposes of national armament and commercial expansion, but is shut out from supplies of cheap capital on account of her silver standard. The second is that the Occident is beginning to talk seriously of reverting to bimetalism. Should that contingency occur, and should the gold-price of silver appreciate to any great extent, Japan would find herself

terribly handicapped, and her material progress would be seriously checked. Her wisest course is to safeguard herself against that evil by boldly adopting the gold standard and fixing silver at its present ratio. This argument seems to be diametrically opposed to the view of those that advocate the adoption of gold because silver is no longer the metal of civilized nations, but both contentions make equally for the abandonment of silver monometallism. Many people imagine that the adoption of the gold standard will be followed by a large influx of foreign capital, that the rate of interest will fall, that the price of public securities will rise, and that a time of general prosperity will ensue. Doubtless that view finds many supporters in the Diet, and will help to pass the Bill. The *Fiji* then goes on to state its own opinions. The gist of them is that, theoretically, it does not advocate the use of gold alone, or silver alone, or both in combination. History shows that sometimes the one is more advantageous; sometimes the other, and sometimes the two together. But it is beyond question that Japan has benefited immensely by using silver, and the *Fiji* does not attach the smallest importance to the argument that silver is a discredited metal, or that a nation employing it takes low financial rank. It thinks that the longer Japan can preserve her present system, the better equipped she will be for industrial competition with other nations. There is as yet no certainty of a return to bimetalism in the West, and it would seem that no hasty step is yet called for on Japan's part. But the *Fiji* writes in a half-hearted way. It evidently regards the adoption of the gold standard as a foregone conclusion, and refrains from any resolute attempt to oppose it.

FAREWELL DINNER TO BARON D'ANETHAN.

On the evening of the 2nd instant, the members of the Tokyo Club entertained the Belgian Representative, Baron d'Anethan, at a farewell dinner. His Excellency being about to proceed to Europe on leave of absence. Sixty of the members were present, among them being all the Foreign *Chefs de Mission*, with the exception of the German and Italian Representatives, who were unavoidably prevented from attending; practically the whole staff of the Foreign Legations; many Japanese—officials of high standing and private gentlemen—and a contingent of varying magnitude from almost every nationality included among the foreign residents of Japan. It would have been difficult to bring together a more representative gathering, or one whose composition bore more marked testimony to the universality of the esteem and affection entertained for the departing guest.

After the health of the Emperor of Japan had been drunk, Mr. G. Lowther, Vice-President of the Club, rose and said:

GENTLEMEN,—I have a very pleasant duty to perform in proposing the health of our guest of the evening, Baron d'Anethan, the Belgian Minister, who is departing for Europe on leave of absence, and in the very few words I have to say, I intend to make use of my own, the English language, a language of which our guest has such a complete command. It is indeed hardly necessary for me to say anything. The numbers that have gathered here to-night and the various nationalities they represent are sufficient proofs that our guest has been fully appreciated—appreciated not only by his own nationals but by all the foreigners in the

East, and by all those of the country the hospitality of which we here enjoy. You are probably most of you aware that this is not the first time that Baron d'Anethan leaves Japan. He was here as a Secretary some years ago; it is not necessary for me to say how many years; for I was not here at the time. He, no doubt, left the country then with a halo of popularity around him, but I have much doubt whether the halo of popularity which surrounded him then, as a young man, was greater than the halo of popularity which surrounds him now that he leaves Japan in the prime of life. Speaking as a junior member of the Diplomatic Corps, I am bound to say, and in this I am sure I shall carry all those in the same position with me, that we have always met at his hands with the greatest kindness and consideration. Speaking as a member of this Club, and here again I am convinced that I shall meet with no denial, I say that in him we have found a genial companion and a good friend. It may not be unknown to you that during the past two years Baron d'Anethan went through a somewhat severe and long illness, of which he even now sometimes feels the effects, and this has indeed partially prompted his journey to Europe. In wishing him good-bye to-night, we can not do better than add our heartiest wishes for his prompt and complete recovery. If it should please his King and Government to direct that he should return here, I am sure we shall all endeavour to receive him with the same cordiality with which we have tried to entertain him to-night. If, however, it should please his King and Government to send him to another post, we can only hope that the change may mean a step on the ladder of official promotion which will eventually land him in the highest post of the Diplomatic career of his country. Gentlemen, I ask you to drink to the health of our guest, Baron d'Anethan.

Baron d'Anethan, who, on rising, received an ovation said:—

Mr. President and Gentlemen:—If I venture to speak in English the few words that I have to say to you, it is not because I am not fully sensible of my deficiencies in that language. I should be glad to enjoy the same advantage as our Vice-President and to speak to you in my own tongue, but, imperfect as my knowledge of English is, I think that I can manage to tell you how much, how very much, I appreciate the cordial and kind farewell you have given me this evening. Gentlemen, truly when I see how many of you have assembled here to-night to bid me good-bye, and when I note the enthusiasm with which you have drunk my health, and, above all, the genuine heartiness of your response to Mr. Lowther's kind hopes for my speedy return, I feel that it has not fallen to my lot hitherto, and that it can scarcely fall to my lot hereafter, to have such solid cause for happiness and gratitude. Looking round this table, I see represented here members of every nationality among whom I have the honour and privilege to number friends and acquaintances, and if anything could enhance the value of the good feeling evinced towards me by your manner of entertaining me, it would be the universal character of this gathering. What gives me special satisfaction is to see so many Japanese among you, official as well as private. I am not a club man. We old men—or, rather, as your Vice President put it, we men in the prime of life—who have the advantage of being married—well, gentlemen, there are domestic relations in our case that prevent us from being unconditionally club men. But I thoroughly appreciate the value of a club, and it has been a keen source of satisfaction to me to frequent this club, not alone for the sake of the delightful society I have found here, but also because I see the immense benefits conferred by such an institution in a city like Tokyo. Those benefits are illustrated this evening, in the number of different nationalities represented here, and in the numerous attendance of our Japanese friends. Within these walls Japanese and Westerners cement acquaintanceship and friendship far more intimate than could be otherwise brought about, and I do not hesitate to say that the oftener we can here meet the people of this charming country, the more truly shall we understand each other and the kindlier will be our relations. I assure you that the pleasure you have conferred on me by this most undeserved demonstration is deepened and enhanced by the evidence thus afforded of the growth of such relations. Gentlemen, nothing but good should be spoken, they say, of the dead. A man who takes leave of his friends probably receives at their hands a degree of tolerance and consideration that might not be extended to him if he were continuing among them. But if your exceeding kindness suggests that I am, in one sense, to be numbered with the defunct, it never-

theless inspires me to hope that I shall survive in your memories. It is true, as your Vice-President has said, that this is not my first leave-taking of Japan. I am almost an old resident, and I can honestly say that the longer I have lived here, the longer I have desired to live here. I love Japan, and it is my cherished hope that I may come back again. When I do, gentlemen, I hope that you—do not be alarmed. I am not going to ask you for another dinner—I hope that you will welcome me with something of the cordiality that you are showing towards me this evening. I thank you heartily for that cordiality. I thank you for this demonstration of which any man might justly be proud, which I reckon as the happiest experience of my life, and I drink to the health of this friendship-making institution and of its Vice-President, Mr. Lowther. This speech was received with rounds of applause.

ECONOMIC TOPICS.

The Government has decided to change the mode of subsidizing the Nippon Railway and the Tanko Railway. Instead of determining the rate of subsidy after the profit and loss account has been made up, the Government now intends to estimate the amount of guarantee in advance. The Nippon Railway has acquiesced in the Government's request, but negotiations with the other Railway Company have not yet been brought to a conclusion. The Nippon Railway is receiving a Government subsidy,—or rather its profits are guaranteed by the Government—for the 4th and 5th sections, the former for six years more and the latter for a little over nine years. According to the present agreement, the guarantee will aggregate about 2½ million yen. In consideration of this benefit, however, the Company has to put up with a good deal of official interference. For instance, the receipted accounts must be presented for each section, the salaries of experts and other employés, the cost of plant and so forth, must strictly conform with the standards set for Government Railways. Naturally, these restrictions have evoked constant complaints from the officers of the Company, who are of opinion that the railway would pay much better if the subsidy was withdrawn altogether. According to the new system of guaranteeing profits, the Government will save, and the Company lose, about 600,000 yen. But the Company was quite willing to sacrifice that sum, if it could divest itself of official interference. However, continues the *Fiji*, from which we are quoting, the Company appears to have undertaken a sacrifice without receiving reparation in any shape. For so long as the original agreement remains unaltered, the Government will be entitled to interfere with the Company. The latter does not appear to have asked the Government to amend or annul the original agreement when it assented to the new proposals.

Similar inconvenience accompanies the Government's guarantee of the profits of the Tanko Railway Company. It is therefore confidently believed that the Company will consent to the Government's proposal to reduce the guarantee, and thereby effect a loosening of the leading-strings. The point was alluded to in the House of Representatives, when the Budget was under discussion. The Diet's and the Government's idea is to cut down the bounty to 160,000 yen, whereas, according to the original terms of the contract, the Company was to receive about 240,000 yen.

A big iron foundry scheme is on the

tapis. The chief projector is Mr. Amenomiya Keijiro, who acquired notoriety in connection with the Water-pipe Scandal Case. He owns an iron mine in Iwate Ken, and this has induced him to start an iron foundry of his own on a large scale. The total potential yield of iron ores in Japan is estimated at 150 million tons, so that there is an abundant supply of raw material for extensive iron-works. The Government Iron Foundry is too limited in scope to deal with the matter satisfactorily, for it is not expected that large results can be obtained by a foundry with only a capital of four million yen. Mr. Amenomiya and other owners of iron mines think that a big foundry with, say, 27 million yen capital, ought to pay. Such an extensive private enterprise must obtain Government aid, and the projectors have resolved to ask the Government to guarantee profits of 6 per cent. They have already drawn up a circular earnestly enlisting support in influential quarters. The members of the House of Representatives elected from Iwate, Akita, Aomori, Yamagata, and Niigata, where iron mines are situated, have secretly decided to ask the House to endorse the project. The Liberals and the National Unionists are favourably inclined to the scheme, while members of the *Shimpo-to* representing constituencies in the Sanyo and Sanin districts favour it, those districts producing a large quantity of sand iron. Therefore, should the matter be put before the House, it would most probably pass. What attitude the Upper House will assume cannot be predicted with any certainty. On the side of the Government, Count Matsukata and Viscount Nomura are said to approve the scheme. One difficulty is the want of competent experts to undertake the superintendence of the work. There is only one expert now in Japan who could undertake the task, Professor Noro, but he is in prison on a charge of bribery in connection with the Water-pipe Scandal.

EARNEST STUDENTS.

Innumerable incidents of earnest studentship are recorded in Oriental annals: the lad that tied a dagger under his chin to keep himself from nodding; the boy that deciphered his Analects by the light of the moon reflected from the snow; the youth that practised caligraphy by the aid of glow-worms, and any number of men that nearly starved themselves to death for the purpose of saving money to buy books. The students of the Royal English School in Sôul have added another instance to the list. They have decided to do without tiffin in order to procure an English teacher and a gymnasium. It appears that the lads were already in the habit of dispensing with a mid-day meal, and that the King, learning of the fact, decided to make them an allowance of 5 *sen* per head daily. But the boys saw in this grant only an opportunity to improve their scholastic opportunities. They held a meeting, and resolved that the money should be applied to pay some one for teaching them how to translate Chinese into English, and also to provide a gymnasium. There is promise for a nation with a rising generation of that type.

THE GOLD STANDARD.

Marquis Ito's attitude towards the problem of the gold standard has been the subject of some contradictory rumours. The *Mainichi Shimbun* represents him as alleging that the adoption of gold monometallism is essential for Japan, and that the present time is eminently fitted for making the change. The *Nichi Nichi Shimbun* declares that it is false to attribute such views to the Marquis, and that, on the contrary, the ex-Premier has declined to pronounce any definite opinion on the subject, being persuaded that its importance is too great to permit hasty treatment, and that to change the standard without the utmost deliberation and exhaustive inquiry, would be extremely dangerous. Our contemporary adds that, on the occasion of the recent interview between Count Matsukata and Marquis Ito, the latter entered very minutely into the theories expounded by financial experts and the precedents furnished by the experience of various nations, and without committing him to any final declaration, did not hesitate to say that he was opposed to Count Matsukata's project of carrying the change into immediate effect. Count Inouye's views are given by the *Sekai-no-Nippon*. They are even more guarded than those of Marquis Ito. The Count is represented as saying that it is entirely false to include him among the strong advocates of the gold standard. He thinks that the first thing to be done is to place the national economy on a sound basis, and that, pending that consummation, currency reform of the kind indicated would be useless. The Liberal organ does not explain what is meant by "placing the national economy on a sound basis," but it quotes Count Inouye as adding that so long as things remain in their present groove—in other words, so long as the balance of trade is heavily against Japan—to give up silver and adopt a gold currency would be a hopeless undertaking. We suspect, however, that the *Sekai-no-Nippon's* interviewer did not clearly comprehend Count Inouye's statement. For it is plain that if gold were made the unit of currency, its ratio to silver being fixed at 32 to 1, then since the value of the yellow metal for purchasing purposes would be greater in Japan than in any other country, it would tend to gravitate to Japan rather than to leave it. From one point of view, indeed, the outflow of Japan's stock of specie might be increased by the change, but that argument appears to be outside the views enunciated by Count Inouye.

SERIOUS ASSAULT ON A RUSSIAN CARRIAGE.

On the afternoon of Sunday, the 28th ultimo, the carriage of the Russian Chargé d'Affaires was returning from Ueno Park, with Mademoiselle de Speyer, a little girl of three or four, and her nurse. Near Kanda-bashi several drunken soldiers were disporting themselves. They paid no heed to the warning cries of the groom accompanying the carriage, and as it drove up, one of them lurched against the horses, or was struck by them. He immediately began to pound the horses and kick the carriage, and being resisted by the groom and coachman, he was joined by his tipsy comrades, of whom there were

four. Testimony collected by the police goes to show that two of the five inebriates were disposed to check the violence of the others, but, if that be so, their efforts were of a most helpless character, for the impression conveyed to the coachman, groom, and occupants of the carriage was that the soldiers belaboured the horses, seized the wheels of the carriage, with the apparent intention of upsetting it, and menaced the nurse and child with their fists. A crowd quickly gathered, and a woman hastened to call the police, while a man, seemingly a *finrikisha* coolie, jumped upon the steps of the carriage and protected the nurse and child, who were both painfully alarmed. The soldiers then broke off one of the carriage lanterns and threw it at the nurse, happily without injuring her. Just then a police-man arrived upon the scene, and the drunken soldiers at once turned their attention to him, handling him very roughly. Meanwhile, the carriage drove off. The little child had, of course, received a great shock, but we are glad to be able to say that she does not seem to have suffered permanently. The five soldiers were arrested. When they awoke from a drunken sleep, they were much astonished, and deeply chagrined, we are informed, to learn what they had done. Drunkenness is no excuse, however, for such conduct, and we trust that exemplary punishment will be inflicted. The incident is a disgrace to the Japanese Army and to Japanese manhood. If a little child and a helpless woman are to be exposed to cowardly outrages in the streets of the capital, the nation will be classed by foreigners in a very low grade of humanity. It is satisfactory to observe that no vernacular newspaper attempts to extenuate the conduct of the soldiers, but when we remember the extraordinary hubbub, political and journalistic, recently raised, because the German Minister touched a student in the face with his whip, we may fairly invite Japanese public men to show their sense of proportion by denouncing this incomparably greater outrage in becoming terms.

THE IMPORT DUTY ON TOBACCO.

We observe with much surprise that the import duty on tobacco is fixed at from 35 to 40 per cent. *ad valorem*, by the General Tariff now in the hands of the House of Representatives. Doubtless some explanation of this figure is forthcoming, for the subject is known to have received mature consideration, and the possibilities of the proposed tobacco monopoly's being rendered virtually inoperative by the imported article, are well understood. The facts are these:—When the monopoly goes into force, the tax on tobacco grown and manufactured in Japan for home consumption will be at least 100 per cent. of the original cost of the tobacco. In other words, the price of the lower grades of tobacco will be more than doubled. There are, however, several kinds of foreign tobacco that can easily be imported into Japan at prices not much higher than the prime cost of the coarser grades of the Japanese product. If the import duty on these foreign tobaccos be only 40 per cent., they will have an advantage of 60 per cent. over the Japanese tobacco with which they come into competition. It is quite plain that, with such a handicap against it, Japanese tobacco would be driven out of the market, the only alternative being the

abandonment of the monopoly. Another danger also presents itself. Japanese leaf tobacco intended for export will be exempted from the operation of the monopoly. It will not be subject to the tax imposed on tobacco destined for home consumption. What, then, will stand in the way of the Japanese leaf's being exported, manufactured abroad, and brought back to Japan to compete with the tobacco of growers and manufacturers who have not perceived that by the simple expedient of sending the stuff for a trip to China, they could avoid a tax of 60 per cent.? It appears to us that the compilers of the General Tariff have neglected to give practical effect to considerations which must surely have been patent. The difficulty might easily have been negotiated by fixing import duties on a sliding scale, so that foreign grown tobacco of the coarser grades would be so heavily taxed as to be precluded from competing with the Japanese product.

THE NEW CHARGÉ D'AFFAIRES IN KOREA.

It is remarked by the vernacular press that since the Japanese Legation was established in Seoul in 1880, there have been no less than twelve changes of Representative, their names being, Hanabusa Yoshitada (April 1880); Takezoi Shinichiro (Nov. 1882); Kondo Shinjo (Aug. 1887); Kawakita Shunsuke (Dec. 1890); Kajiyama Keisuke (March 1891); Oishi Masami, Otori Keisuke, Inouye Kaoru, Miura Goro, Komura Jutarō, Hara Kei, and now, finally, Kato Masao.

Mr. Kato is a graduate of the Foreign Languages School, and was also a professor in that institution. After entering the Foreign Office, he proceeded to Italy, and subsequently to Holland, as a Legation official. He was then transferred to the Legation in St. Petersburg, where he served as Chargé d'Affaires during Baron Nishi's absence. On his return home, he received the appointment of Chief of the Bureau of Records in the Foreign Department. During the war with China, he proceeded to Fusan, in the capacity of Consul, and afterwards acted as Chargé d'Affaires in Seoul, during the absence of Mr. Hara Kei. His success in that delicate position was very marked. Mr. Kato is proficient in three foreign languages, Russian, French and English; a very useful attribute in a diplomatic official.

COUNT OKUMA'S PROGRAMME.

That Count Okuma is the central figure of the political situation may easily be gathered from the constant attacks of which he is the object in the columns of the vernacular press. Not content with criticising what he has done and what he is doing, his assailants now make capital out of the things that he is supposed to be about to do. The *Tokyo Shimbun* says that, as soon as the present session of the Diet is over, the Count intends to make extensive changes in the personnel of the Japanese Representatives abroad, replacing the present occupants of Ministerial positions by men adapted for carrying out his own policy; and further intends to devote his energies to developing the country's foreign trade. The sting of this apparently simple statement lies in the suggestion that the close of the Diet's session has to be waited for. Something is

to be done that the Diet would censure if it had the chance. Count Okuma must often feel the inconvenience of prominence.

THE GENERAL TARIFF.

The Bill submitted to the House of Representatives on the 27th ultimo, covering a draft law of general tariff, seems to call for a word of explanation. Several of the Foreign Powers, in negotiating new treaties with Japan, have negotiated also new tariffs, covering articles in which the Power concerned has a special interest; and most of the Powers that have not negotiated tariffs, enjoy the benefits obtained by the rest in consideration of the most-favoured-nation clause. But there are, of course, articles that do not appear in any of the tariffs; there are also, or there may be, Powers that have no favoured-nation clause; and, finally, there are Powers that have, as yet, no treaties with Japan. To meet these last three classes of cases the enactment of a general tariff is necessary, and that is what the Diet has been invited to do. The general tariff does not in any way affect rates already conventionally fixed. It has nothing to do, in fact, with conventional tariffs.

NEW MINISTER TO RUSSIA.

Baron Hayashi Kaoru, at present accredited as Minister to China, and now on leave in Japan, was appointed Minister to Russia on Thursday. Baron Nishi Tokujiro, the present Minister to Russia, has retired.

COUNT OKUMA IN THE HOUSE OF REPRESENTATIVES.

On February 25th, Count Okuma, Minister of Foreign Affairs, addressed the House of Representatives as follows:—

GENTLEMEN,—It is my intention at this time to reply to the interpellations of Mr. Suzuki Jubi and others, and Mr. Inouye Kakugoro, etc., respecting the understanding between Japan and Russia; and the Korean railway, and other cognate subjects respectively. With regard to the understanding with Russia, I will to-day make public the Protocol entered into between Marshal Yamagata, our Special Ambassador, and the Russian Minister for Foreign Affairs at Moscow, and also the Memorandum concluded at Seoul by the Japanese and Russian Representatives. It is important, however, that I should in the first place briefly explain the necessity for such an agreement. I propose, therefore, at the outset to describe succinctly the modern diplomatic relations between Japan and Korea; then to give the reasons why the agreement between Japan and Russia was unavoidable, and finally, after making public the two engagements,* I will reply to the questions propounded. Though much of what I have to say is, of course, familiar to you, I shall deal with the subject in historical sequence, touching first upon the course of diplomacy between Japan and Korea.

First, immediately upon the inauguration of the Meiji era, notice was given to Korea, but as the Korea Government had up to that time had no diplomatic relations, except the intercourse with Japan at Fusan and the trade with China at Wiju, she never accepted this notice of the Restoration. A similar announcement was frequently despatched but as often that Government failed to accept it. Our Government sent officials to Fusan to expostulate, but with no better success. Seven or eight uneventful years intervened and then relations between Japan and Korea were most unexpectedly established owing to the firing of a Korean coast fort in Kanghwa Bay upon a Japanese man-of-war. In conse-

quence of that attack, Counts Kuroda and Inouye were, in 1876, despatched to Korea as Plenipotentiaries to demand an explanation and to conclude, at the same time, a treaty of friendship between the two countries. It was a very complicated matter; but, the Korean Government, recognizing the general tendency of the world, was no longer in a position to refuse diplomatic relations, and a treaty was happily peacefully signed between Japan and Korea. Later, in 1882, arose the Seoul disturbance, followed by another in 1884. The latter was one of serious moment, for if it had not been adjusted, it might have caused complications between Japan and China. Fortunately, however, it was amicably settled by the agreement of Seoul between Japan and Korea and the Treaty of Tientsin between Japan and China. After that, came the domestic disturbances in 1894, on account of which both Japan and China sent forces to Korea, and unhappily a collision between them led eventually to the war which extended over 1894 and 1895. The conflict, happily, was brought to a peaceful issue, but immediately upon the conclusion of the Treaty of Bakau unexpectedly arose the Liaotung question, in which the Governments of Russia, Germany, and France intervened in connection with the cession of that Province. Although this gave rise at the time to a great deal of discussion throughout the Empire, the Japanese Government, firmly believing the object of the three Powers to be the maintenance of the peace in the Orient, retroceded Liaotung in conformity with their advice.

What was the effect upon the state of Korea? Japan having entered upon the struggle in alliance with Korea and having acquired territory in consequence of her victory, the King and people of Korea, were deeply touched by the chivalrous action of Japan, and they were highly elated to think that their country had happily become a truly independent Power. The retrocession of Liaotung created doubts in the Korean mind. The condition of Korea had in the meantime undergone a slight change, and unfortunately in October, 1895, there occurred a disturbance at Seoul. That was followed by another in February, 1896; and consequently the sentiments of Japan and Russia in regard to their relations in Korea were less impaired. The situation was disquieting; and it was, I am assured, to allay apprehensions that the necessity arose for an understanding between Japan and Russia. But, as is well known to those gentlemen here who are familiar with Korean history, Korea, being surrounded by great Powers, secures peace by relying upon a stronger neighbour. Korea always maintains her position by her confidence in the power of a great nation; and hence since her diplomatic relations were established, changes in this respect have frequently taken place. Next, when foreign intercourse was inaugurated, His Majesty the King of Korea was still young and the kingdom was governed by a Regency. Following the opening of the country for the first time, there were, as everywhere else, demands, on the one hand, for the closing of the ports and the expulsion of foreigners and, on the other, for the opening of the ports, and subsequently dissensions arose between the conservative and progressive parties. Again, as is frequently seen in the history of China and Korea, a collision took place between the Queen's entourage and the Royal family, which, by affecting the international relations of the country, brought various parties into activity. Then came into existence the Jidaito Party, to be followed by various other combinations such as the pro-Chinese, the pro-Japanese, the pro-Russian, and the pro-American parties. His Majesty, the reigning King of Korea, is not a man of ordinary parts nor is he in any way cruel: but, as is frequently found in Chinese and Korean history, the King, being obstructed or overpowered by the Queen's followers, or by other members of the Royal family, or by his eunuchs, has caused a great many persons to suffer death within the last thirty years. For fear is supposed to grow as the list of persons put to death is lengthened. The mutual suspicions harboured by different members of the Royal family led, I believe, to the

disturbances of October, 1895, and February 1896. This is most deplorable, and certain parties in Korea appear, in consequence, to have felt that the influence of Japan was injurious to their country's interests. It is to be regretted that such misguided people should have attempted to alienate the good will of Japan, and so expel Japanese residents. No differences have ever existed between Japan and Russia; but there have been many things in the conduct of domestic parties—the pro-Japanese, pro-Russian, and pro-American—which have tended to injure the amicable feelings of the two countries. Hence, the necessity for adopting measures to compose distrust and to prevent misunderstandings between Japan and Russia. The Moscow protocol, which was the result of this necessity, was concluded by Marshal Yamagata and the Russian Minister for Foreign Affairs. I will now read the protocol signed at Moscow:—

PROTOCOL.

Marshal the Marquis Yamagata, Ambassador Extraordinary of His Majesty the Emperor of Japan, and the Secretary of State Prince Lobanow Rostovsky, Minister for Foreign Affairs, having exchanged their views on the situation in Korea, have agreed to the following articles:—

Art. I.—The Japanese and Russian Governments, with the object of remedying the financial embarrassment of Korea, will advise the Korean Government to suppress all useless expenditures and to establish an equilibrium between the disbursements and revenue. If, in consequence of reforms, deemed indispensable, it becomes necessary to have recourse to foreign loans, the two Governments shall lend, by common accord, their support to Korea.

Art. II.—The Japanese and Russian Governments shall leave to Korea, in so far as the financial and economic conditions of that country will permit, the creation and maintenance of indigenous armed forces and police in sufficient proportions to maintain internal order without foreign aid.

Art. III.—With a view to facilitate communication with Korea, the Japanese Government shall continue to administer telegraphic lines actually held in their hands. It is reserved to Russia to construct a telegraph line from Seoul to her frontiers. These different lines can be purchased by the Korean Government as soon as they shall have the means to do so.

Art. IV.—In case the above expressed principles should require a more precise and detailed definition or if subsequently other points should arise upon which it may be necessary to concert, the Representatives of the two Governments shall be charged to amicably come to an understanding.

Done at Moscow 9th June, 1896.
28th May, 1896.

(Signed) YAMAGATA.
LOBANOW.

The following is the Memorandum which was concluded at Seoul:—

MEMORANDUM.

The Representatives of Russia and Japan at Seoul, having conferred under identical instructions from their respective Governments, have arrived at the following conclusions:

1. While leaving the matter of His Majesty the King of Korea's return to the Palace entirely to his own discretion and judgment, the Representatives of Russia and Japan will friendly advise His Majesty to return to that place when no doubt concerning his safety there could be entertained.

The Japanese Representative, on his part, gives the assurance that the most complete and effective measures will be taken for the control of Japanese *soshi*.

2. The present Cabinet Ministers have been appointed by His Majesty at his own free will and most of them have held Ministerial or other high offices during the last two years and are known to be liberal and moderate men.

The two Representatives will always aim at recommending to His Majesty to appoint liberal and moderate men as Ministers and to show clemency to his subjects.

3. The Representative of Russia quite agrees

with the Representative of Japan, that in the present state of affairs in Korea, it may be necessary to have Japanese guards stationed at some places for the protection of the Japanese telegraph line between Fusan and Seoul, and that these guards, now consisting of three companies of soldiers, should be withdrawn as soon as possible and replaced by gendarmes, who will be distributed as follows: Fifty men at Taku, fifty men at Ka-heung, and ten each at ten intermediate posts between Fusan and Seoul. This distribution may be liable to some changes, but the total number of the gendarme force shall never exceed two hundred men, who will afterwards gradually be withdrawn from such places where peace and order have been restored by the Korean Government.

4. For the protection of the Japanese settlements at Seoul and the open ports against possible attacks by the Korean populace, two companies of Japanese troops may be stationed at Seoul, one company at Fusan, and one at Gensan, each company not to exceed two hundred men. These troops will be quartered near the settlements and shall be withdrawn as soon as no apprehensions of such attacks could be entertained.

For the protection of the Russian Legation and Consulates the Russian Government may also keep guards not exceeding the number of Japanese troops at those places, and which will be withdrawn as soon as tranquillity in the interior is completely restored.

J. KOMURA,
Representative of Japan.

J. WARBUR,
Representative of Russia.

This is the Seoul Memorandum. Neither the Protocol nor the Memorandum limits or impairs in the least the independence of Korea. Russia and Japan are completely in accord regarding the maintenance of the independence of the Peninsular Kingdom, and therefore both Powers, I am certain, will hail with delight the restoration of order and the advancement of civilization in Korea. The disturbances and discontent in Korea are daily diminishing, and riots have also been suppressed. The feelings of the Korean officials and people towards Japanese are also improving. Whereas, at one time, Japanese could not travel or trade outside Seoul, Fusan, Jinzen, and Gensan, they are now welcomed throughout the eight provinces of the Kingdom. At Pihyong-yang, which was at one time entirely deserted by Japanese, they can now trade in safety. They also carry on their business as far north as Wiju on the Yalu, the river which marks the Chinese boundary. The hostility that existed formerly between the Japanese merchants and others in Korea on the one hand, and the Koreans on the other, has most unexpectedly disappeared and been replaced by friendlier sentiments. The trade of the two countries is undisturbed and has a tendency to increase; and in the same manner, the relations between the two Governments are also very cordial. The suspicions of His Majesty the King of Korea have also been dispelled. In November last, when His Imperial Highness Prince Komatsu Yorihito visited Seoul in his capacity of a naval officer, His Korean Majesty, though then living at the Russian Legation, went to his palace and received him with the heartiest expression of welcome and goodwill. This is sufficient to indicate the great change that has taken place in the King's sentiments towards Japan. It is also a proof of the intimate relations of the two countries that His Majesty, upon hearing of the demise of Her Majesty the Empress Dowager lately, expressed the deepest sympathy, and immediately despatched an Ambassador to attend the funeral and at the same time ordered Court mourning. This not only shows the great intimacy existing between the sovereigns, but it indicates the good relations between their respective subjects. The kindly sentiments and cordial feelings which characterize the intercourse between Korea and Japan will, I am sure, be regarded with great satisfaction by the Russian Government, because the actual present situation is a realization of what that Government has been aiming at.

Thus the dark cloud which hung over the Orient has now entirely disappeared. This is a matter of high congratulation, and at this auspicious moment it gives me the greatest pleasure to make public to you the understandings between Japan and Russia. I will now reply to the interpellations. As to Art. I. of Mr. Suzuki's enquiries, there is no need to reply to it, as I have laid before you the Russo-Japanese agreements. Respecting Art. II., that is, the despatch of military officers to Seoul and the training of Korean troops, it is a fact, but as I have just now read you, this has no connection whatever with the Russo-Japanese undertaking. I must, however, add a few words in this connection. Russian officers appear to have been sent at the request of the King of Korea, and no diplomatic question is involved in it. As to Art. III., respecting the alleged loan of three million yen by the Russo-Chinese Bank on the recommendation of the Russian representative at Seoul, it is not true, though there is no doubt that there was such a proposal. The matter was also broached by the Russian *Chargé d'Affaires*, but it has not yet been consummated. If Korea should borrow this money from a third country, that fact would of course more or less affect the friendly and financial relations of Japan and Russia with Korea. Accordingly the Japanese Government intends not to fail to promote in every way the convenience of Korea. As the matter is thus made clear, there is no need to reply to Arts. IV. and V., of the interpellation.

Next, I will reply to the questions put by Mr. Inouye and others. In my reply to the question regarding the Seoul Fusan Railway, to the effect that it could not be undertaken single-handed by a Power, my language was not clear enough or else the reporter did not quite understand me. I deem it necessary, therefore, that I should here explain my meaning fully. A matter of international concern like this cannot be settled by a power single-handed; if it could be, I should have settled it. There is Korea to take into account, and it is possible in international affairs that a third Power might be interested under certain circumstances. Such was my statement at the time. The condition of Korea was, as I have already said, such that the various party intrigues, coupled with the King's apprehensions, made it impossible for His Majesty to remain in his Palace, consequently matters like the railway question cannot be settled so hurriedly. As it is apparent that there is no intention to renounce an undertaking once concluded, you will wait for a short while. The time will come when the Korean Government will surely fulfil its engagements. I have, in the meantime, the pleasure to announce to you the happy tidings, which I believe you doubtless already know from the papers, that His Majesty the King of Korea had returned to his palace and the new Cabinet appears to be a very strong one, but I am without details, as I have not received any later reports. If the King feels secure and a strong Cabinet is maintained, this engagement is sure to be fulfilled. I do not fear Korea neither do I condemn her. In the fulfilment of this engagement, there is nothing requiring us to defer to another country; and there need not be the least hesitation in claiming our just rights. But we cannot, taking advantage of others' difficulties, rely on the strong and oppress the weak. That is impossible in view of our national reputation. But the time (for the fulfilment of the engagement) will soon come; I am confident it will not be long.

The *Kobe Chronicle* translates the following from a local contemporary:—On Sunday evening last a pickpocket, travelling by the train due at Nishinomiya at 5.40, leaped from the carriage and was run over and killed by the train near Mukogawa bridge. It appears that the pickpocket had attempted to steal a hand-bag carried by a fellow-passenger, who had fallen asleep after the train left Kan-zaki. They were the only occupants of the carriage. The attempt aroused the sleeper, and his light fingered companion jumped through a window but fell against the train and was killed. The handbag contained a gold smoking pipe, watch, and 20 yen in cash.

THE EUROPEAN SITUATION.

A telegram received on the 28th ultimo in Tokyo, and published elsewhere in our columns, shows that the difficulties of the European situation have not yet been absolutely disposed of, though all fear of a general outbreak of hostilities may be said to be over. The Great Powers are agreed that Turkey and Greece shall not fight, and that the Cretan Christians shall henceforth manage their own affairs without Mussulman interference. There is an apprehension that Greece may decline to accept this fiat, her ambition to annex Crete being very keen, and the excitement of her people very great. It would be most lamentable if force had to be employed by the Great Powers to be coerced her. The British nation would find it exceedingly distasteful to have to take a hand in such a task. Yet, after all, Greece is not upholding the cause of freedom. If administrative autonomy be assured to the people of Crete, they ought to be satisfied, and though the world might sympathise with Greece's desire to include in her dominions the land of Mount Ida and of Minos, it would scarcely endorse the idea of a war simply to gratify that ambition. This Cretan question has long troubled Europe. After the conquest of the island by the Turks in the middle of the seventeenth century—a conquest made memorable by the twenty years' siege of Candia—the unfortunate inhabitants suffered, during a period of many years, cruel violence and oppression at the hands of the janissaries. Thus the spirit of revolt was always present, and when (1821) the revolution broke out in continental Greece, the Cretans rose and wrested the whole country from the Mahometans and Turks, who, however, took refuge in the towns and there defied all the efforts of the insurgents to reduce them. This was the first occasion of interference on the part of the Great Powers (France, Russia, and England). They transferred the island to the rule of Mehemet Ali, Viceroy of Egypt. Nineteen years later, Crete was again placed under Turkish dominion, and has remained under it until now. But the Cretans have always retained a strong yearning for freedom and union with the Greek monarchy. To achieve these ends they rebelled twice (1859 and 1866), and their second attempt taxed all the resources of the Porte. This, their third revolt, has procured for them administrative autonomy, but not union with Greece, and as the control of the situation has been resumed by united Europe, it is to be hoped that neither the Athenians nor the Sfakiots will entertain the wild idea of resisting.

COINAGE LAW.

The following is a translation of the new currency law submitted by the Government to the Diet:—

Art. I.—The power of minting and issuing coins belongs to the Government.

Art. II.—A weight of 2 fuh (11.574 grs T.) of pure gold shall be the unit of coinage, which shall be called a *yen*.

Art. III.—The varieties of Coin shall be as follow:—

GOLD COINS.

Pieces of 20-*yen*; 10-*yen*, and 5-*yen*.

SILVER COINS.

Pieces of 50-*sen*; 20-*sen*, and 10-*sen*.

NICKEL COINS.

Pieces of 5-*sen*.

COPPER COINS.

Pieces of 1-*sen*, and 5-*rin*.

Art. IV.—The decimal system shall be adopted for purposes of currency calculation. The hundredth part of a *yen* shall be called a *sen*, and the tenth part of a *sen* shall be called a *rin*.

Art. V.—The composition of the Coins shall be as follows:—

GOLD COINS.

900 parts of pure gold to 100 parts of copper.

SILVER COINS.

800 parts of pure silver to 200 parts of copper.

NICKEL COINS.

250 parts of nickel to 750 parts of copper.

COPPER COINS.

950 parts of copper; 40 parts of tin, and 10 parts of zinc.

Art. VI.—The weights of the Coins shall be as follow:—

	Momme.	Grammes.
The 20 <i>yen</i> Gold piece	4.444	(16.6665)
The 10 <i>yen</i> Gold piece	2.222	(8.3333)
The 5 <i>yen</i> Gold piece	1.111	(4.1666)
The 50 <i>sen</i> Silver piece	3.5942	(13.4783)
The 20 <i>sen</i> Silver piece	1.4377	(5.3914)
The 10 <i>sen</i> Silver piece	0.7188	(2.6955)
The 5 <i>sen</i> Nickel piece	1.244	(4.6654)
The 1 <i>sen</i> Copper piece	1.9008	(7.1280)
The 5 <i>rin</i> Copper piece	0.9504	(3.5640)

Art. VII.—Gold Coins shall be legal tender to any amount. Silver Coins shall be legal tender to the amount of ten *yen*. Nickel and Copper Coins shall be legal tender to the amount of one *yen*.

Art. VIII.—The dimensions of the Coins shall be fixed by Imperial Ordinance.

Art. IX.—The legal remedy of fineness shall be $\frac{1000}{1000}$ in the case of Gold Coins, and $\frac{1000}{1000}$ in the case of Silver Coins.

Art. X.—The legal remedy of weight shall be as follows:—

20 *yen* GOLD COIN; 0.00864 *momme* (0.0324 grammes); or 0.83 *momme* (3.1125 grammes) in 1,000 pieces.

10-*yen* GOLD COIN; 0.00605 *momme* (0.02269 grammes); or 0.62 *momme* (2.325 grammes) in 1,000 pieces.

5-*yen* GOLD COIN; 0.00432 *momme* (0.0162 grammes); or 0.41 *momme* (1.5375 grammes) in 1,000 pieces.

In the case of SILVER COINS, the legal remedy of weight shall be 0.02592 *momme* (0.0972 grammes) for each piece; or 1.24 *momme* (4.65 grammes) in each 1,000 pieces of 50-*sen*; 0.83 *momme* (3.1125 grammes) in each 1,000 pieces of 20-*sen*; and 0.41 *momme* (1.5375 grammes) in each 1,000 pieces of 10-*sen*.

Art. XI.—The minimum circulating weights of the Gold coins shall be as follow:—

	Momme.	Grammes.
20 <i>yen</i> Gold Coin	4.42	(16.575)
10 <i>yen</i> Gold Coin	2.21	(8.2875)
5 <i>yen</i> Gold Coin	1.105	(4.1438)

Art. XII.—If, in consequence of friction from circulation, any of the Gold Coins fall below the minimum circulating weight, or if any of the Silver, Nickel, and Copper Coins become visibly reduced owing to the same cause, or if any Coins become inconvenient for purposes of circulation, the Government shall exchange such Coins for others of the same face values, without making any charge.

Art. XIII.—If the design upon a Coin becomes difficult to distinguish, or if it has been privately restamped, or otherwise defaced, it shall be regarded as unfit for circulation.

Art. XIV.—Should any person import gold bullion and apply to have it minted into Gold Coin, the Government shall grant the application.

Art. XV.—The Gold Coins already issued shall circulate at twice the rate of the Gold Coins issued under the provisions of this Law.

Art. XVI.—The Silver 1-*yen* Coins already issued shall be gradually exchanged for Gold Coins, according to the convenience of the

Government, at the rate of one Gold *yen* for one Silver *yen*.

Pending the completion of the exchange referred to in the last paragraph, Silver 1-*yen* Coins shall be legal tender to an unlimited extent, at the rate of one Silver *yen* for one Gold *yen*; and the suspension of their circulation shall be notified six months in advance, by Imperial Ordinance. Any of these coins not presented for exchange within a period of five full years reckoned from the day on which their circulation is suspended, shall be regarded thenceforth as bullion.

Art. XVII.—The 5 *sen* Silver Coins and the Copper Coins already issued shall continue in circulation as before.

Art. XVIII.—From the day of the promulgation of this Law, the coinage of 1 *yen* Silver pieces shall cease; but this restriction shall not apply to silver bullion entrusted to the Government for coinage prior to that day.

Art. XIX.—All previous laws or ordinances conflicting with the provisions of this Law are hereby rescinded.

Art. XX.—With the exception of Art. XVIII., this Law shall go into operation from the 1st day of the 10th month of the 30th year of *Meiji* (October 1st, 1897).

"YACHI-GUSA."

Messrs. Koike Toyonori and Oe Takayuki, the former in the capacity of Publisher and Printer, the latter, in that of editor, have begun the issue of a little monthly magazine called *Yachi-gusa*, the chief object of which is to aid foreigners desirous of studying the Japanese language. This is not the first enterprise of the kind undertaken by the same gentlemen. During the past four years, they have published a similar magazine entitled *Irairo*, but as its circulation was limited to their own friends and acquaintances, they have now decided to appeal to a wider field. *Yachi-gusa* contains sixteen pages of matter, clearly printed, and quite free from typographical errors, so far as our examination indicates. The subjects are a well chosen mixture of grave and gay. No translation is given, and scarcely any notes are appended. The reader is left to his own devices; a system which may seem to increase his initial perplexities, but must ultimately insure to his advantage. The style is not difficult, but we find a considerable mixture of the scholarly expressions that are constantly coming into conversational vogue now-a-days, as *Kaichin suru* (to state), *Keppeti* (cleanly), *Katō shakwai no yōdōsha* (low class labourers), *Kōkyō no* (public), *shiryō jutsu* (dentistry) and so forth. There are portions of lectures or essays on Japanese qualities, on Japanese cleanliness as compared with foreign, and on Japanese horticulture; and there are the first parts of the celebrated *Kachi Kachi Yama*, from Japanese folk-lore, and of a romance. Undoubtedly the regular perusal of this little book, month by month, would do much to increase the student's familiarity with Japanese, and if the authors intend to deal with subjects of current interest, the magazine will find its way into the hands of all foreigners competent to decipher the meaning of well-composed Japanese presented to them in *romaji*. We hope that Mr. Oe will continue the folk-lore pages. They carry us to the land where differences of politics, of race and of creed no longer hold men asunder, the land of childhood. We ought to add that the yearly subscription to the magazine is only 1 *yen*, and that orders may be sent to Maruzen, Nihonbashi, Sancho, No. 14, Tokyo. Here is a little excerpt, the story of the clever beggarman:—

Kojiki: "Ichi nen bakari mae ni watakushi ga kono iō ye mairimashita toki, anata sama wa watakushi ni donna sama no o furui chokki wo kudashimashita. Oku sama wa go shōchi ga animasumai ga, ano naka ni wa go yen no satsu ga ichi mai haitte imashita."

Saikun: "Oya, oya! Ma, omae sono o kaue wo kaeshi ni kita no ka e?"
Kojiki: "Iye, dō shimashite, mata chokki wo chōdai ni kimashita."

THE ADOPTION OF THE GOLD STANDARD.

THE Japanese statesmen now in power have resolved to adopt gold monometallism instead of the silver monometallism hitherto existing in this country. It is a large experiment, and since all experiments in such a field inspire uneasiness, the nation naturally shows some perturbation. Japan's case is a plain illustration of the working of the Gresham Law. When (1871) the Government of the Restoration first elaborated a currency system, gold was the standard. But it was at the same time enacted that for transactions of foreign trade at the Treaty Ports, silver *yen* might be employed, and these coins were legal tender to an unlimited extent. By and by (1878), internal taxes came to be payable in silver, and in 1883 bonds issued by the Government under the title of "unregistered *Kinsatsu* exchange bonds" took the declared form of silver securities. A year later, the Treasury began to circulate convertible notes, redeemable in silver, and when hard money payments were resumed in 1885, all talk of gold had ceased to be audible, and the Government pledged itself to exchange its note issues against silver, on presentation. Silver, in fact, had completely displaced gold, the cheaper currency driving out the dearer. But, in truth, neither silver nor gold was actually in use. The Government Mint at Osaka, during the quarter of a century included between 1871 and 1895, struck 225 million *yen* worth of coins. Great quantities of these found their way to China, Hongkong, and the Straits Settlements for purposes of currency, or were exported to redress the balance of trade, so that, by the year 1896, such a thing as a silver *yen* or a gold piece was not to be seen in the hands of the people. The only hard money in daily circulation was subsidiary coins; the larger denominations (50-*sen*, 20-*sen* and 10-*sen*) of silver; the smaller, of nickel or copper. According to latest estimates, the metallic currency now in circulation consists of gold coins, to the value of (12,872,187 *yen*; silver coins to the value of 73,355,844 *yen*; and nickel and copper coins to the value of 15,551,608 *yen*. Thus, out of 225 million *yen* worth of coins struck by the Mint, 102 million *yen* worth, approximately, remain in circulation. There are also lying in the vaults of the Bank of Japan gold and silver coins aggregating 66 million *yen*. Hence it follows that Japan retains 168 million *yen* worth of the coins struck by her mint, and that 57 million *yen* worth have left the country. The people, however, have no fancy whatever for hard money. They use subsidiary coins because bank notes of smaller denominations than one *yen* do not exist, but, for the rest, they are perfectly content with paper, and will not take a gold or silver

piece if they can have a note instead. The quantity of media of exchange that they require for their various transactions is comparatively small, though it shows a steady tendency to increase in proportion to the development of business enterprise. Thus, in 1890, the paper currency in circulation averaged 3.54 *yen*, and the subsidiary coins, 0.86 *yen*, per head of the population; whereas the corresponding figures for 1896 were 5.84 *yen* and 0.95 *yen*, respectively. At present, the total currency of all kinds averages only 7½ *yen* per head, a trifling figure when compared with the rate in the United States, namely, 40 *yen* per head. Side by side with this record it is interesting to place the facts that, during the years 1895-6, the Japanese people subscribed 120 million *yen* for war expenses, and started enterprises—railways, banks, industrial, commercial, and agricultural companies—with capitals aggregating 1,280 million *yen*. In other words, currency representing 318 million *yen*—of which only 102 millions were in hard money—performed services representing 1,400 *yen*; which means that every *yen* did the duty of five, approximately, to say nothing of the ordinary work of exchange. On the whole, it would be difficult to find a nation conducting its monetary transactions with greater economy and with less recourse to the precious metals.

Such is the state of affairs that the Government proposes to alter by adopting gold monometallism. The programme is in many respects so simple as to commend itself. Every silver *yen* now in circulation is to be reckoned as one-tenth of a standard gold ten-*yen* coin, the latter being the approximate equivalent of an English sovereign. Thus the ratio between the precious metals becomes 1 to 32.34, and since the actual value of the sovereign to-day is only 9.552 *yen*, whereas the 10-*yen* piece will be worth 20s. 5½d. silver in Japan, according to the new ratio, will be 2.13 per cent. cheaper than it is at present in the markets of the Occident. The silver 1-*yen* pieces now in circulation are to be gradually withdrawn and replaced by gold coins, the ratio being as above stated. In other words, five silver *yen*, now worth 10s. 5½d. in the open market, will be exchanged for a 5-*yen* gold coin worth 10s. 2½d. The silver 1-*yen* pieces circulating in the Japanese empire aggregate 39,320,000 *yen*; the Bank of Japan holds 30,000,000 *yen* worth, and it is estimated that 10,000,000 *yen* are circulating abroad. Thus, roughly speaking 79½ million *yen* worth of these coins have to be replaced by gold. The Government does not pledge itself to any hard and fast course with regard to this operation of exchange. It is to be effected gradually, according to the convenience of the Treasury. In the meanwhile, the coins are, to be legal tender to an unlimited amount, just as they are at present. At a fitting moment,

their circulation will be suspended, six months notice being given, and within five and a half years from the date of the issue of the notice, they must be presented for exchange against gold, at the ratio mentioned above, on pain of being treated as mere bullion. It will be seen at once that the hazardous element of the system presents itself at this point. We do not propose, however, to deal here with the economical aspects of the scheme, but will confine ourselves to its mechanism. Assuming, then, that silver 1-*yen* pieces to the total value of 79½ million *yen* flow into the Treasury in exchange for gold, the next question is, what will be done with this silver. Will the Japanese Government offer it for sale in Western markets? There is no such intention, we believe. The silver subsidiary coinage already requires to be largely supplemented, and the demand for it will, of course, be still greater when the 1-*yen* coins are withdrawn. It is estimated that, within the space of about 4 years, an addition of 42 million *yen* may be made to the silver subsidiary coinage. The remainder of the 1-*yen* pieces, aggregating 37½ million will be stored in the vaults of the Bank of Japan, for gradual conversion into subsidiary coins, or for exchange against gold, should advantageous opportunities offer. With regard to the manner of putting into circulation these 42 million *yen* worth of silver subsidiary coins, the channel employed will be the 1-*yen* notes now in the hands of the public. It is to be observed that the Bill submitted to the Diet and translated elsewhere in our columns, contains no provision with reference to 1-*yen* notes, and the inference suggested is that they are to remain in circulation, performing the part of subsidiary paper, without any representative among the subsidiary coins—florin notes, in short. That is not the idea, however. They, too, are to be gradually withdrawn from circulation. The issues of them amount at present to 67 millions of convertible notes (*dakwan-ken*) and 9 millions of Treasury notes and bank notes, or 76 millions in all. Against 41½ millions of this paper the corresponding amount of silver subsidiary coins will be issued. Thus, at the end of 4 years, there would remain in circulation 34½ millions of 1-*yen* notes, and these would either be exchanged for 5-*yen* gold notes, or subsequently redeemed with subsidiary silver coins.

The coins forming the new system will be these:—

GOLD STANDARD COINS.

20-*yen* piece.....10-*yen* piece.....5-*yen* piece.

SILVER SUBSIDIARY COINS.

50 *sen* piece.....20-*sen* piece.....10-*sen* piece.

NICKEL SUBSIDIARY COINS.

5-*sen* piece.

COPPER SUBSIDIARY COINS.

1-*sen* piece.....5-*rin* piece.

The gold standard coins are to be 900

fine, and the silver subsidiary coins, 800 fine. The weights may be learned from the project of law. As for the dimensions, they are stated to be, 0.95 inches (Japanese) diameter for the 20-yen gold coin; 0.7 inches for the 10-yen, and 0.6 inches for the 5-yen. In the silver coinage, the 20-sen and 10-sen pieces will remain unchanged as to diameter, but the new 50-sen piece will be decreased in diameter from 1.04 inches to 1.02 inches. For purposes of comparison, it may not be uninteresting to place the weights of the old and new silver coins side by side:—

	Old. Monme.	New. Monme.
50-sen piece	3.32925	3.5942
20 sen piece	1.3317	1.4377
10-sen piece	0.66385	0.7188

It is understood that, during the months of July, August, and September, the mint will coin gold to the extent of 48 million yen; namely, 12 million yen worth of 10-yen pieces, and 36 million yen worth of 20-yen pieces. For the proposes of this gold coinage, there is already 20 million yen worth of bullion in the Osaka Mint, and arrangements have been made for 15 million yen worth to arrive by the middle of the present month (March). Moreover, the Bank of Japan holds 35 million yen worth. Hence the total stock of gold bullion immediately available for coinage purposes is 70 million yen.

Concerning the reserves to form the basis of the gold currency, the following figures are approximately correct:—

Gold Coins now in the Bank of Japan	YEN.
Japan	36,776,600
Gold Bullion to be received by the end of May from the Chinese Indemnity against issues of convertible notes.....	72,623,856

Total	109,400,456
Silver Coin and Bullion in the Bank of Japan	49,040,841

Grand Total..... 158,441,297

To complete these figures, we append the currency in circulation at the end of last January:—

	YEN.
Gold Coins	12,872,187.600
Silver Coins	73,355,844.943
Copper and Nickel Coins...	15,551,608.995

Total Hard Money 101,779,641.535

Treasury Notes.....	9,217,147.750
Bank Notes	16,464,289.000
Convertible Notes.....	190,519,446.000

Total Paper Money 216,200,882.750

Grand Total of Currency... 317,980,524.285

COUNT OKUMA'S EXPERIMENT IN THE HOUSE OF REPRESENTATIVES.

IT has been very interesting to watch Count OKUMA's experiment in the House of Representatives. For a moment things almost assumed the complexion of a successful issue. That Count OKUMA himself expected to succeed, must be supposed, but we doubt whether many persons equally sanguine could have been

found. Hitherto, Ministers of State, without exception, have declined to present themselves at the bar of the House for cross-examination. When they had statements to make, they said what was to be said, aiming above all things at brevity, and refusing to answer the queries of which an avalanche was generally poured upon their heads by members of the Opposition. That reserved attitude on the part of the statesmen in power was always a sore grievance to the House. Loud charges of pusillanimity were preferred against them, and they were accused, at the same time, of insulting haughtiness and of want of consideration for the Legislature. Then Count OKUMA appeared upon the scene. Not less clever as a politician than ready as a debater, he would probably have found difficulty in persuading himself to turn his back upon any discussion to which he was challenged. Moreover, his party relations had accustomed him to dealing with men *en masse*. He boldly faced the House, and abandoning the cold reserve of his predecessors, assumed the character of a parliamentary leader; employing the resources of eloquence and logic, and undertaking to reply to any questions propounded for solution. So far as direct issues were involved, he succeeded admirably. The House had to confess itself in the presence of a speaker of the highest calibre, nor could the Opposition devise any question, however irrelevant, that proved a stumbling-block to the Minister. Thus far the victory rested absolutely with Count OKUMA. He had met the House with weapons chosen by itself, and had vanquished it in fair fight. But the House had not the magnanimity to acknowledge its defeat. Magnanimity, indeed, is a quality seldom found among men acting in association. Beaten in the battle proper, the Opposition did not hesitate to resort to the tactics of petulant children. While Count OKUMA was speaking from the rostrum, a Liberal member, indifferent alike to the rules of parliamentary procedure and to the canons of common politeness, attempted to address the House. Count OKUMA resented the interruption so far as to say "*o hikaye nasai*" (pray wait). That is an expression commonly employed by the members themselves under similar circumstances. We have heard it used a dozen times without evoking the slightest protest. There is nothing to protest against. When a member occupies the rostrum and is in the act of making a speech by permission of the President, no other member has any right to interrupt him. A speech by a Minister of State is doubly fortified against such incidents, for Ministers of State enjoy the Constitutional privilege of addressing the House at any time. To interrupt them, or to refuse to hear them, is a direct violation of the Constitution. Forgetting all

this, a hot-headed Liberal at once challenged the propriety of Count OKUMA's "*o hikaye nasai*," and no sooner was this illogical and paltry frivolity flaunted before the Opposition, than they caught at it as a straw to save the situation, and insisted on introducing a motion of censure against Count OKUMA. Of course the motion was defeated, but it gave the Opposition an opportunity of losing their heads, and they proceeded to do so with all the zeal in the world. They even taunted the Minister because he left the House before a vote of censure had been taken, though His Excellency had no manner of concern with that procedure, and must have been thoroughly ashamed to witness such conduct on the part of men whom he had just been treating as responsible legislators.

The incident teaches two lessons. One is that until the House of Representatives develops some sense of its own dignity, its clamours about the unwillingness of Ministers of State to come and be baited by it, can not be taken seriously. No Minister could possibly have treated the House with greater patience and consideration than Count OKUMA displayed, yet he was grossly insulted, and not the faintest shadow of extenuation can be found for the vertigo that overtook his insulters. It can not be supposed that members of the Cabinet will again subject themselves voluntarily to an ordeal so injurious to the reputation of the House, and so painful to themselves in their capacity of statesmen desiring to respect the Diet and to see it respected.

The second lesson is one that we have often insisted on previously, namely, the great inexpediency of Ministers' appearing at all in the Japanese Diet. They have no real status there, nor is there any logical reason for their presence. Hitherto, they have always played the part of living documents—until Count OKUMA broke the record—setting forth a fixed modicum of information but declining to answer questions and refraining from taking any share in the debates. The House has been puzzled what to make of them, and its inclination to convert them into official dictionaries is not, on the whole, an extravagant outcome of a situation so anomalous. We can not recall a solitary instance of really useful results having been attained by a Minister's attendance in the Lower House. Friction or dissatisfaction has invariably been the issue.

POLITICAL TALK.

THE usual stream of gossip continues to emanate from anti-Cabinet sources. It is alleged that Mr. KONO HIRONAKA, parliamentary leader of the Liberals, recently submitted to Count KABAYAMA a proposition in the sense that if Count OKUMA were driven out of the Cabinet, he, KONO, would undertake to secure the

support of the Liberals for the Government. The *Nichi Nichi*, publishing this rumour, says nothing about the nature of Count KABAYAMA'S reply, but observes that Mr. KONO subsequently withdrew from his Party, and that, since then, his relations with Count KABAYAMA have been very close, whereas, on the contrary, symptoms of estrangement between Count OKUMA and Count KABAYAMA have begun to show themselves. The sum of all this, we take it, is that the prominence of Count OKUMA'S figure in the Cabinet renders him a natural target of attack. The bitterest enemies in the political arena are the Liberals and the Progressionists. By "Progressionists" we mean the former *Kaishin-to*. In the opening years of Japanese parliamentary institutions, the *Kaishin-to* were the life and soul of the Opposition. They led every attack against the Government, and when all other political associations consented to be placated, the Progressionists resolutely maintained their implacable attitude. Indeed, it is not too much to say that had the various elements of the Opposition continued to rally round the Progressionists, and had they adhered to the latter's destructive tactics, the Government must ultimately have been reduced to a state of helplessness, and the political parties would have remained absolute masters of the situation. But, at a critical stage, fierce animosity suddenly blazed out between the Liberals and the Progressionists. It would be difficult to trace the various sources from which embers were carried to build that fire, but that Mr. HOSHI TORU set the torch to the tinder, is matter of history. Next to the war with China that event was the most signal in the story of constitutional politics. It meant that the Government, instead of being confronted by an overwhelming solidarity of enemies, was enabled to fold its arms, and, from defending itself against hopeless odds, could turn to the much more comfortable spectacle of an internecine contest among its foes. It meant, also, that unless the breach in the ranks of the Opposition were closed, one of the contending sections must vote with the Cabinet. That is precisely what happened, and from supporting the Cabinet for the sake of opposing the Progressionists, the Liberals ultimately passed to supporting the Cabinet for its own sake and for the sake of its measures. Their dilemma now is that they can not revert to their old attitude of antagonism merely because the *personnel* of the Cabinet has changed, since there has been no change of measures or principles. That is where Counts MATSUKATA and OKUMA have displayed their shrewdness. They have stepped into the groove prepared by their predecessors, the only difference between the policy of the two Cabinets being that, the men now in power are disposed to travel faster than

the men they have displaced; and seeing that the direction towards which they travel is exactly the direction always taken by the Liberals, the latter are confronted by the dilemma of either developing conservative tendencies, or submitting to something very like self-effacement. It seems to us that this situation might always have been anticipated. It is the inevitable outcome of the artificiality of the differences hitherto holding Japanese politicians apart. At no time could any party—if we except the insignificant little coterie under the leadership of Viscount TORIO, who called themselves Conservatives (*Hoshu-to*)—at no time could any party elaborate a programme varying intelligibly from the programme of another party. All were in absolute unison with regard to cardinal principles. All wanted party cabinets. All wanted a fuller measure of free speech. All wanted to extend the franchise. All wanted to reduce administrative expenditures. All wanted to increase the Army and Navy. And every one of these things, with, perhaps, trifling variations of degree, was desired by the Government also, the sole exception being party cabinets. But party cabinets are now a foregone conclusion. From the moment that the *Meiji* statesmen stepped down into the arena and joined hands with a body of their political assailants, the doctrine of responsibility to the SOVEREIGN alone and independence of the Diet, lost its vitality. What is there now to fight about? There is no war cry that can be translated into language commonly comprehensible. No tangible embers of antagonism smoulder except the ashes of the old fire that once burned so vividly between the Liberals and the *Kaishin-to*, whose leader was Count OKUMA. It is hard for the Liberals to support a Cabinet including Count OKUMA. It is equally hard, probably harder, for them to oppose a Cabinet whose platform is their own from point to point. Impaled on the horns of that dilemma, they have naturally suffered some disintegration. If somebody would provide them with a tocsin that they could sound without awakening echoes of inconsistency, they might close their ranks for a fresh onset. But nobody seems disposed to save the situation; neither Marquis ITO, not Baron ITO, not Count ITAGAKI. Choshu and Satsuma have been too long in the same camp to take up arms against each other for the gratification of party enmities. The upshot of it all is that Japanese politicians having exhausted the potentialities of personal differentiation, must now set about the building of platforms out of intelligible principles. No other sources of difference can survive the test of practice. The country is apparently on the eve of a new political era. If there be any vertebrate conservatism anywhere, we shall presently see it raise its head.

PRESS LAW AMENDMENTS.

WHEN our English local contemporaries complained, time and again, that submission to Japanese jurisdiction would bring them under a press law by which the Minister of Home Affairs was vested with competence to arbitrarily suspend or suppress a journal, we repeatedly pointed out that the apprehension was chimerical, inasmuch as the objectionable provisions of the Japanese press law would certainly be amended or rescinded long before the abolition of Consular Jurisdiction. Apparently our forecast is on the verge of being fulfilled. Indeed, it might have been partially fulfilled long ago had the advocates of reform shown themselves more practical, for very material amendments, that would have received the Government's endorsement, were wrecked in their passage through the Diet owing to the Lower House's obstinacy in refusing to entertain any compromise proposed by the Upper. Rather than take half a loaf, the Representatives preferred to go altogether without bread. However, the end that they have long sought to achieve seems to be now in sight. The Cabinet laid before the House an amended draft of press law, the power of suspension, hitherto unlimited, being reduced to a period of one week, and it being further provided that, in every case, the incriminated matter must be specified; a rule the absence of which from the existing Law enables the Administration to suspend or suppress without even informing a newspaper of its exact offence. But the Special Committee entrusted by the House with the duty of examining and reporting upon the Government's Bill, recommended changes amounting to a radical metamorphosis. They proposed to transfer the control of the press virtually from the Administration to the Judiciary, their suggestion being that suspension should be possible only in connexion with an action at law, and that its effect should be limited to the particular issue or issues containing the incriminated matter, as well as to the subsequent publication of similar matter, pending the verdict of the Law Court. In other words, should the Authorities deem that a journal or periodical contains writing prejudicial to public peace or morality, or calculated to impair the dignity of the Court, to subvert the political system, or to derange the laws of the realm, a public prosecution must be instituted against it, and pending the result of the prosecution, the sale and distribution of the offending issue may be suspended, or the issue may be temporarily seized. Suppression by Administrative order becomes, of course, impossible, but, on the other hand, the Law Courts are to be vested with power to suppress; a power never previously possessed by them. Such are the amendments proposed by the Special Com-

mittee, and the Lower House has adopted them *en bloc*. Moreover, the Government has practically agreed to accept them, provided that they pass both Houses. Hence everything now depends on the action of the Peers. In all previous sessions they have shown themselves conservative toward the Press Law, and we hesitate to conclude that they will suddenly perform a *volte-face* simply because the Cabinet of the day has shown itself heroically liberal.

It is hard, very hard, to think that the time has come to dispense with the Administration's power of suspension. That it ought to be modified, we have little doubt. Justice rebels at the notion that suspension should be possible without any clear indication of the offence committed. To this patent objection the Japanese Authorities have always replied that suspension is intended to be preventive rather than punitive: in other words, that a publication is suspended when its writings, if continued in the same strain, would be likely to prejudice public peace and good order. But surely the power of drawing such a fine deduction is too vague to entrust to any official. The incriminated matter ought to be distinctly pointed out, and a maximum term of suspension should be fixed. Beyond those modifications we can not think it safe to go. It is true that several Japanese journals have reached a stage far above the need of Administrative supervision. But many others seem to be still without any adequate sense of dignity or responsibility, and, what is worse, public opinion does not arraign them. Their hysterical pettinesses and delirious agitations would quickly discredit them in any community possessing a matured appreciation of the standard by which public writers should be judged. But the Japanese nation does not yet understand what it has a right to expect from the press, and since public opinion imposes no adequate restraints, the removal of those hitherto imposed by the Administration seems a hazardous experiment. Nothing is easier than to grant liberties, but to withdraw them when they have lapsed into licences is a different undertaking.

THE NEW CURRENCY SCHEME.

WE explained, in a previous article, the mechanism of the new system of coinage proposed by the Japanese Government. In so far as concerns the unit of value chosen, the principles on which the choice has been made do not commend themselves to intelligent reflection. One of Japan's chief objects in adopting gold monometallism is to bring herself into close touch with the gold-using countries of the world. To pursue that end logically, she ought to select a unit of value exactly equivalent to the unit most widely

recognised in those countries. The English sovereign is incomparably the most widely recognised among circulating coins. It is received by all civilized nations at a discount representing merely the cost of exchange. Japan's wisest course, we think, would have been to make her 10-yen piece of the same intrinsic value as the sovereign. She has not done so. She has made it contain 115.7426 grains of pure gold, its intrinsic value thus being 5½ pence greater than the intrinsic value of the sovereign. There are no foreign coins that correspond precisely with the Japanese gold coins. Her 10-yen piece will be equivalent to 4.985 American gold dollars. Thus, she is about to adopt a system involving very complicated calculations for exchange purposes. Of course, there is this to be said, namely, that by choosing such a unit the disturbance caused in her existing system is reduced to a minimum, since her old gold coins will continue to circulate without any change, except that their face value in terms of the new unit will be doubled, the old 5-yen piece becoming the equivalent of the new 10-yen piece, and so forth. But since it is her intention to gradually re-cast all these old coins, the additional effort of adopting a unit that may be called practically the unit of Europe would surely have been worth making.

Since the definite announcement of Japan's probable adherence to gold monometallism, gold has begun to appreciate. That was to be foreseen. The demand for silver having been reduced by the closing of the mints of yet another country to silver coinage, and the demand for gold having been increased by the adhesion of yet another nation to the gold-using society of States, it is inevitable that the divergence between the prices of the two metals in terms of each other should be intensified. Doubtless it was in anticipation of such a result that Japanese financiers fixed the silver price of the gold yen at two shillings and twenty-three-fortieths of a penny, whereas the price then ruling in the market was two shillings and forty-five-fortieths of a penny. They left a margin of twenty-two-fortieths. Already a portion of that margin has disappeared. The sterling value of the yen, at this moment (4th instant) is quoted at two shillings and thirty-five-fortieths of a penny. A further drop of three-tenths of a penny will bring silver to the ratio chosen by Japan, namely 1 to 32.34. Will the descent stop there, and if it does not, how will Japan fare *en route* to her new system? These are questions of the greatest importance. It will be seen at once that if the projected system were fully established, no embarrassment need be anticipated. The ratio fixed by Japanese financiers is intended simply to connect their subsidiary silver coins with their standard gold coins.

Great Britain's silver money is connected with her gold by a ratio which fictitiously enhances the gold-price of the silver to the extent of more than a hundred per cent. Yet her currency system works smoothly, and she is never invaded by a deluge of silver. Japan would fare similarly were her arrangements for the new system completed. Even though silver fell to twenty pence an ounce in the markets of the world, while rated nominally at about 30 pence in the markets of Japan, there would be no avenue for it to flow to this country, displacing gold, any more than there is now an avenue for it to flow to the United Kingdom, where its value for purposes of subsidiary coinage is 66 pence an ounce against a world value of 31 pence. In some quarters the Japanese Government is charged with presumptuously undertaking to fix a ratio concerning which the ablest financiers of the Occident confess themselves perplexed. Did she attempt to introduce bimetallism, linking the two metals by an invariable ratio, she would certainly be open to that accusation. But she is not adopting bimetallism. She is adopting gold monometallism, and being under the necessity of connecting her subsidiary coins with her gold standard coins, she chooses a ratio in close proximity to that actually ruling in the London market. The mechanics of the system are not to be reproached. The point is, can she ever reach her goal? Two serious obstacles lie in her path, her 1-yen silver coins and her 1-yen bank-notes. It is estimated that the silver 1-yen pieces now circulating in Japan aggregate 39 million yen, and that 10 millions are in use in China and the Straits Settlements. As for 1-yen bank-notes the issues amount to 76 million yen worth. These coins and notes have to be exchanged for gold before the new system is fully established. It is true that the Government does not pledge itself to any method of exchange. The operation is to be effected gradually according to the convenience of the Treasury. But there is a limit of time. At a date to be hereafter fixed, with six months' notice, 1-yen silver coins and notes will cease to be legal tender, and within 5½ years from the issue of the notification suspending their free circulation, they must be presented for exchange against gold, or treated as mere bullion. Now suppose that gold appreciates largely within that period of 5½ years. Suppose that it appreciates 28 per cent., so that the sterling value of the silver yen falls to 1s. 6d. Such a conjuncture is quite possible, for, since 1890, the appreciation of gold in terms of silver has been over 35 per cent. Every silver yen bearing the stamp of the Japanese Government, and every 1-yen note the convertibility of which is guaranteed by the Japanese Treasury, would then be presented for exchange against gold, and the loss in-

curred by Japan in connexion with 125 million *yen* of silver and paper 1-*yen* pieces and notes, would be 31½ million *yen*, or over three millions sterling. That is a grave risk. Why it is to be deliberality incurred, we do not apprehend. It seems to us that the simpler and safer plan would have been to relegate the silver 1-*yen* pieces and the 1-*yen* notes to the rank of subsidiary money. A subsidiary token of larger denomination than the 50-*sen* coin seems to be wanted. The 1-*yen* coins and 1-*yen* notes would have been a convenient addition; they would have practically played the rôle that the florin plays in the English system. Japan can not afford to impair her credit in the eyes of the world, and certainly people in Europe and America will shake their heads over the risk that she runs in pledging herself to redeem, within 5½ years, 125 million *yen* worth of silver at the fixed price of 30 pence an ounce, when the gold price of silver in London may not be more than 20 pence or even 15 pence.

It is not necessary, however, to dwell upon that side of the problem, for, as we understand, Japan's change to gold monometallism is dictated chiefly by the conviction that silver has reached virtually its lowest point, and that its sterling price may be expected to appreciate largely within the next few years. Her financiers would probably decline to reckon the chances of precisely the opposite contingency. They are fully sensible of the great advantages that their country's industry and commerce have derived from the employment of a currency constantly depreciating in terms of the currency of the markets where they sell their commodities. But they think that they have drunk to the depths of that well of prosperity, and that the time has now come to guard themselves against the upward swing of the silver pendulum. In short, they have been made rich by silver that cheapened steadily in terms of gold, and now, thinking that the Occident inclines towards bimetalism, they want to be made richer by gold that cheapens steadily in terms of silver. It has been said that the Japan is the pet child of fortune. If this new experiment succeeds, who can deny her right to the title?

There is also the secondary—is it not, perhaps, the primary?—motive that Japan's financiers want to place her within reach of the stores of cheap capital awaiting investment in the Occident. They believe that were their public securities changed to a gold basis, Western capitalists would purchase them eagerly. Probably they are right. Japanese £10 consols paying five per cent. interest ought to sell easily for £12, or even £13, in London, were the conditions of the investment satisfactory. It is here that Japan will find the disadvantage of her heroic method of dealing with her public

debts. Her programme is to discharge her whole indebtedness by the year 1939. Under such circumstances her consols will scarcely be regarded as a comfortable investment. A holder is liable to have his money thrown back upon his hands at any moment, and must have it thrown back within 42 years. If Japan would behave like other nations in this matter; if she would proceed deliberately instead of indulging in financial fireworks, the investments she offers would commend themselves better to Western capitalists.

One point must be at once apparent. It is that if Japan's statesmen believe in the imminence of a general bimetallic movement and the consequent depreciation of gold, then to obtain foreign capital by means of a gold loan, without any change of the country's currency system, would be a most profitable speculation. To that Counts MATSUKATA and OKUMA would doubtless reply that although the burden of such a debt might diminish steadily in proportion to the depreciation of gold, the diminution would not bear comparison with the great impairment that the people's ability to pay must suffer were they condemned to the use of an appreciating currency.

It is held in some quarters that by adopting a ratio of 32.34 to 1, Japan is guilty of repudiation in so far as her public securities are concerned. She has pledged herself to redeem those securities in silver, and she now announces her resolve to redeem them in gold at a rate fixed by herself; a rate that may prove to be much lower than the gold-price of silver at the time of redemption. There is no blinking that phase of the question. If, as Japanese financiers are understood to anticipate, silver, owing to rehabilitation, appropriates largely within the next ten or fifteen years, foreigners that invested in Japanese consols previously to the adoption of gold monometallism, will have a great many complaints to make.

Cheap silver has been of immense benefit to Japan. Were she now about to abandon its advantages in deference to a romantic fancy for the nobler metal; or for the sake of entering the financial comity of European nations; or for the sake of obtaining access to Western capital, a long sermon might be preached on her economical folly. But since she professes to be taking this step in order to escape the misfortunes of appreciating silver and in order to benefit by the blessings of depreciating gold, all that economical aspect of the problem is excluded from the argument, and the question turns simply upon the soundness or unsoundness of her forecast. She is embarking upon a vast speculation. We trust that her idea may prove to be an inspiration, not a vertigo.

IMPERIAL DIET.

FRIDAY, FEBRUARY 26TH.

HOUSE OF PEERS.

The House met at 10.05 a.m., the Order of the Day being:—

- 1.—Determination of the time for the Budget Committee's Examination of a Supplementary Budget of Revenue and Expenditures for the 29th Fiscal Year (sent up from Lower House).
- 2.—Determination of time for the Budget Committee's Examination of a Supplementary Budget of Special Revenue and Expenditures for the 29th Fiscal Year (sent up from Lower House).
- 3.—The same with regard to a Supplementary Budget of General Revenue and Expenditures for the 29th Fiscal Year (sent up from Lower House).
- 4.—Government Bill for dealing with Unreclaimed Lands in Hokkaido.
- 5.—Government Bill for entrusting to a Private Company the construction of a Railway included in the Hokkaido Railway Scheme.
- 6.—First Reading of a Bill for a Treasury Grant to a Public Library.

Mr. Kubota Yuzuru presented a Question with reference to the organization of the Education Council. He complained that the present membership of the Council was quite insufficient; that the scope of its inquiries was too narrow; and that its proceedings ought not to be private.

On the motion of Viscount Tani, Chairman of the Budget Committee, it was decided that the Committee should conclude its examination of the three Supplementary Budgets so as to present its reports on the 27th instant.

The Government Delegate explained the Bill relating to Unreclaimed Lands in Hokkaido. The object of the Bill was to supplement the present law so as to bring it into accord with the altered circumstances of Hokkaido. The law provided only for the sale of unreclaimed land, and fixed the rate at 1 *yen* per 1,000 *tsubo*. But in order to promote the development of the island, grants of land must be made without payment. Power to make such grants, and the limits within which they might be made, would be established by the proposed law. There were three million *cho* (7½ million acres) of land awaiting reclamation in Hokkaido, and the statistics of 1894 showed that only 47,000 *cho* (117,000 acres) had hitherto been reclaimed.

The Bill was handed to a Special Committee. The Government Delegate, explaining the Bill with reference to a Hokkaido Railway, said that the line in question was from Hakodate to Otaru, 150 miles; a road of unquestionable importance. The Government, though fully sensible of the necessity for this line, did not see its way to undertake its construction, so numerous were the enterprises already devolving upon the State. Fortunately, two or three private companies had applied for permission to build the line, and the Government now sought the Diet's consent to entrusting the work to the most solid of the companies. He reminded the House that the development of Hokkaido was now progressing by increments of 40 or 50 per cent. annually.

Viscount Tani opposed the Bill. He considered that if the work were worth a Company's while to undertake, it should be worth the Government's while. They all knew that an interval of 5 or 6 years must elapse before such a railway began to pay fair dividends on the capital invested, and he doubted whether a Japanese Company was in a position to face a project of that kind. He doubted, also, whether this additional avenue for the outflow of specie should be opened at present, and whether the finances of the country permitted the fixing of so much floating capital.

The Government Delegate replied that the prosperity of Ishikari and its vicinity was chiefly due to the influence of railways, and that a similar result might confidently be anticipated from the proposed line. In answer to a question from Baron Ozaki Saburo, he said that there was no question of guaranteeing interest, and that the company applying for a charter was genuinely solid. The period of construction was 4 years, and the cost was estimated at 8 million *yen*.

The Bill was entrusted to the Special Committee already appointed to report upon the Bill relating to Unreclaimed Land in Hokkaido.

Professor Toyama, introducing the Bill with reference to a Grant-in-Aid of a Public Library, said that a Representation in favour of the principle of the Bill had already been made by the House, but as the Government had not acted upon it, he now brought forward a draft of law to expedite matters. He dwelt on the importance of a public library for educational purposes, and explained that in every civilized country of the Occident such institutions received State aid.

The Bill was entrusted to a Special Committee.

The House was counted out after the mid-day recess, and the President announced that the next meeting would take place on the 1st of March.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m. the Order of the Day being:—

- 1.—Continuation of the First Reading of Press Amendment Bills (three in number).
- 2.—First Reading of a Bonded Warehouse Bill (official).
- 3.—First Reading of a Project of Law (official) relating to Rates of Custom Duties.

The proceedings commenced with an explanation of a question presented by Mr. Tanaka Shozo (*Shimpo-to*) and 102 other introducers or supporters, the subject being the mineral poison alleged to emanate from the Ashio Copper mine, owned by Mr. Furukawa Ichibei.

Mr. Tanaka's speech occupied fully two hours. He enumerated various evils engendered by the mineral poison; alleged that 33,000 *cho* (82,500 acres) of farms had been devastated and the food and drinking water of 100,000 people poisoned; that one *tan* (a quarter of an acre) of arable land, formerly worth 200 *yen* or so, had been reduced in value to only 1 or 2 *yen*; and that the annual output of copper from the mine, namely, 2 million *yen*, could not be compared with the evils accompanying its extraction. He further observed that this was the fifth question introduced on the subject since the 24th year of *Meiji*, and that the Government stood convicted of criminal negligence in not promptly attending to the matter.

When Mr. Tanaka concluded, Count Okuma, who had been seated on the ministerial bench for about half an hour, entered the rostrum, and said that he purposed explaining the questions put by Messrs. Suzuki Jubi and Inouye Kakugoro. The Count's speech did not impress our reporter as up to the high level he attained on the previous occasion. His voice, moreover, was rather low, and a member sitting on a back seat had to ask him to speak in a higher tone.

His Excellency first alluded to the Russo-Japanese Convention concluded by the Representatives of the two Powers at Moscow last year, and also to the memorandum signed in the same year by the Representatives stationed in Seoul. He reviewed the relations between Japan and Korea, going back for that purpose to the time when Korea traded with Japan alone at Fusan, and with China at Wiju, all other places being closed to the outer world. When the Restoration was effected in Japan, the latter asked Korea to conclude a Treaty of Commerce, but the proposal was rejected. His Excellency then proceeded to show how, in the 8th year of *Meiji* (1875) Japanese warships cruising along the Coast of Korea (at the island of Kokwa) were fired upon from the Korean forts; how that had led to the despatch of Counts Kuroda and Inouye to Korea to demand a satisfactory explanation; how, in the 15th and 17th years of *Meiji* (1882 and 1884), disturbances had broken out in Seoul, and how, on the latter occasion, war was thought imminent between Japan and China. A similar disturbance, occurring ten years later, had culminated in the War between the two empires, and the intervention of three European Powers had obliged Japan to retrocede the Liaotung Peninsula, after obtaining it from China. The relations between Japan and Korea had been cordial at that time; in fact, a treaty of alliance had been concluded between the two. The *emute* that broke out in Seoul in the Fall of 1895 had considerably effected those relations, as well as the relations between Japan and Russia, so that it had been thought

necessary to support the independence of Korea conjointly with the Great Northern Power. The Count then read the Convention and Memorandum, at the same time thanking Mr. Suzuki for presenting the Question that had enabled the Foreign Office to publish the document:—

THE RUSSO-JAPANESE CONVENTION.

Marshal Marquis Yamagata, Ambassador Extraordinary of His Imperial Majesty the Emperor of Japan, and Prince Lobanoff, Foreign Minister of Russia, having exchanged the ideas entertained by them on the affairs of Korea, have decided to conclude an agreement in the following terms:—

Art. I.—With a view to relieving the financial difficulties of Korea, the two Governments of Japan and Russia will advise the Korean Government to retrench any and every superfluous expenditure, and to endeavour to establish a balance between outlay and income. If, as a result of essential official reforms, it be deemed necessary for Korea to have recourse to a foreign loan, the two Governments of Japan and Russia, by mutual concert, will extend help to Korea.

Art. II.—So far as Korea's finances and economy permit, the two Governments of Japan and Russia shall leave Korea to organize by means of her own nationals and without recourse to foreign aid, such a force of military and police as shall be deemed sufficient for preserving order within her dominions, and shall also leave her to maintain them.

Art. III.—With a view to facilitate communications with Korea, the Japanese Government will have control of the telegraphs now actually owned by it. Russia shall have a right to construct telegraphs between Seoul and her own frontiers.

So soon as Korea is in a position to purchase the above lines of telegraph, she shall be entitled to do so.

Art. IV.—If it be deemed advisable that a more detailed or exact explanation should be formulated on the above points, or, if other matters requiring conference present themselves subsequently, Representatives of the two Powers shall be accredited to negotiate in a spirit of friendship.

Done at Moscow on the 28th (9th) of June, 1896.
(Signed) MARQUIS YAMAGATA.
PRINCE LOBANOFF.

MEMORANDUM.

The Representatives of Japan and Russia stationed in Seoul, having conferred together, in accordance with identical instructions from their respective Governments, have arrived at the following agreement:—

1.—Although the Korean King's return to his Palace shall be left to his own free will, the Representatives of the two Powers, should they deem that no apprehension need be entertained as to His Majesty's safety in spite of such return, shall advise the King to remove to his Palace.

At the same time, the Representative of Japan shall pledge himself to adopt strict measures for the control of Japanese *Soshi*.

2.—The Ministers of the Korean Cabinet now in power have been appointed by His Majesty's own choice. Most of them have filled, during the two years, Ministerial or other distinguished positions, and are known to be men of liberal and moderate views. The Representatives of the two Powers shall always make it their object to advise the King to appoint men of liberal and moderate views as Ministers of State, and to regard the people with magnanimity.

3.—The Representative of Russia holds views entirely identical with those of the Representative of Japan on the following points:—

Judging by the present condition of Korea, it is necessary that, in order to protect the Japanese lines of telegraph between Fusan and Seoul, Japanese guards should be stationed at certain places. But the telegraph guards now organized with three companies of troops, should be withdrawn as quietly as possible, and gendarmes should be employed in their stead. These gendarmes shall be stationed as follows: 50 men at Tai-ku; 50 at Ka-heng; and 10 at each of the 10 stations between Fusan and Seoul. The mode of distribution may be modified, but the total number of gendarmes must not exceed 200. Moreover, these gendarmes shall be gradually withdrawn, hereafter, from places at which peace has been restored.

4.—To provide against the contingency of Japanese settlements in Seoul and the Treaty Ports being assailed by Koreans, and to protect them, two companies of Japanese troops, may be stationed in Seoul, and one company at Fusan and Gensan. The numerical strength of one company must not exceed 200 men. The troops shall be stationed in the vicinity of each settlement, and shall be withdrawn so soon as the danger of attack is over. To protect the Russian Legation and Consulates,

the Russian Government also may station guards at the above places, their numerical strength not exceeding that of the Japanese troops. The foregoing guards shall be withdrawn so soon as peace is entirely restored in the interior of Korea.

Done at Seoul, May 14th, 1896.

(Signed) • KOMURA JUTARO,
WABBER.

The Count next explained categorically the points raised by Mr. Suzuki in his question. He admitted that Russian officers were drilling Korean soldiers. But that was in deference to the Korean King's request and had no relation to diplomacy. As to the point whether Korea had sought to borrow a sum of 3 million *yen* from the Russo-Chinese Bank, His Excellency explained that this was merely a rumour, not based upon facts. The other points required no elucidation, being explained by the convention and memorandum just read.

In answer to questions from Mr. Suzuki, the Count said that he did not think the occasion suitable for discussing the matter of the drilling of Korean troops by Russian officers. Such a discussion would not be wise, whether considered from the standpoint of Japan's diplomacy and the speaker's policy, or in deference to his predecessor and to Marshal Yamagata. As for the Palace to which the king had removed from the Russian Legation a few days previously, it was not situated in close proximity to the Russian Legation but was separated from it by some distance. Further, the recent arrival of 80 Russian blue-jackets, with a piece of ordnance, in Seoul, had been solely for the purpose of relieving the troops already on guard there.

Mr. Komuro Juko (Liberal) wished to ask four questions, namely, did Count Okuma still adhere to his declaration that Korean independence must be supported by Japan alone; had the Foreign Office opened negotiations with the Korean Government about the peculiar passage that appeared in the judgment lately pronounced on the Koreans who plotted to bring about the King's return to the own Palace; had suitable steps been taken about the recent murder of a Japanese subject in the vicinity of Seoul; and, lastly, what measure had the Government adopted with reference to international courtesy in connexion with the mourning for the late Empress Dowager?

The Count replied that so long as an understanding existed between Japan and Russia in connection with the maintenance of Korean independence, no objection need be entertained though the task were undertaken conjointly with Russia, or even with other Powers. As to the two next points, negotiations were being conducted with the Korean Government. The last point being a delicate affair involving the Court of Japan and the Courts of other Powers, the Count preferred not to discuss it.

Messrs. Shigeoka Kungoro (Liberal), Motoda Hajime (Unionist), and Komatsu Sansei (Liberal) addressed one question after another to the Count, and the latter, with remarkable patience, replied to each of the queries, though some were quite irrelevant.

While Count Okuma was answering Mr. Komatsu's question, another Liberal, sought permission to speak. The Count, in a somewhat loud voice, told the member to desist (*ohikaye nasai*). Thereupon a tumult arose. Several Opposition members sprang to their feet, and clamoured to know whether a Minister of State had the right to enjoin a member to keep silence. They claimed that the Count had exceeded his power. On the other hand, several pro-Government members declared that it was not wrong for the Count to tell a member to desist while he himself was speaking with the permission of the President. The same thing was frequently done by the members themselves.

Mr. Suzuki Jubi (Liberal) wished to introduce an urgency motion in the sense that the Order of the Day be altered, so that the House might consider whether the Count had used improper words in speaking from the rostrum that day. The motion that the order be changed was approved by a majority, but the proposal to censure the Count's language was rejected by a vote of 122 to 83. The Count had left the

chamber some minutes previously, though loudly challenged by Opposition members to remain in his place.

The Bill standing first on the Order was taken and Mr. Kudo Kokan (*Shimpo-to*) in his capacity of Chairman of the Special Committee, reported the result of the Committee's deliberations. The House, however, decided to postpone the debate on the Bill until the next day, and rose at 6 p.m.

SATURDAY, FEBRUARY 27TH.

HOUSE OF PEERS.

The House was occupied with Committee work only.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m., the Order of the Day being the same as that of the previous day.

Mr. Kudo Kokan, in the capacity of Chairman of the Press Amendment Bills Committee, briefly explained that considerable pains had been taken by the Committee in connexion with Art. XXIII. of the Government's Amended Press Law Bill, the purport of the Article being that the competent authorities might provisionally suspend the issue of an offending journal for a period not exceeding one week, or of an offending periodical for a time corresponding to three successive issues. The Committee decided that this article should be altered so as to read that the sale and distribution of an offending paper might be stopped, and the number containing the objectionable matter seized; and also that, in case of a law-suit being instituted against a journal or periodical, the publication of any matter cognate with that forming the subject of prosecution, might be suspended, pending the judicial decision. Three delegates had been appointed from among the Committee, and on the above basis of compromise, negotiations had been opened with the Government. The latter desired to press its own proposals on this particular point, but was induced to promise that, if the amendments suggested by the Committee were adopted by the two Houses, the Government would not necessarily raise any objection. As to the probability of the Upper House's opposing the amendments proposed by the Committee, Mr. Kudo thought that there was reason to hope for the best, inasmuch as several leading members of the House of Peers, when they served as senators of the now defunct *Genro-in*, had urged the Government to amend the Press Law in force at the time in a sense very similar to that now suggested by the Committee.

A representation forwarded by these Senators to the Government was then read, at the request of Mr. Kudo, by a Secretary of the House.

Mr. Motoda Hajime moved that as the three Bills relating to the amendment of the Press Law stood separately on the Order of the Day, namely the Official Bill, the Minoura Bill, and the Motoda Bill, the Order should be changed, so that the two private Bills might be debated at the same time with the Official Bill. The motion was seconded and passed.

Mr. Kudo Kokan observed that the Committee had taken the Official Bill as a basis for amendment, and that, as a natural consequence, the two private Bills had been disregarded.

Mr. Motoda (Unionist) said that, although the fate of the Bill introduced by him and his supporters was a foregone conclusion, he could not persuade himself not to speak in defence of the measure, especially as it had been handed somewhat hastily to the Special Committee, the introducers having no opportunity to recommend it to the House's attention. He spoke forcibly in its defence, displaying great eloquence. He pointed out that his Bill was essentially an improvement on the amendments which would have passed the Diet last year, but for the conflict of views between the managers of the two Houses. Though perfectly ready to appreciate and acknowledge the considerable progress that several Japanese journals had made, he asserted that the general tone of the press did not warrant the complete abolition of the power of suspen-

sion. To keep the press under proper control suspension for a period not exceeding three days was manifestly necessary. When the time arrived that a real editor and a real publisher were ready on their own responsibility to pen and publish an article or essay, then this safeguard of suspension might be taken away, but recourse to it must be considered unavoidable for the present. He argued at some length to show that the amendment proposed by the Government would subject the press to greater restraints and dangers than the law now in force, inasmuch as the Government proposed to employ suppression in several cases where suspension was now deemed sufficient. Moreover, his long experiences at the bar convinced him that whenever the Authorities prosecuted a journal before a Law Court, the latter, in nine cases out of every ten, would endorse the Government's views and pronounce a verdict unfavourable to the journal. Under such a system, the press would be exposed to serious perils. By way of demonstrating this point, he declared that a glaring inconsistency had been manifested between the treatment extended to the original magazine, the *Twenty-sixth Century*, and that extended to the new periodical of the same name. The former had been prosecuted by the Home Minister on a charge of having sought to bring officials into contempt, the incriminated article being quite harmless. Still a conviction had been obtained simply because the Home Minister was the prosecutor. The new *Twenty-sixth Century* had written in a far stronger tone against the Minister of the Household, but had escaped with impunity, simply because it had not been prosecuted. Further, he could not understand the apparently lukewarm attitude assumed by the Government towards its own Bill. Though it expressed a desire to have its measure adopted by the House, it pledged itself at the same time not to object to the Committee's amendments if they succeeded in obtaining the approval of the Diet. Yet, there was one irreconcilable discrepancy between the two: the Government's Bill contained a clause empowering suspension for a period not exceeding one week, but the amendments abolished suspension altogether. The Government's action in this matter was perfectly unintelligible. Finally, the speaker avowed himself pained to find that a special passage for protecting the dignity of the Imperial Court had been newly inserted in the Government's Bill and approved by the Committee. Such a provision was not only superfluous, but also insulting to the loyalty of the nation.

Mr. Koizuka Ryu (*Shimpo-to*) could not understand why Mr. Motoda deemed it necessary to retain a clause providing for three days' suspension. The existence of such a provision would not improve the tone of the press any more than the abolition of suspension would impair it. The tone of the press depended entirely upon the quality of public opinion. He regarded Mr. Motoda's Bill as more dangerous than the Government Amendments, inasmuch as it proposed that in the event of a newspaper being suspended more than three times within a space of six months, it should be liable to suppression. In former times it was nothing uncommon for a newspaper to be suspended twice a month, so that, if the Motoda Bill were suffered to pass, the press would have the Damoclean sword of suppression perpetually hanging over its head.

Mr. Motoda rebutted this charge by pointing that the Government's amended law authorized suppression even for one offence, and, therefore, without any warning.

The discussion between Messrs. Motoda and Koizuka was conducted in a manner quite regardless of the principles of discipline and order. While Mr. Motoda was refuting his antagonist's charges, the latter would rise in his place, and without obtaining the permission of the President, would proceed to speak in a loud voice, causing a general tumult in the House. It seemed as if Mr. Koizuka (Progressionist) acted purposely in such an irregular manner so as, if possible, to provoke Mr. Motoda into uttering some protest,

in the nature of "silence" (*damare*), or "desist" (*hikaye*), which would have served as an object lesson to defend Count Okuma's utterance on the previous day. Be that as it may, Mr. Motoda spoke steadily on, though his words were rendered inaudible by the general confusion in the House.

Several amendments of the Committee's recommendations were proposed, but all were rejected by the House.

One of these amendments seemed well advised. It came from Mr. Komatsu Sancho (Liberal). He pointed out that the provisions of Art. 30 of the Committee's draft were lacking in clearness, inasmuch as they simply laid down that a publisher and an editor should be liable to a fine of from 20 to 500 *yen* in the event of violating the order of suspension referred to in Art. XXIII. It did not seem clear whether the fine was to be refunded, should a Court of Law declare the suspension unwarranted. He thought that the article should be re-drafted, so as to provide for the imposition of the fine only in the event of the suspension's being confirmed by a law court.

Another amendment was proposed by Mr. Koizuka. He argued that the confiscation of the plant used for publishing an offending article would prove a penalty often unjust and even ineffective, seeing while some newspapers owned their own plant, others had their printing done at shops belonging to people unconnected with the journal. Was a newspaper office of the first kind to incur the double penalty of having its plant confiscated simply because it happened to own it? Such an unfair provision should be expunged.

Mr. Komuchi Chijyo (Government Delegate) replied that plant not owned by a paper could not be confiscated, but if it were so owned, then it must be liable to confiscation.

Mr. Kudo Kokan also explained that Mr. Koizuka's objection was irrelevant. Was not a costly *Massamune* blade, if used for committing a murder, confiscated just as surely as a mere kitchen knife employed for a similar purpose?

The closure having been put and carried, the Committee's amendments were voted by a large majority, the Second and Third Readings of the Bill being dispensed with.

AMENDED PRESS LAW BILL, AS PASSED BY THE HOUSE OF REPRESENTATIVES.

N.B.—(The portions in brackets are from the Press Law now in force. The portions in italics are the amendments.)

Art. XIX.—[It shall be competent for the Minister of Home Affairs to suspend or suppress a daily journal or periodical if it be deemed to contain matter prejudicial to public peace and good order, or injurious to public morality.]

RESCINDED.

Art. XX.—[In the event of the suppression or suspension of a daily journal or periodical, it shall be competent for the Minister of Home Affairs to prohibit the sale and distribution of such journal or periodical.]

RESCINDED.

Art. XXI.—*Should it be deemed that the contents of a daily journal or periodical published abroad, are prejudicial to public peace and good order or injurious to public morality, it shall be competent for the Minister of Home Affairs to prohibit the sale and distribution of such journal or periodical within the Japanese realm, and to seize the offending number or numbers of the said journal or periodical.*

Art. XXII.—*The Minister for Foreign Affairs, the Minister of War, and the Minister of the Navy, shall be competent to prohibit the publication of matters relating to [the movements of troops or War-ships, or to strategical secrets] diplomacy or to the Army or the Navy.*

Art. XXIII.—In the event of a public prosecution's being instituted with reference to matter published in a daily journal or a periodical, it shall be competent for the Public Prosecutor to temporarily seize the issue or issues containing the incriminated matter, and the Court of Law, according to the nature of the offence, may confiscate the publications seized.

Amended as follows.

In the event of a public prosecution's being instituted in connexion with Articles XXII., XXXI., or XXXII., it shall be competent for the Minister of Home Affairs or the Minister of Colonization to suspend the sale and distribution of the number or numbers containing the incriminated matter; to

temporarily seize such number or numbers and of suspend the publication of any article or note of similar import in a subsequent number of the same journal or periodical pending the decision of the Law Court. Further it shall be competent for a Law Court, according to the nature of the offence, to suppress the issue of a daily journal or periodical that has been guilty of any of the offences, or violated the prohibitory injunction, referred to in Articles, XXII., XXXI., or XXXII.

Art. XXX.—In the event of violation of the order of suspension specified in Art. XXIII., the publisher and editor shall be liable to a fine of from 20 to 500 yen.

Art. XXXI.—Should a daily journal or a periodical publish matter calculated to impair the dignity of the Imperial Court or to subvert the political system, or to derange the laws of the realm, the publisher, editor and printer shall be liable to minor confinement of not less than 2 months and not more than 2 years, together with a fine of not less than 50 yen and more than 300 yen. Further, the plant used in the publication of the incriminated matter shall be confiscated.

Art. XXXII.—Should a daily newspaper or a periodical publish matter calculated to disturb public peace and good order or to injure public morality, the publisher and editor shall be liable to minor confinement for not less than one month and not more than six months, or to a fine of from 20 yen to 300 yen.

The numbers of Articles XXXIV., XXXV., XXXVI. and XXXVII. in the present Press Law are changed to XXXIII., XXXIV., XXXV., and XXXVI., respectively.

The Bonded Ware-houses Bill, the General Tariff Bill, and the others on the Order, were all entrusted to Special Committees, to be nominated by the President.

PROJECT OF LAW RELATING TO BONDED WAREHOUSES.

The Bill is subdivided into 4 chapters, namely, general provisions, Government Bonded Warehouses, Private Bonded Warehouses, and lastly punitive provisions. The first chapter provides that a Bonded Warehouse is a place where goods not yet finally imported may be stored; that the maximum period of storing shall be one year, after the expiration of which import duties must be paid; that commodities to be stored shall be determined by the Minister of the Department having the control of such matters, and so forth.

Chapter II. provides that a certificate bearing the name of the person storing commodities shall be issued for all commodities stored in a Bonded Warehouse; that this certificate shall be transferable if endorsed by the storer; that, in the event of a lawsuit occurring about bonded goods, an extension of the period of bonding may be granted; that, in the event of delivery not being taken of bonded goods on the expiration of the period of bonding, the officials in charge of the Bonded Warehouse shall issue a notification, and if no application be received within six months from the date of issuing the notification, the goods shall be put up to auction and any sum that remains after subtracting from the proceeds import duties, storage dues, auction expenses and so forth, shall be handed to the owner of the goods. There are also provisions relating to goods liable to decay or to any other form of injury from storing.

Chapter III. provides that the owner of a private Bonded Warehouse shall be held responsible for import duties payable on goods deposited therein, and for any loss or diminution of the goods stored; that as security for the payment of import duties leviable on such goods, the owner must deposit either cash or Government Bonds; and that the owner must not store goods of his own.

The punitive chapter provides that any violation of the Law shall be punished by the imposition of a fine ranging from 2 to 20 yen, or 3 to 30 yen, or 5 to 50 yen according to the gravity of the offence. The Law is to go into effect from May 1st, 1897.

PROJECT OF LAW RELATING TO THE GENERAL TARIFF OF CUSTOMS DUTIES.

Art. I.—Goods imported from abroad, that belong to the First Category given in the appended list, shall be liable to import duties as specified therein. Goods belonging to the Second Category shall be exempt from duties; and the importation of those belonging to the Third Category is forbidden.

Art. II.—The dutiable value of commodities shall be calculated by adding to their original price at the place of purchase, produce, or manufacture, all expenses incurred until the commodities arrived at a port of import.

Art. III.—Of commodities given in the appended list those for which a specific duty is considered more convenient than *ad valorem* duty may be fixed by Imperial Ordinance.

The specific duty mentioned in the preceding clause shall be determined by computing the average price for the previous 6 months, and applying to that price the rate given in the list.

Art. IV.—In the case of goods to which two or more rates of duty are applicable, the highest rate shall be imposed.

Art. V.—The following articles shall be exempted from duty:—

1. Goods for use in the Imperial Household.
2. Arms, powder, and explosives imported by the Imperial Army or Navy.
3. Vessels of the Imperial Navy.
4. Goods for use in the households of Foreign Representatives accredited to Japan.
5. Decorations, medals.
6. Written records and other documents.
7. Samples of commodities sent as specimens.
8. Personal effects (of a traveller).
9. Commodities for permanent display in official or public museums.
10. Goods of domestic production, re-imported within 5 years and retaining the same nature and form as at the time of the original export. Tobacco and liquors are, however, excepted.

11. Articles that were sent abroad for repair, and are re-imported.

Goods coming under 7, 8, and 9, shall be confined to those judged by the Customs Authorities as falling properly within the sphere of the prescribed exemptions. For goods coming under 11, the date of re-importation shall be determined at the time of export.

Art. VI.—The following articles shall be exempted from import duties, provided they are to be exported abroad within 6 months from the date of import, and provided that a sum corresponding to the import duty shall be deposited either in cash or by hypothecation of a valid security.

1. Those temporarily imported for repair.
2. Those temporarily imported for purposes of scientific investigation or for the use of travellers.
3. Those temporarily imported by way of experiment.
4. Those temporarily imported as specimens for merchants, manufacturers, or agents.
5. Those temporarily imported for use in theatrical or other public performances.

Art. VII.—In case that any amendment of the appended list be deemed necessary, the change shall be notified at least 6 months previously to the date of carrying it into effect.

APPENDIX.

Art. VIII.—The date of putting this Law into operation shall be determined by Imperial Ordinance.

RATES OF DUTIES.

- I.—Arms, clocks, scientific and mechanical instruments and machines; from 5 to 25 per cent.
 - II.—Food-stuffs and liquors; from 10 to 25 per cent.
 - III.—Clothing and appurtenances; from 20 to 30 per cent.
 - IV.—Medical stuffs, chemicals, &c.; from 10 to 40 per cent.
 - V.—Dye stuffs, paints, &c.; from 10 to 15 per cent.
 - VI.—Glass and glass ware; from 5 to 25 per cent.
 - VII.—Grains and seeds; 5 per cent.
 - VIII.—Horns, tusks, skins, leather, tortoise shell; from 5 to 25 per cent.
 - IX.—Metals and metallic wares; 5 to 35 per cent.
 - X.—Oils and wax; 10 to 15 per cent.
 - XI.—Paper and stationery; 15 to 35 per cent.
 - XII.—Sugar; 5 to 25 per cent.
 - XIII.—A. Cotton fabrics and yarns; 10 to 15 per cent.
B. Wool and woollen fabrics; 10 to 15 per cent.
C. Silk and silk fabrics; 15 to 25 per cent.
D. Hemp and hempen fabrics; 10 to 15 per cent.
E. Blankets, carpets, caoutchouc fabrics, mosquito net, &c.; 15 to 25 per cent.
 - X.—Tobacco; 35 to 40 per cent.
 - XI.—Liquors; 25 to 40 per cent.
 - XII.—Miscellaneous goods; 5 to 35 per cent.
- (Here follow lists of goods exempted from import duties, and goods the import of which is forbidden.)

The House rose at 4.30 p.m.

MONDAY, MARCH 1ST.

HOUSE OF PEERS.

The House met at 10 a.m., the Order of the Day being—

- 1.—Report by Count Matsuura, Chief of the Petitions Committee.
- 2.—Report of the Budget Committee on the Supplementary Budget No. 5 of Revenue and Expenditures for the 29th year of Meiji.
- 3.—Report of the Budget Committee on a Supplementary Budget of Special Revenue and Expenditure for the 29th year of Meiji.
- 4.—Report of the Budget Committee on a Supplementary Budget of General Revenue and Expenditure for the 29th year of Meiji (Supplementary Budget No. 6).
- 5.—First Reading of a Bill for amending the Railway Construction Law.
- 6.—First Reading of a Bill for adjusting Pension Bonds.
- 7.—First Reading of a Bill for adjusting Family Pensions and Pensions granted as Rewards.
- 8.—Representation with regard to the Preservation of Ancient Tombs and Cemeteries.
- 9.—Petition relating to the Restoration of Pensions, &c.
- 10.—Petition for amending the Business Tax Law.
- 11.—Petition for repairing the River Shōnai.
- 12.—Petitions relating to the development of Fodder and Manure Grounds for Cattle.
- 13.—Petition for making Shimonoseki a Port of Import and Export.
- 14.—Petitions for extending the System of City Administration to Hakodate.
- 15.—Petition relating to the establishment of Regulations for the control of Insurance Business.
- 16.—Petition relating to the establishment of Regulations for the Amalgamation of Commercial Companies.

Various reports having been read, the Order of the Day was taken.

Mr. Umayahara, as substitute for Count Matsuura, Chief of the Petitions Committee, reported that the petitions received by the Committee up to the 26th ultimo numbered 290 and that three lists of them had been prepared for submission to the House. In the first list, six petitions referred to the restoration of pensions; four, to the amendment of the Business Tax Law; one to the repair of the river Shōnai; one to the opening of Shimonoseki; one to the extension of the system of City Administration to Hakodate. The petitions on the second list were of similar purport, and among those on the third, was one for the opening of Aomori to foreign trade, and one for the opening of Moxu.

Viscount Tani, Chairman of the Budget Committee, stated that the Supplementary Budgets standing second, third, and fourth on the Order, being very simple, he proposed to include the three in one report.

Supplementary Budget No. 5 provided for aid from the Treasury in consequence of extraordinary damages sustained last year through floods and earthquakes. Budget No. 3 covered an appropriation from the Treasury for the Central Relief Fund; and Supplementary Budget No. 6 contained an appropriation for the Home Department, for the prevention of an epidemic among oxen. The Committee had recognised the prime importance of these three Budgets, and had decided in favour of them.

Mr. Kubota explained that Budget No. 5 provided for a subsidy from the Treasury on account of engineering expenses for the reconstruction of embankments in the sequel of last year's floods and earthquakes. The disasters of last year had not been confined to embankments, but extended also to common schools, in the cases of Aomori, Akita, and Iwate Prefectures, and it being impossible to rebuild these schools by means of the local taxes alone, a petition had been presented for aid from the Treasury. But as no statement was contained in the Budget with regard to common schools, an inquiry had been addressed by him to the Government Delegate at the conference of the Committee. He had failed, however, to obtain an answer, on account of the absence of the Government Delegate for the Educational Department, and he now asked to receive a reply.

Mr. Kiba, Government Delegate, answered that the common schools in Akita and Iwate Prefectures had indeed sustained damage from an earthquake, and that the damage having been especially considerable in Iwate, the Governor of that Prefecture, convoking the Prefectural Assembly, had submitted a proposal to grant a sum out of the local taxes. The matter had, however, been set aside for reconsideration, on account of the investigations being incomplete. Subsequently, aid to the

extent of 30,000 *yen* from the Treasury had been asked for by Iwate Prefecture, but as the principle involved in making such a grant was in itself of a most important nature, requiring grave consideration, while no surplus existed in the Treasury at the time, the application could not be complied with. Investigation made by the Home Department, however, had led to the decision that no aid should be given, the local taxes being quite sufficient for the purpose.

This Budget, as well as those standing third and fourth on the Order, were then passed unanimously.

The Bill standing fifth on the Order was taken. It provided for the construction of a branch line from Matsumoto, on the Nagoya-Gifu road, *via* Takayama, to Toyama, for the purpose of connecting the Central and Hokuriku Roads.

Mr. Matsumoto, Government Delegate, having explained the Bill, it was handed to a Special Committee.

The sixth and seventh Bills were similarly handed over without questions.

Professor Toyama explained the Representation standing eighth on the Order. Its purpose was to provide that the State should undertake the duty of restoring and conserving the sepulchres of the nation's illustrious dead. He wished to say a word about what were described in the memorial as "faithful subjects, personages of high merit to the State, and other persons of meritorious deeds." The terms "persons of meritorious deeds" might convey only a vague impression, but would be better understood in the form of learned men as well as artists, who had rendered meritorious services to the State. The reason why he had introduced this Representation was that, during a journey through the provinces of Yamato, Kawachi, and Yamashiro, from the middle of July to the middle of September, he had visited more than 110 cemeteries and tombs, and had found a most lamentable and regrettable state of affairs. For example, the tomb of Minamoto no Yoshiie at the temple of Tshoji, in Furuichi, Kawachi, and the tomb of Junan Kinoshita, the celebrated scholar, which stands to the north of Omori, were worn almost beyond recognition. The latter stood close beside the kitchen of a common cooking-house. It was a characteristic of the Japanese nation to venerate ancestors, and he failed to see how such sights could be passed without deep regret. No investigation had yet been made as to the best method of preserving such tombs, but the obvious necessity of undertaking something on their behalf had induced him to introduce the Representation now before the House.

Baron Osawa enquired what limitation of time would be put to the operation of the measure. Was it contemplated that all tombs, no matter how antique, were to become objects of national care? He expressed his unwillingness to support the proposal unless the details of the plan were made clear. As to the remark that the custom of the Japanese is to venerate their forefathers, he observed that, if such were the case, the custom might be best perpetuated by leaving these things to the discretion of individuals rather than by inviting Government interference. Again, what should be the standard for recognising "merit"? In the explanatory statements accompanying the Representation, it was mentioned that the fundamental duty of the State had not been discharged towards the spirits of those that had rendered high services to this country. He was at a loss to understand why the preservation of ancient tombs should be considered as constituting part of the State's duty.

Professor Toyama did not answer these objections in detail. He based his reply on the general grounds of morality, and provoked an irrelevant criticism from Mr. Yasuba.

Baron Komatsu enquired whether new tombs also were to be repaired and preserved. The Representation made no distinction between old and new.

To this question Professor Toyama replied that the Representation was intended to apply to comparatively modern tombs as well as to old.

Mr. Kubota observed that the criticisms evoked by the measure virtually indicated its rejection by the House, and consequently any amendments that might be made would probably be futile. Yet, as he had given a pledge to Professor Toyama, he wished to propose some changes in the Representation; the chief of them being the insertion of the words, "Men of great learning or erudition," in addition to the words, "Personages of high merit and faithful subjects." His motive was that greater importance should be attached in such a matter to learning than to political merit or loyal deeds.

Baron Suyematsu said that he proposed to place the part of Otani Gyobu, and deliver a lecture in support of the Representation. The custom of venerating ancestors was exceedingly important. It had a direct bearing on the decline or prosperity of a State and on the progress of civilization. Any great reformation of national administration, however, seemed to create a tendency to discredit this graceful idea, a fact that had been illustrated by the story of the Restoration in Japan, and, indeed, might be gathered from the history of many nations of the world. Yet, in the most civilized countries, reverence for the memory of the illustrious dead always re-asserted itself. Did not Shakespeare's tomb receive the homage of incense and flowers to the present day? The laws of the realm as well as regulations included in the system of Local Administration, contained provisions for the preservation of historical objects. None the less it was a fact that even those who possessed pension bonds to the value of more than a million *yen*, had, in some cases, neglected to pay proper attention to the tombs of their ancestors. It was conceivable that the pressure of domestic business might have prevented them from taking sufficient steps in that direction, yet the failure was a matter of astonishment. For his own part, he could not but feel admiration and sympathy when a man of practical learning like Professor Toyama introduced such a subject to the notice of the House.

Baron Date asked Baron Suyematsu whether it was really a matter of his own observation that ancestral cemeteries had been neglected by nobles of high rank having hereditary property worth more than a million *yen*.

Baron Suyematsu did not attempt to make any detailed reply.

Mr. Matsuoka declared himself a supporter of the Representation, but regretted to see that Mr. Kubota, another advocate, had been discouraged by the criticisms that the measure had evoked. The scope of the representation did not extend to tombs of great scholars and artists, whose descendants were in a position to undertake the duty of preservation to-day. Neither did it extend to those of personages like the Tokugawa, whose representatives, being in possession of pension bonds worth a million *yen*, were able to construct splendid tombs for their ancestors. The State was under no obligation to do anything for such families. Aid should be given exclusively on account of the tombs of persons whose posterity had become extinct, or fallen into a condition of extreme poverty, though their ancestors could be proved to have rendered illustrious services to the nation. The subject, however, had assumed a somewhat perplexing aspect, for if reason appeared on one side, unreason faced them on another. He therefore proposed that a Committee of nine should be chosen to thoroughly investigate the matter.

Mr. Tanaka thought that the problem of investigation by means of documents, might prove very difficult, and that researches would be more effective were a Committee appointed for investigating the tombs *in situ*. The inaccuracy of Japanese history showed itself vividly in such matters; for example, no less than three sepulchres were confidently shown as the burial place of Ono-no-Komachi.

The House voted to hand the Representation to a Special Committee. The Petitions, from the 12th to the 19th on the Order, were adopted without opposition.

The House then rose.

HOUSE OF REPRESENTATIVES.

The House did not meet.

TUESDAY, MARCH 2ND.

HOUSE OF PEERS.

The House did not meet.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m., the Order of the Day being:—

- 1.—Government Bill relating to Amendment of the Law of Public Meeting and Political Association. (Report of Special Committee.)
- 2.—Bill relating to the collection of Fees for Shooting Licences (Report of Special Committee).
- 3.—First Reading of a Government Bill relating to an Amendment of Law No. 23 of the 27th year of Meiji.
- 4.—Continuation of the First Reading of a private Bill for amending the Law of Public Meeting and Political Association.
- 5.—First Reading of a Bill for amending the Law of the Houses.

The President reported that the Government had introduced a Bill for the Amendment of the Coinage Law.

The Order of the Day having been changed, with the consent of the Government Delegate, Mr. Kudo, in the capacity of Chairman of the Special Committee, reported that the Committee had decided to reject Mr. Minoura's Bill and to introduce alterations in the Government's Bill for amending the Law of Public Meeting and Political Association.

Mr. Terahara, Government Delegate, opposed the Committee's alterations. He said that, as meetings in the open air were generally held not for the purpose of delivering political lectures, but as a means of making a demonstration, a difficulty would arise in preserving the peace in such cases; that the alteration permitting students of all government and public schools to attend political lecture meetings would tend to impair the progress of sound education; and that Government approval could not be given to a measure entailing any political association to be organized and to conduct its business without duly registering its members, as such a state of affairs would be entirely contrary to the general laws of political associations.

Mr. Kudo replied that the spirit of the Committee's amendment was to forbid political discussions in schools, but not to adopt any preventive measures in other cases, namely, such as when students attended to listen to debates in the Diet. He asked whether the Government desired to prohibit even the latter proceeding.

Mr. Makino, Vice-Minister of Education, expressed a wish that the Bill should be preserved in its original form, as the Government desired to keep common schools beyond the range of politics and religion, with a view to the unprejudiced development of literature and art.

Mr. Minoura's Bill having been dropped, the second reading of the Committee's amended Bill, namely, the Government Bill, was voted.

Mr. Inaba, Chairman of the Special Committee, reported in favour of the Bill for altering the system of paying Fees for Shooting Licences. The Committee considered that the proposed amendment—*i.e.* making payment by means of stamps—would be much more convenient than the present system.

The Bill was passed through all its readings without dissent.

The Bill embodying amendments in Law No. 23 of the 22nd year of Meiji, related to travelling expenses for the Army.

Mr. Nakamura, Government Delegate, explained that, although, according to the Law at present in force, provision is made for non-commissioned officers, nothing is provided in the case of officers of the rank of General and other military dignitaries. Serious inconvenience must inevitably occur in the event of war or an emergency in defraying the travelling expenses of these officers. It was consequently proposed that the terms non-commissioned officers and soldiers be changed to *Gunjin* (any person in the service of the Army), and that the amended Law be applicable to military reviews, not to times of war alone, as heretofore.

The Bill was handed to a Special Committee. The amendments proposed in the Law of the Houses (promulgated by Law No. 2 in the 22nd year of Meiji), were as follow:—

The following note to be added to Art. 1:—

Note.—A special meeting of the Diet shall be exempt from this provision.

Art. III.—The President and Vice-President of the House of Representatives, after being elected by the House shall report the fact to the Emperor for His Majesty's sanction. The Chief Secretary is to act as Chairman until such sanction is obtained for the election of President and Vice-President.

Art. XV.—(to be entirely cancelled).

Art. XXV.—Each House, by its own decision or on the demand of Government, may appoint a Committee to sit during the period when the Diet is not in session, and may cause it to investigate bills and other necessary matters.

The note to the Second clause of Art. XXVI., is changed as follows:—Note.—When other subjects of debate of an urgent nature are introduced, an alteration may be made in the subjects by the decision of the House, provided that, in such case, notice be given to the Government.

Art. XXVIII.—No project of law shall be put to the vote without undergoing investigation at the hands of a Committee.

Note.—This provision is not applicable when a special demand is made by the Government, or when a special decision is arrived at by the House.

The first clause of Art. XXXIII., is altered as follows:—Suspension of the session shall not exceed fifteen days.

Art. XL.—In case a budget is presented by the Government to the House of Representatives, the Budget Committee shall complete its investigation within twenty days from the receipt of the same, and shall present a report to the House.

Art. XLI.—(Cancelled).

With regard to the above, Mr. Takada explained that the amendments were intended to extend the rights of the Diet.

The Bill was handed to a Special Committee. The House rose at 5.30 p.m.

WEDNESDAY, MARCH 3RD. HOUSE OF REPRESENTATIVES.

The House met at 1 p.m., the Order of the Day being as follows:—

- 1.—Government Undertakings Finance Law Amendment Bill. Continuation of First Reading
- 2.—Coinage Bill.
- 3.—Special Finance Bill with reference to Capital for adjusting the Coinage.
- 4.—Bill relating to Amendments of Regulations for Convertible Notes.
- 5.—Bill for amending Notification No. 14 of the 18th year of Meiji.
- 6.—Bill for rescinding Notification No. 35 of the 12th year of Meiji.
- 7.—A Project of Law embodying amendments of the Local Government Systems for Cities and Prefectures.

The President reported that three bills had been presented by the Government, viz., a Supplementary General Budget for the 30th Fiscal year of Meiji, a Supplementary Special Budget for the 30th Fiscal year of Meiji, and a Budget of items not included in the General Budget.

Mr. Komuro introduced the following Question:—"Is the Matsukata Cabinet organized to bring the constitutional system to perfection or to subvert it entirely?" He urged that Count Matsukata, when formerly Minister President, had, by interference in the general elections, caused the death of many persons, the burning of houses, and the staining of several places with blood, and had committed atrocities familiar to all. Bitter resentment on account of these things still lingered in Mr. Komuro's bosom, and he did not hesitate to say that he could never forget the cruelties perpetrated by the Count, the horrible scenes of the time having become photographed on his mind. Had the Count repented of his former wickedness and determined upon carrying on a virtuous administration compatible with the constitution, then he might have been forgiven and Mr. Komuro might not be ashamed to support him. But what was known of the present Cabinet consisted chiefly in "outrages" committed by the force of power; in the so-called "purchase" of members of Parliament, or in secret union with influential merchants. It was rumoured that, in the inmost chambers of tea-houses near Shimabashi, some of the members had sold their fidelity for official positions and some for money. The brilliant conquest achieved by the country's arms in the 27th and 28th years of Meiji had, the speaker believed, been an outcome of the constitutional proceedings on the part of Japan. But now with infinite

regret it had to be declared that the fame and honour of the Constitution were levelled with the ground through the depravity of the Cabinet. The Coinage Bill had been submitted to the House on the 1st of March, yet some ten days previously an enormous profit had been gained in Osaka by virtue of this projected Bill. The prominent merchants of to-day might appropriately be called "ruffians in frockcoats," or "thieves in tall hats."

Mr. Kudo said that Mr. Komuro's speech about the so-called "purchase" of members of Parliament was too serious to be disregarded. It virtually fixed a stigma upon the sanctity of the House. If, indeed, Mr. Komuro's strictures were founded upon facts, they were inevitable. But he wished to know precisely the names of such representatives, and also for what sums they had been bought.

Mr. Komuro retorted that he was under no obligation to make replies to a question propounded with regard to another question.

Mr. Kudo then moved that Mr. Komuro be handed over to the Disciplinary Committee.

Much commotion ensued.

Mr. Inouye Kakugoro inquired why Mr. Komuro should be punished.

Mr. Kudo replied that he deserved to be punished for slandering the House.

Mr. Inouye asked whether Mr. Kudo proposed to hand over to the Disciplinary Committee the thirty supporters of Mr. Komuro's Question?

Mr. Kudo replied that the blame rested primarily with Mr. Komuro as the proposer.

Mr. Inouye argued against Mr. Kudo's motion on the ground that Mr. Komuro had advanced his statements merely in the form of a question based on a rumour as to the "purchase" of members.

Mr. Kudo grew still more excited, and insisted on pressing his motion. Cries and exclamations were heard on all sides and the tumult threatened to involve the whole House.

Mr. Kudo's motion, having been put to the vote, was defeated.

At this stage Count Matsukata, Minister of Finance, ascended the rostrum, and made a speech lasting for an hour and twenty minutes, with reference to the change in the system of coinage, and to the introduction of the Coinage Law.

Mr. Kurihara considered that the question of coinage bore a close relation to the financial system of the State and to the economic principles of the nation. He desired to propound two questions, and he trusted that candid and clear replies would be given. One question was, what necessity existed for putting into operation the project of coinage law under discussion. Another question referred to Art. XVI. of the Law. The Coinage System of the Empire ought, no doubt, to be placed on a substantial basis, in view of the changes perceptible in similar systems throughout the world. Whatever might be said as to the necessity of the speedy adoption of the gold standard, the majority of the House must be of the opinion that whether gold or silver be the standard, gold should be provided to such an amount as to suffice for a reserve. The problem was one that demanded the gravest and most minute consideration, and even supposing that the Financial Committee had given it full attention, the people at large must have time to examine it at leisure. An attempt to place such a momentous problem before the Diet after brief examination amounted to a violation of the constitutional system, and must be denounced as most improper. He had been informed that, owing to the difficulty of adjusting the finances after the war, the Government had endeavoured to raise a foreign loan in the London market, but that, as a satisfactory result could not be obtained on account of Japan's silver currency, the adoption of the gold standard had been resorted to. If such were the case, the Government would do better to issue a gold loan. Did the Government really contemplate subverting this important question to the convenience of temporary financial adjustment? Moreover, the Formosan expenditures would not fall short of ten millions of yen for several years to come. Was it not possible that the

prospect of such large outlays had led to the introduction of the Bill now before the House? At the recent conference of the Budget Committee, a question had been asked as to the future source for obtaining money, Count Matsukata, Minister of Finance, had replied that he was revolving a scheme which would relieve the situation. Was that scheme the project of Law now under discussion? The Minister had told them in his speech that he proposed to take steps for dealing with the silver 1-yen pieces, as speedily as possible. It seemed to Mr. Kurihara that if measures for that purpose were delayed, Japan must become bimetallic.

Mr. Obata asked whether this coinage question had been referred to the Chambers of Commerce and Industrial Societies in various parts of the Empire.

Mr. Taguchi intimated that he opposed the Bill, but wished first to know how the Government proposed to deal with any Public Loan Bonds that had passed into the hands of foreigners, in case of the gold standard's being adopted. The Bonds, would certainly rise in price, and their holders might object to have them redeemed at the price fixed by the Government.

Mr. Tajiri (Government Delegate) replied that Mr. Taguchi's anxiety was groundless, inasmuch as the Bonds were sold subject to that condition.

The Bill standing first on the Order was passed without any objection.

The President announced that the Bills from the second to the sixth on the Order would be taken together.

With regard to the Coinage Bill and its correlated Bills, Mr. Kimura asked what amount of gold and silver bullion was in the Treasury, and what amount of coined gold was deposited in the London Bank.

Mr. Matsuo (Government Delegate) replied that the total amount deposited in the London Bank had been 202,460,000 yen, of which a sum of over 48,270,000 yen had to be kept in the Bank to make payments during the 29th, 30th, and 31st years of Meiji, thus leaving a balance of over 154,190,000 yen. Of the latter amount, the gold stood at over 79,620,000 yen and the silver at some 20,020,000 yen; while some 40 millions had already been paid in drafts; twenty millions had come to Japan, and another twenty millions were on their way out. The remainder, according to present intention, would be shipped for Japan by May. The reserves in the Bank of Japan were:—Gold bullion, 36,770,000 yen; gold coins, 22,900,000 yen; silver bullion and so forth, 158,440,000 yen.

The Government Delegate, in reply to Mr. Yoshimoto's question, said that one yen was counted as two according to the Coinage Law now in contemplation.

The Bills were submitted to a Committee of twenty-seven members for investigation.

The Bill standing last on the Order was deferred for discussion in connexion with the Bill for amending the systems of District Local Administration.

The House rose at 4.30 p.m.

CUTTING A POLICEMAN.

About 1 a.m. on Wednesday, a burglar broke into a house occupied by Mr. Nagai Seitaro, at No. 38, Setagaya, Ebara-gun. He was armed with a drawn sword. The occupants hearing a noise raised an alarm and the man fled. Mr. Hagai at once informed the Shimogawa Police of the affair, and they telephoned to all the police-stations in the vicinity that the would be burglar should be detained if seen. In the meanwhile, a suspicious-looking fellow was observed passing through Midori-mura in Ebara-gun. A policeman in plain clothes noticed him and called out for the man to stop. Instantly the tuffian drew a sword and cut the policeman on the forehead. Then he took to his heels. The fellow has not yet been caught.

KOREAN NEWS.

A Christian periodical has been started in Korea under the supervision of the Rev. H. Y. Appenzeller and the Rev. H. B. Hulbert. It is called the *Chosan Christo In Hyobo*; is printed in *Inmun*, and will appear weekly.

A company has been organized in Söul for the purpose of undertaking the tanning enterprise. Hitherto Korean hides have been exported to Japan and tanned there, but there is no apparent reason why the manufacturing process should not be performed in Söul. The leather turned out at the new tannery is said to be good.

One is not prepared to hear of highwaymen plying their trade in the districts between Söul and Chemulpo. Korea is sufficiently disturbed in the interior, but travellers passing from Söul to Chemulpo ought to be safe. On the 31st of January, however, a band of twenty robbers, said to have come from Whanghai province, attacked a Japanese subject near Orikel, the half-way village between Söul and Chemulpo, wounded him severely, and stole from him \$30, as well as his watch, blankets, &c. The people of the village seem to have shown great promptitude and sympathy in rescuing the unfortunate man.

The removal of the King of Korea to the Kyengpok Palace was not accomplished too soon. Numbers of memorialists had begun to present themselves in Söul, urging His Majesty's return. They behaved in an orderly manner, confining their demonstrations to patient sitting at the entrance of the street leading to the Russian Legation, and dispersing readily when ordered by the King to do so.

The Korean Council of State has recommended that reductions of land tax, aggregating a hundred and thirty-four thousand *yen*, be made in the thirteen provinces, in consideration of calamities that befel the farmers during the past year, and the King has approved the recommendation.

The people of Korea seem to be singularly gullible. Anybody sufficiently daring to call himself a governmental deputy appears to be able to collect taxes and raise forced loans. The latest instance is a man named Ye, who, claiming to be an agent of the Royal Household Department, went to the districts of Yeson and Dusan, and carried matters with a high hand. In the pretended capacity of overseer of markets, he made the merchants raise and lower the price of rice to suit his own convenience, and as simulated local superintendent of trade, he forced the innkeepers to pay him a commission for the privilege of conducting their business. The wonderful thing about such frauds is that their perpetrators must anticipate early exposure. They can not possibly expect to escape with their illegal gains. Their sole idea seems to be a short life and a merry.

A Chinese representative, Mr. Tong, has arrived in Söul for the purpose of concluding a treaty of commerce with Korea.

In an edict published on the 11th of February, the King of Korea says, "We would have returned already (to the new place) if we could." His Majesty gives no explanation why "We could not."

Here is a disappointment:—

The Minister of Education requested the different Departments to appoint the graduates of the Confucian School to good positions in the Departments. The War Office replied that the Dep't. does not need such men in the service as the Confucian knowledge is of very little use. Therefore, the Department regrets to say that it is impossible to appoint the recommended persons in the Dep't.

H.M.S. second-class cruiser *Iphigenia*, which was built at Glasgow by contract in 1891-92, under the Naval Defence Act, was commissioned at Portsmouth on 19th inst. by Captain Horatio N. Dudding for service on the China Station, where she will relieve her sister cruiser *Arcturion*, Captain Robert L. Groome, which returns to England to pay off. The *Arcturion* was commissioned at Devonport on Jan. 16, 1894, for service on the Mediterranean Station, but was transferred to the China Squadron during the Chino-Japanese War.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for January, showing the foreign trade of the Empire for the month:—

	1895.	1896.
Exports	7,742,962.350	11,816,712.020
Imports	14,272,188.440	13,321,222.780
Total exports and imports	22,015,150.790	25,137,934.800
Excess of imports		1,472,510.760
Exports	163,380.937	310,378.980
Imports	18,817.134	
Miscellaneous		
Total	501,577.501

THE KING OF KOREA RETURNS TO HIS OWN PALACE.

(FROM OUR OWN CORRESPONDENT.)

Söul, Feb. 20, 1897.

The King of Korea is in his own Palace once more. On the 20th inst., amid the universal rejoicing of his people, His Majesty left the Russian Legation, where he had been safely domiciled for one year and nine days. He went in at the back gate, and passed out by the front. He went in a closely covered chair; he passed out publicly. He went into the Legation at about seven—the early morning—he left it at one in the afternoon. He slipped out from the Palace by one gate and the Crown Prince by another a year ago; to-day, on their departure from their temporary home, they observed the usual rules, even to the extent of sending the two empty chairs in advance.

The day was beautiful, one of those delightful winter days so common in Korea. The special guard that had been drilling for this event for some months, was drawn up along the street leading from the Legation to the Palace. It should be remembered that the King did not return to the Palace in the Northern part of the city, but to the new one—Kyeng-won—in the western part of the city, in the immediate vicinity of H.B.M.'s Consulate grounds; the other Legations, American, Russian, and French being a little further to the

west though on the same ridge, while the German Consulate is on the south ridge. Without trying to be facetious, one may say that His Majesty is now well backed by the Western Powers: or some one may be unkind enough to suggest that he has taken his position at the feet of the West.

A single file of soldiers guarded each side of the street. No one was allowed to enter. There was a great desire on the part of the populace to show their sympathy with the return to the Palace, as well as their loyalty to their King, but this was not permitted, doubtless because the street was too narrow. But the people would come, even the women with cloaks over their heads insisted on coming. The German Consulate and Pai Chai College grounds, from which a good view could be obtained, were crowded with people; the city wall likewise had a goodly crowd of sight-seers.

The boys of the Pai Chai School, about one hundred and fifty strong, felt that some special demonstration of patriotism was necessary. They went in a body to the street and succeeded in receiving permission to give three cheers for their king and to strew flowers in his way. The cheers were given with enthusiasm, and no doubt the formal demonstration was pleasing to His Majesty.

The King is in his own Palace once more. The people seem very happy. The demonstrations to-day were not prompted by mere curiosity. Put your ear to the heart of the people and you will find that it beats with a warmth and loyalty that must be most pleasing to their sovereign.

INTERVIEW WITH THE GERMAN MINISTER AT CONSTANTINOPLE.

In view of recent events in Greece, the following translation will be of interest:—Shortly after the frightful massacre at Constantinople, the German Minister, Baron von Saurma-Jelisch, consented to be interviewed by Herr Alberti, a representative of the *Berliner Lokalanseiger*. The Minister said he was glad that, for once, someone had come from Berlin to study the situation on the spot, especially at a time when so many false reports were in circulation. Recently, a Russian paper had stated that, during the massacre, every Legation granted protection to the Armenians except the German. This, the Minister said, was the purest invention. He gave admittance to and succoured about thirty Armenians, among whom were clergymen and women. After correcting some other misstatements, the Minister proceeded to give his views on the situation and the present status of the so-called Oriental Question. I do not believe, said Baron von Saurma-Jelisch, that fresh scenes of horror need be feared in the near future. The Turks are apparently somewhat frightened at their deeds and the united and determined attitude of the Powers has resulted in cooling down their Asiatic hot-heads. There were, of course, limits beyond which the Powers could not proceed. One can not deny that there was some cause for the procedure of the Turks, though none for the manner in which they proceeded. I regard the demands of the Armenians as neither justifiable nor feasible. They are, after all, a nation belonging to Turkey, the same as others, and are subjects of the Sultan. What they have a right to claim, religious liberty and freedom of trade, they possess already to the fullest extent. No one disturbs them in their religious exercises, and in business they do exceptionally well. It can not be denied, however, that their inconsiderate ways, and their impudence in trade dealings have produced much bad blood among the Turks, whom they have plundered for centuries. They are usurers and dishonest. The Armenians that threw the bombs are desperadoes, reckless characters, that will dare the utmost. They demand for themselves autonomy, want to play a political rôle, and are determined that if the political reins of Turkey are not put in their hands, after they have monopolized everything commercial, and if Europe will not help them to

satisfy their demands—and Europe never can—they will bring ruin upon all Christians and Europeans residing in Turkey. That the Sultan should take measures against public rebels, is his right as long as he is recognized as the ruler of the country. The Furks were only wrong in the manner in which they overthrew the rebellion. They proceeded against all Armenians without distinction, when in fact there is perhaps but one rebel among a thousand Armenians. The leaders are mostly ambitious young fellows, who, while studying in Geneva, were infected by anarchistic ideas. I do not speak of Asia Minor, for where two such radically different races are compelled to live side by side, there is no possibility of preventing friction. But I assert that the overwhelming majority of the Armenians in Constantinople wish for peace and order, and have nothing in common with the bomb-throwers. To destroy all on account of a few guilty persons can not be permitted. Among the victims that fell in August, there were, at the most, only ten guilty. Turkey sees now whither she is going by such procedure. The whole world was frightened; the well-to-do Armenians left Constantinople *en masse*; hundreds of business-houses are closed; capital is withdrawn; business is at a standstill; the city is desolate. Constantinople is approaching a commercial crisis. Such a state of things can not be tolerated, and I have most emphatically represented this matter to the Sultan. He may uphold his power, but by proper means, and it is his duty to care that only guilty persons are punished. In the next revolt—which is sure to come—the cudgel men will not again appear; the Sultan has promised to employ only police and regular troops hereafter, and only against really guilty folks will measures be taken. In the recent massacre shocking barbarities were perpetrated. This will not happen again. The Sultan has given his word of honour. This, of course, was about all we were able to accomplish. To interfere diplomatically with the internal affairs of the State, is next to impossible. For the rest, most all is true that has been said with regard to Turkish mismanagement. In Turkey there is neither order nor justice. There is no control over the receipts and expenditures of the Government, and if one goes to law he is compelled to bribe the judge. The Turks suffer under these conditions, and Europeans suffer just as well as Armenians. These are Asiatic conditions as they obtain in Turkey, and whoever lives here has to reckon with them. With regard to the personal safety of the Europeans, there is not the smallest cause for apprehension; at least not as long as we do not proceed too severely against the Sultan. Turkey will do her utmost for the safety of Europeans, for the Sultan knows too well that if a European were wronged by a hair, all would be at an end with him: the catastrophe would come. Europe, on the other hand, knows that if the Sultan and his Government are once seriously threatened, all Europeans living in Turkey would become victims of Turkish fury. There would be a butchery without a parallel in history. The Sultan is still a power that has to be respected; the police and troops obey him unconditionally. All this suggests to the Powers the wisdom of proceeding with caution and distinctness.

CURRENT TOPICS.

Delegates from the Press Amendment Bills' Committee, now before the House of Representatives, waited on Counts Matsukata and Kabayama and Viscount Takashima seeking consent to the Committee's suggestion to strike out the suspension clause from the amended Bills. It is said that these Ministers, or rather the Cabinet as a whole, were apparently determined to adhere to their original notion. The negotiations for the abolition of the suspension clause were therefore likely to be brought to a standstill owing to the irreconcilable antagonism between the Government and the political parties, for the *Shimpo-to* and Liberals alike recommended its abolition. But a *via media* was ingeniously

devised by Mr. Komuro, one of the Committee, who proposed that instead of striking out the suspension clause, a special clause should be inserted providing for the suspension of the continuation of any article deemed prejudicial by the authorities. This concession is regarded favourably by the Government, so it is confidently believed that the latter will also concede a step and agree to the proposal abolition of the suspension clause.

Details are given in the vernacular press of the reason for dissolving the Shanghai Spinning Company. The meeting was held at Osaka on the 16th inst., with the express intention of arriving at some definite conclusion in the matter, the many meetings held since the latter part of last year having resulted in nothing. When, after a prolonged discussion for and against the project, a vote was taken, it was found that out of 190 voters, no less than 115 were against continuing business, and it was finally decided to dissolve the concern. Ten commissioners were next elected to wind-up the business, and a sum of 1,500 *yen* was voted as remuneration. Their principal business will be to sell the land and plant in Shanghai. The former, it is believed, can be sold at a price that will repay the Company, and the latter at about 15 per cent. discount. A loss of about 190,000 *yen* is expected.

SUICIDE OF CAPT. WARD, R.M.L.I.

From Hongkong papers just to hand, we gather some particulars of the death of Captain John Harry Ward, R.M.L.I., of H.M.S. *Grafton*, who shot himself through the mouth in his cabin on the 22nd Feb. At the inquest, held in Hongkong, Commander A. W. Hewitt said that he was in his cabin on the star-board side of the ship when he heard a rifle shot. Continuing, he said—I was struck by a few splinters of wood and saw the shot come through the after bulkhead. I immediately went to the next cabin and found the deceased in his bunk, severely wounded in the head. The rifle was lying alongside of him. He was barefooted. He appeared to have pulled the trigger with his toe; one leg was half up. I immediately sent for the doctor, and reported the occurrence to my captain. Deceased was captain of the R.M.L.I. He was in hospital when appointed to the *Grafton*, and he joined us in August last year. He was formerly in H.M.S. *Edgar*. By the captain's orders I immediately had the door closed, and a sentry placed on it. The deceased arrived on board about eleven a.m. on the 22nd inst. He was placed under arrest about a quarter of an hour afterwards having broken his leave. At the same time his razors were removed from his cabin by the Doctor's orders. He had gone ashore at some period the previous day: what time I cannot tell. I have reason to believe he was in serious pecuniary difficulties. He was never under arrest before on board the ship. I made inquiry, and heard he had been last seen by an officer of the *Grafton* about 12.20 outside of the Club. I should say the deceased was not of sober habits.

The following letter, in Captain Ward's handwriting was produced:—

"To the detachment, Royal Marines, H.M.S. *Grafton*.

"Goodbye all! I am leaving this world through no fault of my own. Good luck to you all. J. H. WARD.

"Mind you fire decent volleys over my grave or I shall rise up and extra parade you!"

After further evidence the jury returned a verdict of "Suicide by shooting through the head whilst in a state of mental aberration."

Signor Riccardo Aurth, of Florence, has commenced the bust of the Queen, which he has been commissioned by a committee of Italian residents in London to prepare as the gift to Her Majesty upon the occasion of the celebration of the sixtieth year of her reign. The modelling of it will be finished by Feb. 20th, when it will be handed over to an Italian foundry to be cast in bronze. It is said that the bust will first be exhibited at the forthcoming Royal Academy Exhibition.

A LONG-DESIRED REFORM.

We are informed by the Mitsui Ginko that from the 1st of this month, the *rin* digit will no longer be used in their system of accounts. This step will greatly simplify matters. Clerks in Japanese banks and mercantile offices have always been unnecessarily hampered in balancing their accounts by having to reckon in the three decimals of a *yen*. Often a mistake of one *rin* has taken a whole day to put right, and in this way much valuable time has been lost and important work delayed. The *rin*—the tenth part of the hundredth part of a *yen*—is of such comparatively little value that it is really not worth the time and trouble now spent in calculating it. The Mitsui Ginko have held strong views on this subject for some time past, and have now decided to abolish the use of *rin* altogether. They have drawn up the following rules for the convenience of customers:—

1. In accounts of deposits, loans, and overdrafts, the *rin* will be struck out; but when remitting money and in dealing with Government accounts, exceptions to this rule will be made.
2. Any *rin* resulting from interest on deposits and loans, will be taken as one *sen* in the former, and struck out in the latter. In any cheques bearing a *rin*, the Bank will agree to pay one *sen* per *rin*, when issued; and in collecting cheques the *rin* digit will be treated as one *sen*.

Notice of this change has been given to the Bank's customers, who have all agreed to the conditions.

EASTERN JAPAN TRADING COMPANY, LIMITED.

On Saturday evening a dinner was given at the Sanomoto, Otamachi, Yokohama, by the Eastern Japan Trading Company, Limited, in Japanese style, to representatives of the banking, mercantile, and shipping interests in Yokohama. Several foreigners were present and among the influential Japanese were the following, Messrs. Yamakawa Chonosuke, Mori Kenjo, Honjo Kyohiko, Okubo Shosaku, Saito Matsuo, Nishiyama Junkyu, Hayashi Tamio, Okoshi Terisato, Nagai Rihai, and others.

Mr. Otani Konosuke, President of the Company, welcomed the guests in a short speech, and dinner was served immediately afterwards. During the course of the proceedings, Mr. Otani Kohiei gave a complimentary address, in which he said that he hoped success would attend the venture. It was the first trading association of its kind in Yokohama where Occidental and Japanese capital was amalgamated, and where Japanese and Occidentals were concerned in the management.

Mr. Otani Kohiei also delivered a short speech. He said that he was greatly pleased at seeing his son at the head of the concern, the shareholders having elected him to the Presidency, and he asked the help of all present for him. He was a young man who had but just left college, and as such required all the good advice and assistance that experienced business-men could give him. He (the speaker) augured well for the success of the undertaking when so many of the influential leaders in the commercial life of Yokohama gathered to celebrate its inauguration.

Mr. Kobayashi Beika returned thanks on behalf of the President. He expressed the pleasure that it gave Mr. Otani Konosuke to see such a large gathering that evening. The Company had been started to undertake trade with foreign countries on foreign lines, and with foreign direction in some respects. They hoped to maintain cordial and friendly relations with all the foreign firms trading in Yokohama, for they had not started with any intention of cutting behind, cutting below, or cutting into the trade of the foreigners resident in Japan. They simply wished to work with the foreign merchants in promoting the trade of the port and of the country, and in so doing to enhance the prosperity of the Empire of Japan.—(Loud cheers.)

The gathering broke up shortly before 11 o'clock after a most enjoyable evening.

The Admiralty have ordered that the sloop *Algerine* and *Phanix*, at Devonport, are to be commissioned on Feb. 11 for service on the China Station. They will each have a complement of 106 officers and men. They are to relieve the *Linnet* and *Swift*, both obsolete vessels, which have been on the China Station upwards of thirteen years.

YOKOHAMA CRICKET AND ATHLETIC CLUB.

The Annual General Meeting of the members of the Yokohama Cricket and Athletic Club was held in Keil's Building on Friday evening, the President, Mr. J. P. Mollison, in the Chair. There were present, Messrs. F. E. White, K. F. Crawford, A. B. Walford, C. M. Duff, F. S. Moise, G. C. Murray, H. V. Dickinson, J. E. Moss, K. van R. Smith, H. S. Goddard, E. H. Irwin, E. Mendelson, H. Goddard, F. H. Tanner, E. Flint Kilby, B. Hyde Pearson, H. May, G. McGowan, H. J. Sharp, W. V. Showler, L. H. Abel, H. A. Poole, W. Goddard, W. R. Matheson, M. L. Ellis, W. Tucker, E. Adet, F. W. McWilliams, F. L. Elliott, W. S. Stone, D. F. Blake, G. H. Bain, G. J. H. Schurr, R. C. K. Johnson, C. Moss, L. Eylon, J. Keane, and Kay Smith.

The CHAIRMAN said that he did not propose to read the report, as it had been in the hands of members for a few days, but if some one present would move its adoption he would then be ready and willing to answer any questions that might be asked about the accounts.

Mr. SHOWLER proposed and Mr. TUCKER seconded the adoption of the report and accounts.

The CHAIRMAN—I have only a few remarks to make in regard to the accounts. You will all have noticed that there is a considerable debit balance brought down this year, a most unusual thing for the Y.C. and A.C. But nearly all of this is due to the building of the new fence, that cost about \$600, and we may therefore consider that as a pretty good asset. The Pavement is in very good order and will not require extensive repair this year: the bicycle track, as you know, has been improved by the erection of two banks and the widening of the third corner. This I hope will prove useful to the new element that has entered the Club, and I think it will be some time before such an expense will be again incurred. We have also a large stock of ribbons and sashes, a good \$100 worth of them, and of course this will return to the Club. Our membership has increased and seems likely to go on increasing, and I think that we may look forward to the future with every confidence.

Messrs. SHOWLER and ELLIS having been appointed scrutineers, the election for President took place. It resulted in the re-election of Mr. James Pender Mollison, the announcement being greeted with hearty applause.

Mr. MOLLISON, in returning thanks for the renewed expression of the members confidence, said that he would do all that lay in his power to forward the interests of the Y.C. and A.C.—(Applause.) In regard to the Vice-President and Captain of Cricket, Mr. Walford did not offer himself for re-election on this occasion. The Committee regretted this, and he felt sure that the members would also; but Mr. Walford had quite made up his mind in the matter. He, however, suggested that Mr. Duff would make a good successor. Unfortunately, Mr. Duff's difficulty of hearing might militate against him; still as Captain of Cricket on the ground he (the Chairman) felt sure that Mr. Duff would make a capital man.—(Hear, hear.)

While the ballot was being taken, the CHAIRMAN presented to Mr. G. C. Murray the Kirin Cup for the best batting average of the past year.

Mr. MURRAY, whose rising was a signal for applause, said—Mr. Chairman, you have taken me by surprise. This is a thing which I have never done before, and I don't suppose I shall do it again.—(Laughter and applause, and a voice—"What, at your time of life!" at which there was renewed laughter.)

The CHAIRMAN announced that the result of the ballot was that Mr. Duff had been elected Vice-President and Captain of Cricket.—(Applause.)—He had no doubt that he would make a very able Captain in the field, and as in the autumn they would be entertaining Kobe on their ground, and Shanghai too, if they could possibly get some China players across, there was every necessity for having so good a man and a cricketer.—(Applause.)

Mr. DUFF—Mr. Chairman and gentlemen, I think I heard my name mentioned in connection with the Vice-Presidency and Captain of Cricket. I thank you for the honour you have done me, but I would remind you that I am afflicted with deafness and for that reason am not a very suitable man for the position. Still, if you think that this does not matter, and you wish me to take the position, I shall only be too pleased to do all I can: I will do the best I can for you.—(Hear, hear, and applause.)

The CHAIRMAN next announced that a committee of seven had to be elected, the positions of Secre-

tary, Treasurer, Ground, Baseball, Cricket, Athletics, and Football men, being selected by the Committee themselves. He regretted that Mr. Kilby, owing to pressure of work, and Mr. Crawford, who, unfortunately for the Club, but fortunate for himself, was going home, were unable to serve again. Mr. Walford, however, though he resigned the Vice-Presidency would be willing to serve on the Committee. It had been suggested that Mr. Owen, if elected on the Committee, would take the post of Secretary, while Mr. Walford, if elected, would take over the Treasurer-ship.

The Committee elected were—Messrs. F. E. White, B. Hyde Pearson, A. B. Walford, E. Owen, L. H. Abel, G. Bain, and E. J. Libeaud. There was a tie between Libeaud and F. H. Tanner, but the latter retired in favour of the former. This concluded the business of the meeting.

REPORT.

GENTLEMEN.—Your Committee present herewith the report and accounts for the Season 1896-1897.

THE GROUND did not show the improvement that had been looked for at the beginning of the Season, but picked up as usual during the latter half.

As the nature of the soil, and the weed called grass, made it so difficult for the Ground Committee to procure good wickets, matting was used for the first time both on the match and practise pitches, and was found to be a great success, especially with regard to the latter, which were positively dangerous before the matting was put down. More money than usual having been expended on the ground, the Committee are hopeful of good results.

CRICKET.—The Season of 1896 may be considered a very satisfactory one. In consequence of an increase in the number of playing members and of the longer stay in port of many naval cricketers, there were more matches than have ever before been recorded.

The Interport match was played at Kobe and the Club suffered defeat, but unfortunately the XI. available on that occasion was hardly representative.

In the Autumn some of our members joined with Kobe in forming a team to visit Shanghai, where they met with a hearty welcome. The weather was more favourable for indoor amusements than for cricket, but after rather a prolonged stay the team reported three matches played, of which the first was drawn, the second was lost, and the third was won.

The Kirin Challenge Cup for the highest batting average goes to Murray, whose average is 31.75. There was some high individual scoring during the season but the century was only once passed, and that by Crawford, who made 118 not out in a scratch match. In calculating the average the matches played at Shanghai have been included though they were not played for the Club.

It is hoped that in the coming season more attention will be paid to bowling and fielding.

FOOTBALL.—A revival of interest, and a successful season with regard to this branch of sport have to be reported.

Thanks to players from H.M. ships *Archer* and *Undaunted*, and also to the amount of young blood, a couple of games have been played almost every week. Two Rugby Games against the fleet were played early in the season, the Navy, by their combined play proving the stronger on both occasions. It must be added, however, that years have passed since Rugby was played in Yokohama, and the second game proved that Yokohama with more practise could soon hold their own.

Association.—Nine matches have been played against ships in port, resulting in the Y. C. & A. C. winning five, drawing one, and losing three.

The Interport Match was played on 20th February in about six inches of snow and resulted in a rather unexpected easy win for the Y. C. & A. C. by four goals to nil.

ATHLETICS & CYCLING.—A Spring Meeting was held on 9th May and an Autumn Meeting on 7th November, and at both the various events were well contested. The times are only moderate and could probably be improved if competitors would take more time in training for those events best suited to their powers. The Committee have done away with the old system of an all round entry fee, which used to swell the list of entries, by many who never intended to compete. The Bicycle Races have been fairly well contested, but at the Spring Meeting especially, the cyclists entered were very few in number. These races, beside adding a very popular feature to our meeting, give an opportunity of longer times between the other events, which materially assists in arranging a workable programme. The attendance of the general public has been large, and gate money satisfactory. The Committee have to thank Mr. A. H. Dare for the handsome Challenge Cup presented for the mile running Flat Race, and other members who so kindly presented prizes, and they have not this year asked for special subscriptions from members towards the Prize Fund. Two corners are now banked for Bicycles, and a third improved so that the Track is now probably as safe as it can be made for Cyclists.

BASEBALL.—Ten games of baseball were played during the season, of which the Club won five.

The game on July 4th, a combination team of Y. C. & A. C. and the U.S.S. "Olympia" versus the Tokyo Higher School, who had already twice defeated the

Club, attracted much attention. Mr. H. W. Denison, of Tokyo, having kindly offered a beautiful Silver Cup to be competed for. After a hard struggle the combination team won by a score of 14 to 12.

The first interport match of baseball was played at Kobe. The K. R. & A. Club, however, won the first two games, thus winning the series.

The Committee hope the interport match with Kobe may become an annual event.

LAWN TENNIS.—The Silver Challenge Cup was won this year by G. C. Murray, who defeated W. F. Page in the Final. No other handicaps took place, but the Courts were in good condition and largely used both by ordinary and visiting members.

Of the retiring Committee, Messrs. Walford, Kilby, and Crawford do not offer themselves for re-election.

THE HONORARY TREASURER IN ACCOUNT WITH THE Y. C. & A. C.

STATEMENT OF ACCOUNTS—SEASON 1896-97.

HONGKONG AND SHANGHAI BANKING CORPORATION.

HALF-YEARLY MEETING.

The ordinary half-yearly meeting of the shareholders of the Hongkong and Shanghai Banking Corporation was held in the City Hall, Hongkong, on the 13th inst. Mr. A. McConachie presided:—

Mr. T. JACKSON read the notice calling the meeting.

The CHAIRMAN read the annual report, and proceeded:—Gentlemen, the Directors are glad to meet you again with a very favourable report for the last half-year. We propose to pay what has now become the usual dividend of £1.5/ per share, and place five lacs of dollars to the Reserve Fund. At the last meeting, I advised you that we had sold £188,000 of our holdings of Consols, the profit on which, say £25,582.16/3, is included in the account now submitted. Our holdings of Consols remain at £500,000 standing at £95. Our other investments both in sterling and rupees stand in our books at very favourable rates. I am glad to say that we have a large portion of the profit upon the Loans we recently participated in still unappropriated; some will go to enrich future Profit and Loss accounts, and will help us to maintain a steady dividend of £1.5/ per share in bad times as well as in good ones—that is the goal we are aiming at, and we are confident of realizing it.—(Applause.)

Margins and profits of every kind are not what they formerly were in Eastern Banking. We cannot see that the future will bring us any relief in this respect. It is therefore sound policy to husband our resources, and in building up our Reserve as we are doing we are accomplishing two desirable ends, firstly improving (if that be possible) the credit of the Bank, and secondly rendering it all the easier in future half-years to place before you satisfactory reports.—(Applause.) In my speech at the last meeting I alluded to the large amount of Sterling that was then deposited with us in London in currency account belonging to the Chinese Government. Our London current accounts then aggregated £6,315,097. A considerable amount of said funds has since been withdrawn, reducing the Sterling current accounts to £3,886,364 on the 31st December. A corresponding reduction has taken place in our Cash balance, say \$25,765,782 on the 31st December as against \$52,409,687 on the 30th June 1896. Our Fixed Deposits in Gold are less by £144,000 than they were six months ago, being £2,626,307 against £2,770,788. Bills Receivable on the 31st December aggregated \$80,217,513 as against \$71,727,698 the previous half-year. The dearthness of money in Europe during the half-year brought a good deal of business to the Eastern Banks, and our funds were fully and profitably employed during most of the time. So much for the past. As for the future we look forward hopefully, and although there are more Banks in the field than there formerly were, there is no doubt that the volume of the Eastern trade is steadily increasing, and the tendency is to go on in the same direction.—(Applause.) The deplorable famine in India and outbreak of plague there are interfering very much with business in that great dependency; let us hope that the efforts now so freely and so generously being made will be crowned with success, and that the dark clouds will soon pass by.—(Applause.) In conclusion, we hope that the year entered upon will be equal to any of its predecessors, and while we are fortunate enough to have our management conducted with the zeal and ability which so signally characterise our Chief Manager and his Staff we may look forward with every confidence to the future.—(Applause.) Before moving the adoption of the report and passing of the accounts, I shall be glad to answer any questions shareholders may wish to put.

No questions having been asked, the Chairman proposed the adoption of the report and passing of the accounts.

Mr. E. S. WHEELER said—Mr. Chairman and Gentlemen, I have great pleasure in seconding the proposal. You have expressed the pleasure it gives the Directors to meet with such a report; it is even more pleasant for us as shareholders to receive so good an account and to agree to your proposal as to the division of the profit, and this especially so as you tell us that the account does not include a large portion of the profit on the loans recently issued by the Bank which will augment future profits, and thus assist in the maintenance of a steady dividend. It is especially satisfactory to hear of your confidence of attaining a position which will enable the dividend to be maintained alike in bad years and in good; nothing will do more to maintain the Bank in its present proud position, and nothing

is more likely to result in the gradual and permanent enlargement of the dividend. You have referred to the increased competition in the Bank's business; that is a complaint we are all suffering from, but we may look forward to increased trade compensating for the increased competition. At any rate, I think we may have every confidence that the Hongkong Bank, with its numerous and influential supporters, its growing resources, and its able management—both here and at the numerous branches—will in the future as in the past, not only hold its own, but enjoy the lion's share of the trade of the Far East and long continue to be the leading bank.—(Applause.) With these remarks, gentlemen, I beg to second the adoption of the report and statement of accounts for the past half-year.—(Applause.) Carried unanimously.

Mr. RAY proposed the re-election of Mr. N. A. Siebs and Hon. J. J. Bell-Ing on the Board of Directors, and the confirmation of the appointment of Mr. C. Beermann, in room of Mr. J. Kramer, who resigned on leaving the Colony, and of Mr. R. L. Richardson, as Directors.

Mr. J. H. LEWIS—I beg to second Mr. Ray's proposition. Carried.

Mr. P. SACHS proposed the re-election of Messrs. F. Henderson and C. S. Sharp as auditors. Mr. G. STEWART seconded.—Carried.

The CHAIRMAN—That is all the business, gentlemen. I thank you for your attendance. Dividend warrants will be issued on Monday morning.—*China Mail.*

SHROVE TUESDAY.

It has come round once again, but where are the feelings with which we greeted it thirty years ago in dear old England? Dead, all dead, and not even mourned! We let it pass almost unnoticed here. I suppose even the little ones give no thought to it. Yet at that time we held our own little carnival by the seaside in Yorkshire, and a merry day it was for the whole town.

A whole holiday for everybody! One of the few week days of the year when all the shops were shut. During the forenoon, the streets were comparatively quiet, as quiet as on Sunday. You might catch a glimpse of children hurrying to the various schools to put in an appearance only—waiting to be presented with a ball each—and then rushing home again triumphantly, for this was the day when every child, no matter how poor, had at least one ball given to it. It was rumoured that some children managed to attend more than one school that day, but that could hardly be true. Making those balls provided welcome work for many nimble fingers. One of the sights of the quiet town in the early morning was the women delivering the balls—carried in large clothes-baskets. How heavy those baskets appeared to be, and no wonder, for, as the children well knew, if a stitch of the patchwork ball gave way, the sand stuffing oozed out rapidly.

Then at eleven o'clock the Church bell was tolled. No thought of Divine service filled our heads, no thought of any call to be shaven before the holy season of Lent. [Had not some holy saint won dispensation for our town if we did but assemble on the sands in the afternoon instead?] But with shrieks of "The Pancake bell!" "The Pancake bell!" we left our play and hurried indoors to watch the preparations.

O the pancakes of those days! So light and so nice, and only once a year! How good they did taste! What triumph next day in recording the number eaten to one's envious school-fellows! With what scorn we brought home the news that So-and-so's mother actually cut pancakes into quarters, and he or she had only eaten three quarters to our five or six whole ones! Then the frying of those same delicacies. Two or three fires and frying pans ready to begin at the first stroke of the pancake-bell (for nearly everybody dined at noon on that day), and then what joy we children had in watching the rising piles! With what nervous eagerness the pancakes were tossed, for no woman could hope for a bridegroom within the year unless she could toss at least one without breaking it, whereas she might most certainly expect him to appear speedily if she were successful with all of them. And we crowded round, and watched the flushed faces, huzzaying the successes and jeering at the failures as only children can. Then there was the annual discussion about using snow instead of eggs; never satisfactorily settled, for the snow so rarely allowed itself to be in good condition for being subjected to such an indignity. Neither was it ever decided which was the best accompaniment. But when we sat down at last and enjoyed the dainty morsels, and talked of others eating sugar with oranges, lemons, or even beer

with their pancakes, we children always maintained that there could be nothing more suitable than the delicious golden treacle which we had ourselves. Was there any other course at that banquet? I suppose there must have been, but memory utterly fails at that point, and imagination can picture nothing worthy of either preceding or following those delightful pancakes. But although we still looked lovingly and longingly at the decreasing pile, we were soon impatient to be off to the sands to see the revelry there, and to show off our nice ball.

The sun rarely shone on that cold grey day, but it never rained. Generally the tide was sufficiently far down to allow plenty of room for the crowds that assembled, but occasionally it was so high that the jostling was terrible and more than half the fun was spoilt. There were plenty of stalls of the usual description, and a lively trade was done with the youngsters in the balls, oranges, nuts, treacle-sticks, and ginger-beer. Of course the old woman was there with her peppermint rock. How calmly she could sit in the midst of the crowd!

Gradually the sands filled. Whole families, from father to baby-in-arms, came tramping down. All the children of the place, even the workhouse and charity children, mustered strongly. The little fishie-lads came in crowds, especially when the tide was high, for many a kind-hearted man bought oranges and threw them along the sands or towards the sea to be scrambled for. There were loving couples to be seen too, but they generally wandered away over the rocks, for the rough element largely prevailed and they might be sensitive. All the servant-girls appeared with their beaux, each decked with bright ribbon or button-hole, and soon the fun was fast and furious. There were marvellous games with the balls (even paterfamilias showing his skill in the number he could keep in the air at once), and there were other amusements of all kinds, but the game of the day to witness was kiss-in-the-ring. The sands far and near were covered with rings of people, some not allowing kissing, and some only allowing it when playing with their friends, but as a rule the play was left to the lower classes and to the children who played it though with evident enjoyment, the more select young men and maidens looking on with patronising and curious though often longing glances.

What a crowd of onlookers there was! Poor, little, shivering well-dressed mortals clutching their one nice ball; elderly ladies daintily picking their way over the sands; elderly and young men benevolently or quizzically putting up their eye-glasses; placid-looking individuals; flustered-looking matrons; anxious mothers with their broods—all, all there to see and, as much as in them lay, to join in the fun. "Ball-day comes but once a year!" was the cry, both when a young man stole a kiss, and when the old man at one of the stalls found trade dull. "Sold again, sold again, to a lady worth five hundred a year!" he would yell as a poor, timid, better-dressed little girl ventured to buy a halfpenny treacle-stick.

There was no drinking except of ginger beer, the public houses were far away, and genuine mirth prevailed, but when the short winter afternoon was drawing to a close, a good deal of horse-play would begin, and then we had to come away reluctantly. Excited young men intent on breaking sand-filled balls on some young woman's neck, were not nice to encounter, nor was it pleasant to be knocked down over a child with a wet treacle-stick. But we had had a very happy time, and still had our best leather balls, and went to bed that night tired out but sighing: "A whole year before ball-day comes again!" M.L.O.

MISSING HEIRS AND KINDRED IN 1896.

Mr. Sidney D. Preston writes us from 27, Chancery Lane, London, W.C., as follows:—In the course of a year some thousands of advertisements appear in the "Agony" columns of the Press, inquiring for missing heirs, legatees, and others. These notices, which are often of a most romantic character, have a peculiar fascination even for people who have no "expectations." A few jottings on the more important cases for 1896 may, therefore, interest your readers.

Vacant successions await the heirs of Edith Harrison, widow of F. Bockel, and her children, who were found dead near Brussels, supposed to have been murdered; and considerable property is due to the next-of-kin of John Leddy, formerly of Cavan, and late of San Francisco. Miss Kate Norris, of Dublin, deceased in 1894, is supposed to have died without any relations; and the heirs of Miss Margaret Middlemiss, of Musselburgh, are missing. H. J. Masters, of Hull, last heard of in 1884, has become entitled to funds through the death of

his parents; the brothers of Nasmyth Morrison, who died in India in 1846, are sought; also the descendants of Rowland Cowper, who died in London in 1823. The residue of the estate of Mrs. Isabel Fyffe, formerly of Bombay, deceased in 1873, had in the absence of heirs, fallen to her Majesty the Queen; and the "non-nisamut" children of his late Highness the Nawab Nazim of Bengal are inquired for. The descendants of Dr. Joy Adolphus, of Germany, are entitled to a share in the estate of a London merchant, who died nearly 200 years ago; and £7,000 has become due to the next-of-kin of Mary Hendry, who was living in 1777. T. J. Hull, who left England for Australia in 1864, is entitled to freehold property; the children of Caroline Day, who died at Leamington in 1874, are sought; and legacies are due to the brother and sister of Mary J. Caldwell, who went to America in 1856.

The proceeds of the sale of a freehold estate in Cheshire await James Kirkley, who left England in 1873; the sons of Donald M' Rae of Gravesend, who died in 1851, are wanted; and Francis Lucas, of Plymouth, who went to sea many years ago, is a missing legatee. News is wanted of William Lingford, on whose arm is tattooed a skull and crossbones, and who left for America in 1885; and the children of Adolphus Oram, who died in an infirmary in 1881, are missing. William Jeffery, of Fulkestone, last heard of in 1874, and Jermina Jeffery, who disappeared 30 years ago, are both inquired for; while A. R. Reeve, decorative painter, said to have gone to America in 1889, is entitled to £900. J. L. White, of Chichester, who left England in 1870, is also entitled to funds, and J. C. Golden, who in 1881 was in the employment of a baker, may share in the residuary estate of a lady recently deceased. Mary A. Charlesworth, of York in 1874, is interested in the estate of her father; and it is again notified that £3,526 is due to the unknown heirs of John Renny, who died abroad. Information is wanted of James Blair, who, on a voyage from Leith to London, fell overboard; and particulars are required as to securities belonging to a clergyman drowned in the wreck of the *Drummond Castle*. Claimants may benefit to extent of upwards of £9,000, arising from the estate of Commodore Michael Stackpole, of Limerick, who died in 1846; the children of Harriet E. Gow, deceased in Liverpool in 1873, are wanted; also the descendants of Thomas Jeffray, who died *en route* from India nearly 100 years ago. The sons of William Platt, who died at Winkfield, Berks, in 1853, are called for; and R. S. Capon, who left England in 1883, is interested in a legacy of £1,000. Other missing beneficiaries include Eliza Ballantine, who went to Australia 25 years ago; Agnes A. Russell, or Bradshaw, of Glasgow in 1852; William Bellow, formerly of Northam, North Devon; Thomas Dowie, of Tasmania 40 years ago; and A. L. Oldfield, last heard of at Sydney.

Many persons are enquired for by the Courts of Chancery. These include J. B. Crabtree, who left Yorkshire in 1873; James Kearns, who emigrated to New York prior to 1848; G. T. Sandy, last seen at Manchester in 1882; David, Henry, and Peter Lawson, of Nova Scotia in 1847; Henry A. Morgan, last heard of in South Africa in 1889; T. E. Horseman, who went to Australia in 1844; the next-of-kin of W. D. Overton, of Swindon, Gloucestershire; W. N. Cornock, of Birmingham, last seen in 1884; the next-of-kin of T. H. Hake, of King's Lynn, who died in 1845; L. W. Boode, said to have died in Demarara in 1839, and J. T. Boode, probably deceased in Germany in 1848.

The next-of-kin or representatives are sought of John Lowe, of Boston, Lincolnshire, who died in 1782; Miss Sophia Cullett, of London in 1765; Charles Gore, of London in 1797; John Collis, who died in Limerick in 1846; Henry Bridge, of Manchester, deceased in 1873; James Brander, late British Vice-Consul at Lisbon in 1829; W. F. Preston, of Rolleston, who died in 1881; Major General D. Ballingall who retired in 1816; and D.A.N., who was transported to Sydney in 1838.

In addition to the foregoing, representatives of shareholders in the West New Jersey Society, on whose stock no dividends have been paid since 1692, are again sought; the Treasury Solicitor has advertised for next-of-kin in several cases in which intestates' estates have fallen to the Crown in the absence of heirs; several lists of Colonial intestates, who have left funds for their unknown kindred are issued; claimants are sought to unclaimed Chancery Deposits in Jamaica; and large rewards are offered for missing wills, birth, marriage and death certificates.

SPECIAL TELEGRAMS.

London, February 27th.

The Marquis of Salisbury declared, in the House of Lords, on the 25th of February, that the Powers had virtually agreed upon the following points:—

1. That administrative autonomy be established in Crete, which will, however, remain nominally a portion of the Turkish Empire.

2. That if Turkey or Greece refuse to withdraw its troops from the island of Crete, the Powers will impose their decision by force.

It is generally believed that Turkey will submit to these conditions, but as Greece entertains the ambition of annexing the island, and as the Greeks are much excited, it is doubtful whether the Government at Athens will accept the joint demands of the Powers.

London, February 28.

On February 21st, the Cretans outside Canea began to fire on the town, which was occupied by the Turks, and though the Admirals of the European Squadrons issued injunctions against such procedure, the Cretans refused to desist. Thereupon, the men-of-war of Great Britain, Russia, and Germany opened fire upon the insurgents, but the war-ships of the other Great Powers did not participate in the bombardment, their positions not being favourable. On the following day, Mr. Balfour spoke in the House of Commons substantially in favour of resolute activity for the maintenance of peace, and the French and German Ministers for Foreign Affairs also spoke in similar terms in their respective parliaments. It is now said that autonomy will be granted to Crete, the Great Powers having finally arrived at a decision in that sense. In order, however, to preserve the integrity of the Ottoman Empire, the island will be transformed into a privileged province, and thus a connecting link between the two will be secured. It is generally believed that the acute stage of the affair has now passed over.

Paris, March 1.

The Powers having decided on granting autonomy to Crete on the basis of full equality of rights for Mussulmans and Christians, will probably send, on March 2, a Joint Note to the Greek Government announcing the above decision.

LATEST TELEGRAMS.

[SPECIAL TELEGRAM TO "KOBE CHRONICLE."]

Nagasaki, March 1, 5.30 p.m.

A Reuter's telegram states that the European Powers have assumed a joint control over Crete, and guarantee that the island shall not revert to Turkey.

(FROM THE "JAPAN GAZETTE.")

London, March 1st.

Russia, Austria, and Germany are urging that a peremptory note should be sent to Greece threatening forcible measures. The other Powers are equally desirous to see the policy of the concert of Europe promptly executed, but desire to approach Greece in a more moderate manner.

March 2nd.

It is understood that a collective note from the Powers giving Greece four days to evacuate Crete will be presented to-morrow. In the meantime hostilities between the Cretans and Turks have been resumed.

Latest advices from the India show that the plague is decreasing.

March 3rd.

The Powers have sent a collective note to Constantinople identical with a note to Athens declaring Crete autonomous under the suzerainty of Turkey and demanding that the Greek forces shall evacuate the island within six days.

March 4th.

The Powers will not hesitate to adopt coercive measures to enforce the evacuation of Crete, but it is generally expected that Greece will refuse to comply.

(FROM THE "N.-C. DAILY NEWS.")

London, Feb. 23.

The Powers have bombarded the insurgent camp at Canea owing to the insurgents' refusal to stop the fusillade.

Seventy shells were fired. The British fired first, and the cannonade lasted twenty-five minutes.

A German cruiser fired melinite shells. The insurgents fled.

Feb. 24.

There was a scene in the House of Commons when the Hon. G. N. Curzon, under Secretary for Foreign Affairs, confirmed the news of the bombardment at Canea. The Unionists cheered and the Opposition hooted. Mr. Labouchere, supported by the whole Opposition, moved the adjournment of the debate to discuss the matter.

The Right Hon. A. J. Balfour, First Lord of the Treasury, defended the bombardment, and stated that unanimous action of the Powers was essential to prevent a European war.

Sir William Vernon Harcourt protested against using British shells against Cretan Greeks. The motion was defeated.

M. Hanotaux, French Minister for Foreign Affairs, has stated that Great Britain suggested the forcing of the Dardanelles, and the seizing of the Sultan, but that the Powers refused, and that Great Britain then adhered to the French proposal that the Ambassadors at Constantinople should collaborate in urging reforms.

He stated also that Crete would never return to direct Turkish administration, but that it would be necessary to check Greece in order to avert a European war.

Pilgrimage to Mecca from the whole of India has been stopped.

The British have captured Benin city.

Feb. 25.

The Hon. G. N. Curzon has denied the statement of M. Hanotaux to the effect that Great Britain had suggested forcing the Dardanelles and seizing the Sultan.

(FROM THE NATIVE CORRESPONDENT OF THE "N.-C. DAILY NEWS.")

Peking, February 25.

The Imperial Government have decided to order four more armoured cruisers, two fast cruisers, and several torpedo destroyers, English type. This is owing to the great increase made recently in the navy of her neighbours. China will not order any large vessels of over 10,000 tons as she has neither harbours nor docks suitable for them. The programme for some years to come will be to order vessels of 8,000 tons, or so. The retrenchments made at the Palaces of the Emperor, Empress, and Empress-Dowager are to be devoted towards strengthening the new navy. There are indications of H.E. Li Hung-chang coming into fuller power soon, but there are still a great many attempts made to undermine his newly acquired influence over the Emperor. The Empress-Dowager is still Li's greatest champion and she is assisted in this by Prince Kung.

(FROM THE "DIARIO DE MANILA.")

January 26.

The Spanish troops have had several victories over the rebels in Cuba. The rebels are being beaten every day.

Spain has joined officially the Congress of Hygiene convoked by Italy to adopt measures providing against the introduction of the bubonic plague.

Public opinion in Spain awaits without impatience the early triumph of her arms in Cavie.

In Marseilles 20 suspicious cases have been registered.

(FROM THE JAPANESE PRESS.)

Bakan, March 4.

Marshal Marquis Yamagata is expected to arrive here to-morrow from Kumamoto *via* Miike.

Tsu, March 4.

The Japanese man-of-war *Naniwa* left here for Taketoyo to-day.

Otsu, March 4.

A student of the Normal School has succumbed to small-pox. The school is closed for five days from to-day.

CHESS.

All Communications to be addressed to the Chess Editor

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

White to play and mate in two moves.

SOLVERS FOR 1896

The following is the list of solvers for last year. Our old friend J.D. is again at the head of the poll, let us hope that, when he gets firmly rooted among the new surroundings at Moji, he will again favour us with his weekly note.

The figures against each name, give the number of correct answers furnished to the problems published in this column from 1st January to 31st December, 1896.

J.D.	62	Kr.	6
W.H.S.	55	Sigma	5
W.d.H.	53	T.Mcl.	4
Shogi	52	N.E.	4
W.D.C.	51	F.G.	3
Omega	39	Oiso	2
E.J.K.	22	W.B.	2
Digamma	16	J.W.E.	1
XX.	11	A. L. Jordan	1

STEINITZ-LASKER.

We continue the publication of the games from last week:—

GAME No. 667.
(FOURTEENTH GAME).

GAME No. 669.

RUY LOPEZ.

Notes by GUNSBORO.

Game played in the tournament between Marco and Dr. Tarasch.

WHITE. Marco.	BLACK. Tarasch.
1-P to K 4	1-P to K 4
2-Kt to KB 3	2-Kt to QB 3
3-B to Kt 5	3-Kt to Q 2 (a)
4-Kt takes Kt	4-P takes Kt
5-P to Q 3	5-B to B 4
6-Castles	6-P to QB 3
7-B to QB 4	7-Kt to B 3 (b)
8-P to R 5 (c)	8-Kt to Kt sq.
9-Q to Kt 4	9-K to B sq.
10-Q to B 3	10-Q to K sq.
11-B to B 4	11-P to Q 4 (d)
12-P takes P e. p.	12-Kt to B 3
13-Kt to Q 2	13-B to K Kt 5
14-Q to Kt 3	14-Q to Q 2 (e)
15-Kt to K 4	15-Kt takes Kt
16-P takes Kt	16-P to KR 4
17-P to KR 3	17-B to K 3
18-B takes B	18-Q takes B
19-P to K 5	19-R to K sq.
20-Q R to Q sq.	20-Q takes R P (f)
21-B to Kt 5	21-Q to Q 4
22-P to KB 4	22-B to Kt 3
23-B to K 7 ch.	23-K to Kt sq.
24-P to B 5	24-B to Q sq.
25-P to B 6	25-P to K Kt 3
26-K R to K sq.	26-Q to K 3 (g)
27-B takes B	27-R takes B
28-R takes P	28-K to R 2
29-Q to Kt 5	29-K to Kt sq. (h)
30-R to K 3	30-K to B sq.
31-P to Q 7 (i)	31-R takes P
32-R takes R	32-Q takes R
33-R to Q 3	33-Q to B 2
34-Q to Q 2	34-K to K sq.
35-P to R 4	35-R to R 2
36-R to Q 6	36-Q to B sq.
37-Q to R 5	37-P to R 3
38-P to B 4	38-R to R sq.
39-Q to B 5 (k)	39-Q to B 2
40-P to K 5	40-Resigns.

(a) An impatient move, with not much to recommend it except that it leads to irre. ular play.

(b) Cannot be done. The alternative is P to Q 5.

(c) White takes admirable advantage of the opportunity which Black has given him. This and the subsequent moves are played vigorously and with good judgment.

(d) Black is getting very cramped. He therefore decided to sacrifice a pawn in order to gain a little freedom.

(e) To avoid the rooks; for the same reason B to K 3 was not feasible, as R to K sq. would have followed.

(f) There is never any time for such moves. Black should have played K to Kt sq., if possible, to establish a connection between his two rooks.

(g) Forced, as White threatened a complete break-up by P to K 6.

(h) There is nothing better; for if K R to K sq., White wins by R to K 4.

(i) A very effective move. Black has no option; he must take the pawn, as White threatens it to Q 6, followed by P to K 4.

(k) Threatening B takes P. This and the next moves are decisive.

GAME No. 670.

SCOTCH GAMBIT.

Notes by GUNSBORO.

Game played in the City of London Chess Club Championship tournament between Mr. C. J. Woon and Mr. N. W. Van Lennep.

WHITE. Mr. Woon.	BLACK. Mr. Van Lennep.
1-P to K 4	1-P to K 4
2-Kt to KB 3	2-Kt to QB 3
3-P to Q 4	3-P takes P
4-Kt takes P	4-B to B 4

5—B to K 3
6—P to Q B 3
7—B to K 2 (a)
8—P takes P (b)
9—Castles
10—P takes B
11—B to B 4 (c)
12—B to K 3
13—R to B 4
14—R takes Kt
15—K to B sq. (f)
16—Q takes B
17—Kt to Q 2
18—Q takes B
19—K to Kt sq.
20—B takes P ch.
21—Q to B 4 ch.
22—Q to B 4 ch.
23—Q takes Q
24—Kt to B 3

and wins.

(a) We think B to O B 3 the strongest continuation here. We do not think much of the opening generally.
(b) The usual move is B to B 3, but that leads to White having an isolated pawn on the Q file after exchanges take place. Mr. Woon, who often adopts this opening, must have succeeded at some time or other in this doubtful move, otherwise he would probably not have adopted it against such a strong player.
(c) This move explains matters. By giving up the pawn White hopes to gain an attack, in which Q to R 5 enters largely in his calculation.
(d) An object-lesson. Black is not too eager, but exercises discretion. In protecting his K P, the pawn cannot escape him.
(e) Very nice play.
(f) Forced by Black's excellent tactics; for if, 15—K to R sq. B takes R, and the queen cannot retreat owing to Q to K 8.
(g) Black's conduct of the game has led to very interesting developments. If 17—Kt to R 5, R to K 5; 18—Q to Kt 3, R to B 5 ch.; 19—Kt to B 5, Q to Q 6 ch.; 20—K to R sq., R to K 8 ch., and mates.

ENGLAND VERSUS AMERICA.

We have had no cable-news as to the result of this match which was fixed for 12-13 Feb. Perhaps the next steamer from San Francisco will tell us something.

PROBLEM NO. 287.

Peccavi! Some 'cute quidnuncs of Tokyo have bowled us out, and have found a flaw in the solution we gave of this problem last week. We apologise and print the correct one below.

WHITE. BLACK.
1—Q to R sq. 1—Q takes R
2—Q to R 8 2—Q takes Q
3—R to R 3, mate if 2—K to R 7
3—Q takes Q, mate 1—P to K 4
2—R (B 3) to R 3 2—Q takes R ch.
3—R takes Q, mate 1—B to B 2
2—R takes P (B 2) 2—Anything
3—Mate accordingly.

Our Tokyo critics (Shogi and W.D.C.) did not send in the correct answer themselves, so they cannot score, except negatively by nullifying the points given to W.H.S. and Omega in our column of 27th February.

MAIL STEAMERS.

B. Ransom, U.S.N., Mrs. G. B. Ransom and child, Mr. L. Bellingardi, Captain E. W. Haswell, and Miss E. L. Cummings in cabin.

CARGOES.

Per British steamer *Ancona*, for Hongkong via ports:—Silk, 449 bales; Waste Silk, 195 bales.

Per British steamer *Monmouthshire*, for Portland, Oregon:—Silk for New York, 378 bales.

REPORTS.

The American steamer *City of Peking*, Captain J. T. Smith, reports:—Left San Francisco the 13th February at 2.44 p.m.; arrived at Honolulu the 20th at 1.17 a.m. Left Honolulu the 21st at 1.13 a.m.; had fine weather.

The British steamer *Coptic*, Captain I. Sealby, reports:—Left Hongkong the 23rd February and arrived at Shanghai the 27th. Left Shanghai the 28th and arrived at Nagasaki the 1st March. Left Nagasaki the 2nd and arrived at Kobe the 4th. Left Kobe the 4th and arrived at Yokohama the 5th March; smooth passage throughout.

LATEST COMMERCIAL.

IMPORTS.

Enquiry is fair and dealers willing to go on at late rates; but Importers cannot accept, as exchange drops and Manchester rises. There are signs of buyers coming round partially to holders ideas. Yarn—Small business for the above reasons. Shirtings—Dealers are well supplied at present, and will not follow the market up. Fancies and Woollens—Dull without change so far.

COTTON PIECE GOODS.

Grey Shirtings—8 1/2 yds, 39 inches	\$2.40 to 2.75
Grey Shirtings—9 1/2 yds, 45 inches	2.70 to 3.15
1. Cloth—7 1/2 yds, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yds, 44 inches	1.95 to 2.90

JAPANESE AND LOCAL SHARE LIST.

[MESSRS. BISSET & URE'S CORRECTED LIST.]
LOCAL SHARES.

Yokohama, March 1st.

Business has to be reported in Ind-Chinas for delivery at the end of June at \$50. In local shares, Japan Breweries have again changed hands at \$305, Club Hotels at \$67.50 and Langfeldts at \$195. Grand Hotels are still enquired for at \$195. Oriental Hotels at \$140, whilst Iron Works might be secured at \$135.

Yokohama, March 3rd.

Raub Mines have been fully enquired for at \$12.50. Our re-Jay's wire quotes H. & S. Banks 173 per cent; Hongkong Lands \$76 1/2; China Fires \$108; H. & W. Docks 24 per cent; H. & K. Wharfs \$58. All these stocks are wanted at these quotations. The following are offering:—H. C. & M. Steamboats at \$35 1/2; Punjoms at \$10 1/2; Hongkong Fires at \$400.

In Local Stocks, Japan Breweries have again been placed at \$305 and Langfeldts at \$195.

Yokohama, March 4th.

The following quotations have been wired to us from Hongkong:—H. & S. Banks 174 per cent. Buyers; Hongkong Lands \$76.50 Buyers; China Fires \$108.50 Buyers; H. & W. Docks 24 1/2 per cent. Sales; H. & K. Wharf \$58 Buyers; Douglas \$61 Steady; H. C. & M. Steamboats \$35 Sales; Punjom Mines \$11 Sellers; Raub Mines \$12 Buyers; Hongkong Fires \$395 Steady; National Banks \$25 Sellers; Indo-Chinas \$47 Steady; Straits \$28 Buyers; Unions \$235 Steady, and China Traders \$80 Sellers.

Yokohama, March 5th.

Latest mail advices from Hongkong, bearing dates up to the 24th ultimo, report the following changes in the share market:—Unions have weakened to \$235, after sales at \$237.50. Hongkong Fires have further improved and \$397.50 has been paid for shares. H. C. & M. Steamboats have been in very strong demand, closing with buyers at \$34. H. & W. Docks have risen considerably and after sales at 230 per cent, premium, up to 239 per cent, has been paid. Bells' Asbestos have strengthened from \$7 to \$8.

In the Shanghai market the following changes have to be noted:—S. C. Farnham's have risen from Tls. 155 to Tls. 187.50; Yangtzes from \$157.50 to \$158.50; Perak Sugars from Tls. 25 to Tls. 25.50; Shanghai Gas from Tls. 218 to Tls. 220; Shanghai Sumatras from Tls. 155 to Tls. 161.50, and Langkats from Tls. 480 to Tls. 510.

The General Managers have received the following reply by wire to an enquiry regarding the prospects of the Oliver Mines, "Have struck Eureka Reef at a depth of 200 feet; prospects are encouraging; removing Balmoral Company battery alongside Olivers. The mill will work night and day."

Regarding the issue of new capital by the Shanghai Land Investment Company, Limited, our Shanghai Agents reports as follows:—At the succeeding extraordinary general meeting a resolution was passed increasing the Capital by the issue of 6,000 new shares of Tls.50 each, which will be offered at 40 per cent. premium to the Shareholders in the proportion of 3 new shares for every existing ten shares held by them, such new shares to rank for dividend from 1st July next.

No change to report in local stocks. Grand Hotels continue to be enquired for and a few Langfeldts are offering at \$195.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BARNES, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of a kind. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
May 2nd, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAR. 13TH, 1897.

BIRTHS.

On March 7th, at Sendai, the wife of Rev. JAMES CHAPPELL, of a Son.
On the 10th inst., the wife of W. S. STONE, of Yokohama, of a Son.

DEATH.

At Stroud Green, London, on 11th instant, THOMAS MACMILLAN, Senior. (By telegraph.)

SUMMARY OF NEWS.

MR. YANO FUMIO is the new Japanese Minister to China.

Kobe's Fire Brigade starts a new year with yen 760.12 to the good.

THE Emperor of China has sanctioned the Imperial Bank of China.

DURING February the Kanagawa Kencho issued 111 passports to foreigners.

MILITARY manoeuvres will take place in Shidzuoka Ken at an early date.

THE Nagasaki Rice and Grain Exchange have lately been allowed to deal in kerosene.

RUMOUR says that Mr. Matsumoto, President of the Railway Bureau, will resign at an early date.

THE Taipeh Joint-stock Rice and Grain Exchange, which has a capital of yen 50,000;

and the Taipeh Electric Light Company, backed by a capital of yen 150,000, were licensed on Saturday.

A HEAVY gale and storm, about March 4th, blocked the telegraphic lines in the South of England.

MESSRS. G. D. RÖNING and A. J. Raymond have joined the Board of the Hongkong and Shanghai Bank.

THE officials of the No-Ko Ginko (Agricultural and Industrial Bank) will be appointed at the end of this month.

MR. KURIMOTO JOUN, founder of the Yokosuka dockyard, died of diphtheria on the 6th instant, at half-past 4 o'clock p.m.

MR. JUSTICE MOWAT and Mrs. Mowat arrived at Shanghai by the O. & O. liner *Gaelic* the Sunday before last.

MR. FRANK MAY, the well-known ex-Chief Cashier of the Bank of England, died in London on February 8th.

AT the rising of the Imperial Diet, Count Kabayama, Minister of Home Affairs, will convene a conference of local Governors.

BARON NISHI TORUJIRO, late Minister to Russia, who resigned the post on account of ill-health, will be appointed a Privy Councillor.

BARON HAYASHI, the new Minister to Russia, will leave Yokohama for Russia on the 21st inst. by the French steamer *Ernest Simons*.

THE *Ryojun Maru*, of the Nippon Yusen Kaisha, will be submitted to Government inspection under the Navigation Encouragement Law.

MR. FURUKAWA, owner of the Ashio Copper Mine, is endeavouring to buy up all the land devastated by the outflows from the copper mine.

A PROPOSAL to grant yen 1,750,000 as a Government subsidy to the Central Tea Business Association, will be submitted to the Diet shortly.

THE Lower House of the Diet passed, on the 11th inst., the new Coinage and Currency Bills through their first, second, and third readings.

A HOUSE of Correction organized by Mr. Miyoshi Taizo, ex-President of the Court of Cassation, will be opened at Miyoshicho, Kyobashi, shortly.

A PETITION asking for improvements in Kobe anchorage was presented to both Houses of the Diet on Thursday, by some representatives from Kobe.

A TELEGRAM received by the Authorities reports that Mr. Oshima, an expert of the Japanese Iron Foundry, and staff, will return home about July.

LAST year Japan's imports of gold exceeded those of the previous year by 10,000,000 yen: her imports of silver fell off by about 1,000,000 yen.

THE *Kanagawa Maru*, the new N.Y.K. boat, brought out yen 60,000 in gold bars, from England. This gold is part of the Chinese Indemnity.

SIR J. BATES THURSTON, K.C.M.G., Governor and Commander-in-Chief of the Fiji Islands, and High Commissioner for the Western Pacific, is dead.

THE Admirals of the squadrons of the Powers in the Levant have prepared a plan to coerce Greece by blockading the Greek ports and the Cretan coast.

ACCORDING to a telegram received by the Authorities, we learn that Japanese one-yen silver

pieces to the value of yen 8,623,700, are now in circulation abroad, out of which yen 8,000,000 are in Singapore.

BOMBAY is almost a city of silence nowadays, owing to the plague's ravages, and the consequent desertion of a large portion of the native population.

MR. A. J. BALFOUR has announced in the House of Commons that the celebration day of Queen Victoria's sixty year's reign will be a national holiday.

BARON SHIRANE, late Minister of Communications, now in the Hospital of the Imperial University, is reported to be progressing toward convalescence.

MR. NAKANO, Governor of Kanagawa Ken, inspected the works of the Dock Company, Yokohama, on Friday, and expressed his satisfaction with the progress made.

ONE British subject has taken out a patent in Japan, one German subject has registered a design; and 800 of the two nationalities have applied to register trade-marks.

MR. FUJII, President of the Correspondence Bureau in the Foreign Office, will send in his resignation of that post, as he has been appointed *Chargé d'Affaires* in Brazil.

THE British Naval Programme for this year allows for the building of fourteen new ships including four battle-ships, and increases the personnel of the Navy by six thousand men.

A REUTER'S telegram states that Greece has sent a reply to the Collective Note of the Powers, refusing to evacuate Crete. Hostilities have been resumed and further trouble is expected.

SPEAKING in the House of Lords, Lord Salisbury said that the Powers agreed with the British proposals except as regards the withdrawal of Turkish troops from Crete. The Right Hon. G. N. Curzon, Parliamentary Under-Secretary for Foreign Affairs, speaking in the House of Commons, said that the union of Crete with Greece was impossible in the face of the present attitude of the Powers.

THIS has been a comparatively busy week, all things considered. The rise in the price of raw cotton and the further fall in exchange has caused buyers to come down a little in their ideas and some good transactions have consequently resulted in Manchester goods. Yarns have advanced all round, but chiefly in 2-fold gassed, and 2/42 plain. Forward business is bright for Shirtings, and a few spot sales are recorded. Turkey Reds are moving to a small extent, but Woollens are without life. Kerosene is again without any noticeable movement, buyers holding off in the hope that early arrivals will depress the market. At present it looks as if this desire will not be speedily realised. Arrivals have exceeded sales in Brown Sugars and quotations are the turn lower. Takao sorts are neglected, but whites have been fairly active at stronger rates. Metals have seen considerable sales, but in view of the steadily appreciating prices at home, importers fear that they must put up quotations to realise any profit from the trade. There is some enquiry for futures but the offers are beneath notice. A very big business has to be recorded in the principal staple of export, though higher prices have had to be paid. The principal part of the buying has been for New York, and settlements of 2,500 piculs are notched. Stock is now down to 7,500 piculs. More has been done in Waste than for some time past, 1,500 piculs being settled. Exchange is very weak.

**SPIRIT OF THE VERNACULAR
PRESS DURING THE WEEK
ENDED MARCH 6TH.**

No financial measure previously undertaken in Japan—not excepting the resumption of specie payments on the 1st of January, 1886, and all the drastic steps of currency restriction and so forth preliminary to that event—has ever seemed so important to the nation as the adoption of gold monometallism, now contemplated by the Government. That inference may be drawn from the copious writing of the vernacular press on the subject. Another inference, also, might have been drawn at first from the same writing, namely, that the people in general, so far, at any rate, as the newspapers might be supposed to represent them, had not studied the matter very profoundly, or formed a very clear idea of its significance. With the exception of the *Nichi Nichi Shimbun's* articles, nothing at the outset indicated historical research or financial acumen. The journalistic world appeared to have been more or less taken by surprise. The *Fiji Shimpō*, to which we should have looked for light and leading in such a crisis, showed exasperating nonchalance. Its liberal attitude towards all questions commands admiration, but there are occasions when opinions, however grey and neutral under ordinary circumstances, ought to assume at least opal tints. It looks too like drifting with the tide when a prominent newspaper says that really it has no *penchant* for either silver monometallism, or gold monometallism, or gold and silver bimetalism, but is ready to endorse whichever of the three experience indicates. Yet to the *Fiji Shimpō* belongs the credit of having stated in clear and forcible terms the only weighty argument in favour of the proposed change; namely, that Japan believes the Occident to be on the verge of rehabilitating silver, and that, foreseeing the disastrous effects of working with an appreciating currency, she desires to fix silver at its present point for the purposes of her own monetary system. That view of the world's financial condition has, at any rate, the merit of being intelligible, and if Japanese financiers really entertain such a conception, and are sufficiently persuaded of its justice to make it the basis of practical action, we should be compelled to admire their courage whatever we might think of their judgment. The *Fiji Shimpō* may be said to be the sole journalistic exponent of that phase of the problem, and it lends to it, at the same time, the great weight of its advocacy.

We have already reproduced the gist of articles from the *Nichi Nichi Shimbun*, in which that journal strongly traverses the idea of introducing such a far-reaching change without maturer consideration and fuller investigation. In other articles of the same series it declares that official preparations alone are not sufficient when the adoption of a new monetary standard is in question: the people also have their preparations to make. It is, therefore, manifestly precipitate that the programme should be sprung upon the nation with only seven months' notice. The Government stands in the position of having secretly matured a design that touches the pocket of every Japanese subject, and then published it with startling suddenness. Were the Authorities genuinely solicitous for the people's prosperity, they would hardly have allowed themselves to be carried away by such a vertigo merely for the sake of achieving a temporary success. Turning to history, our contemporary notes that other Powers proceeded with incomparably greater deliberation. In Germany's case, for example, currency reform was essential to her very existence as a united empire, inasmuch as she found herself with no less than seven different kinds of gold coin and sixty-six of silver. She therefore set about the task immediately after her war with France, which brought into her exchequer five thousand millions of francs. Yet she proceeded with due deliberation, announcing, by a law promulgated in 1871, her intention of adopting

the gold standard, and putting that intention into force by a law promulgated in 1873. Nevertheless, despite the great resources at her command, and despite the prudence and ability shown by her financiers, she encountered immense difficulties in carrying out the change. Russia is another case in point. For years she has been collecting vast stores of gold, and preparing to resume specie payments on a gold basis, yet, after full reflection and by the advice of her creditor country, France, she has temporarily abandoned her intention. The fact is that she recognises, not merely the vast magnitude of such a step, but also the great impulse that her own export trade derives from cheap silver. Japanese statesmen, however, propose to force this big change down the nation's throat at seven months' notice. They take no note of the fact that the balance of trade is already against the country to the extent of fifty or sixty millions annually, and that, by adopting the gold standard, the export trade will certainly receive a check and the import trade an impetus. They say, too, that the indemnity obtained from China constitutes a reserve sufficient for the purposes of the measure. That is not true. The indemnity is already appropriated. In a very few years it will all be spent upon the expansion of the empire's armaments, upon Formosa, and upon other projects already voted by the Diet. Whence, then, will Japan obtain a supply of gold to maintain her new monometallism? Again, the financial history of the past two decades shows gold steadily appreciating and silver depreciating. It shows, also, that every gold-using country has been overtaken by a period of depression, whereas every silver-using country has basked in the sunshine of prosperity. Japan is now to pass from the ranks of the latter to those of the former. Her economical experience, since she emerged upon the stage of international competition, has been small. Her progress is only in its initial stage. If she has been fairly fortunate hitherto, she owes much of that fortune to the aid of silver. Is it not a mistake on the part of the Government to discard the silver crutch that has supported her halting steps and to expose her to the risks of a disastrous fall? This change, if it is ever to be made, ought to be postponed for several years.

In another article the same journal illustrates the unsettled state of public opinion by quoting the diverse views that prevail on the subject. Some hold, it says, that silver is destined to depreciate more and more in terms of gold, and that it is fatal for a nation to employ monetary tokens the purchasing power of which is always getting less. Others maintain that silver will be rehabilitated; that it will consequently appreciate in value, and that the country will suffer unless it pins the metal to the position now occupied by it *vis-à-vis* gold. Others, again, are confident that the ratio between the precious metals has reached a steady point, and that the time for adopting gold has, therefore, arrived. Yet others say that Japan has suffered seriously by the depreciation of silver, and that she ought to pull her feet out of the sinking quagmire as quickly as possible. And others declare that she has benefited immensely by cheap silver, but that she can not hope to go on benefiting by it. Such views can not possibly be reconciled. People obviously do not know what to think. The Government, although confronted by the fact that the ratio between gold and silver has varied as much as 40 per cent. within the past seven years, proposes to take the ratio of the past few months as an index for all time. Moreover, official financiers talk of gold monometallism as a means of preventing fluctuations in the prices of commodities. But careful statisticians show that the prices of commodities in terms of gold have varied more than their prices in terms of silver. Is it rational, in the face of such a demonstration, to expect that by adopting gold Japan will be able to count on uniform prices? The *Nichi Nichi* has much more in the same strain, but our space does not permit further quotation. The articles show a grasp of the

subject and a cogency of reasoning that are often lacking in the utterances of the vernacular journals.

But though these criticisms of the superficial and perfunctory character of the vernacular journals' writings about a topic so overwhelmingly vital, must have occurred to any one perusing their early utterances, nothing of the kind can be laid to the charge of their articles during the week under review. These show much familiarity with the profounder aspects of the problem, and indicate a degree of research and knowledge that inspire confidence in the nation's ultimate capacity to choose the safe route. Their tone, too, is moderate, nor do we find any traces of the polemical warmth and over-verbose language that too often disfigure the columns of Japanese newspapers.

In an article published at a later date than those summarized above, the *Fiji Shimpō* shows that maturer reflection has convinced it of the extreme peril of pushing forward this change with the haste that marks the present programme. It notes that the opinion of the public at large has not been sounded: that leading financiers and business men outside the ranks of officialdom have not been consulted: that the views of foreign economists have not been sought; that, in fact, the scheme owes its conception to the statesman now in power, and has not had the advantage of being carefully considered by the nation which has such a vital interest in it. The *Fiji* finds that precipitancy very wonderful, especially having regard to the fact that the question of rehabilitating silver now occupies the attention of the Western world, and forms the subject of keen discussion by the greatest financiers and economists of the era. This adoption of gold monometallism is of not less importance than engaging in a great foreign war. It differs altogether from budgets or other projects of law submitted to the Diet. Mistakes in estimates of revenue and expenditure may be corrected. A defective law may be rescinded. But a monetary standard once adopted can not be altered without encountering difficulties almost insuperable. If the experiment succeeds, it has a lasting effect upon the country's prosperity and reputation; if it fails, the outcome is something like ruin and disgrace. The question is essentially national. It belongs in no respect to the sphere of party politics. Yet the members of the *Shimpō* seem to be disposed to endorse the Coinage Law from point to point, merely because it emanates from the present Cabinet; and the Liberals seem to oppose it for the very same reason. The *Fiji* makes a powerful appeal to the patriotism of party leaders. It reminds them of the zeal and assiduity that they bring to bear upon questions so incomparably petty that they do not deserve to be mentioned in the same breath, with a change of the standard, and it conjures them not to let this immensely important Bill pass just as if it were an insignificant project of every-day law or ordinary regulations. In short, the *Fiji* now counsels delay, supporting its appeal by powerful arguments and vivid language.

The *Mainichi Shimbun* publishes a statement of views by Mr. Oishi Masami, an ardent advocate of gold monometallism. Mr. Oishi—doubtless familiar to our readers as the Japanese Representative who showed himself a practical exponent of the "strong foreign policy" in Korea—has three reasons for the faith that is in him. The first is that the civilized world has turned its eyes irrevocably to gold. All the great nations of the West are goldites. It is vain to talk of advocates of bimetalism: They may be very learned men with great facility for economic discussion. But their views are merely of academical interest. They are swimming against the tide of the time, and must go under eventually. The second reason is that Japan, having entered the arena of nations, must be prepared for the consequences, and one of those consequences is that she may be called upon hereafter—Mr. Oishi imparts

much vagueness to this "hereafter"—to engage in a life-or-death struggle with some big Power. Unless she has access to the stores of capital lying idle in the West, she can not hope to support the strain of that crisis, and so long as her currency is on a silver basis, she can not have such access. The third reason is that history is imperious: no nation can gainsay it. History shows that the course of currency reform is towards gold. From the age of cowries and pebbles to the age of iron; from the age of iron to the age of copper; from the age of copper to the age of nickel; from the age of nickel to the age of silver; from the age of silver to the age of gold. That is the order clearly indicated by history. Japan can not exempt herself from it without excluding herself, at the same time, from the march of civilization. Mr. Olshi says much more, but the gist of his arguments may be gathered from this epitome.

The *Chuo Shimbun* devotes itself chiefly to insisting upon the great disadvantages always incidental to changing a national system of currency. It alleges that Holland and Belgium suffered severely by making such a change, and that Germany would never have made it had she not been led away by the sudden acquisition of a huge store of gold, and had not her destinies been directed by a statesman without any profound economical knowledge, who imagined that one of the sources of England's prosperity was her employment of gold monometallism. Englishmen themselves recognise Germany's error, and recognise also the sufferings that have been inflicted on their own nation by the demonetization of silver. Yet their sound financial instincts deter them from making any change. Mr. Arthur Balfour, when not in office, is an advocate of bimetalism; but, as a Cabinet Minister, he is strictly conservative. The *Chuo* goes on to insist that it is a mistake to speak of the depreciation of silver; that the purchasing power of the white metal has not decreased; that what has happened is the appreciation of gold; that Japan has benefited immensely by her silver currency; that all foreigners engaged in trade with her, are opposed to her adoption of gold monometallism; that she will be killing her prosperity if she adopts the programme of the Matsukata Cabinet; and that the gold standard has nothing to recommend it except the monetary relief it may bring to the country's finances by tapping the stores of Occidental capital.

We need not follow the other journals in this discussion. The *Sekai no Nippon* and the *Meiji Shimbun* both oppose the measure vigorously. In short, the whole of the Opposition press is arrayed against the Government, and the pro-Cabinet newspapers are silent on the subject during the week under review, except the *Hochi Shimbun*, whose arguments have already been reproduced in our columns.

The Sanyo Railway is the subject of a leading article in the *Fiji Shimpo*. It appears that the principal shareholders of this road are very anxious to establish direct connection with Osaka. At present their terminus at one end is Kobe, and from thence the line runs to Hiroshima. But, of course, Osaka being the commercial centre of Japan, the Sanyo Railway's prospects would be immensely brightened were its road extended to that city. The directors are agitating in that sense, their contention being that the line now connecting Osaka and Kobe is quite insufficient for the immense traffic between the two places: that there is plenty of room for a second road, and that the public would benefit greatly by the addition. The *Fiji* regards that plea as unreal. It notes that the State line is about to be doubled, and that the speed of the trains as well as the number of services will be increased, so that the line can easily do twice the work it does at present. Such being the case, to say that there is need of a separate road is a mere pretext. The directors of the Sanyo Company would be better advised if they honestly stated that direct communication with Osaka

is essential in the interests of their line, as it undoubtedly is; and if they boldly asked the Government to sell to them the present Kobe-Osaka railway. It is true that the question of State ownership of railways or private ownership is not yet solved in Japan, and that the Government would probably hesitate to sell a line so important under such circumstances. But that need not prove a genuine obstacle. The deed of sale might contain a clause providing for the repurchase of the line by the State, should the policy of Government ownership be finally adopted. As to the fact that the earnings of the line constitute an important item of public revenue, the *Fiji* dismisses that consideration by observing that its force depends entirely on the terms of sale. Ten years have elapsed since the construction of the Sanyo Railway was commenced, yet it has been carried only as far as Hiroshima. Undoubtedly its continuation to Bakan (Shimonoseki) would greatly conduce to the interests of the nation. But the prospects of the extension are not sufficiently tempting, and there is no telling when the line will be completed. The *Fiji* recommends that the Government should sell the Osaka-Kobe line to the Company on the condition that the latter complete the Hiroshima-Bakan extension within a fixed and reasonable time.

The Government recently presented to the House of Representatives a Bill providing for the construction of a railway from Kanagawa to Hachioji. On the 3rd instant, the House accepted an amendment proposed by the Special Committee charged with the duty of examining and reporting upon this bill, the amendment being that the line should run from Tokyo to Hachioji. That action on the part of the House is interpreted by the *Yomiuri Shimbun*. The line from Kanagawa to Hachioji was planned simply for the purpose of connecting the Chuo Railway and the Tokaido Railway, and its construction would not have been permanently advisable except on the hypothesis that the State acquired the Koku Railway. The directors of the Koku Railway, however, expect that when their line is pushed from Hachioji to Nagoya, its value will be immensely enhanced, and with such a prospect in sight they will ask a very large figure if the Government proposes to buy their line. Foreseeing that conjuncture, the House changed the route to Tokyo-Hachioji. The change had a further object; namely, the concentration of the lines entering the capital at a point in the immediate vicinity of the new harbour which must be built sooner or later in Tokyo Bay. The *Yomiuri* has a good deal to say about the harbour; about the lines converging on it, and about the best means of establishing communication between the capital and the surrounding provinces; but the gist of it all is that the scheme of providing Tokyo with a harbour is again upon the tapis, and may perhaps become an established fact before long.

Several other subjects are discussed—as the procedure of the police; the state of political parties; the Japanese-Russian Convention, and so forth—but we must defer reference to them.

DEPARTURE OF THE BELGIAN MINISTER FROM TOKYO.

The Belgian Representative and Madame la Baronne d'Anethan had a splendid "send off" when they started from Tokyo on the afternoon of the 5th. The station was literally crowded. Owing to an important Cabinet Council the Ministers of State were unable to attend, but they sent representatives, and for the rest, everybody that is anybody assembled to bid farewell to the much liked Minister and his wife. Every Department of State was *en evidence*, as well, of course, as the whole Foreign Corps Diplomatique. It was a species of ovation. Madame la

Baronne was loaded with beautiful flowers, and the parting cheer as the train moved out of the station was of the lustiest and heartiest description.

ARMED DEMONSTRATION IN TOKYO.

On Wednesday morning, about 400 farmers from Tochigi and Gumma Prefectures, armed with bamboo spears and other weapons, assembled in front of the Department of Agriculture and Commerce in Tokyo, and insisted upon having an interview with the Minister. The leaders in this unseemly disturbance stated that they had assembled for the purpose of informing the Minister of the true state of affairs in and around the Ashio Copper Mine, and the devastation the mine is causing to cultivable land in its vicinity, and along the banks of the Ashio river. The farmers did not attack the buildings of the Agricultural and Commercial Department, or do harm to any of the officials, but great excitement prevailed for some time and matters looked very dangerous owing to the size of the mob. Policemen from every quarter of the capital were called to the spot by telephone, and eventually they succeeded in dispersing the crowd. It is said that a large number of farmers are on their way to the capital from the agricultural districts of Gumma Prefecture, and when they arrive there will be fully 1,000 in Tokyo. It is feared that the excited agriculturists will make further attempts at demonstration, as they feel their grievances acutely.

JAPANESE TEA IN SIBERIA.

Mr. Katoku Kenzo, who was sent some time ago to Siberia by the Tea Industry Corporation for the purpose of inspecting business prospects there, lately returned to Japan. He says that in Siberia Japanese tea is less popular than Chinese, and gives several reasons for this state of affairs. In the first place, cheap, bad tea is exported to Siberia from Nagasaki, Kobe, etc. Secondly, most of the teas exported by Japanese merchants are inferior to the Chinese. It is useless to expect to supersede Chinese teas by a cheap and nasty article. Much of the tea in demand by military officers, civilians, and merchants is sold from 70 copecks to one rouble per pound, Russian. So Russians do not mind paying a good price for a good article. In the third place, the Japanese custom is to sell new teas within one year of manufacture, consequently they have a bitter taste, and easily spoil. Mr. Katoku recommends radical reforms in the tea trade if Japanese merchants desire to supersede Chinese tea in Siberia.

REWARDS TO SCHOOL TEACHERS.

Primary school-teachers who have been in the employ of their respective schools for five years, are entitled, under the provisions of Imperial Ordinance, No. 2, to additional allowances of fifteen per cent. of their present salaries. In Tokyo 550 teachers out of the 3,000 engaged in the capital, are already entitled to these grants, and within the next two years, the number will be doubled. Owing to the meagre stipends that primary school-teachers receive, it has resulted that good men have not offered themselves for the positions, while others have simply held them for a short time, using a teacher's position as a mere stepping-stone to some more remunerative post. Naturally, changes in a school's staff have been very frequent, much to the detriment of scholars and education generally. It is thought that the new system will lead to a better state of things: and that teachers will devote their lives to the calling, or at least remain at the different schools for longer periods. Even now the rates of pay are most inadequate, and before long Japanese educationists will have to face the position seriously if the standard of primary education is to be maintained.

CURRENT FINANCIAL TOPICS.

The Treasury recently took advantage of the discretionary power vested in it by law to make purchases of its own securities. During the month of December last, it bought in five-per-cent. Pension Bonds to the total amount of six hundred thousand *yen*, the price paid being 99 *yen*, and the face value 100 *yen*. In the course of the same month, it acquired a hundred thousand *yen* worth of five-per-cent. War Bonds, at 98.50 *yen*. In January, another purchase of five-per-cent. Pension Bonds was made, to the extent of a hundred thousand *yen*, the price paid being 99 *yen*. During February, yet another operation in the same kind of Pension Bonds is reported, namely, a purchase of 52,800 *yen* worth at 99 *yen*; and, finally, in March, five-per-cent. Naval Loan Bonds were bought, to the amount of 1,914,000 *yen*, at 99.90 *yen*. To show that these purchases were well advised, and also to furnish some indication of the effect produced upon the stock market by the prospect of gold monometallism's being adopted, we give figures bearing on the prices of various securities:—

	Market Price Feb. 5th.	Market Price March 5th.
Five-per-cent. Consols (100 <i>yen</i>).....	99.20	100.10
Five-per-cent. War Bonds (100 <i>yen</i>).....	99.20	100.10
Five-per-cent. Naval Bonds (—).....	98.50	100.00
Five-per-cent. Railway Bonds (—).....	98.00	99.50
Five-per-cent. Pension Bonds (—).....	98.00	99.00

Count Matsukata's speech in the House of Representatives, on the occasion of introducing the new Coinage Bill, lasted eighty minutes. It was by far the longest address ever delivered by a Minister of State in the Diet. Count Okuma's two speeches during the present session stand next in point of length. Hitherto, Cabinet Ministers have studied brevity before everything. Probably that is one of the reasons why the House of Representatives always feels dissatisfied with the statesmen in power: it imagines that they treat it with almost contemptuous curtness. The statesmen, on their side, are only now beginning to recognise that the audience actually listening to them within the four walls of the Diet is a mere fraction of the audience to which they really speak. From the rostrum of the House they address not only the whole Japanese nation, but also whatever outside nations take any interest in Japanese affairs. It would be advantageous if they utilized these occasions more earnestly. Count Matsukata's speech is a historical document. It is an *exposé* of the motives that have induced the Cabinet over which he presides to take a step of the gravest moment. His Excellency evidently appreciated the situation. He carefully avoided every effort to be ornate or rhetorical, and confined himself to a succinct and lucidly marshalled statement of facts. That method is thoroughly congenial to him.

The brevity affected by Ministers of State in the Diet is most to be regretted, perhaps, in connection with the Budget. It is not too much to say that the Japanese people are conspicuously ignorant of the state of their national finances. The method of compiling the Budget is not happy. To arrive at any intelligent perception of its contents one must take pencil and paper, and perform long and laborious calculations. Even when that is done, there remains the difficulty that the settled accounts of the previous year are not forthcoming, and cannot be studied

until some two years have elapsed. It does not appear to have occurred to Ministers of Finance that the public would be grateful for a clear explanation of the main features of the Budget, and that the system of accounts adopted in Japan offers a unique opportunity for parliamentary statements such as British financiers are wont to make. There is reason to doubt whether even the members of the Diet themselves thoroughly understand what they are doing when they vote the Estimates. The Committee system has a tendency to educate a perfunctory mood. A Bill having been entrusted to a Special Committee, the House relies almost implicitly on the latter's investigations, and generally accepts its report as conclusive. One result of this is that the discussions are, for the most part, shallow and jejune; another, that the proceedings of the Diet, as printed in the *Official Gazette*, convey to the nation a very meagre perception of the real nature and significance of the measure enacted.

It is worth notice that while the shares of companies have risen largely since the adoption of gold monometallism came upon the *tapis*, Government securities have not shown such a strong upward tendency. In the case of shares, an appreciation of 10 or 15 per cent. is recorded in some instances, whereas Consols, War Bonds and so forth, though they too have risen, do not appear to be keenly sought after, and can easily be purchased at their face value, or a little over. The explanation of that is probably to be sought in the fact that great uncertainty exists about the Government's national-debt policy. It is anticipated that when the currency is placed on a gold basis, the Treasury will take advantage of any marked application of its securities to effect conversion from five per cent. to four, or even three and a half. With such a programme in sight, people naturally refrain from investing in securities that may be thrown back upon their hands any moment at face value. The shares of companies, banks, and so forth, are different matters. They pay handsome interest, and if they were gold investments, foreign capitalists, it is supposed, would snap at them eagerly. We doubt it. Foreign capitalists will not be disposed to put their money into enterprises over which they themselves exercise no kind of supervision. Two things are pretty certain. The first is that if the Government wants to place its securities abroad, it must make some public statement as to the details of redemption. Buying Japanese Consols, War Bonds, or Railway Bonds at present is too obscure a business. The rate of interest that these securities pay will tempt investors rather than speculators, and investors want to know something definite about the prospect of redemption or conversion. The second point is that, if a Japanese company desires to see its shares purchased by foreigners, it will have to translate its accounts into English or French, and admit foreigners to its board of directors or auditors. No other method of winning foreign confidence suggests itself, and until confidence is won, capital will be shy.

Possibly some of our readers may not have clearly appreciated the change made in the dates of paying interest on certain securities under the provisions of a law that recently passed the Diet, and was promulgated over the Imperial Sign Man-

ual on the 24th of February. The securities affected are these:—

Railway Bonds, issued by authority of Law No. 4, in the year 1892.
Public Undertakings Bonds, issued by authority of Law No. 59, in the year 1896.
Hokkaido Railway Bonds, issued by authority of Law No. 93, in the year 1896.

Hitherto the interest on these Bonds, in common with that on all Government securities, was paid in January and June. Henceforth, it will be paid in March and September.

An interesting table is given by the *Hochi Shimbun* showing the amount of currency, *per capita*, circulating in Japan during the 7 years ended in 1896. These are the figures.

Year.	Standard Coins and notes per head.	Subsidiary Coins per head.	Total Currency per head.
1890.....	3.540	0.864	4.404
1891.....	3.789	0.822	4.615
1892.....	3.972	0.833	4.805
1893.....	4.301	0.845	5.146
1894.....	4.738	0.869	5.607
1895.....	5.452	0.911	6.363
1896.....	5.842	0.950	6.792

The following is a clear statement of the metallic reserve, on the strength of which the adoption of gold monometallism is contemplated:—

	Yen.
Gold coins and bullion now in the vaults of the Bank of Japan ...	36,700,000
To be received from the Government by the end of May (<i>i.e.</i> from the Indemnity)	99,500,000
Total gold reserve	136,340,000

Silver coins and bullion now in the vaults of the Bank of Japan ... 22,090,000

Grand Total..... 158,430,000

The convertible notes now in circulation aggregate 181,980,000 *yen*. Hence they exceed the above reserve of the precious metals by only 23,550,000 *yen*. It is evident that, under such circumstances, a considerable addition of convertible notes may be made, should the occasion arise.

Count Matsukata stated in his speech delivered on the 2nd instant in the House of Representatives, that, up to January of the present year, Japanese 1-*yen* coins had been exported to the extent of 112 million *yen*. This calculation seems to be based on the facts, first, that the total coinage of silver *yen* at the Osaka Mint has been a little over 160 million *yen*; secondly, that the quantity of these coins estimated to be now circulating in Japan, is 30,520,000 *yen*—how such an accurate estimate is formed, we do not perceive—and thirdly, that the 1-*yen* coins lying in the vaults of the Bank of Japan amount to 19,233,866 *yen*. Reports from Japanese Consuls state that about 8 million *yen* worth of these coins are circulating in Singapore; some seventy thousand *yen* at Tientsin; two or three thousand *yen* at Chefoo, and none at any other place. Hence it is conjectured that the greater part of the coins exported have gone to the melting pot. Some may be circulating in the interior of China, but they are probably "chopped" by this time. All this must be more or less conjectural, but probably it is sufficiently close to the truth. If so, the danger of 1-*yen* coins being presented in large quantities for exchange against gold, after the adoption of the gold standard, need not be considered serious. The question of

1-yen notes being presented for exchange against gold notes is another matter, however. The issues of paper of this denomination aggregate 76 million yen, and no regulation hitherto published stands in the way of the Treasury's being called on to exchange them for gold coin. On the contrary, two Bills, now before the House of Representatives, provide that convertible notes and Government bank notes shall be exchangeable for gold coin from the 1st of October next, and if, before that date, or at any time subsequent to it, the silver price of gold falls below the figure at which it is assessed by the Japanese Government for the purposes of the new coinage, we see no reason why all the country's paper issues should not be piled into the Treasury in exchange for gold coin.

In connexion with the question of public securities, we may take the opportunity of referring to a point that recently afforded us some amusement and surprise. A statement made in these columns, to the effect that the first railway bonds issued by the Japanese Government were purchasable by foreigners, elicited a flat contradiction from the *Japan Gazette*. So confident was our contemporary of having discovered us in error, that it published two or three challenges inciting us to establish our statement or confess our blunder. Considering that reference to the Nakasendo Railway Bond Regulations, issued on December 28th, 1883, was alone necessary to prove the correctness of our assertion, we took no further notice of the matter. Having now had occasion, however, to turn up the Kinsatsu Loan Bonds Regulations, issued on the same day as the Nakasendo Loan Bond Regulations, we shall quote the 3rd Article of the latter, for the *Japan Gazette's* information:—

Art. III.—These Public Loan Bonds shall not bear the names of the owners, and shall be of three denominations, namely 100 yen, 500 yen, and 1,000 yen.

It is unnecessary, we presume, to say that bonds which do not bear the names of their holders may be held by any one—Dick, Otto, Leonardo, Jacques, Jonathan, or Pedro. They are on exactly the same footing in that respect as bank-notes or consols. The editor of the *Japan Gazette* was not in this country in 1884. Had he been, he might, perhaps, have read a leading article published by the *Japan Mail* on January 5th of that year, which said "there is to be no restriction with regard to the nationality of the purchasers of the Bonds." That there was no restriction we can attest, for in the happy days, just eleven years ago, when Nakasendo Bonds could be purchased for 80 yen, we had the pleasure of buying some. Any foreigner can buy them to-day, if he pleases—not for 80 yen, however!—and since the day of their issue, transactions in them have been as innocent of distinction of nationality as transactions in ordinary bank-notes.

With reference to the change of standard projected by the Matsukata Cabinet, we have sometimes wondered whether the statesmen now in power have read, and, if they have read, whether they have been influenced by, Professor Jevon's words, written more than a quarter of a century ago:—"The gold standard has thus made great progress, and it will probably continue to progress. When the United States

return to specie payments, they will certainly adopt gold; and Canada, whose currency can hardly be classed at all at present, must do the same. The Latin nations, having once abandoned the double standard in practice, are not likely to return to it; and Austria must follow. An extensive monetary change is hardly to be expected in Russia. * * * * Hence we arrive, it seems to me, at a broad, deep distinction. The highly civilized or advancing nations of Western Europe and North America, including, also, the rising States of Australia, and some of the better second-rate States, such as Egypt, Brazil and Japan, will have the gold standard. The silver standard, on the other hand, will probably long be maintained throughout the Russian Empire, and most parts of the vast continent of Asia; also in some parts of Africa and possibly in Mexico." If Professor Jevons were alive to-day, he might be gratified at the testimony that events are bearing to his prescience, but would he be as certain now as he was then of the soundness of his judgment?

Since we are in the way of quoting, we desire to recommend to the notice of the Japanese Cabinet what Professor Walker wrote, in 1878, about the demonetization of silver by the United States in 1873:—"The measure certainly was not preceded by that thorough discussion, or accomplished with that general consent of the popular intelligence and will, which are desirable when changes in fundamental policy are to be made in a free country."

Count Matsukata's speech in connexion with the new Coinage Bill, shows that he expects the introduction of the gold standard to act as a steadier of the prices of commodities. We wonder whether His Excellency has studied Sauerbeck's latest figures, showing the fluctuations in the prices of forty-five staples during the fourteen-year period 1878 to 1896. The average of the eleven years ended in 1877 being taken as 100, Mr. Sauerbeck finds that the index numbers for the fourteen years following were:—

1878	111	1888	70	1893	68
1879	83	1889	72	1894	63
1880	83	1890	72	1895	62
1886	69	1891	72	1896	61
1887	68	1892	68		

These are figures deduced from the statistics of gold-using countries. Do they indicate any encouraging degree of stability?

We have been asked various questions by correspondents about the method of arriving at the ratio between gold and silver in the proposed new coinage system of Japan; about the ratio itself, and, generally, about the arithmetic of the scheme. It may be as well, therefore, to set down the figures *ab initio*. The five-yen gold piece in the old system weighed 2.2221 *momme*, of which 10 per cent. was alloy (copper). Hence the actual weight of pure gold in the coin was 2 *momme*, and the actual weight of pure gold in the 1-yen gold unit was 0.4 *momme*, or 4 *fun*. As we are dealing now with ratios, which are independent of the metrical system employed, it is unnecessary to convert these Japanese weights into their English or French equivalents. Now the old 1-yen silver piece—i.e. the 1-yen silver coin now actually in circulation—weighs 7.18848 *momme*, and being of the same fineness (900) as the gold 5-yen piece, the actual weight of pure silver contained in it is 6.46992 *momme*. If we

divide this latter figure by the weight of pure gold—i.e. 0.4 *momme*—contained in the gold 1-yen unit, the quotient is 16.1748, and we find that the ratio of gold to silver in the old coinage is 1 to 16.1748. Now the new gold 1-yen unit is to be one half of the intrinsic value of the old gold 1-yen. Therefore, the weight of pure gold in the new gold coin is 0.2 *momme*, or 2 *fun*, as stated in the Coinage Law now before the House of Representatives. This new unit is to be equal to one silver yen, containing the same quantity of pure silver as before. Hence, to obtain the ratio between the precious metals in the new system, we have to divide 6.46992 *momme* (the weight of pure silver in the 1-yen piece) by 0.2 *momme* (the weight of pure gold in the new 1-yen unit). The quotient is 32.3496. Hence the ratio in the new system is 1 to 32.3496. In other words, silver in the new system has exactly one-half of the gold-price that it had—nominally—in the old system.

All this is simple enough, but there remains one perplexing point about the new system. The Coinage Law now before the House of Representatives, provides that the new silver coins—which are all subsidiary, namely, the 50-sen piece, the 20-sen piece, and the 10-sen piece—shall be of 800 fineness. That being the case, and the ratio between the precious metals in the new system being 1 to 32.3496, it follows that four-fifths of the weight of the 50-sen silver piece is 3.213496 *momme*; and therefore the full weight of the piece should be 4.0437 *momme*. But in the Coinage Bill the weight of this coin is put at 3.5942 *momme*, or exactly one-half of the weight (7.18848 *momme*) of the old 1-yen piece, of which the fineness is 900. It would appear, therefore, that the 50-sen piece in the new system does not conform with the provisions of the Law: its fineness is not 800 but 900. The weights of the 20-sen and 10-sen pieces are correctly given as precisely equal to the weights of the corresponding pieces in the old system, because the fineness of the latter is 800. The weight of the 50-sen piece alone is to us inexplicable. Either the drafters of the new law have made a mistake in their arithmetic; or else the fifth article, which provides that the silver coins shall contain 800 parts of pure silver to 200 parts of copper, is not intended to apply to the 50-sen silver piece.

Apropos this subject, we may note that the alloy entering into the composition of a coin is never taken into account when computing the intrinsic value of the coin. In exchange calculations the pure metals alone determine the values. Seyd notes that the value of the copper used to alloy standard gold is less than $\frac{1}{11000}$; and that of the copper used to alloy standard silver, less than $\frac{1}{11}$. Commenting on this, Walker says:—"Not even if the largest amount of standard gold or silver were to be estimated for, would the copper be reckoned; that is, with 750 shillings we should not add one shilling for the value of the copper contained; with 11,000 sovereigns, we should not add one sovereign on a similar account."

With regard to the Bill—supplementary to the new Coinage Law—which provides that the working profits of the Mint shall be set aside as a capital fund for the redemption of 1-yen silver coins and other coins unsuited for circulation, it may interest our readers to know that the profits of the Mint from 1875, when it was fairly

in working order, until 1896, a period of 22 years, aggregated 11,693,337 *yen*, or something over half a million of *yen* annually. The greatest profit was in the fiscal year 1885-6, when, in consequence of the resumption of specie payments, large quantities of silver were coined. The figure for that year was 1,459,102 *yen*. If gold monometallism be adopted, the Mint will doubtless be very busy for a time.

THE DIET, THE BUDGET, AND THE COINAGE BILL.

It is not at all probable that the Budget will meet with any serious opposition in its passage through the House of Peers. There is undoubtedly an inclination on the part of some of the members to effect a radical change, certain supporters of that view being either genuinely convinced that the country has been launched upon a course of excessive expenditure, or merely desirous of embarrassing the present Cabinet; while others desire to assert the Upper House's independence in financial matters, and to demonstrate that the lead given by the Representatives, need not always be slavishly followed by the Peers. If it were possible for these malcontents to find some reinforcement of their views in a particular item of expenditure, they might develop a formidable opposition. But their practical consensus does not extend beyond a general conviction that 30 million *yen* ought to be retrenched, somehow or other. When they come to discuss the details of the reduction, agreement is said to be as difficult to them as though they had no common basis whatever. Further, even supposing that the advocates of retrenchment carry their views by a majority vote in the Budget Committee, it does not at all follow that the House will endorse their report. A minority report also will be presented, and as the Government's supporters constitute a plurality in the House, there can not be much doubt about the result. Only 12 working days remain in the session, and the Upper House would, under any circumstances, hesitate, at this late stage, to challenge the Representatives to a conflict which would inevitably end in the Budget's not coming into existence at all. We believe, therefore, that the Budget will emerge completely unchanged from the hands of the Upper House.

The Special Committee of the House of Representatives devoted only 5 days to the examination and discussion of the new Coinage Law. They received it on the evening of the 3rd instant, and they returned it to the President of the House on the 9th, during which interval there were 5 working days—including the 9th. The mere fact that a measure of such overwhelming importance received such brief consideration makes us hope that the Bill will encounter, in its progress through the Houses, some obstacle sufficiently formidable to prevent its becoming law this session, and in order that the nation may have leisure for at least one look before it leaps. Various amendments were proposed in Committee; namely, that the weight of the gold unit should be changed; that 1-*yen* and 25-*sen* silver pieces should form part of the currency; that the ratio should be fixed at 1 to 25; and that the circulation of the present 1-*yen* coins should cease from the day

of the new Law's going into operation, a year being allowed thereafter for their exchange, at the expiration of which time, any still remaining out should be treated as bullion. These alterations were all negatived. Finally, a member moved that the Bill be rejected altogether, and the Committee divided on that proposition, when 9 were found in favour of it and 15 against. Yesterday, the Committee's Report was presented to the House, and the Debate commenced. At the outset an urgency motion was introduced in the sense that the Second Reading should be deferred until next session, the Bill being meanwhile entrusted to a Continuing Committee for mature examination. The motion was defeated, from which fact it may be inferred that the Bill will pass the Lower House. Yesterday, the debate evoked some powerful speeches, and the House rose without coming to any decision. It seems to us that if ever an occasion existed, or is likely to exist, eminently calling for the services of a Continuing Committee, the present is such an occasion. The House can not possibly debate a subject of the kind with any semblance of exhaustiveness in eight or ten hours; and besides, an interval ought certainly to be allowed for the commercial and manufacturing communities to formulate their views. It is permissible to hope, however, that the conservatism of the House of Peers will save the situation. The Bill can not reach the Upper House before Friday, at soonest. There will then remain eleven working days in the session, and if the House of Peers consents to deal with a problem so momentous in that brief interval, we shall be surprised. Indeed, we have from the first found it difficult to believe that this Law would pass the Diet during the present session.

ADDRESS TO THE THRONE IN THE HOUSE OF PEERS.

The malcontents in the House of Peers have shot their bolt and missed the mark. They made the effort under the leadership of Viscount Tani, who, like the unbiassed Irishman, is "agin all governments." Viscount Tani is President of the Budget Committee in the Upper House. The plan originally entertained by him and his fellow-thinkers was to induce a majority of the Committee to report in favour of reducing by 30 million *yen* the proposed expenditures for military and naval expansion. But that programme would not work. The general principle of reduction found advocates, but the particular directions in which reduction should be effected, could not be agreed upon. It was therefore resolved to introduce an Address to the Throne, which is, of course, the most significant form of procedure open to the House. Yesterday (11th instant), Viscount Tani and 47 other members introduced the Address:—

Your Imperial Majesty's servants of the House of Peers respectfully submit:

In the Message addressed by Your Majesty to the Imperial Diet at the commencement of last session, Your Majesty said that the preservation of peace and tranquillity; the development of the nation's resources; the gradual perfecting of the country's defences; the repair of the injuries suffered by war, and the organization of the essentials for the protection of the realm, were the objects to be achieved.

With all reverence we venture to think that although, for the purpose of maintaining peace and tranquillity, the national defences can not for a moment be neglected, yet the due

administration of State affairs demands equal attention; especially the administration of finance, which lies at the root of a country's prosperity, and affects even the solidity of the national defences themselves and of the military preparations.

The various States of the West, lying in close propinquity to each other, find themselves confronted by conditions that dictate the necessity of arming. Nevertheless, the expenditures incurred by them on that account, do not exceed one-third of their total public outlays, and are never allowed to interfere with the progress of civil affairs.

The completion of the defences of our country has long been a subject of consideration. The remains of the indemnity obtained in the war, the proceeds of new taxes, the funds obtained by a national loan are all to be devoted, it would seem, to the increase of armaments; only the comparatively small residue being applied to the spread of education, the development of material resources, the opening of facilities of communication, and administrative purposes in general.

It cannot be said that these so-called *post-bellum* undertakings are not occasionally at variance with the Imperial intention as to preservation of peace and tranquillity and development of the nation's resources. To bring the country's defences gradually to a state of perfection; to repair the injuries suffered by war; to organize the essentials for the protection of the realm—these things are not at present difficult to achieve. What calls for close attention is that the due proportion between civil and military matters should not be lost. The national debt is already considerable when compared with the resources of the nation. A large addition is now to be made to it in order to meet the needs of the Treasury. Is it not to be feared that the strength of the country may be exhausted before the national defences are completed? The responsibility for such a result would not rest with the Cabinet Ministers alone. We, Your Majesty's Servants, would have to bear our share of it.

Most humbly do we pray that Your Majesty warn the Ministers of State to change this over-hasty increase of the national armaments; to devise means for promoting the people's industries; to place the country's finances on a sound basis, and to restore contentment to the public mind. And Your Majesty's Servants will ever pray, &c.

This Address the House refused to adopt by 82 votes to 69. What seems to us remarkable is, not that it was rejected, but that it found 69 supporters. To stand as chief sponsor for such a proposal in the present temper of the nation, requires great moral courage, and that 69 members of the House of Peers should vote for it, indicates the growth of a wholesome spirit of moderation.

THE SOLDIERS AND THE CARRIAGE OF THE RUSSIAN CHARGE D'AFFAIRES.

We learn that the regrettable incident, on the 28th ultimo, when some drunken soldiers attacked a carriage containing Mademoiselle de Speyer and her nurse, has been satisfactorily terminated. Colonel Kumagaye, the officer commanding the Twentieth Regiment of Artillery, to which the riotous men belong, has formally apologized to Mr. de Speyer, and has informed him that it has been decided to try the men by Court-martial, and that they will be severely punished. His Majesty the Emperor has also expressed very strong condemnation of the action of these soldiers, and desired that an exemplary penalty should be inflicted. The Empress, too, has taken a most graceful and gracious action. On the morning of the 4th, Her Majesty despatched Viscountess Takakura, a principal Lady in Waiting, and three Maids of Honour, to the Russian Legation, to convey a message of sympathy and regret to Monsieur and Madame de Speyer, and to present to little Mademoiselle de Speyer, a number of very beautiful toys. The truculent artillerymen and the regiment to which they belong will view this affair with greatly

increased chagrin when they learn that it has caused distress and solicitude to the Emperor and Empress.

While sincerely sympathising with Mr. de Speyer, and complimenting him upon the tact and moderation displayed by him in connexion with this disgraceful incident, we are disposed to hope that it may inure to the benefit of others. Several complaints have reached us lately about the proceedings of soldiers and students in Tokyo. It is even stated that foreign ladies can not go about the streets of the capital safely on Saturday afternoon or Sunday, and that the patience of foreign gentlemen is sometimes dangerously tried. This incident of the Russian carriage may, perhaps, serve to convey a useful lesson. If it could be made known to the garrison generally that rude behaviour towards a foreigner not only disgraces their cloth, but also causes pain to the Emperor himself, the evil would soon be corrected. Nor ought there to be any difficulty on the part of the educational authorities in dealing with the same question among the rising generation. We ourselves recently saw a student kick a foreign lady, and we have incontrovertible evidence that another lad spat in a lady's face. Such miserably unmanly and savage acts can not be denounced in too strong terms. The first impulse of every lad, supposing him gifted with the most ordinary feelings of courtesy and chivalry, should be to defend and assist a lady. It is true that the attitude of the stronger sex towards the weak has always been governed in Japan by canons quite inconsistent with Western ideas, and it is also true that Japanese men and youths regard the average foreign lady as shockingly deficient in the qualities of modest self-effacement and gentle deference that are held to be essential traits of femininity in Japan. But in setting up his own type to the exclusion of all others, a Japanese merely displays ignorance and narrow-mindedness. He forgets that his own women constantly violate rules of modesty deemed essential in the Occident, and he would be bitterly indignant if foreigners, deducing from such conduct the inferences that it must suggest in Europe or America, were to shape their attitude accordingly. If the Japanese student understood Occidental women, he would quickly appreciate them as splendid types of humanity, not faultless indeed, not able to free themselves from the slavery of fashions as frivolous as they are extravagant, or to eschew the pursuit of their own fortunes along routes that often diverge considerably from the standards of conservative morality, but yet approaching as nearly as it is possible to approach to the ideal help-meet, the perfect complement of a man's life, the mother and parent of grand children. If the Japanese student is too callow, too prejudiced, to understand these things, he can at least perceive the chivalrous courtesy that his own women always receive at the hands of educated foreigners, and he can see the justice of returning like for like. Speaking as people genuinely solicitous for Japan's fair fame, we strongly urge the educational authorities to take up this matter, and to contrive that school-boys shall learn how little value attaches to suavity of manners as compared with courtesy of conduct, and how miserably unpatriotic is the youth that fixes a stigma upon his nation for the sake of asserting his own capacity for rudeness.

THE ROKUMEIKAN.

It is alleged that the Nobles find no use for the Rokumeikan. They purchased it a few years ago from the Household Department and it has remained a white elephant upon their hands. During the period immediately succeeding the purchase, they employed it to good purpose, the spacious suite of chambers—including the ball room—on the upper floor being constantly devoted to entertainments of various kinds. But the earthquake in June, 1893, which threw down the porch, killing two horses and a driver, seems to have shaken the building so much that, without extensive repairs, it could not be safely used to accommodate large numbers of people. The Nobles accordingly constructed, within the same enclosure, a pretty building in pure Japanese style, which seems to suffice them for all the purposes of a club, and rumour says that they are now talking of selling the Rokumeikan, but whether the idea is to dispose of the building with a view to its removal, or whether the purchaser would be permitted to use it as business premises, we have no intelligence. If the former, the price realized would be a mere bagatelle; if the latter, then the land on which the building stands and in its immediate vicinity would have to be sold at the same time. The Nobles appear to have no use for the land. They do not even take the trouble to keep it swept and garnished. It does seem a pity that such a fine building, situated so conveniently, should be suffered to play the rôle of the deserted house. These evidences of shifting purpose are becoming too common in Tokyo. Most prominent of all is the fine assemblage of buildings formerly occupied by the Engineering College. For years have they have stood, virtually unemployed. The name "Imperial Museum" has been given to them, but with the realities of a museum they have never been made acquainted, neither is there any prospect that they ever will be. Such remnants of the era of confusion and uncertainty through which Japan passed in her assimilation of foreign systems are, perhaps, inevitable. But they are eye-sores, all the same.

In connexion with this matter, we venture to advise the members of the Tokyo Lawn Tennis Club to seriously consider the feasibility of purchasing the turf of the Rokumeikan ground and transferring it to some site more secure from official interruptions. If the Rokumeikan is to be sold, the space hitherto used as a tennis lawn will certainly be appropriated for building purposes. Under any circumstances, the turf is evidently not required by the Nobles Club. The Nobles might object to have the lawn stripped, but we do not see why they should. It is not visible from the rooms of their new premises, and, under any circumstances, it would not be more unsightly than the deserted and partially diapidated building of which it now forms an appropriate adjunct. If the turf be acquired, and moved with proper precautions, the Lawn Tennis Club can have a new ground ready for play by the end of June. If turf for the purpose be procured from a nursery garden, the ground can not possibly be fit for play before October.

THE NEW COINAGE.

The following Bills have been submitted to the House of Representatives, supplementing the Coinage Bill, of which we have already published a translation:—

BILL FOR AMENDING THE CONVERTIBLE NOTES REGULATIONS OF THE 17TH YEAR OF "MEIJI" (1884).

Art. I.—The words "silver coin" contained in the 1st Article shall be changed to "gold coin."

Art. II.—The following note shall be added to the first clause of the second article:—

Provided that the silver coin and silver bullion shall not exceed one-fourth of the whole Redemption Reserve.

Art. III.—The words "gold and silver coin" in the 7th Article shall be changed to "gold coin."

This Law shall go into force from the 1st day of the 10th month of the 30th year of Meiji (October 1st, 1897).

NOTE.—The amended article reads thus:—

Art. I.—Convertible bank-notes shall be issued by the Nippon Ginko, in accordance with Art. XIV. of the Charter of that Bank. These Bank notes shall be exchangeable for gold coins.

Art. II.—The Bank of Japan shall form a suitable reserve of silver coin to be applied to the redemption of its convertible silver bank-notes. Provided that silver coins and bullion shall not constitute more than one-fourth of the total exchange reserve.

Art. VII.—When gold coin is presented for exchange for bank-notes, the exchange shall be made without charge.

BILL FOR AMENDING NOTIFICATION NO. 14 OF THE 18TH YEAR OF MEIJI (1885).

The words "silver coin" shall be replaced by "gold coin" in Notification No. 14 of the 18th year of Meiji (1885).

NOTE.—The Notification, as amended, runs thus:—

"It is hereby notified that the paper currency issued by the Government will be gradually exchanged for gold coins, on and after October 1897, and that the paper currency thus exchanged shall be destroyed."

BILL EMBODYING A SPECIAL FINANCE LAW RELATING TO CAPITAL FOR REGULATING THE COINAGE.

Art. I.—For the purpose of redeeming *1-yen* silver coins, and other coins unsuited for circulation, a Coinage Adjustment Capital Fund shall be formed, and the incomes and outgoings of this Fund shall be entered in a special account distinct from the general financial accounts.

Art. II.—From the 30th year of Meiji onwards, the working profits shown in the Special Account of the Osaka Mint shall be applied to the purposes of the above Fund.

Art. III.—Sales of bullion resulting from *1-yen* silver coins and other coins unsuited for circulation, after their withdrawal and exchange, may be effected by unrestricted agreement (*i.e.* independently of the Law of Finance).

Art. IV.—Should any surplus appear in the above Fund after the final balancing of the Special Account of the Fund each fiscal year, such surplus shall be added to the Capital.

Art. V.—The Government shall prepare, and submit to the Diet, every year a Budget showing the incomes and outgoings in the Special Account of the Coinage Adjustment Capital Fund.

Art. VI.—Regulations relating to the income and expenditure of the Coinage Adjustment Capital Fund shall be fixed by Imperial Ordinance.

BILL FOR ABOLISHING NOTIFICATION NO. 35 OF THE 12TH YEAR OF MEIJI (1879).

Notification No. 35 of the 18th year of Meiji is hereby rescinded.

NOTE.—The Notification in question provides for the circulation of silver *yen* and trade dollars at equal values. The coin referred to as the "trade dollar" weighs 7.176 *monme* and contains 90 per cent. of pure silver to 10 per cent. of copper. It has hitherto been received in payment of Customs duties and in settlement of all accounts payable by foreigners to public offices.

The Uraga Dock Company recently presented a petition to the Kanagawa Kencho for permission to deposit dredgings outside the harbour limits at Uraga. The fishermen of the locality fear that this will cause them great losses, and have sent representatives to Kanagawa Kencho, to ask that the petition be not granted.—*Asahi Shimbun*.

NOTES ON NEWS.

The last official act of the Belgian Minister before leaving Tokyo was to present to Count Okuma, Minister of State for Foreign Affairs, the Grand Cordon of the Order of Leopold, conferred by His Majesty the King of the Belgians, in consideration of the conclusion of the Revised Treaty between Japan and Belgium. The Vice-Minister of Foreign Affairs, Mr. Komura, was, at the same, nominated a Grand Officer of the Order; Mr. Nakada, a Commander; Mr. Mitsuhashi, an Officer; and Mr. Ichiki, a Chevalier.

"Under new Treaties, which take effect in 1898," writes Consul-General McIvor, "it will be possible for foreigners to acquire an interest in properties outside the concessions, but it is not known what taxes will be levied or what licences charged." Surely the Consul-General might have been a little less circumspect in his statement. Any one desirous of obtaining information about taxes in Japan, can have no difficulty in doing so. The whole story has been published with the greatest minuteness and accuracy.

If there is any future for the tea industry in Japan—a question answered in the negative by many pessimists—we imagine that the best hope lies in the introduction of systems such as those employed in India; namely, amalgamation of small plantations, and application of uniform and scientific processes on a large scale. The tea industry is one of the fields where great improvements would be quickly effected were foreign capitalists and experts able to exercise a free hand. Everything in Japan is on a petty, divided scale. Genuine and general progress is scarcely possible under the circumstances.

Truly the methods of mourning in Japan are beyond the comprehension of the average foreigner. The prohibition against music is still observed so punctiliously in the Imperial Household that, although more than two months have elapsed since the death of the Empress Dowager, the Imperial Band is still forbidden to play. Not even practice is permitted. How long will this last? If the veto be removed at the end of the second fifty-days' period of mourning, the Band will not have suffered very much; but if the men have to lay aside their instruments for a whole year, they will need a further interval of some weeks before they can "appear in public." There are limits to everything—except Japanese mourning.

Some persons seem to be still puzzled about the value of the new Japanese gold *yen*. Yet the calculation is easy enough. The *yen* contains 2 *fun* of pure gold; consequently the 10-*yen* piece contains 20 *fun*, or 2 *momme*. Now, according to the most accurate tables, the *momme* is equal to 57.8713 grains Troy. Thus the weight of pure gold in the new 10-*yen* piece will be 115.7426 grains, and since the weight of pure gold in the sovereign is 113.0012 grains, the 10-*yen* piece is 2.7414 grains heavier—in respect of pure gold—than the sovereign. Pure gold is worth £4.4s. 11½ per ounce of 480 grains, and it follows that the 10-*yen* piece will be 5½ pence—omitting fractions of a farthing—better than the sovereign. The one-*yen* piece will consequently have the value of 2 shillings and $\frac{2}{10}$ of a penny; or two shillings and a half-penny, approximately.

THE INSURRECTION IN MANILA.

We observe that the sensational correspondent is again at work. He informs the *Hongkong Telegraph* that "the advance upon Cavite has evidently been repulsed with heavy loss to the invaders, as for three days and nights after the advance of the Spanish Army, boats were constantly arriving at Manila with wounded soldiers." That was certainly a strange inference to draw from the facts stated. No one imagined, we presume, that the campaign against Cavite would be conducted without loss to the Spaniards. If they sent their wounded back to Manila, that was an inevitable incident, conveying no suggestion whatever of defeat. At the very time when this correspondent was penning his sinister statements, telegrams coming direct from the Commandant in Manila to the Spanish Legation in Tokyo were appearing in the columns of this journal. They showed that the Spanish advance had been entirely successful, and that the first part of the plan of campaign against Cavite had been carried out without a hitch, the Spanish troops proving themselves brave and enduring, and the strategy of the Captain-General being evidently well conceived and thorough. From a telegram which we publish elsewhere, it will be seen that the second part has now commenced, and that Salikan has been taken after a sharp struggle, the Spanish loss in killed and wounded being 10 and 30, respectively. We gather, from the comparatively deliberate nature of the proceedings, that the Captain-General has determined to incur no risks avoidable by careful preparation.

CHINESE NEWS.

There is talk of the construction of a short local railway at Hangchow. It will connect the foreign settlement at Kungchen bridge with the market town at the mouth of the Chien-t'ang river.

The Taotai of Shanghai has taken a liberal step. At the instance of Sir Nicholas Hannen he has issued a notification prohibiting Chinese publishers and booksellers from reprinting the publications of the Society for the Diffusion of Christian and General Knowledge. Speaking in the abstract, it is a pity that the Society on whose account the prohibition was issued does not bear some other name.

"A telegram from Peking of the 26th of February," says the *North-China Daily News*, "mentions that the Russian railway through Manchuria will be shortly begun, and that surveys have already been made and approved for a continuation of a branch line into Korea *via* Possiet Bay, many influential Koreans living in Russian territory having sent the requisite petitions to the Governor-General of Siberia. The Russian 5-foot gauge is to be maintained in Manchuria, though the Chinese is the same as the English standard gauge, 4-feet 8½ inches."

We take the following from the *N.-C. Daily News*:—

The following figures in round numbers comprise the gross revenue of China for the year 1896, or, more strictly speaking, for the 22nd year of the reign of Kuang Hsi (14th February, 1896, to 1st February, 1897, inclusive), as presented in the annual report of the Board of Revenue to his Majesty, the Emperor, towards the close of the last Chinese year. The totals are given under various Heads of Revenue, and these annual re-

ports are now regularly required by the Board of Revenue in accordance with the scheme of reform and retrenchment inaugurated not long ago by H.I.M. the Empress Dowager:—

Total revenue derived from the Imperial Maritime Customs	Tls. 15,500,000
Total revenue derived from the land and grain taxes	10,800,000
Total revenue derived from the Salt Gabelle	12,200,000
Total revenue derived from ordinary taxes on home produce	2,600,000
Total revenue derived from likin ..	13,400,000
Total revenue derived from licences on tea, pawnshops, and salt monopolists	3,500,000
Total revenue derived from duty on miscellaneous articles of consumption and use	15,300,000

Deduct cost of transport, leakage, and waste

Total gross revenue as reported ... 72,750,000

From Hsichuang, a town 30 miles south of Ichou-fu, comes news that a native Christian has had his eyes jabbed out by some roughs, whose weapon was a chopstick with a bunch of needles tied on the end of it; and that Mr. Faberg, of the German Catholic Mission, was attacked by a band of the same ruffians, and narrowly escaped severe treatment.

"Svastika" contributes to the *N.-C. Daily News* the following:—

O Reuter, friend Reuter, it cannot be true!
What's this about Crete that your telegram tells,

The squadrons of Europe, according to you,
Bombard the insurgents with melinite shells?

Confess, dear deceiver, it's one of your sells.
Britannia a sheep! why it's not in the breed.

She one of a flock? Meekly follow the bells?
You've blundered, my boy. We don't follow, we lead.

The Concert of Europe? Oh fiddle! pool-pool!
To go with the ruck? To be guided by yells?

To learn from another the right thing to do?
Be cowed by a bogey and fanciful spells?

Is Britain a land that mere menace compels,
To dance to a foreigner's piping? Indeed,

I doubt if in Britons the faculty dwells.
You've blundered, my boy. We don't follow, we lead.

My Lord, when your plan was to force a way
way through,

Spite Turk and spite Sultan, fort-girt Dardanelles;

To show the ensanguined Assassin who's who;
To put fear of God in the proud infidels;

Your instinct was true, the spirit that swells
In Englishmen born would have backed you at need.

But now you have strayed from the path by
some sells.

You've blundered, my boy. We don't follow; we lead.

The Briton, if fickle in many things else,
Obsequious "ratting" ne'er took for his creed;
No arrogance daunts him, no bugaboo quells,
You've blundered, my boy. We don't follow, we lead.

NOTES FROM SHANGHAI AND THE NORTH.

The Chairman of the Shanghai Branch of the China Association, Mr. R. M. Campbell, in a speech recently made on the occasion of his retirement from the Committee, recalled the facts of the Whasang massacre, and noted that not a single Chinese official had been punished on account of that terrible affair, and that every British official who was stationed in or near Foochow at the time has been transferred to another post. No inference is to be drawn from the removal of the British officials, but Mr. Campbell thinks that the average Chinaman will draw an

inference. Is the average Chinaman quite so clever as all that?

A sad accident is reported from Foochow. Mr. Werner Krohn, of Messrs. Siemessen and Krohn, who is described as "one of the most genial and popular residents of Foochow," stumbled on the deck of his houseboat, on a dark night when the river was in flood, and falling into the water, was swept away. The body had not been recovered at the date of latest advices, though the river had been dragged for a week.

An attempt on the part of a French citizen to exploit the petroleum wells of Szechuan has ended badly. The enterprising Frenchman could not, of course, proceed in his own name. He therefore assumed the character of an expert in the employ of two expectant officials. The latter, alleging that they had organized a Chinese syndicate, with several hundred thousand taels of capital, obtained leave from the Viceroy at Nanking to prosecute their enterprise. But when they visited the region of the well, the local officials caused them to be arrested, on the pretext that they had no money whatever of their own, and were working with the capital of the foreigner alone. It appears that orders had been issued through Chang, the Customs Taotai of Chungking, to the effect that natives must not combine their capital or work with foreigners for any enterprise whatever in the interior of China. One of the arrested men committed suicide, probably foreseeing torture, and the other is now confined in Cheng-tu. The Viceroy Lu has recommended that he be cashiered, by way of preliminary. Meantime, the foreigner has proceeded to Pekin to complain. He claims 75,000 Tls. for breach of contract. The French Consul, Mr. Haas, has gone to Cheng-tu to settle matters. China is a wonderful country. Under what provision of the treaties can a Chinaman be forbidden to combine with a foreigner for the purposes of industrial enterprise in the interior?

The Mukden correspondent of the *N.-C. Daily News* reports that men's minds are much disturbed by rumours. Yesterday, Russia was said to have planted flags along the railway route eastward to Kirin, and to have warned the holders of the land that they must either give it up on fair terms, or hold it on onerous conditions; to-day, Japan and Russia are declared to be at war, with varying fortunes.

FINANCIAL POLICY OF MR. MCKINLEY'S ADMINISTRATION.

That the President-elect fully recognises the gravity of the financial situation in America is indicated not only by the caution he has exercised in selecting his Secretary of the Treasury, but also by his appointment of a leading authority in economic science to what is commonly considered the principal office in the Cabinet. While Mr. Sherman's ability to conduct the foreign transactions of the Government is conceded on all sides, it is significant that his studies have been chiefly directed to monetary questions, and that his most important public services have been connected with the national finances. His experience will be of the highest value to the new Administration, and his co-operation in the proposed measures of reform will be accepted with

especial confidence by prudent conservatives who have as yet no acquaintance with the Chicago banker's methods, and little knowledge of his qualifications for the tasks assigned him. The actual control of the Treasury will, however, be in Secretary Gage's hands, and in view of the difficult problems awaiting him, and the magnitude of the interests dependent upon their satisfactory solution, efforts have already been made to elicit his opinion with regard to the country's immediate necessities, and to the remedial treatment which he proposes to apply. To the inquiries of a number of prominent journalists Mr. Gage has responded with perhaps more directness and frankness than would ordinarily be expected from a man in his responsible position. His declarations may be taken as a forecast of certain lines of policy which he will endeavour to pursue during his term of office, and should command attention not only in the United States, but in all nations the fiscal conditions of which are unsettled, and the governments of which are contemplating a departure from their established system.

These are the statements which Mr. Gage has offered for publication:—

Our whole monetary system is the resultant of makeshift legislation and unscientific compromises. It is time that reform began.

In my own opinion the greenbacks should be permanently retired. The silver purchased under the Sherman act should be gradually sold and the Treasury notes redeemed and cancelled. Some well guarded system of bank-note circulation, broader and more elastic than the present national bank act provides, should be inaugurated.

Such bank notes should be redeemable at a central place and be redeemable in gold only.

Silver certificates, which form nearly one-fifth of the circulating medium of the United States, are dangerous. By their use a volume of inferior money has found an abnormal use. They are the most perplexing feature in the much-involved problem of our national finance.

There is no reason why the Government should act as warehouseman for either gold or silver. Such a function is outside its proper limit of action.

But we are faced by a condition. The enormous amount of \$500,000,000 of silver represented by \$338,000,000 in silver certificates, added to the \$150,000,000 purchased by the Government under the Sherman act, constitutes a standing menace to every business interest.

To sum up, the defects of our present currency system are:—

1. Confusing heterogeneity which needs simplification.
2. The greenback controverts the principle of paper money, viz: that every note injected into the commercial system should represent an existing commercial value.
3. The Treasury note is a standing evidence of a foolish operation—the creation of a debt for the purchase on a falling market of a commodity for which the purchaser has no use; it lies open to the just charge of being both idiotic and immoral.
4. The national bank note nearly conforms to the true principle of paper money, but the unreasonable requirements for security paralyze its efficiency and operate to destroy its elasticity.
5. The silver certificate encourages the use of silver to a larger extent than is consistent with the safe preservation of that metal on a parity with gold.

Would a national commission help to promote reform?

There is reason to hope that it would be of great service in that direction. Such a commission if rightly elected would throw a flood of light upon these involved questions. The information it might gather would be of immense value to all our people and would guide us to wise legislation.

Emotion and sentiment are not safe guides in matters of science. A clear apprehension of true principles will lead to correct action.

Reaction will be slow, but it is coming, and it will be of long duration.

Through our heterogeneous system the public mind has seemingly lost the power to discriminate between real things and the shadows or signs of things. It is necessary that disguises be pulled aside and that real facts appear.

There is in truth only one real money—metallic coin. It may be composed of gold or silver; it

might be of something else, but it is not. Greenbacks, Treasury notes, and national bank notes, are but promises to pay. In the nature of things they can be nothing more. They pass as money, perform the functions of money often more conveniently than money itself.

Because of this, confusion comes, and we are led astray. Seeing that the greenback is uttered by the Government, that it has by the legal-tender quality imparted to it the power to pay debts, and that it circulates with all the power of money, discrimination ceases, we call it money; and the idea that government can create money by its sanction or fiat becomes rooted in the mind.

The distinctions just pointed out are, however, fundamental distinctions. They should be taught in the schools. They are simple and easy to be understood even by a child.

While the silver dollar is real money, its power to exchange for other things is more than doubled by an artificial value imparted to it through the law which gives it power equal to the dollar in gold to pay customs dues.

Having an equal in this direction, and the quantity being limited, it has equal value in all directions; but the difference between the metallic value of the silver dollar and this arbitrary value lies in the realm of credit.

COUNT MATSUKATA'S SPEECH.

Count Matsukata, speaking in the House of Representatives on the 2nd instant, said:—

Before stating the reasons for introducing alterations in the Coinage Regulations, I wish to say one word on my own behalf. I have heard from my place in this House the question put by Mr. Komuro, but I shall not reply until the Question reaches me in due form. Nevertheless, I say now that I regard his statements as unfit to have been uttered in this honourable House.

I now turn to the alterations that I ask to have made in the Coinage Regulations. It is hardly necessary to say that the nature of the coinage system bears a close relation to the interests of the country and to the welfare of the people, in so far as its economic aspects are concerned. Therefore, in discussing my proposed alteration of the system, the fullest attention as well as the most minute investigations are unquestionably required. I desire to bespeak your attention to the statement I am now about to lay before you with regard to the system of coinage in our country.

Omitting all records that go back to ancient times, it may be asserted that the establishment of a general system of coinage in Japan dates from the *Keicho* era (1596-1614), when a mint was opened by the Tokugawa Government, and gold and silver coins were struck for general circulation, the media of exchange thus assuming a fixed and definite form. The system then inaugurated was bimetallic, with subsidiary coins of silver and copper. Later on, the re-coining of gold and silver became frequent, and the quality of the metal deteriorated, so that the coinage was debased. Moreover, the relative values of gold and silver underwent fluctuations owing to various causes. Ultimately, in the *Ansei* era (1854-9), when the first Treaty with a Foreign Power was signed, the ratio between the precious metals had become so anomalous, as compared with the ratio existing in foreign countries, that a given weight of gold could be purchased for eight times the corresponding weight in silver, whereas fifteen or sixteen times the weight had to be given in Western countries. Commerce with the outer world having been suddenly commenced under such conditions, a large exodus of gold was the inevitable result, and although the Tokugawa Government took steps to change the coinage and to raise the value of gold in terms of silver, with the object of preventing the efflux of the yellow metal to foreign countries, yet, as the measures were adopted after undue procrastination and partook of the character of mere expedients to tide over the emergency of the moment, no appreciable effect was produced. In the beginning of the *Meiji* era, the Government revised the system of coinage, and upon the basis of conclusions found by investigating all the best

systems prevailing among other nations, and examining the precedents furnished by Japan herself, new coins were minted of perfectly uniform character and purity, and the gold standard having been adopted, the disorganised state of the currency was effectually corrected, and the export of gold and silver ceased. Still, the overwhelming amount of business that had to be transacted at the time of the new Government's inauguration; the confusion accompanying the belligerent measures that had to be taken, and the empty state of the Treasury, resulted in an over-issue of inconvertible paper, which virtually led once more to the export of the precious metals. It was in January of the 1st year of *Meiji* (1867), that the Government determined to have recourse to a fiat currency, the financial embarrassment being then very serious. The notes thus issued were known as *Daijokwan satsu*, and they were to remain in circulation for a period of thirteen years, being inconvertible in the interim. Subsequently, *Mimbusho satsu* (Home Department notes) and other currency of various denominations were issued to a considerable amount. But despite the growing volume of paper currency put into circulation by the Government, the notes did not depreciate, their amount not being in excess of the business requirements of the time. They circulated for some years at par with hard money. Still, being inconvertible notes, they could not fail to gradually affect the country's foreign trade, stimulating the exodus of genuine coins. Besides, the revision of the National Bank Regulations in the 9th year of *Meiji* (1876) confirmed the inconvertibility of the paper currency by deferring the period of redemption, and the volume then circulating reached thirty or forty millions of *yen*. Owing to these facts depreciation gradually set in, and was accompanied by the results always observable in such cases,—export of the precious metals, excess of imports in the foreign trade, rise in the prices of commodities and in the rate of interest, and finally, decline in the quotations for public loan bonds. Moreover, habits of luxurious living become prevalent; a spirit of speculation sprang up, and, in short, the economics of the country fell into a disorganised and dangerous condition. The Government now began to feel serious anxiety about the state of affairs. It elaborated a resolute programme of financial adjustment, and adopted earnest measures to put it into practice. In the 14th year of *Meiji* (1881), steps were taken to organise the Specie Bank, in order to afford facilities for the circulation of money in the channels of foreign trade; and in the 15th year (1882), further efforts were made to promote the circulation of money at home by the establishment of the Nippon Ginko, while a revision of the National Bank Regulations, and the promulgation of Regulations for the issue of Bank Notes redeemable with silver, were further steps all forming part of the general scheme for placing the fiat currency on a hard-money basis. Moreover, all reserves of paper currency were collected into the Treasury; bonds were issued for the purpose of withdrawing notes; the reserves were increased by curtailing administrative expenditures; any surplus of annual revenue was devoted to the redemption of paper, and specie was collected so as to increase the fund available for resuming hard-money payments. Fortunately the discretion exercised and the schemes elaborated by the Government were rewarded with conspicuous success. The redemption of specie payments was effected in the 19th year of *Meiji* (1886); the paper currency, which had suffered a depreciation of 70 per cent. as compared with silver, was restored to its original value, and circulated at par with silver and all the incidents connected with fiat paper were finally terminated. With regard to coins, however, it is to be observed that the amount then circulating in the interior was exceedingly small; and since the scope of the employment of the one-*yen* trade dollar had been extended by Notification No. 12 in May of the 11th year of *Meiji* (1878), the gold-standard system had been disturbed, and the country had

become bimetallic in appearance. Silver, however, being used as the medium of exchange in all transactions, silver monometallism really prevailed, gold bearing a mere name, and gold coins taking no part in the currency. On the other hand, from the 6th year of *Meiji* (1873), the gold-price of silver had gradually fallen, and it thenceforth continued to fall, until the value of the white metal in terms of gold is only one half of what it used to be. Nor is depreciation the only remarkable phenomenon that silver presents; the fluctuations in its value have also been unlimited.

This great divergence in the relative values of gold and silver seems to have had its origin chiefly in the varying production of the two metals. Of late the silver produced in the world has reached an enormous amount. The production of the year before last was 170,000,000 ounces, and that of last year 200,000,000 ounces; a figure three times as great as that recorded twenty years ago. Side by side with this large increase of the world's stock of silver, the production of gold amounted to only 9,000,000 ounces the year before last, and 10,000,000 ounces last year, a quantity not more than double of that produced twenty years ago. These figures I take from statistics compiled by the Superintendent of the Coinage Bureau of the United States. This extraordinary difference in the production of gold and silver must have produced a corresponding divergence in the relative value of the two metals. Twenty years ago gold and silver were connected by the ratio of one to fifteen, but now that ratio has changed to about one to thirty. It is consequently plain that the relative value of the metals is not determined by the amount of their production only, but that it is influenced by other artificial factors. Yet, viewed from the standpoint of production alone, the divergence is exceedingly remarkable.

The change in the ratio connecting the two metals having been so great, countries that adopted bimetalism or the silver standard found themselves seriously embarrassed, and in view of the danger connected with the continued use of the white metal, nation after nation resorted to gold monometallism, or, suspending the free coinage of silver though nominally permitting bimetalism, became, in fact, a gold-standard country. Among the changes made in their systems of coinage by various nations, that adopted by Germany claims attention as among the most important. Although the political union of the various states of Germany had been effected, no steps were taken to place the coinage on a uniform basis, and we learn from the programme originally elaborated for reforming the currency, that seven different systems of coinage existed in the German Empire at the time, most of them having the silver thaler as the standard. Different calculations had to be made in every locality, and indescribable inconvenience was experienced in fiscal and commercial affairs. The problem of establishing a uniform system was then taken up, and, in 1871, namely, the 4th year of *Meiji*, a notification was issued providing for the coinage of gold. Fortunately at that time the war with France had resulted in the acquisition of the enormous sum of 1,395,000,000 thalers by Germany. Gold monometallism became an accomplished fact in July of the 6th year of *Meiji*, 1873, 340,000,000 thalers of the indemnity being appropriated for minting gold coins, and steps being also taken to obtain gold by the gradual sale of silver. Subsequently, however, owing to the depreciation of silver, these sales were suspended for a time, about the 11th year of *Meiji* (1879). This amendment of her coinage system by Germany was attended by the most remarkable fluctuations ever experienced in the relative values of gold and silver, and established a precedent for other countries to discard silver and adopt gold. Simultaneously with the introduction of gold monometallism in Germany, a similar step was taken by Norway and Sweden. Moreover, France set limits to the receipt of silver by her mints. In the following year (1880) France, Italy, Switzerland, Belgium, and other countries formed a union, mutually pledging

themselves to restrict the amount of silver coined during three years, subsidiary coins being, of course, excepted. In the 8th year of *Meiji* (1875) Holland made gold her sole legal tender, suspending the coinage of silver, and, among the States of the Latin Union, Switzerland abolished the coinage of silver. In the following year, a similar course was adopted by Belgium and France. Other countries, also, as Spain and Russia, stopped the free coinage of silver, and the United States of North America fixed a low limit to the legal-tender capacity of the white metal. Thus the revision of her coinage system in Germany may be said to have had the effect of producing a panic in the various countries of Europe and America, which thenceforth essayed to hinder the exodus of gold and the ingress of silver. The white metal having been thus discarded on all sides, its gold-price depreciated largely, in spite of earnest efforts made by silver-possessing as well as silver-producing countries to bolster it up. As regards the United States of America, steps were taken to restore the capacity of legal tender to silver by the Bland Bill of the 11th year of *Meiji* (1878), but in the 13th year (1885) the coinage of silver was again suspended. Under the provisions of the Sherman Bill in the 23rd year of *Meiji* (1890), the amount of silver purchased monthly by the Treasury was increased; the principle of bimetalism found favour and other schemes of various kinds were resorted to. But none of them having proved successful, the normal condition of gold appreciation and silver depreciation was subjected to no further interference. In the 25th year of *Meiji* (1892), Austro-Hungary, with a fine display of resolution, issued Gold Loan Bonds to the amount of 183,456,000 thalers, and having struck new gold coins with the metal thus obtained, adopted gold monometallism.

In the 26th year of *Meiji* (1893), India, famous for the production of silver, also stopped the free coinage of that metal, and appraising the rupee at a fixed sterling value, declared that the coin should be legal at the rate of one shilling and four pence. Russia also suspended the coinage of silver, directing her efforts to the purchasing of that metal in both domestic and foreign markets, while the United States, on their side, totally abolished the regulations for the official purchase of silver. More recently, among the countries of South America, Chili became a gold-using State in the 28th year of *Meiji* (1894), and Costa Rica adopted the gold standard last year. In the United States of North America where silver bears a specially important relation to the interest of the people, the theory of gold monometallism having gained public support, the general condition of the world seems to indicate a tendency to use gold in preference to silver.

Independently of the fact that the various countries of Europe and America have adopted the gold standard, so many measures are adopted to obtain gold that the demand for it has greatly increased, and, further, the taste of various nations having turned in a marked measure to the yellow metal, a considerable quantity is now used in art manufactures. It is also hoarded by some persons who regard it as permanently secure against depreciation. All these circumstances have swelled the demand for gold. With regard to silver, however, the reverse is the case. Not only has the demand for it for coinage purposes decreased steadily, but also its employment in art manufactures, and the tendency to hoard it, have not increased in proportion to the growth of the supply. Various uncivilized countries which were expected to prove absorbents of silver, and to increase the demand for that metal, have not justified these expectations. The supply of gold is hardly sufficient to meet the demand, while, on the other hand, the supply of silver is always in excess of the demand. Such being the case, the appreciation of gold and the depreciation of silver are inevitable consequences. In view of the extraordinary fluctuations in the value of silver, which are destined to inflict much injury on a silver-using country like Japan, the Government, by Imperial

Ordinance issued in October, of the 26th year of *Meiji* (1893) appointed a Commission to investigate the various systems of coinage. The principal points submitted for investigation by the Commission were:—

1. The cause of the recent fluctuation in the relative values of gold and silver, and the general results of that fluctuation.

2. The effects produced in the economy of Japan by the fluctuations in the relative values of silver and gold.

3. Whether the recent fluctuations in the relative values of gold and silver indicate a necessity to introduce alterations in the system of coinage now in operation in Japan; and if they do indicate such necessity, what system should be adopted, and what measures should be taken to adopt it. The Commission began its work in October of the same year, and after twenty-two months' of zealous assiduity, completed its investigations in July of the 28th year of *Meiji* (1895). According to the Report of the Commission it appeared that, after various discussions, the detailed account of which may be omitted here, being accessible in the Report itself, a decision was arrived at in favour of adopting the gold standard system, six of the members voting in that sense against two who alone approved bimetalism. In short, the almost unanimous views of the Commission were in favour of altering the present system and adopting the gold standard. But to introduce gold monometallism the difficulty in making sufficient provision of gold for the purpose presented large dimensions at the time; and, moreover, the prices of commodities having risen considerably, the country enjoyed temporary prosperity. Hence the decision of the Commission could not be carried into effect. The affair of the 27th and 28th years (1894-5) and its sequel, the Shimonoseki Treaty, resulted in the acquirement of an indemnity of two hundred million taels from China, with an additional thirty millions by way of compensation for the retrocession of the Liaotung Peninsula.

As these sums were to be procured by China's raising gold loans in the markets of Europe, it was stipulated, as a matter of mutual convenience, that Japan should receive the money in English gold coin. The gold coin thus received up to the end of last year amounted to over 22,400,000 pounds, and by appropriating this the Nippon Ginko's gold reserve is expected shortly to reach the sum of 109,000,000 *yen*. Of that total, over 36,700,000 *yen* is actually lodged in the Bank's vaults, and a sum of over 72,600,000 *yen*, which is shown in the accounts as having been borrowed by the Government from the Bank, has to be paid back in gold by the Government. Further, there is a prospect of obtaining reserves of silver to the amount of more than 49,000,000 *yen*, and this, added to the gold, will form an aggregate reserve of 158,000,000 *yen*, which is more than half of the total paper currency of 200,000,000 *yen*. Under these circumstances, it may be assumed that the provision of the precious metals necessary for introducing gold monometallism, on account of which no little anxiety was entertained, is now complete.

Now, turning to the prices of commodities in our country, we find that, after the conclusion of the affair of the 27th and 28th years (1894-5), prices rose considerably, so that serious disadvantages were inflicted upon our commerce. Statistics show that the prices of commodities last year were thirty per cent. higher on the average than in the 21st year of *Meiji* (1888), and twenty-six per cent. higher than they were immediately prior to the war. It may be useful to refer briefly here to the causes of this rise. Some are inclined to attribute the phenomenon entirely to the expansion of the currency. The volume of the currency, it is true, has expanded a little, but if the amounts sent to China, Korea, and Formosa be deducted, and due account be taken of the development of enterprise in various localities and the growth of foreign trade, there is no reason to suppose that any excess of currency is responsible for the rise of prices. What,

then, are the principal causes of the appreciation of commodities? I venture to assert that though increased demand may be one of the causes, the depreciation of silver is chiefly, if not entirely, responsible for the phenomenon. Even granting that the causes are manifold, and that they cannot be determined at once, the plain fact remains that commodities have risen extravagantly in price, and that results not a little disadvantageous have been experienced by commerce. Such a state of affairs may be considered in some degree, a natural outcome of the war, but it is certainly very remarkable that imports last year showed the extraordinary excess of 53,000,000 *yen* over exports. In consideration of the fact that a gold reserve is provided, or of the fact that commodities have abnormally appreciated, from any point of view, in truth, I am justified in inferring that a unique opportunity now presents itself for the adoption of gold monometallism. I am persuaded that you have fully understood my remarks, so I will now venture to speak of the programme to be pursued in effecting the proposed change.

In the proposed reform of the coinage system there are two principal points calling for consideration. The first is that the new gold coins are to be exactly one-half of the weight of the present coins, that is to say are to contain one half of the weight of pure gold. That is the monometallic basis prescribed in the new Coinage Regulations.

The second point is that the silver coins of the old system are to be abolished and gold coins substituted for them. The discretion that must be exercised in introducing changes into the coinage system has, for its prime object, the prevention of fluctuations in the price of commodities and the avoidance of any change in the relations of debtors and creditors, or of any increase in the burden of taxation, or any obstacles to the smooth conduct of business. The utmost attention has been paid to these points, and arrangements are to be made for the circulation of new gold coins which shall be an exact multiple of the present one-*yen* silver pieces. It is, of course, very important to consider how the intrinsic value of the gold coins should be determined. Careful consideration of the subject shows that an average of the relative values of gold and silver during several years answers the purpose. But, as I have already stated, there is great difficulty in finding the average value of silver, so liable is it to extreme fluctuations. Whatever average be assumed, it is sure to be at variance with the practical experience of the time. There is no alternative but to depend upon the latest market quotations. The fact of our country's adopting gold monometallism is sure to tend to the greater or less appreciation of gold. Thus it becomes necessary to appraise gold at a higher rate than it actually commands, so as to anticipate future fluctuations. The average ratio between gold and silver in the London market during January of this year was a little less than 1 to 32. That ratio may be raised a little, and the figures may be taken at something over 1 to 32. Then the old 1-*yen* gold piece will become double the value of the new coin, and great convenience will be attained since the old and new coins may circulate side by side. The reason why the ratio has been determined by reference to the market prices in London, instead of taking the market prices in our own country is because gold has a smaller value in Japan than abroad on account of having been withdrawn from circulation for a long time. It may be urged that this appreciation of the silver-price of gold, trifling as the increase is, will tend to enhance the prices of commodities to the extent by which the gold-price of silver is depreciated. But I do not anticipate that the consequences will be so serious as to produce any practical effect upon business. Taking these circumstances into consideration, if revision of the coinage system proceed on the above lines, I believe that no fluctuation or disorder will occur in the market for commodities, in the wages of labourers, in the relations between creditors and debtors, in the burden of

taxation, or in any other matters connected with the measure.

I have next to speak, about the method of dealing with the 1-*yen* silver coins, which have been circulating in Japan as legal tender to an unlimited amount since the 11th year of *Meiji*. In suspending the circulation of this silver a proper period must be allowed and though during that period it must suffered to circulate as before, yet it must be withdrawn from circulation at the earliest convenient date. In place of 1-*yen* silver coins, 50-*sen* pieces and those of lower denominations will be struck, and as the 1-*yen* silver notes will remain in circulation for some time, no inconvenience can possibly occur in business transactions. These notes also may be decreased in volume or dispensed with hereafter, when they cease to be of any further use for currency purposes.

I may here tell you that, simultaneously with the development of various enterprises, an increased issue of subsidiary coins will become necessary, and that the issue of such subsidiary coins in exchange for 1-*yen* silver pieces, so as keep plenty of media of exchange in circulation is virtually the means of consolidating the foundations of the new coinage system.

Although I have arranged to withdraw 1-*yen* silver coins, and to have convertible notes exchangeable against gold, yet, following the example set by the Bank Regulations of England and Holland, I have also made provision for keeping a reserve of silver, to a limited amount, as specified in the Regulations of the Nippon Bank, that it may be available in time of future need. All imperfections that I have detected in the present coinage Regulations have been eliminated.

I wish further to say a few words about the anxiety entertained by many persons on various points. The export of 1-*yen* silver coins from our country has really been considerable, the amount exported up to January of this year being 112,000,000 *yen*. It may be questioned whether silver will not be imported under the new system, and whether the exit of gold will not result. As you doubtless know, the silver that has gone out of the country has been taken chiefly to China where it is treated almost as bullion, and being greatly defaced, is rendered unfit for circulation as coin. Inquiries show that silver not thus disfigured is seldom found, except in Hongkong, Singapore, and other neighbouring countries, and as it is used in these places for all ordinary transactions, there need be little anxiety that it will be presented for exchange.

The latest information I have obtained corroborates all these facts, and nothing can be more certain than that there is little silver in circulation in those places, whereas, silver here being valued at a lower gold price proportionately than it commands elsewhere, there is no reason to expect that it will be presented for exchange.

Thus it follows that gold will not be exported, or drawn away, to any considerable extent.

With regard to the anxiety that although there is a sufficient reserve of gold now, yet a difficulty may arise in future in maintaining the present figure, I may be allowed to say that so long as our producing and exporting capacity is not promoted, the same cause for anxiety exists even with the silver standard in operation.

A retrospect of our past progressive history shows that the trade, as well as the productive industry of our country, can not fail to be developed to a state of marked prosperity.

With the exception of such an unusual year as the last, the average excess of imports from silver-using countries, since the 21st year of *Meiji*, was 10,500,000 *yen*, but the excess of exports to gold-using countries being over 11,000,000 *yen*, the balance shows a sum which we may look to receive in gold. If we may hope to progress in that degree then we need not entertain any fear. Moreover, as Japan is closely connected by her geographical position with gold-producing countries, such as Australia and California, and since gold is annually exported to us from China and Korea, there will be no difficulty in obtaining the yellow metal if we but take the trouble to do so. Anxiety is also felt by some as to our foreign commerce. It is true

that the trade of our country seems to have progressed, to a certain extent, in consequence of the depreciation of silver, until the rise of wages and the appreciation of commodities has become extremely remarkable. Of late years, Japan's foreign commerce has made considerable strides. But that cannot be attributed to the depreciation of silver alone. Facilities of transport and communication, combined with the progress of education, must have been the principal cause of the development. When the prices of commodities rise so extravagantly as they have now done, not only do we fail to reap any benefit from the depreciation of silver, but we are likely to be overwhelmed with injury from that cause.

The change of our standard to gold may not handicap us sensibly in competing with other gold countries for the trade of a silver-using nation like the Chinese, for we continue to enjoy the advantages of proximity to the Oriental markets and of cheapness of all sorts of labour.

It is feared by some that should the gold price of silver fall hereafter, considerable embarrassment will be felt in connexion with China's silk and tea, with which we have to compete in the markets of gold countries. Such embarrassment, if it be felt at all, will be only temporary, and will be amply compensated by the benefits resulting from gold monometallism, which guarantee us against fluctuations in the rate of exchange. Similar doubts were inspired at the time of altering the system of coinage in India, but the Committee appointed to investigate the matter reported confidently that the change had not worked in the manner feared.

Any alteration in the system of coinage has evoked various criticism in all countries, and is regarded as a step for which unanimous approval can never be expected. The opposition commonly encountered by reformers has generally no basis except people's inclination to maintain what they have already, and to cavil at any alteration. I have repeatedly shown that fluctuations so acute as those to which the gold-price of silver is subject are fatal to the healthy growth of our commerce.

The next strongest opposition comes from those that advocate the adoption of bimetalism. That tendency prevails among learned men in Europe and America, and also among persons engaged in Oriental trade. The problem is, in itself, very difficult to solve with a view to the practical enforcement of bimetalism. The principle of bimetalism amounts, in fact, to the simultaneous or optional use of gold and silver, and can not possibly be asserted in practice by the independent strength of a single country. Here I must say a word about the International Coinage Conference. It was convened several times with a view to the rehabilitation of silver and to re-introduce the system of bimetalism, but it laboured were quite unfruitful. The latest conference was held in the 25th year of Meiji (1892) at the suggestion of America, in the city of Brussels, and representatives from twenty countries were present. This assembly, however, was closed without coming to any decision. Later on, namely, in the year before last, a suggestion for holding an International Conference with regard to coinage emanated from various states of Europe and America, but no practical result has been attained up to the present day. England, which is financially the most influential among the Powers of Europe, having revised her system of Indian coinage in the year following the International Conference, there is little ground for anticipating the international adoption of bimetalism. Even supposing that the States on the West form a union for the purpose, and that bimetalism be introduced, the adoption of gold monometallism on our own part will present no obstacle. In short, the system of bimetalism can not be carried into effect without the safeguard of international agreement, and since there is great difficulty in effecting such agreement, it would be most unwise to defer such an important reform as that now engaging our attention merely on the chance of the bimetallic problem's having solved. From all

these circumstances it will be seen that no anxiety need be felt or opposition organized with respect to the present question.

I will now lay before you some of the advantages accruing from revision of the coinage system, as well as the necessity of revision. The chief economic advantage we may expect to gain is that we shall avoid fluctuations in the prices of the commodities. The adoption of the gold system, can not fail to lessen such fluctuations, so that the anomaly of constant ups and downs in the price of commodities may eventually be avoided. Great appreciation of price may produce a temporary state of prosperity in the market, but as materials and wages must be gradually influenced by the anomaly, the final issue must be not only injury to production but the decrease of exports. On the other hand, any sudden fall of the price of commodities is sure to inflict loss on the commercial community, and to impair the circulation of money. These abuses and injuries, however, are inseparable from the silver system, and cannot be avoided except by recourse to gold monometallism.

The second profit that we may hope to derive from the gold standard is an increase of exports. A gold system secures convenience of trade with foreign countries having a similar system, and prevents fluctuations in the price of commodities. Hence productive power is developed, and the export trade is promoted. Another advantage is that fluctuations in exchange are obviated. A silver country like Japan suffers so considerably from the depreciation of silver in gold countries, that its trade is almost crippled owing to constantly shifting rates of exchange. This evil can at once be removed by the adoption of the gold standard. Finally, comes the question of access to larger stores of capital. The progress we have made in Western civilization has imposed upon us the necessity of holding close communication with the markets of the world. But we are separated from Occidental nations at present in the matter of monetary circulation. That inconvenience will be removed by bringing our coinage system into uniformity with theirs, and considerable facilities will be gained for the circulation of money and with respect to financial affairs generally. Still the question of the monetary standard is of such great economic importance that it ought not to be decided on the basis of financial convenience alone.

In deciding to introduce gold monometallism, the history of our country since the Keicho era, as well as domestic and foreign conditions have been taken into account, with the view of consolidating the basis of our coinage and promoting the healthy development of the national economy. An established opinion exists among various nations with respect to this very question. Austria has solved the problem even by the issue of a foreign loan, and though there is more or less controversy about the desirability of bimetalism, that is an academical matter at present, whereas the question that we have to deal with is essentially practical. The gold that we now possess, if left to itself, will soon be absorbed by other nations, and it will be extremely difficult to recover it again. We have now a rare opportunity for laying in a stock of gold, and resolute steps in that sense seem desirable. Any delay must be attended with financial anxiety and not a little injury. I hope the question will be promptly investigated and approved, as it is of vital moment to the State.

At the fourth meeting of the Higher Council of Agriculture, Commerce, and Industry, held on the 6th inst., the special Committee's report on the proposed currency reform was adopted with some minor alterations. The subject of encouraging the direct export of silk and tea by Japanese merchants was then debated. It was thought that grants-in-aid should be given to merchants engaged in these businesses. The grants should take the form of bounties for improvements in cocoon-reeling, finishing, etc.; while in regard to tea Japanese exporters should have every aid extended them, especially as tea-growers in Ceylon, Assam, and India generally, are pushing their way energetically into the markets of America.

A GARLAND OF VERSE.

"IN THE FIRE-LIGHT."

When alone in your darkened chamber
You gaze in the embers' glow,
Can you discern in the firelight
Sweet scenes of long ago?
And oh! that Time would stay his feet
Beside those days of yore,
That waken memories sad and sweet,
And bring them back once more!
When the ruddy firelight flickers
On the wall—on an empty chair—
Do you ever long for a far-off hand
To linger upon your hair?
The distant sound of a sweet-toned bell,
Or a soft and plaintive strain,
Will seem like an echo from the past—
And bring it back again!
In the cheery, mellow firelight
Let us dream of the long gone-by,
It makes us glad, and it makes us sad—
And we know not the reason why!—
The future yet is darkly veiled,
And the present—cannot stay:
But the dear, dead days and their memories
Sweet,
We hold in our hearts for aye!

F.V.H.

"A JAPANESE LOVE SONG."

Spring.

The Maple leaves are bursting, Love,
The sweet green buds are young:
My soul for thine is thirsting, Love,
Ah! linger not, but come!
Come forth! and deck thy coal-black hair,
With pins of quaint design:
And round thee tie an "obi" fair:
And let, me call thee mine!
Yes! loved one, 'neath the Maple trees,
We'll sit and sip our tea,
For tender as the young Spring leaves
Is my young love for thee!

Autumn.

The Maple leaves are crimson, Love!
Vermillion—yellow—red.
I'll hasten forth and bring some, Love!
To deck thy glossy head:
Then linger not, but come my love,
And join me in my quest.
We'll wander through the Maple grove
And on their bright leaves rest.
I'll clasp thee to my beating heart,
I'll press thee close to me;
For crimson as the Maples art,
So burns my love for thee!

"FOUR SEASONS."

Two children played beneath the Maple-tree;—
A maid and youth: they laughed melodiously.
The leaves were painted by the tender Spring;
The maid was fair, the boy reigned as her King!
Two lovers sat beneath the Maple-tree:
His lips kissed her sweet eyes most wistfully:
'Twas Summer time; the tree was wondrous fair,
The sunbeams glinted through it on her hair.
Two sad souls strolled beneath the Maple-tree;
The years had lined their faces ruthlessly:
Athwart the leaves the Autumn winds blew chill,
As hand in hand, they wandered down Life's hill.
Two corpses laid beneath the Maple-tree:
Dark Death had kissed them both regretfully.
They sank asleep, rocked by the wintry air:
The branches of the Maple-tree were bare.

EM D'A.

The *Kanagawa Maru*, the new N.Y.K. steamer which arrived at Kobe on Sunday, brought five cases of gold bars from England consigned to the Shokin Ginko. Each case is worth about 60,000 yen. This gold is, of course, a part of the Indemnity.

THE COINAGE BILL IN THE DIET.

ON Thursday the House of Representatives passed the new Coinage Bill through its three Readings with speed savouring strongly of temerity. Mr. TAGUCHI UKICHI, editor of the *Keisai Zasshi* (Economist), who throughout the debate and in all the controversy that preceded it, showed sound financial instincts and a clear perception of the question, moved that the Bill be rejected, but the motion was defeated by 151 votes to 96. The House, having thus taken the bit in its teeth, if the metaphor be permitted, galloped away without further restraint: voted to carry the Bill to a Second Reading; voted to proceed with the Second Reading at once, a course seldom pursued where measures of any gravity are at stake; voted the Second Reading, practically without debate; voted to take the Third Reading at once; voted the Third Reading by acclaim; and then gleefully forwarded the Bill to the Peers, having compressed its total legislative labours into eight days and its debate into eight hours. This country has often displayed great crispness and airiness in dealing with big problems over which other nations cudgel slow brains through long intervals, but we doubt whether it will ever beat the record now achieved. A legislative assembly that finds eight days sufficient to consider, and eight hours sufficient to discuss, a change from silver monometallism to gold monometallism, when all the rest of the civilized world is seething with perplexity, and has for years been seething with perplexity over this very problem, may fairly claim to be endowed with electric genius. There is an alternative hypothesis, but we leave to other critics the pleasure of stating it, preferring, for our own part, to conclude that the members who voted for the Bill on the memorable 11th of March, and swept it through its three Readings on a torrent of enthusiasm, had devoted to the previous study of the question time and research of which the eight-day-eight-hour business was but an infinitesimally small fraction.

We had supposed that the object of this measure was to secure to the country the advantage so highly appraised by all mercantile communities; the advantage of selling in a rising market and buying in a falling. Not owing to any deliberate choice of her own but because of happy accident, Japan has hitherto enjoyed that advantage. It was said at first that she fully appreciated it, but that, anticipating the rehabilitation of silver and its consequent appreciation in terms of gold, she had resolved to turn to the metal which seemed likely to befriend her in the future as silver had done in the past. There is no indication of any such forecast in the speech delivered by the Minister of State for Finance before the House of Representatives. His Excellency had only two arguments to

advance in support of his proposal for the adoption of gold monometallism. One was that by recourse to a gold standard, fluctuations in the prices of commodities and in international exchange would be prevented; the other, that by joining the comity of gold monometallic states, Japan would gain access to their accumulations of cheap capital. As to the former point, statistics had disclosed to the Minister a general rise of prices in Japan, to the extent of from twenty to thirty per cent., since the war with China. His Excellency attributed the rise chiefly to the depreciation of silver, and expressed fears lest the phenomenon, if left unchecked, must ultimately exclude Japanese products from foreign markets. What is this depreciation of silver to which Count MATSUKATA alluded? When the battle of Phung-do was fought, the sterling value of the silver *yen* was 2s. $\frac{7}{8}$ d. When the Minister introduced his gold monometallic programme to the House of Representatives, the sterling value of the silver *yen* was 2s. 1 $\frac{1}{4}$ d. In two years and eight months the difference in the sterling value of the *yen* had been $\frac{5}{8}$ of a penny, or less than 2 $\frac{1}{2}$ per cent. And it had been a difference of appreciation. Its effect upon commodities should have been to pull down their prices. Yet in that paltry factor of depreciation, Count MATSUKATA found a factor responsible for an appreciation of from 20 to 30 per cent. In the spring of 1895, Japan emerged from a brilliantly successful war. Great sums of money had been distributed among the people; tens upon tens of thousand of the lower orders found themselves suddenly placed in the possession of amounts which, in their eyes, constituted opulence; simultaneously, an immense spur was given to enterprise of all kinds; vast demands were made upon the labour market, already depleted by direct and indirect military necessities; speculation rose to fever heat. That prices, under such circumstances, should ascend by leaps and bounds, was perfectly natural. They had done so in all other countries under similar circumstances. And in all other countries they had subsequently recovered their normal level by processes equally natural. No reason for heroic measures existed in Japan's case. Most nations, were they invited deliberately to adopt a system of currency the avowed object of which was to depress prices, would scoff at the idea. Merchants and manufacturers do not want falling prices. Their test of good times is an upward tendency in prices all round. It can never be said, at all events, that Japan went into this business with closed eyes. She knows what gold monometallism has signified in the case of European countries. Her statesmen openly avow the knowledge, and frankly declare that one of their chief reasons for turning to gold is precisely the reason that now disposes European countries to turn away from it. The latter complain that gold

monometallism pulls down prices. Japan wants it because it pulls down prices. Perhaps we ought to applaud the courage that impels her to administer to herself such bitter medicine in order to cure a complaint from which any Occidental people would be only too glad to suffer. But we can not yet regard concrete affairs from such a height of fine abstraction. We see no warrant for Japan's action, and we can only hope that the fault lies with our own blindness.

STRIKE AT THE SENDAI SECOND HIGHER SCHOOL.

INFORMATION has reached us to the effect that a serious disturbance has taken place in the Second Higher School, Sendai, resulting in a general strike among the students. The following is the account of the affair published in the Sendai papers. On Saturday last, the third year Engineering Class, of which Mr. TACHIYARA is the head, absented themselves in a body, on the ground that they had a grievance which they wished to see redressed. On inquiry it was found that the class had taken umbrage at the action of the Director in expelling from the school one of their fellow-students, called UYENO OTOKICHI. The alleged reason for this dismissal was certain information supplied privately by a policeman, to the effect that this student had been engaged in shady transactions. It was afterwards found that the student had been falsely accused, and that in order to deceive the police, his name had been made use of by the real culprit. This disclosure was followed by UYENO's reinstatement in the school. But no sooner had the facts become known to the members of his class, than they determined upon a general uprising against the Director. On Saturday last, it was noticed by the teachers that the students were all very much excited about something, and it subsequently transpired that the matter had been taken up by all the second and third year men, and that each of the classes had appointed two delegates with full power to consult with their fellow-students and to decide on the action to be taken by the classes. On Sunday, at a meeting of delegates, it was decided that the action of the Director was of a nature to destroy their confidence in him; that a man who would give credence to the slander of a policeman was not fit to occupy the post of Director of the school; that they therefore demanded his removal, and that, pending that event, they and the students whom they represented should absent themselves from class. They further agreed that in the event of the action taken by them as delegates leading to their dismissal from the school, the members of all the classes they represented should leave the school in a body. Accordingly, on Monday morning, the teachers assembled at the school to find

nothing but empty benches, the first year men having apparently followed the lead of the senior students. It is reported that Mr. TACHIYARA, the head of the class in which the commotion commenced, has resigned his position and returned to Tokyo, and that the Director and Sub-Director have both gone to Tokyo.

It is a year ago this month since the students of the same school demanded in a body that Mr. CARRUTHERS should be dismissed from the institution. A similar commotion had previously ended in the discontinuance of the services of Mr. SHARP. It seems to be established all over Japan that it is quite impossible for school authorities to retain the services of any teacher, native or foreign, who is thoroughly unpopular among the students. There is no hiding the fact that to a considerable extent the great educational establishments of this country are run by the students, and what is more important, it is done with the cognisance, if not the consent, of a number of the teachers. A teacher of a large school being asked not long ago, whether democratic Government in schools did not seem to him as oppressive as that of the Girondins at the time of the French Revolution, replied, "the absence of the guillotine is the only difference."

The strikes so frequently reported are to be traced to various sources, some of which are not taken into consideration by foreigners when discussing the subject. In the first place, it must be borne in mind that in the Mombusho Higher Schools a large number of the students are grown-up men. They read the newspapers with keen interest every day. They have their favourites among political leaders. They grow as excited over political changes as though their whole future were involved in them. Among these students there is no topic more popular than that of the right of the people to be represented; of the governed to take a part in government. Works like a MILL'S Essay on "Liberty" are used as class books, so that long before the students leave school, their minds are permeated with all manner of advanced notions on political subjects. Discussion of political questions, though forbidden in Government schools, is carried on incessantly outside the class-room. Moreover, a full expression of opinion on subjects connected with the management of schools is, to a large extent, encouraged by the teachers; and connected with not a few high class schools there exist magazines practically under the complete control of the students, who find in their pages ample opportunity for ventilating their views on almost any subject they please. However strange all this may appear to outsiders, it does not appear that the Japanese teacher, as a rule, sees any objection to students figuring thus early in political and literary arenas.

We all know that an average Japanese at 20 is more advanced than most Occidentals at that age. The boyhood, taking the term as we understand it, of the Japanese lasts a very few years. A lad of 15 in this country who is attending a good school, will be found to have a surprisingly intimate knowledge of things in which no persuasion could induce an English boy to take a lively interest. Not a few teachers hold that the frequent commotions in Government schools are an unavoidable concomitant of the time of transition in which we live. The wine of the new ideas with which students heads are filled is too strong for the vessels that contain it. "These things will cure themselves," says one. "Do not err in the direction of crushing all the spirit out of students. Their extreme activity, the interest they take in the management of the institutions they attend, is no bad sign after all." That is one view of the matter. It is impossible for us to obtain official information as to the Sendai affair, but if rightly reported, it looks very serious, as the students undoubtedly have a grievance. One is inclined to ask why great private schools like the Semmon-gakko and the Keiogijiku run so smoothly compared with Government schools. We cannot recall that any serious disturbance has taken place at Mr. FUKUZAWA'S school. It is to be hoped that the Higher Educational Council lately called into existence will discuss subjects of this kind. There is truth as well as antiquity in the saying that when things go wrong both the parties concerned are to blame. It is often only a question of degree. Very possibly in the present case all the real facts are not yet before us. Hence it would be premature to arrive at a definite opinion on the matter.

CHINA'S RE-ARMAMENT.

CHINA'S beginnings of re-armament are ridiculed in Tientsin. Not because of their smallness. It is true that when an empire of vast dimensions and great potential wealth, having lost its whole effective navy, sets about providing itself with a new one by ordering two second-class cruisers and a few torpedo-boats there is a sensible want of proportion between the need and the effort. But that is not the feature criticized in Tientsin. It is that China should think of having a navy at all. Her wisest course, say her critics, is to rely on her weakness and on the mutual jealousies of the Powers that hunger to make a meal of her. Each is so anxious to get the first and the biggest mouthful, and so fearful lest another should succeed in being ahead at the feast, that all are reduced to a state of inaction. So long as that mood lasts, China is safe. Why should she waste money on a navy? Moreover, even if she had ships, of what use would they be to her? She lacks the men to man them and the officers to handle them.

Such is the advice given to her by disinterested friends. Very fine advice, no doubt. It reminds us vividly of the sententious judgments that used to be presented to Japan by gentlemen on three-legged stools a few years ago, when she, too, was so silly as to follow the example of all Western States by getting ready for war in order to preserve peace. The lesson of the recent fight in the East must have been very obscure to men that argue in such a strain. What saved Pekin was nothing more or less than the fact that China possessed two line-of-battle ships of nearly 8,000 tons displacement, whereas Japan's biggest vessels were second-class cruisers, little more than half of that size. Had there been no *Ting-yuen* and *Chen-yuen* in the Gulf of Pechili, Japan would never have made that long détour to Fenghwan and Haicheng, by way of preliminary to attacking Port Arthur. Her objective point from the outset would have been Shan-hai-kwan, and she would have dictated terms of peace from Pekin before the close of 1894. But she dared not essay the tasks of guarding a long line of maritime communications and convoying flotillas of transports with a fleet of second-class cruisers, sloops, and gunboats, in the face of an enemy that possessed two line-of-battle ships. That pair of armour-clads changed the whole complexion of the contest. Suppose, now, that China, following Japan's example, furnished herself with six battle-ships, ranging from twelve thousand to fifteen thousand tons, and six first-class cruisers of over nine thousand tons, not to speak of second-class cruisers and torpedo vessels. Can any one pretend to think that the big empire's position among the nations would not be materially altered by such a provision of fighting material? With a squadron of twelve really formidable vessels to be eliminated before any descent could be safely made upon her shores, China might feel confident that no European Power would molest her lightly. As to her having neither men nor officers, there is nothing to warrant the assertion. Her sailors fought well in the Yalu battle; quite well enough, at all events, to prove that they are made of good stuff, and that they only want a fair show—tolerable leading, honest ammunition, and plenty of it. If China will not put her hand into her own pocket, or into some one else's pocket—where she can find plenty of money, whatever pessimists say—if she continues to palter with her responsibilities, disregards her necessities, and lies down in the dust to be kicked by any Power that can disentangle its foot for the effort, she certainly may not expect exemption from the historical fate of all that rely on their own helplessness and on the forbearance of their neighbours. There is one Power in the world that desires, above all others, to see the integ-

city of China preserved. That Power is England. We venture to assert that were English statesmen consulted, their unqualified advice to China would be, "arm." The blow that a country can strike on its own account is the only blow that it can hope to see struck in time of stress and peril. China is to be censured, not because she has ordered two cruisers, but because she has not ordered twenty. Her integrity is not worth a year's purchase if she trusts to the debilitating effect of international jealousies. When it suits the convenience of some Great Power to absorb a slice of her territory, means to placate the rivalry of the rest will not be wanting.

IMPERIAL DIET.

THURSDAY, MARCH 4TH.

HOUSE OF PEERS.

The House met at 10.15 a.m., the Order of the Day being:—

- 1.—Leave of absence for Prince Tokugawa.
- 2.—Bill relating to the Regulations for Irrigation Guilds as prescribed by the Local Government Systems for Cities, Towns, and Districts, and also the General Regulations for Local Education.
- 3.—Bill for amending Law No. 92 of the 27th year of Meiji (sent up from the Lower House).
- 4.—A project of Law relating to the collection of Taxes in Oshima Gun, Osumi Province, Kagoshima Prefecture, and the various islands in Kawanabe Gun, Satsuma.
- 5.—Press Law Amendment Bill (sent up from the Lower House).

The President reported that the Bills passed by the House on the 1st inst., were Supplementary General Budgets Nos. 5 and 6, for the 29th Fiscal year of Meiji, and Supplementary Special Account General Budget No. 3, for the 29th year of Meiji, and that the Petitions for the restoration of Pensions, &c., together with other seven documents had been forwarded to the Government with the views of the House expressed thereon.

The first item on the Order was passed without objection.

The second Bill on the Order read as follows:—

- 1.—All rules shall be rescinded which require the sanction of the Emperor with regard to the Regulations for Cities, Towns, and Districts, as provided in the System of Local Administration.
- 2.—The power of permission and sanction belonging to a Minister of State with regard to the Regulations for Irrigation Guilds and also General Rules for Local Education as provided in the System of Local Administration, may be vested in the Local Governor.

With regard to the above Bill, Mr. Takiguchi remarked that despite the fact that the sanction of a responsible Department had to be obtained in most cases, according to the Local System of Administration, in the event of levying more than one-seventh of the land tax for local purposes, the adoption of the present Bill would be likely to involve serious abuses, as the power of levying the tax was to be vested in the local governor. The only barrier now existing to the reckless imposition of the tax would be removed, and the abuse of a levy beyond the limit might occur. The progress of prosperity in Japan was destined to increase the expenditures of the State, and the revenue could be increased only by means of the land tax. Therefore any local levy beyond the fixed limit must be avoided by all means. According to the report of the Chairman of the Special Committee, it seemed that permission could easily be obtained from a responsible Department for an extra levy to a certain extent. That was very strange, seeing that such procedure would violate the limit of one-seventh, and the law would cease to have any effect whatever.

Mr. Misaki (Government Delegate), explained that as the law did not permit the collection of more than two-sevenths or three-sevenths of the Land Tax, for local purposes, except in cases of extraordinary calamity, when the limit might

be exceeded to the extent of three-sevenths and a half, beyond which no sanction could be obtained from the Ministers of Home Affairs and Finance, no anxiety need be entertained about abuses suggested by Mr. Takiguchi.

Mr. Matsuoka stated that the reason of permitting a levy over and above two-thirds of the Land Tax, was to enable the Local Government to defray the ordinary expenditures, but that no discretion was to be given regarding engineering expenses. He further pointed out that the Local Government was to be entrusted with the duty of enforcing the arrears of local expenses for Towns and Districts, and with preparing the notifications to be issued; measures which would confer great convenience both on the Government and on the people.

Viscount Tani remarked that unnecessary expansion of the machinery of Local Administration, and the consequent augmentation of expenditures, were due chiefly to the defective superintendence on the part of the Central Government, and that the lack of promptitude and punctuality in all transactions at local offices must be ascribed to the inexperience of the functionaries, some of whom, up to a few days prior to their appointment, had been zealous agitators on behalf of a certain political party. The Imperial Sanction required by the Local Government System with regard to the collection of Local Land Tax was practically a safeguard for ensuring that due supervision should be exercised. The Bill under discussion seemed to have been presented by the Home Department, not because the Department deemed the local system of administration sufficiently developed to entitle local officials to be entrusted with the exclusive management of Land Tax affairs, but because the Department had no experience in the management of such affairs. The Bill should be rejected, until the appointment of local governors not liable to be influenced or moved by the leaders of a political party.

The Bill was rejected.

The Bills standing third and fourth on the Order were passed as sent up from the Lower House.

With regard to the Bill standing fifth on the Order, namely, the Press Law Amendment Bill, Mr. Kanimuchi, Government Delegate, explained that the changes made in the original bill by the Special Committee in the House of Representatives after elaborate scrutiny and close investigation, were that the power of suspending a journal for a week should be replaced by the suspension of the incriminated matter only. The Government had introduced the Bill with full conviction that the limitations contemplated by it were proper, still no objection would be raised if the changes suggested by the Committee of the Lower House were passed, for it appeared that the provisions of the revised Law would enable the authorities to attain the object contemplated by the Press Law.

Major-General Kodama observed that the Criminal Code provided for "Offences against the Imperial House," whereas the present Bill contains the phrase, "to impair the dignity of the Imperial House." He wished to know why terms different from those of the Criminal Code were employed, and why the punishment was made lighter than that provided in the Code.

Mr. Kanmuchi replied that the Bill referred to cases not falling within the category of offences against the Imperial House referred to in the Criminal Code, and that all offences coming under that category should of course be treated in accordance with the Criminal Code.

Major-General Kodama asked what was meant by "social order."

The Government Delegate replied that as the terms "injurious to public peace," or "injurious to public tranquillity and good order" were too wide, they had been changed in the present Bill so as to refer to social order, in which no element of politics was involved; as, for instance, the act of instigating labourers to strike.

The Bill was entrusted to a Special Committee of nine, nominated by the President.

The session was adjourned until the 8th inst., and the House rose at 12.55 p.m.

SATURDAY, MARCH 6TH.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1.—Government Bill for amending the Law of Public Meeting and Political Association. Second Reading.
- 2.—Bill relating to the amendment of the Local System of Administration for Gun. Continuation of the First Reading.
- 3.—Bill for amending the Local Government System for Cities and Prefectures. Continuation of First Reading.
- 4.—Bill for adopting special measures with regard to the Local Land Tax to be levied in the localities devastated by inundations. Continuation of First Reading.
- 5.—Bill for making alterations in the boundary line between Chiba and Ibaraki prefectures. Continuation of First Reading.
- 6.—Bill for altering the boundaries between Hiroshima and Okayama prefectures and also those of certain Gun in the latter prefecture. First Reading.
- 7.—Bill for amending the limits of Gun in Saitama prefecture. First Reading.
- 8.—Agriculture Encouragement Bill. First Reading.
- 9.—Bill for amending the Law of taxation for brewing sake. First Reading.
- 10.—Bill relating to the Amendment of the Law of Taxation for brewing sake for domestic use.
- 11.—A Project of Law embodying amendments in the Private Railway Construction Law.
- 12.—Bill for cancelling some provisions in the Law relating to Registration Fees.
- 13.—Railway Construction Law Amendment Bill.

With regard to the first Bill on the Order, Mr. Tanizawa Ryuzo urged that the last clause of Art. II., as revised by the Committee, should be restored in the sense of the existing Law, and that Art. III. be changed, so as to necessitate the obtaining of police sanction, instead of merely giving notice to the police and obtaining their acknowledgment of the notice.

Being questioned by the President as to the exact revisions that he proposed, he replied that he desired to have Art. II. restored to the terms of the existing Law, and the "Receipt of the Police Authorities" in Art. III., changed to "police sanction." Articles IV. and V. he would leave as they were now, and the "Political Association" specified in Art. XVIII. should be required to provide a Register of its members.

The revised Articles II., III., and XVIII. were taken together as subjects of debate.

Mr. Kimura Seitaro proposed that the word "women" be added after "immature youths," in Art. V.

Articles I., II., III., and IV. were passed as amended by the Committee, Mr. Tanizawa's amendments being rejected. The insertion of the words "Students and teachers in Government and Public Schools" was rejected.

Articles from VI. to XXX. were passed as amended by the Committee.

The Bill standing second on the Order, provided that Urban or Rural Headmen be appointed by election, and that the special electoral privileges conferred on large landed proprietors (*Ojinushi*) be rescinded. The Second Reading of the Bill was voted unanimously.

The Bill standing third on the Order was passed without dissent. Its purport was simply that Cities and Prefectures be recognised as administrative divisions of the country.

With regard to the Bill standing fourth on the Order, Mr. Otake remarked that, although the Government had insisted upon the absence of any necessity to pass such a measure so long as the Land Tax Laws were in force, yet these laws having proved regrettably insufficient to meet exigencies or calamities, the adoption of special provisions relating to the Local Land Tax became essential, in view of the late disasters from earthquake and inundations.

Mr. Kokure, in view of the fact that the Bill provided for remission of the Land Tax in years of scarcity, asked whether the tax was to be remitted in every locality where famine might occur in future.

Mr. Otake replied that he had not intended any reference to future famine.

Mr. Megata, Government Delegate, explained that the Central Relief Fund Law would answer the purpose of aiding the people in times of disaster. Its efficacy had recently been proved

by the expenditure of 2,190,000 *yen* for distribution among the sufferers by inundations.

Mr. Otake contended that the outlay by the Government last year, to the extent of 2,190,000 *yen*, had been barely sufficient for the construction of temporary huts and for providing food for sufferers. It had no connexion whatever with the Land Tax.

The Bill was passed by the House.

The fifth Bill was entrusted to a Special Committee for revision.

The Bill standing sixth on the Order was vehemently opposed by Mr. Wada Hikojiro, who denounced its introducer as a man attempting to deceive another in broad daylight. The proposed change of the boundaries was utterly incompatible with the geographical position of the prefectures involved.

The Bill was rejected.

The discussion of the seventh Bill on the Order was adjourned.

With regard to the Bill standing eighth on the Order, Mr. Okuta explained that the object was to promote agriculture. Agriculture in Japan has made conspicuously little progress owing, among other causes, to the imperfection of the agricultural laws in general. No marked advance could be looked for if this industry were left to the discretion of the people alone.

Art. I.—The prime objects of this Law are to provide the means of irrigation and drainage, to construct new embankments and reservoirs; reclaim uncultivated woods, fields, marshes, and swamps, and to prevent drought and inundation; with a view to the development of agricultural industry.

Art. II.—In case that rice-fields for which scarcely any means of irrigation exist, and which are constantly liable to drought, be found to extend over several Districts, and in case a stream or river available for purposes of irrigation be found in the vicinity of such fields, the extent to which it may be used for irrigation shall be investigated; and upon an application being forwarded by the people after mutual deliberation, or upon a report from the Local Authorities, the work of leading the water for the purposes of irrigation may be undertaken with the sanction of the Minister of Home Affairs, and main channels for that purpose may be constructed.

Art. III.—If there be no suitable stream or river in the neighbourhood, so that the fields are constantly exposed to the danger of drought, the possibilities of irrigation shall be investigated by reference to the geographical position, and the work of constructing reservoirs may be undertaken, as prescribed in the preceding Article.

Art. IV.—In case that wet and dry fields exposed to injury from stagnant water, are found to cover one or several Districts, and in case it is considered that damage occurring from such a cause may be avoided by making drains for removing the water, or by constructing new embankments, the limits of such damage shall be investigated, and upon application being made by the people after conference, or upon a detailed report being forwarded by the Local Authorities, the work of drawing off the water or constructing embankments may be carried out with the sanction of the Minister of Home Affairs.

Art. V.—As regards the expenses incurred in connexion with Art. II. or Art. IV., not less than two-thirds of the same shall be borne by the people.

Art. VI.—When works undertaken as specified in Art. II. or Art. IV. have been completed, the value of the lands comprising the wet and dry fields which have been furnished with the means of irrigation, shall be revised within five years and the land tax correspondingly increased. As to the rate of such increase, it shall be on the basis of five-hundredths of the expenses incurred by Government.

NOTE.—The rate may be changed according to circumstances, but no work shall be commenced where there is no prospect of a permanent increase of taxation to the extent of three-hundredths of the Government's outlay.

Art. VII.—The share of taxes to be borne according to the value of land, as prescribed in the foregoing article, shall be determined by a District Assembly, or by an Assembly of several Districts combined, in the places where irrigation has been effected, and sanction shall be given by the Finance Department, after direct inspection of all such places by the officials. In cases where no perceptible difference is deemed to exist in respect of enhanced value, the average share of tax to be borne by each locality shall be levied on the basis of the former value of the land.

Art. VIII.—Undertakings for leading or drain-

ing water shall be limited to the construction of main channels. Branches shall be left to be constructed by individuals. Reservoirs shall in no case be constructed without embankments, and the cost of the land used for that purpose, or for water-courses, shall be borne by the people.

Art. IX.—All repairs shall be made by the people; but if repairs be neglected, the work shall be undertaken by the Government, the expenses being levied from the people.

Art. X.—In case the construction of a reservoir or an embankment, or the opening of a channel for draining off stagnant water, be considered necessary with a view to the reclamation of waste moors, fields, marshes, and swamps, the geographical position of the land to be reclaimed, as well as the prospect of success, shall be investigated, and all the works in connection therewith shall be carried out by Government upon application being made by the people. But more than two-thirds of the expenses must be borne by the latter.

Art. XI.—A proper period of "hoing" shall be allowed in the case of land reclaimed as prescribed in the foregoing article, and the value of the land shall be fixed at the end of the term, when the land tax is to be levied in accordance with the Land Tax Regulations. The amount, however, shall not fall below the profit gained at the expense of the Government.

Art. XII.—If the land specified in the foregoing Article be not reclaimed by the people within the Hoing Term, it shall be purchased by the Government at its original value in the case of land belonging to the people, or restored to Government in the case of Government land, so that it may be tilled, sold, or leased. All contracts concerning the original value of land, and also concerning the provisions of this Article, shall be settled prior to commencing the work, and a deed having been duly executed, no objection can be subsequently raised. In that case, however, the expenses specified in Art. X., shall not be returned.

Art. XIII.—All waste land required for carrying out the provisions of this Law may be appropriated in accordance with the Land appropriation Law.

Art. XIV.—The maximum expenses that may be required for the enforcement of this Law shall be one million *yen*, and the estimates as planned by the Home Department shall be included in the Engineering Expenses, and presented to the Imperial Diet.

APPENDIX.

Art. XV.—This Law shall not be applicable to Hokkaido or Formosa.

Art. XVI.—This Law shall be put into operation from the 1st of April in the 31st year of *Meiji*, (1898).

The Bill was handed to a Special Committee of nine for investigation.

The ninth and tenth Bills were taken together for discussion. These Bills provide that the amount of *sake* brewed for domestic use shall not exceed one *koku* a year, and that the licence fee shall be two *yen*.

The Bills were handed to a Committee.

The 11th, 12th, and 13th Bills were similarly treated.

The House rose at 4.50 p.m.

MONDAY, MARCH 8TH.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of the Day being:—

- 1.—Leave of Absence for Marquis Shotai and Mr. Sekita.
- 2.—Government Bill relating to the Formosa Bank. First Reading.
- 3.—Bill relating to the manner of collecting shooting Licence Fees.
- 4.—Public Undertakings Finance Law Amendment Bill.
- 5.—Bill with regard to the Inspection of Sires for Stud Purposes.

The Bill standing first on the Order was passed without dissent.

With regard to the Bill standing Second on the Order, namely the Formosa Bank Bill, Mr. Soyeda, Government Delegate, explained that the necessity of organizing some machinery to facilitate the circulation of money in Formosa, simultaneously with the island's economic development, could hardly be questioned. Moreover, the conditions existing in Formosa being of a special character, affairs there ought to be managed strictly in accordance with the laws applying to Japan proper. Owing to the absence of means for facilitating the circulation of money in the new territory, the people were obliged to pay exorbitant interest on all their pecuniary transactions; and profitable enterprise had fallen, for the most part, into the hands of foreigners. The

only course for the Japanese to pursue in Formosa was to establish a bank, if they desired to promote productive industries in the island.

Mr. Murata asked whether this project would not bring other speculators into the same field. He further remarked that justice and impartiality should be strictly observed in the establishment of the Formosa Bank, and that nothing should be allowed in the nature of placing the shares in the hands of selected individuals, as had hitherto been the case in all banking enterprise.

The Government Delegate replied that not only would impartiality be guaranteed, but the Bank would be a conjoint enterprise of both Japanese and Formosans.

Mr. Obata asked the reason of unregistered notes payable at sight while convertible silver notes are in circulation.

The Delegate replied that the silver notes in question did not circulate freely, and that the issue of special bank-notes was absolutely necessary to promote the circulation of money. Questioned whether silver monometallism was to be adopted in Formosa, he replied to the effect that the circulation of subsidiary silver coins of fifty *sen* would in no way be objectionable.

Mr. Funakoshi inquired whether, if the bank-notes in question were presented for exchange against gold, the exchange could be refused. The Delegate said that it could under the provisions of the 9th Article.

A period of one week was allowed for the investigation of the Bill by a Special Committee.

With regard to the Bill standing third on the Order, Mr. Megata, Government Delegate, explained that greater convenience could be secured both to Government and people, if the Shooting License Fees were allowed to be paid in stamps.

The Bill was handed to a Special Committee nominated by the President.

The fourth Bill on the Order related to a question of accounts. It was handed to a Special Committee.

Viscount Enomoto, Minister of Agriculture and Commerce, addressed the House, with reference to the 5th Bill, as follows:—

"It is clear, without any explanation from me, that the improvement of horses is necessary, and that the inspection of sires required for stud purposes is of the greatest importance as a step toward that improvement. The Government had directed earnest efforts to obtaining first-class horses, but has not been able to accomplish its purpose in the face of the keen and ever growing demand on the part of private individuals. The present condition of affairs renders it absolutely necessary to establish a proper method of control, with a view to procuring a greater number of stud horses. It is true that horses and cattle for stud purposes were subjected to control by Imperial Ordinance in the 18th year of *Meiji*, but the methods adopted for the purpose being unsuitable, and not of uniform strictness, no satisfactory results have been attained. The Bill I have now introduced is intended to correct these defects, inasmuch as it provides that a Commission shall be established for managing the matter on really practical lines, so that the object of improving horses in general may be unmistakably promoted.

Mr. Nishimura asked why the Bill was to be enforced from the 31st year of *Meiji*. The Government Delegate replied that the delay was attributable to financial considerations.

Baron Suyematsu had been informed that in France stud horses are placed under the charge of people in the various provinces. He desired to know whether any similar method would be adopted in Japan.

Mr. Fujita, Government Delegate, admitted the justice of the comment, but said that the Government did not intend to follow the example of France.

On being asked what amount of expense would be required to carry out the proposed measure, he replied that about six thousand *yen* would suffice for the present.

Mr. Fujimura remarked that the sum of six thousand *yen* referred to outlays by the Treasury,

but from what source would the local expenses be supplied?

The Delegate answered that the six thousand *yen* would be distributed among the various localities for travelling expenses and other miscellaneous outlays, the salaries of officers being excepted.

The Bill was entrusted to a Special Committee nominated by the President.

The House rose at 11.40 a.m.

The principal articles in the Formosa Bank Law are as follows:—

Art. I.—The Formosa Bank shall be a joint stock corporation.

Art. III.—The period of operation of the Formosa Bank shall be twenty years from the date of the permission for its establishment. The term may be prolonged should an application in that sense be forwarded with the consent of a general meeting of shareholders, and should the Government grant permission.

Art. IV.—The capital of the Formosa Bank shall be not less than five million *yen*.

Art. V.—The following business shall be undertaken by the Bank:—

1. Discounting bills and other commercial notes.
2. Remittances of money and remittances on account of goods.
3. Collecting notes for commercial companies or merchants with whom transactions are habitually conducted.
4. Issuing loans on the security of fixed or movable property and opening credits.
5. Receiving deposits of money of all descriptions, and opening credits.
6. Taking or receiving on deposit gold and silver coins, precious metals, and bonds of all descriptions.
7. The sale and purchase of bullion.
8. Agency work for other banks.

Art. IX.—The Formosa Bank is required to provide by way of security for its issues of unregistered notes payable at sight, a corresponding amount of gold and silver coins and bullion. All issues of such over and above the amount of the specie reserve, shall be subject to a tax at the rate of 5 per cent. annually.

The principal points in the Law for the inspection of sires for stud purposes, are as follow:—

1. No sire shall be allowed to be used for stud purposes unless it has been duly inspected according to Law, and unless its qualifications have been certified.
2. The certificate of qualifications shall be valid for one year.
3. Any person who employs for stud purposes a sire that has failed to obtain a qualification certificate, or a sire the certificate of which has become invalid or been suspended, shall be liable to a fine of not less than five *yen* and not more than fifty *yen*.

The amendment proposed in the Regulations for the construction of Private Railways is as follows:—

Art. XXIX.—In case passenger fares, or rates of freight, or rules for transport are to be determined or altered, the sanction of the Minister of Communications must be obtained. The third-class passenger fares and freights, however, shall not exceed the following rates:—1.5 *sen* per mile for a journey of over 8 miles; 2 *sen* per mile for a journey under 8 miles; 3 *sen* per mile for a special journey. When rates are to be increased within the limits thus prescribed, notice must be posted at least two weeks previously.

MONDAY, MARCH 8TH.

HOUSE OF REPRESENTATIVES.

The House met at 1.30 p.m., the Order of the Day being:—

- 1.—Bill relating to the Inspection of Silk-worm Eggs, Continuation of First Reading.
- 2.—Railway Construction Law Amendment Bill. Continuation of First Reading.
- 3.—Bill for granting permission to a Private Railway Company for the Construction of a Railway included in the State programme.
- 4.—Bill relating to Military Travelling Expenses.
- 5.—Bill for the Control of Arms and Ammunition.
- 6.—Bill for Police Supervision.
- 7.—Bill for abolishing the Peace Preservation Regulations.
- 8.—Bill relating to the collection of National Taxes.
- 9.—Bill for adoption of special measures with regard to Taxes in the Localities visited by the recent Earthquake.
- 10.—Representation relating to the Abolition of the Law of Premonition.
- 11.—Bill for amending Law No. 4 of the 28th year of Meiji.
- 12.—Bill with regard to the control of Fertilizers.
- 13.—Representation for altering the period of the Fiscal Year.

The revisions suggested by the Committee in the first Bill on the Order are as follow:—

No silk-worm eggs shall be prepared from cocoons so feeble or thin that the weight thereof in proportion to the total standard weight of 100 does not exceed 80 in the case of Spring Cocoons, and 60 in the case of Summer and Autumn Cocoons.

Art. VII.—No silk-worm eggs not bearing a stamp attesting their quality shall be sold or exchanged in the localities where this Law is enforced.

Art. XII.—Half the amount of expenses to be incurred for the inspection of silk-worm eggs shall be borne by the Treasury, Hokkaido and Okinawa prefecture being excepted.

Art. XIV.—Any person violating Article VII. shall be liable to a fine of not less than five *yen* and not more than fifty *yen*.

With regard to the above, Mr. Higashio, in the capacity of Chairman of the Special Committee, reported that alterations had been suggested in the Bill to the effect that one-half of the expenses should be borne by the Treasury instead of the whole being imposed upon the people, and that silk worm's eggs which were originally collected for scientific purposes should also be subjected to rigorous inspection in case they were sold.

Mr. Komatsu declared himself strongly opposed to the Bill, on the ground that it was destined to inspire excessive confidence in the powers of the law and the Government. The introducer, as well as the supporters, of the Bill seemed to be of opinion that in this matter success could be achieved only by reliance on the power of the Government, in the same way as the ignorant people of old had depended upon the grace of heaven for success in all their enterprises, especially in times of famine and drought. To attempt the development of the silk-rearing industry by the proposed law would be a serious error, and a cry of failure would surely be heard on all sides within three years after the enforcement of the law. The interference of law in men's business or occupation should be made only where freedom from error was perfectly guaranteed by scientific principles and practical experience. If the Bill was based on a mere theory of its proposer, as it would seem to be, it ought to be rejected with all possible condemnation. Some held that a cocoon formed by two silk worms was more healthy than that formed by one. In truth, the principles underlying the inspection of silk-worms were far from being settled scientifically, and it must not be forgotten that inspection touched the interests of the sericulturist to the extent of several thousands of *yen*. Could inspectors be expected to proceed honestly despite the paltry salaries they were to receive? A new and most dangerous form of disease, to be called "Inspectors," would have to be added to the list of risks attending the business.

Mr. Fujita, Government Delegate, replied that the problem of inspection had been investigated for several years, and was familiar to all concerned in the matter; and that the methods of inspection proposed were based on theory and experience.

Mr. Komatsu remarked that the silk of Japan having lost much of its reputation in the markets of Europe and America, owing to inferiority in the methods of its manufacture, measures for improvement were absolutely necessary.

The Bill was carried to its second Reading, and, after some discussion, was passed as revised by the Committee.

The Bill standing second on the Order, as amended by the Committee, provided that a railway be established between Tokyo and Nagoya through Hachioji, Kofu in Yamana-shi, and Suwa in Nagano, *via* Chikuma *gun*. Referring to this Bill, Mr. Nakano pointed out that the necessity of a line between Kanagawa and Hachioji was beyond question, in consideration of the fact that engineering expenses to the amount of twenty-seven million *yen* had been imposed upon the people for the construction of the Central Railway, and that any alteration in the original Bill would impose all the difficult enterprises on the shoulders of the Government, thus increasing the burden of the people to an enormous extent.

Mr. Takeichi urged that the Bill should be altered so as to fix the starting-point of the

Eastern Section of the Central Railway at Tokyo instead of Kanagawa.

The Bill was passed as revised by the Committee.

With respect to the third item on the Order, Mr. Mochizuki asserted the desirability of maintaining the proposed railway as a Government undertaking. Instead of leaving it to private enterprise, despite the fact that the estimates of sixty million *yen*, prescribed by law for the First Term of Construction, had already been found insufficient for the contemplated work.

Mr. Hatano expressed strong doubts as to the policy pursued by the Government with regard to railways. In the 25th year of Meiji, the Government seemed to have acted upon the policy of purchasing private railways, while, in the 27th and 28th years of Meiji, it had changed its course, probably on account of the war, and had adopted, if rumours were true, schemes for the sale of its railways. He wanted to know whether the Government had introduced the Bill really in consideration of public advantage and convenience, or whether it had been induced to present it simply because of applications having been received for permission to undertake the enterprise. In the latter case, he demanded the name of the projector and company.

Mr. Suzuki, Government Delegate, replied that the Government had no disposition to act on its own discretion, but was determined to do everything by the light of public opinion and in obedience to the tendency of the time. As regards the applicants for railway charters, permission would, of course, be given only to such as were trustworthy.

Mr. Orita urged the House to vote in favour of this line as a private enterprise.

Mr. Mochizuki stated that the proposed railway being a portion of the undertakings connected with the Central Railway, there should be no objection to entrusting it to private enterprise, especially as the length of the line was only forty miles.

The Bill was passed in its original form.

The fourth item on the Order was also passed without discussion. It was a Bill providing that with regard to travelling expenses to be paid to soldiers in the country in the event of war or emergency, an order for pre-payment may be issued to the Headmen of Cities, Towns and Districts, who will immediately cash it.

With regard to the fifth item, Mr. Terahara, Government Delegate, explained that the Law for the control of Arms and Ammunition having been established in the 5th and 17th years of Meiji, had become quite incompatible with the practical requirements of the day, and that they ought to be changed as they had special connection with the Law of Premonition.

The Bill was handed to a Special Committee of eighteen, nominated by the President. It ran as follows:—

LAW FOR THE CONTROL OF ARMS AND AMMUNITION.

Art. I.—The term "Arms" used in this Law shall mean rifles, swords, spears, and the like, and the term "Ammunition," gunpowder, percussion caps, fuses, and other substances of a combustible nature.

Art. II.—No arms and ammunition shall be manufactured or imported outside the limits defined by Special Ordinance.

Art. III.—No articles containing swords or rifles nor any arms the external form of which has been changed, shall be carried about by any person.

Art. IV.—Any gendarme or police officer may, if he deems it necessary, inspect the arms or ammunition possessed by any person.

Art. V.—All necessary rules with regard to the following items shall be established, by Ordinance:

1. The possession, manufacture, import, or cession, or use of arms and ammunition.
2. The preservation or transportation of ammunition and other methods of dealing with the same.
3. The position and construction of godowns for ammunition.

Art. VI.—The Minister of Home Affairs or the Minister of Colonization, may, if he deems it necessary for the maintenance of public peace and tranquillity, restrict or prohibit the cession, transport, or conveyance of arms and ammunition for a certain period of time and within certain limits.

Art. VII.—Any person violating Art. II. shall be liable to major imprisonment for a term of not less than two months and not more than two years, and also to a fine of not less than twenty *yen* and not more than two hundred *yen*, besides the confiscation of the articles in question.

Any person violating Articles III. or VI. shall be liable to major imprisonment for not less than one month and not more than one year, or to a fine of not less than five *yen* and not more than one hundred *yen*, and the materials found in his possession shall be confiscated.

As to the Bill standing sixth on the Order, Mr. Terahara, Government Delegate, explained that it was closely related to the Law of Premonition, but differed from it considerably in judicial spirit and scope, the existing Law being restricted to political incidents.

The Bill provided that Police Supervision should be enforced against the following persons:

1. Those who have attempted to commit murder, robbery, incendiarism, kidnapping, seizure of money or property by force or intimidation, wounding by beating, or who have instigated, or assisted, to commit such crimes, but who have been acquitted or declared innocent by a Law Court on account of insufficient evidence.

2. Those who have disturbed the occupation of others, having no fixed abode or business of their own, or who have interrupted meetings organised by other persons.

3. Those who have threatened to take away the goods of others by force.

4. Those who have unreasonably demanded pecuniary assistance from others, or wandered about as beggars.

5. Those who have been engaged in secret prostitution, or acted as pimps or panders, or used gestures to that purport.

6. Those who do not possess the means of acquiring their own subsistence, and fail to obtain any surties as to personal character.

Mr. Tanisawa remarked that the police supervision contemplated by the Bill represented a system of greater severity than that of the present Law of Premonition, as even offences of common assault would subject their perpetrators to police surveillance. He wanted to know the standard by which such a law had been framed.

The Government Delegate replied that offences of common assault, as indicated by Mr. Tanisawa, constituted only a solitary example. The Bill was intended to enforce police surveillance over persons who, though acquitted by a court of law in consequence of failure to achieve a crime, were deemed likely to repeat the attempt. The Law of Premonition dealt with actual or contemplated offences only, but the Bill under consideration was intended to control persons that attempted to interfere with the liberty of others.

Mr. Suzuki Jyubi doubted whether the punishments indicated by the Law did not fall within the limits prescribed by the Penal Code. In that case a second penalty might be inflicted for one and the same offence.

Mr. Terahara replied that the penalties to be imposed lay beyond the limits of the Penal Code.

Mr. Suzuki urged that it would be most improper to punish, at the hands of the police authorities, persons not held guilty by the Penal Code.

The seventh and tenth items on the Order were together submitted to a Special Committee.

As to the ninth Bill on the Order, Mr. Megata, Government Delegate, explained that the special measures to be adopted for the collection of taxes, as embodied in this Bill, would apply exclusively to Akita and Iwate prefectures, which had suffered considerably by the earthquake of August of the 29th year of *Meiji*.

Remarks having been made by the same Delegate as to the impossibility of applying the Central Relief Fund Law to localities devastated by earthquake, the Bill was entrusted to a Special Committee.

The 11th Bill, which provided for the cancelling of an article in the Law relating to Private Railway Companies, was similarly dealt with.

With regard to the Bill standing 12th on the Order, Mr. Nagura asked the introducer whether sardines prepared directly for manure in localities along the coast, would be subjected to the inspection of officers. Mr. Fukuda

replied that among articles of manure, sardines were seldom found to be adulterated, and that therefore they were not included in the scope of the present law.

The Bill was handed to a Committee.

Mr. Kosaka, explaining the Representation that stood thirteenth on the Order, said that, the 1st of April being fixed as the beginning of each fiscal year, according to the Law of Accounts now in operation, the session of the Imperial Diet had to be commenced in November or December and closed in March of the following year. The time so set apart, however, being the most busy period of the year, as it involved the fall and the early spring, the duration of the session fixed by the Constitution had to be contracted on account of holidays in the interim, thus causing not a little inconvenience to the Diet. The Bill was handed to a Committee of nine.

The House rose at 5 p.m.

TUESDAY, MARCH 9TH.

HOUSE OF PEERS.

The House met at 10.15 a.m. the Order of the Day being:—

- 1.—Leave of Absence for Baron Shimazu.
- 2.—Bill relating to the Preservation of Old Temples and Shrines.
- 3.—Government Bill for amending the Railway Construction Law (sent-up from the Lower House).
- 4.—Bill with regard to the Law for the Prevention of Epidemics. First Reading.
- 5.—Petition with regard to the Restoration of Pensions, etc.
- 6.—Petition for granting pecuniary donations to the families of men killed in war after the 7th year of *Meiji*.
- 7.—Petition for abating the local land tax.
- 8.—Petition for constructing the Uetsu Railway in the First Term.
- 9.—Petition for appropriating a portion of the Chinese Indemnity to form a Capital Fund for Common Education.
- 10.—Petition with regard to the Preservation of Ancient Temples and Shrines.
- 11.—Petition for the delivery of Government Rice for sale.
- 12.—Petition relating to the establishment of Rules for the Control of the Sale of Adulterated Fertilizers.

Marquis Hachisuka, Minister of Education, spoke as follows:—"Gentlemen, I desire to reply to the Questions put to me by Viscount Tani and Mr. Kubota, with regard to Educational Conferences held recently. The introducers of the Question seem to be of opinion that the Imperial Ordinance issued at the end of last year with regard to Rules for convening a High Educational Conference is very imperfect. They desire to ascertain whether the Government is inclined to correct such defects, so as to bring education to a better condition. Mr. Kubota criticises the Rules as embodied in the Ordinance, and even condemns them as too narrow to be submitted for discussion by educationists at large. I, too, am inclined to believe that consultation with learned and experienced men is absolutely necessary for educational administration, but as education is of very wide scope, any attempt to procure advice from all interested in it, would surely be attended with no small difficulty, although the propounders of the Question think differently, and suggest that Superintendents of Police, and Chiefs of Prefectural Bureaux, together with all others concerned in the problem, should be assembled for the purpose of determining the policy of education so that it shall be adapted to the state of local affairs. They consider that step essential to secure progress in education. The policy of the Educational Department, however, does not extend to such wide dimensions. The Department has to be satisfied with consulting the views entertained by the Directors of Government and Public Schools, and employing them as guides in educational administration. With regard to the fact that our conference was held with closed doors, various criticisms appear to have been evoked, but I am persuaded that as the meeting was called for the purpose of discussing my enquiries only, it ought to have been conducted in private, as directed by the rules. Last year's Imperial Ordinance has not yet gone into operation. Should any inconvenient features be discovered at the time of its practical enforcement, the Government will not hesitate to make all necessary revisions, and the

utmost discretion will be exercised in the election of members of Council."

Mr. Kubota expressed himself profoundly grateful for the courtesy shown by the Minister of Education, in contrast with the perfunctoriness of the former Minister, who had given a brief reply in writing only a few days prior to the close of the session. Apart from this, however, he wanted to know whether the present scheme for the establishment of a High Educational Council was based simply on the views of the Government or on public opinion. If the Minister of Education really desired to make himself familiar with the general views of those interested in education, the plan resorted to last year would never answer the purpose. History showed plainly that no benefit could be derived in matters of education by consulting with only one class of persons.

The Minister of Education replied that he had framed the rules for the Council on the basis of public opinion.

The first item on the Order was passed without dissent.

The Project of Law relating to the Preservation of Old Temples and Shrines is to the effect that buildings and treasures of Temples and Shrines, to be preserved by aid from the Treasury, are to be selected by the Minister of Home Affairs from among those calculated to serve the purpose of historical reference, or that are of excellent construction, or have a special historical origin; that treasures kept in shrines or temples such as serve the purpose of historical reference or are calculated to contribute to the reputation of the country in consequence of the excellence of their make, may be determined by the same Minister as qualified to be considered national treasures; that buildings for whose preservation aid is given by the Treasury, and which are specified by the Home Minister, and also national treasures, must not be sold, bought, transferred, exchanged, or mortgaged, and cannot be seized for debt. Further, that the repairs of buildings or treasures shall be superintended by Local Governors under the control of the Home Minister, and that buildings and treasures whose sale, &c., are forbidden, shall be kept by the Head Priests of the respective temples or shrines under the control of the Home Minister; that the same Minister shall be invested with power to order, even compulsorily, the exhibition of national treasures at museums, in which case aid shall be given by the Treasury to the temple or shrine owning such national treasures. That the preservation fund shall be included in the Budget every year. That an overseer who steals or replaces by a substitute any national treasure under his care, or sells, exchanges, or transfers such treasure, shall be punished with minor imprisonment, that when a national treasure or a specified building placed under his care is lost, damaged, or consumed by fire owing to his negligence, he shall be made to pay a fine ranging from 50 to 500 *yen*; that when a national treasure placed in a museum suffers a similar fate through the negligence of an overseer, the Treasury shall make good the damage, should not the overseer be competent to discharge that obligation. That any one who wittingly buys, &c., a national treasure or a building specified by the Home Minister, shall come under Art. CCCXCLX, of the Criminal Code. That even private treasures may receive aid when they are deemed qualified to be considered national treasures, and when their owners exhibit them in museums; and, finally, that places of celebrated scenic beauty or of historic fame may come under the Law, though not belonging to Temples or Shrines.

With regard to this Bill, Viscount Soga in the capacity of Chairman of the Special Committee, reported that he had prescribed the amount to be spent, inserting it in Article XVI., despite the Government's objection, but that all the amendments had been agreed to by Government. Article XVI. would now read as follows:—

"The amount of subsidy to be defrayed out of Treasury for purposes of preservation as prescribed in this Law shall be 150,000 or 200,000 *yen* a year."

Mr. Tajiri, Government Delegate, objected to this revision, on the ground that no surplus existed in the Budget for the 30th fiscal year.

Baron Date asked whether the Government intended to intimate that it was unwilling to pay the money although it had introduced the Bill.

The Delegate replied that although the Home

Department had 50,000 *yen* to spare, no amount in excess of that sum could be defrayed.

Baron Date wanted to ascertain the sense of the words "precious things of the country," and was answered by Mr. Nakamura, Government Delegate, that they referred to excellent buildings, admirable works of art, and all other things preserved in Buddhist temples and Shinto Shrines under the name of *Ho-motsu*, which were of rare workmanship or quality.

The most prominent amendments suggested by the Committee were that the punishment of major imprisonment for a term of from two to five years should be inflicted upon any one that stole, destroyed, or made away with any of the precious articles placed under his charge; that appeal might be made from the decision of a Law Court with regard to the fines of from fifty to five hundred *yen* imposed in the event of the loss or destruction of the articles referred to.

WEDNESDAY, MARCH 10TH.

HOUSE OF REPRESENTATIVES.

The House met at 1.25, the Order of the Day being:—

- 1.—Coinage Bill. Continuation of First Reading.
- 2.—Bill for providing a special Fund for Coinage Adjustment.
- 3.—Bill for amending the Regulations with regard to Convertible Notes, as promulgated by Notification No. 35 of the 18th year of Meiji. Continuation of First Reading.
- 4.—Bill relating to the Amendment of Notification No. 14 of the 18th year of Meiji.
- 5.—Bill for rescinding Notification No. 35 of the 12th year of Meiji.

Mr. Motoda, in the capacity of Chairman of the Budget Committee, reported in favour of Supplementary General Budget No. 2 and also Special Budget No. 2 for the 30th fiscal year, relating to Formosan Finance.

With regard to the first item on the Order, namely, the Coinage Bill, Mr. Takekomi, in the capacity of Chairman of the Special Committee, reported that after several conferences for the investigation of the Bill, the Committee had approved it by a majority, as it stood.

Mr. Otake Kwanichi expressed doubts as to the propriety of introducing an extraordinary change in the coinage system of the country, on the basis of an indemnity which could not be counted as an asset. It was true that Count Matsukata, Minister of Finance, had declared the opportunity now offering for a radical change of the coinage system to be such as might not be obtained more than once in a thousand years. But the speaker failed to follow that assertion. The excess of imports last year amounted to fifty-six million *yen*. If that anomaly were to continue for two or three years, the gold reserve would be exhausted, and the situation would present cause for grave anxiety.

Mr. Tajiri, Government Delegate, replied that the receipt of the indemnity from China constituted a unique opportunity for providing a gold reserve. No considerable store of gold could be amassed without the indemnity, as had been already intimated by the Minister for Finance. The excess of imports, if it continued for some years at the rate developed last year, could hardly fail to endanger the Treasury reserves. But that fact would remain the same with either the gold or the silver standard. Japan's exports had exceeded her imports during the past ten years, with the exception of last year, and the tendency was still in that direction. The augmentation of imports and the development of industrial enterprise would not be attended by immediate profits, but the advantages accruing from such a state of affairs must manifest themselves after from three to five years. Moreover, fluctuations in rates of exchange would soon disappear, and with the termination of the abnormal conditions after the late war, the country would certainly revert to its former state of increasing exports.

Mr. Otake asked whether the resources of the country would be sufficient to maintain gold monometallism. "Of course," was the reply of the Government Delegate.

Mr. Taguchi remarked that, although the Government had announced its possession of 109,000,000 *yen* in gold, yet that sum now formed the specie reserve of the Nippon Bank.

It represented outlays already made on account of the Treasury. The fact that this specie reserve was held by the Nippon Bank, resulted from its over-issue of convertible notes. It is equivalent to holding specie as security for debts contracted. The problem of a change of standard being of the greatest moment, there was no necessity to attempt its solution in these eventful years of the country's existence. Still less reason was there for such a step when it was considered that imports greatly exceeded exports in the foreign trade. The experience of the various countries of Europe showed that the adoption of gold monometallism had resulted in a considerable fall in the prices of commodities; heavy losses to the agricultural and industrial population, and disadvantage to the export trade. Japan, too, would be doomed to the same fate if she were to change her monetary standard. She would lose by adopting the gold system many of the advantages that she had hitherto secured by virtue of the silver standard. The bimetallic system had indeed failed to be adopted by the nations of Europe and America. But should the gold-price of silver appreciate to any sensible extent, then it would inevitably result that Japan's subsidiary silver coins would flow abroad: nothing could stop their exit. Further, any depreciation of silver below the ratio adopted would bring considerable losses to the people at large, in the same way as the Bank of Japan had sustained losses in the 15th year of *Meiji* (1872). Further, a Commission appointed to investigate the problem of coinage, seemed to have arrived at the conclusion that gold was liable to greater fluctuations in value than silver. Lastly, Mr. Taguchi urged that, while the proposed alteration in the coinage system must exercise immense influence on the affairs of the nation at large, the House was invited to pronounce a decision upon the momentous question within a few hours after the introduction of the Government's Bill.

Mr. Higashio understood that Mr. Taguchi had approved bimetalism at the ratio of 1 to 16 whereas Mr. Kurihara, another opponent of the Bill, had insisted upon the necessity of re-investigating the question, although avowing himself an advocate of gold monometallism. Mr. Amano, again, had expressed the opinion that the problem had not been solved so definitely as to a warrant Japan in adopting gold monometallism; whereas Mr. Ito opposed the Bill on the ground that it had been introduced into the House merely owing to the ambition, and in deference to the party policy, of the Matsukata's Cabinet. He wished to know with which of these Mr. Taguchi agreed.

Mr. Taguchi replied that the views of the Opposition were manifold, as he had already explained, but that he had never spoken in approval of the bimetallic standard or of the ratio of one to sixteen.

At this stage, the President announced that an urgency motion had been introduced to the effect that the Coinage Bills should be handed to a Continuing Committee of twenty-seven, nominated by the President, in accordance with Art. XXV. of Law of the Houses, so that a full report might be compiled and submitted by the commencement of the next session.

Mr. Arai, the introducer of the motion, addressed the House as follows:—The Coinage Bills now on the Order are problems of the greatest moment to the State, and I do not hesitate to say that the country's economy rests upon them. The results emanating from them may bear an important relation to the export trade, and to all the enterprises of the people. The difficulty of solving these problems exists not only in Japan, but among all nations of the world. The conclusion arrived at by the Committee appointed for the investigation of the Bills, as well as the information received from persons despatched to Europe and America for the same purpose, are, in some points, conflicting. We ought not to decide such an important question during this short session of the Diet. The country's interests forbid such precipitancy. It would be more judicious to defer the dis-

cussion until next session when the Continuing Committee will be able to furnish us with minute reports. We must remember that the problem under notice is closely connected with the welfare of forty millions of Japanese people.

Mr. Nakano opposed the motion on the ground that the question of coinage was not of recent origin, nor was it the invention of Japan, but it was familiar to all who gave any thought to economy. The Government's organization, many years ago, of a Committee for investigating the question, had not, of course, been a private undertaking. It had been done under the authority of an Imperial Ordinance. A number of eminent personages both in the Government and among the people collected information, and a considerable space of time had been spent in discussing the question. The House too recognised the importance of the problem, and had voted the expenses of the Committee. The result is the introduction of the present Bill. The consequences of this problem upon society would certainly be far reaching, but if it were left unsettled, the danger arising from such indifference would be incalculably greater. The question had already influenced the markets in London, and any step of procrastination on the part of the House would surely tend to confuse the policy that ought to be pursued in commercial transactions. It would be a matter of surprise if the representatives chosen by the people were not able to decide upon the merits of the question.

Mr. Soyeda, Government Delegate, asserted that the criticisms of the two monetary systems by men of erudition had already been exhausted, and that the only course for the House was to make a choice between the two. The respective arguments for the two systems could in no way be reconciled, and any vacillation on the part of the House would not only throw business men and financiers into confusion, but would also have the effect of producing fresh fluctuation in the relative values of the precious metals.

Mr. Komuro thought that the time had not yet come for deciding the question between gold and silver, and that great uncertainty must be felt in the presence of dissertations by men of immature knowledge, whose shallow conclusions could hardly fail to endanger the welfare of the country.

Mr. Ban considered that the Bill represented the gravest problem ever laid before the House since the opening of the Diet, and that nothing could be more indiscreet than to try to solve it within nine days after its presentation. Statistics showed that the production of silver exceeded that of gold, and the depreciation of the white metal in the future might be expected. But the market price of silver at the time of the election of the President of the United States might also be referred to as showing the undeterminable nature of the question. Little reliance could be placed on the statements of the Government Delegate, but fortunately facts furnished sufficient evidence for their guidance.

The President announced that the motion for postponement being of great importance, should be decided by closed ballot.

The result was as follows:—

For the motion	98
Against the motion	160
Invalid vote.....	1

The discussion of the original Bill was then resumed.

Mr. Shigeoka said:—For my own part, I believe that it is not yet time for Japan to adopt gold monometallism, and in this view I am confirmed by observing the condition of gold countries in the world. Is it not a fact that the alteration of the coinage system in Germany produced extraordinary effects upon the commercial communities of Europe? Bankruptcy, decline of agricultural industry, and other miserable results are to be noticed. The question of the standards had then been vehemently discussed by scientific as well as by practical men, until there resulted a union of States to maintain silver. I should like to see resolute steps taken at the ripe time, the indemnity being kept as a reserve fund for the future. The fact

that the development of our trade was effected by virtue of our silver system is undeniable, and such being the case, the converse must follow on the adoption of the gold standard. Although the Government alleges its ability to guarantee the safety of the reform by a reserve fund of 150,000,000 *yen*, yet that amount can hardly be expected to be maintained for ten years to come as a great part of it must be paid out to foreign countries. The Government purposes to raise a public loan to the amount of sixty millions *yen*, but everybody is convinced that the attempt will prove a failure under the circumstances now existing in Japan. From no point of view can I discern any reason why our coinage system should be changed."

Mr. Kawashima called attention to the following points:—

1. Wealth and power are the foundations of a country, and these foundations must be consolidated if Japan seeks to compete commercially and industrially with Western nations. Nothing can claim more earnest attention in this context than the problem of the coinage system. It is absolutely necessary for Japan to adopt a monetary standard uniform with that of all foreign nations with whom she is in close commercial connection. The silver coins of Japan have already lost much of their purchasing power, and the country is now vainly struggling in the arena of trade with the aid of the clumsy, old-fashioned, silver weapons, against nations armed with the most formidable weapon of later invention, gold. No hope of success can be entertained in such a campaign.

2. Competition will become still keener when mixed residence takes place in the 32nd year of *Meiji*. Facilities and conveniences must be afforded to our merchants for making preparations against wealthy aliens, whose object invariably is unscrupulous aggression both in politics and commerce. They are to be dreaded.

3. In order to consolidate the financial bases of the country, fluctuations in the relative values of gold and silver, which bear such a close relation to the nation's resources, must be removed.

4. A public loan should be raised in view of the extension of the national armaments, but as apprehension is felt that extraordinary changes will thereby be produced in the domestic markets the required funds may be obtained from abroad through the channel of individual enterprise after the revision of the coinage system. There is a great difference between raising a foreign loan and introducing foreign capital. The former is a matter not easy to accomplish, but as for the latter there will be no difficulty in selling Japanese bonds in foreign markets in proportion to the degree of the credit with which the Government is regarded.

5. Apprehension is also entertained that the alteration of the standard will increase the burden of the taxes, and will affect the relations between creditors and debtors. But embarrassments of that kind are not likely to be sudden or considerable. The gold-price of silver in the Bill having been fixed on the basis of the world's quotations of the two metals, the future depreciation of silver, should it occur, will not be so serious as to cause any extraordinary losses to the people. Hitherto exports to a silver-using country have been articles manufactured in imitation of foreign designs. There is every reason to suppose that should China progress and develop, she will adopt measures to manufacture for herself, and the profits now enjoyed by Japan will become a dream. The scheme for the Formosa Bank will create a power of competition with silver countries.

6. As regards funds to form a basis for the new system, there is fortunately a considerable amount from the indemnity, and the ratio between gold and silver having been fixed at one to thirty-two steps can easily be taken for dealing with the present silver currency. Anxiety has been felt by some lest the basis fund of 150,000,000 *yen* should speedily flow away to foreign countries, but such fears seem quite groundless. Japan has sufficient financial strength to avert any serious results from such perils.

The House rose at 5:35 p.m.

According to the latest census, the population of the Hawaiian Islands is as follows:—31,019 natives; 8,485 half-castes; 24,407 Japanese; 3,016 Chinese; 3,086 Americans; 2,250 British; 1,432 Germans; 101 French; 378 Norwegians; 15,297 Portuguese; 455 South Sea Islanders; 600 unscheduled; a total of 109,020—72,517 males and 36,503 females.—*Yiji Shimpō*.

NEWS OF THE DAY.

Koh Chye, who was one of the prime movers in the recent 'rikisha strike at Singapore, has been deported from that colony.

The Japanese silk-merchants of Yokohama intend giving a garden-party to the foreign silk-merchants of Yokohama at an early date.

On Tuesday the much-decomposed body of a Japanese man was found floating near the N.Y.K. shipping-yard. The remains have not been identified.

On the 7th inst. Captain Kofuji and other persons of Kanagawa Prefecture, who took part in the China War, held a *shokonsai* fête at Shogunuma, Yokohama.

The Spanish flag was hoisted for the first time over the Spanish Consulate at Nagasaki on Saturday last. The Consulate is situated at Deshima in the old Dutch Consulate.

The *P. & T. Times* regrets to announce the death of Mrs. Kimi Tei, wife of the Japanese Consul at that port, which occurred on Thursday morning, the 11th inst. ult., at 8 o'clock.

Mr. Yano Fumio, once a leader of the Progressionist Party, and now Chief of the Bureau of Archives in the Imperial Household, has been nominated Minister to China, in succession to Baron Hayashi.

Three *sendo* were washed off a junk while endeavouring to anchor off Haneda-light, Shinagawa Bay, on the evening of the 8th inst. A gale was blowing at the time and nothing has since been heard of the men.

The authorities at Hongkong, says the *Naval & Military Record*, recommend an extension of the naval yard at a cost of £250,000, with a dry dock on the island. The plans are now in London. A further extension of the colony's boundaries on the mainland is expected.

Two large coal-lighters, while passing Honmoku-beach on Wednesday afternoon, were caught by the strong northerly wind then blowing, and in consequence one sank and the other had to lighten ship by throwing her cargo overboard.

An invitation has been received by the authorities to send delegates to the Seventh International Geological Congress, to be held at St. Petersburg in August next. The Government has asked the Diet to grant *yen* 18,000 for the purpose.

By a peculiar irony of fate, William Riley, the Irish seaman who is charged with biting off the third part of a fellow seaman's ear on board the *Iranian*, will be put on trial in H.B.M. Court on the 17th instant, St. Patrick's day. The jury were drawn on Wednesday.

Quite a serious affray occurred in the harbour on Wednesday afternoon between some coal-lighter coolies and the crew of the *Admiral Nakhimoff*. The vessel was being coaled when the quarrel arose, and operations had to be suspended for a time. Some of the Japanese were badly handled.

Mr. Miyoshi Taizo, ex-President of the Court of Appeal, has resumed practise at the Bar. He will apply the whole of his earnings to starting a School of Correction in which young convicts will receive a technical education and older ones be induced by force of example to forsake their evil ways.

His Excellency Ng Choy, the new Chinese Representative to the United States, is coming up from Hongkong on the O. & O. steamer *Gaelic*, en route to Washington. His suite comprises sixty persons. What a metamorphosis for a "native writer" in the Supreme Court of Hongkong!

The Kanagawa Police report that the body of Mr. Robert Paneth, an Austrian, was found on Sunday morning, hanging from the verandah posts of the Azuma-ya, Sugita. Only the other day the unfortunate man was in Yokohama bent on a fruitless quest for work, a task he had been engaged upon ever since he came out here from Europe some months ago. Despair at his ill-success seems to have driven him to his last sad act. He will

be buried in Yokohama Cemetery by order of the Consul of Austro-Hungary.

The *Yomiuri* strongly supports the proposal that Marquis Ito should represent Japan as special ambassador to England during the celebration of the Queen-Empress's Diamond Jubilee. We do not think, however, that there is much chance of the Marquis' going. If Japan sends anyone, it will be an Imperial Prince.

For his services while attending upon H.E. Li Hung-chang during his tour abroad, says the *N.-C. Daily News*, the Emperor has conferred upon Mr. Detring the rank of a brevet civil premier button—*T'oung-ting-tai*—which only two other foreigners have had the honour of receiving, namely the late General Gordon and Sir Robert Hart.

Yesterday (11th instant), the town of Utsunomiya suffered severely from a conflagration. The fire had its origin in the neighbourhood of the prefectural offices and spread thence to the railway, ultimately leaping the latter, and running down both sides. It commenced at 3 p.m., and was burning fiercely when the train from the north passed through the smoke and sparks at 4 p.m.

The Government has made another issue of War Bonds, to the amount of six hundred thousand *yen*, the minimum price of issue being 99.04 *yen* per bond of 100 *yen*. This is the 19th issue made under the authority of Notification No. 3, by the Department of Finance, in 1895. The total sum contemplated by that Notification was 10 million *yen*, and the amount now issued is 6,327,500 *yen*, leaving 3,672,500 *yen* to be still issued.

The editor of the *Kwutsugan*, an Osaka journal, which appeared for the first time on the 2nd ult., was condemned on the 3rd inst. in the Osaka District Court to imprisonment with hard labour for six weeks, and ordered to pay a fine of 15 *yen*, for having libelled Colonel Ota, the commandant of the Osaka Military Arsenal. In its first number, says the *Kobe Chronicle*, the paper published a report alleging that the officer had received 20,000 *yen* as a bribe from Messrs. Favre-Brandt, and it was for making this false accusation that the editor has now been sentenced to imprisonment.

On the evening of the 3rd instant, Mr. Amenomiya Keijiro invited some friends to the Imperial Hotel and outlined his plan for the Oriental Iron Manufacturing Company, which he wishes to start with a capital of *yen* 27,000,000. He said he had no intention of obstructing the Government's scheme of establishing a foundry with a capital of 4,000,000 *yen*, for since the late war the demand for iron had greatly increased. Last year, 11,000,000 *yen* worth of iron had been imported into the country, and the import would not be less than 20,000,000 *yen* worth in 1897. It was his intention to manufacture rails and iron plates, so greatly needed now-a-days, and he hoped the Government would give a subsidy to the company corresponding to 6 per cent. on its capital.

The poets, writes "The Linkman" to "Lady Betty" in *Truth*, have a magnificent opportunity. On Sunday (January 22nd), one of the most ancient churches in England was destroyed by fire, to wit the Church of Sts. Mary and Lawrence, at Bolsover, in Derbyshire. The church was built early in the thirteenth century. The fire was discovered at three in the morning, and at a quarter to five, the flames, which had completely gutted the interior, enveloped the old tower which contained the bells and the clock. Whilst the oak beams were crackling, the sparks were falling like a shower of gold, and as the fierce flames enveloped the doomed tower, the faithful bells, at five o'clock, chimed for the last time. Having done their duty, even at the point of death, as they had done it for centuries before, they fell with a crash. The "Bells of Bolsover" should furnish a worthy theme for the poet, for the story is almost as pathetic as that of Casablanca.

The new Editor of the English department of the *Yorodsu Choho* has lately been delivering a series of lay sermons principally directed towards England and its people, and at times it is difficult to discover at what he is driv-

ing. In his latest effusion he forsakes the style of writing immortalised by the gentle "Elia," and takes a flight into those regions of emotional English in which Emerson shone so conspicuously. The article is headed, "England's Greatness," and reads:—

Thy greatness, O England, is not thy own making. Thou hast not stored for thyself coals in Lancashire and iron in Yorkshire. Thy commodious harbours of Liverpool, Bristol, Southampton, etc., were not digged by thee. The warm wind that comes from the west, and the fruitful rain which it brings are brought to thy shores by a power that is not thy own. Thou wast placed in the centre of the land-hemisphere, and the whole world turns towards thee. It takes the whole world to make thee great. Thou art the world's mart, and thy wealth is the world's.

Then, thy Laws, Literature, and Religion—thy too are not all thy thinking. What were thy Hobbes, Austin and Blackstone had there not been Cæsar and Justinian for thee? What were thy Milton and Shakespeare had there not been Æschylus, Horace, and Virgil who unwittingly wrought for thee? What were thy Wyckliff, Knox and Wesleys, had there not been Isaiah, Daniel, and Paul, who preached for thee? Rome, Greece, Judea, Phœnicia,—all contributed their parts to make thee great. Thou art the product of ages of human labour, from Abraham and Homer downwards.

The world demands from thee a service which is thy due. Thy fleet ought to be employed, not merely to protect thy interest, but to right the world's wrong. Thy pluck and skill ought to be freely given to help the helpless, to rescue the perishing. Japan, too, comes to thee not to beg help of thee, but to claim from thee fellowship of brothers, which is thy honour to give and ours to receive. In all our strifes of onward progress, great is our need of thy arts, thy laws, thy institutions, thy literature as well. Be thou queenly,—gracious, meek, and true,—and thou wilt surely win a sister empire in the Pacific. Attest thy greatness by larger service to man.

The *Kobe Chronicle* makes the following pertinent remarks regarding a topic of much interest to foreigners:—

We have had brought to our attention another instance of the difficulties which beset foreign merchants in dealing with Japanese traders. A quantity of matting of a superior quality was ordered by a Kobe firm last November, delivery being fixed at end of March. The order was duly acknowledged, but nothing more was heard until a few days ago, when a letter was sent to the Japanese manufacturer asking about the goods and expressing a hope that they would be up to time. Then, and not till then, the foreign firm was told, with the usual expressions of regret, that the matting had not yet been put in hand, and so could not be completed by the end of March, as the weavers to whom the order had been given out refused to undertake the better quality goods because the commoner stuff was very much easier to make. Of course, if the weavers find that the commoner qualities pay them better, they can scarcely be blamed for refusing less remunerative work, but in this particular instance the foreign firm, being more concerned regarding quality than cost, offered prices over and above the market quotations, in order that there should be no difficulty on this score. The important point is, of course, that the Japanese manufacturer, though perfectly well aware that he could not execute the order to time, took no steps whatever either to warn the foreign firm or to ask that the order should be cancelled. Instead, he allowed things to drift until the time for delivery approached, and it was only in reply to an inquiry on the foreign side that he informed his customers that the goods could not be made. The manufacturer in question is not a new man, but a solid, substantial Japanese merchant, who may be taken as being above the average, and yet, as will be seen, his methods are no whit superior to those of the struggling trader who may have some excuse for not executing his contracts because of want of money. Then again, there is the question of quality. Here is a case where the manufacturer deliberately allows common and inferior goods to be made because they involve less trouble than those of superior quality. The result is that the inferior goods are sent abroad, doing immeasurable harm to the country's reputation for quality, and injuring trade where the better quality goods might quite possibly have encouraged it. It is perfectly certain that methods such as these, which unfortunately are only too general, must have a very serious effect in checking the expansion of the country's trade, and are well worth consideration by Japanese Chambers of Commerce.

CORRESPONDENCE.

INFORMATION WANTED.

TO THE EDITOR OF THE "JAPAN MAIL"
SIR,—A few years ago Mrs. Tel (Teru?) Sono, a Japanese lady, raised a considerable sum of money in England and America to found an institution for women in Tokyo. Can you enlighten the public as to the present status of this institution?

March 1st, 1897.

MESSRS. BRETT AND COMPANY, LIMITED.

SEMI-ANNUAL MEETING.

A meeting of shareholders in Messrs. Brett and Company, Limited, was held on the premises, at No. 60, Main Street, Yokohama, on Wednesday evening. Mr. J. H. Bogg, Managing Director, presided, and was supported by Messrs. T. L. Brower, H. Z. Wheeler, G. Blundell, F. W. Thomas, E. Miller, C. H. Best, and T. Bachelor. Some little time elapsed ere a quorum was present, and then the formal business was announced by the Secretary reading the notice calling the meeting. After this the minutes of the last general meeting were confirmed.

The CHAIRMAN then presented the accounts for the past half year. He said—I do not know that I have any remarks to make upon them. As you know, no definite idea can be given of the state of the company without taking stock, and this is only done at the end of the year, in June. I can only say that, as far as I can see, the business has gone on satisfactorily. Business seemed to be about the same, and the aerated water business has increased considerably.

A question having been raised about the stock account.

The CHAIRMAN said he could give no idea unless he had an inventory. The amount of stock, \$15,000, was the stock of last year, with the addition of what had been purchased this year.

Mr. BEST (Secretary) said that at the end of the last financial year the stock was brought over at \$20,000, but at the corresponding meeting last year it was taken at \$18,000.

The CHAIRMAN—We have deducted from the goods' account the total amount of the sales, in which were all the profits.

The CHAIRMAN proposed and Mr. BLUNDELL seconded, the adoption of the report and accounts.

Mr. MILLER was of a contrary opinion. He thought a mistake had been made in calling the figures put before them a statement of accounts; it was merely a trial balance taken off the ledger. He saw \$3,000 was put down to working account, but that was misleading because shareholders might think there was a credit to working account of \$3,000. It was nothing of the kind. He supposed those were the expenses of the year transferred to working account. That was not an asset, though it was put down as an asset. The total of \$35,000 did not represent assets, the total of assets was considerably less. They had to take off, to begin with, the \$3,000 he had spoken of; and their stock was wrong by, he should say, at least \$6,000; their goodwill was merely a nominal asset; the fire insurance premium for 1897 was not an asset, and \$5,000 on profit and loss account could not be brought in as an asset for it was money lost.

The CHAIRMAN—It is a statement of accounts. Mr. MILLER thought that it was rather a trial balance.

A discussion then arose upon the point as to whether it would not be better to present only one balance sheet a year, but on referring to the Articles of Association it was found that this could not be done unless the Articles were altered, and this would occasion some expense.

Mr. MILLER said that they must not ignore their Articles of Association. Besides, he saw that their capital was given as \$28,000, less in hand \$5,000. They had not that \$5,000 in hand; it was written off.

The CHAIRMAN—It has not been written off. Mr. MILLER—It has been written off. I have with me the balance-sheet of last year where it is said to be written off profit and loss account. This shows a credit to profit and loss account and a debit to capital of the 500 shares. There is a credit of \$5,000, and capital was reduced to \$23,000.

The CHAIRMAN—That has been done to keep within the terms of the Articles of Association.

Mr. MILLER thought that it could not be brought in again so as to put the capital of \$28,000 less \$5,000 in hand. He did not speak at the last meeting because he thought some explanation would be forthcoming, but the Chairman had cer-

tainly laid the company open to a penalty according to the Hongkong Ordinances, for having reduced capital without the necessary formalities.

The CHAIRMAN—I think we are within the Ordinances.

Mr. MILLER—We are not. We have reduced our capital.

After some further discussion on the point between the Chairman and Mr. Miller,

Mr. WHEELER said he supposed the \$5,000, in hand, stood for the 500 shares forfeited by Mr. Watson. It represented the 500 shares of stock.

Mr. MILLER said the money had been written off profit and loss account.

Mr. WHEELER asked whether there was any cash received. These shares had been retired.

Mr. MILLER said that was the same as getting the cash. They reduced their debit balance by writing off these shares; the item was taken as a profit.

The CHAIRMAN said they only owed \$23,000 to the shareholders, instead of \$28,000.

Mr. WHEELER—If that \$5,000 was lost?

The CHAIRMAN—We would owe \$28,000.

Mr. WHEELER—Was that \$5,000 put in as profit?

The CHAIRMAN said it was written off the old loss of \$6,000.

Proceeding further, Mr. Miller said his contention was this:—That the liabilities were put down as far as capital was concerned at \$28,000, less \$5,000 in hand. Now that had to be altered. The Chairman had moved the adoption of the accounts. The meeting could not accept any such accounts, because, as a matter of fact, the \$5,000 was not in hand. It was written off profit and loss account last year. Nor was the stock correct; nor were the other matters he had mentioned before. He objected to this so-called account because it was not an account. It was merely a trial balance; and as a matter of fact the Chairman had not signed it because apparently he did not believe much in it.

The CHAIRMAN said those remarks, even if meant for the Press, as he supposed they were, were very ill-timed.

Mr. MILLER—Do you, Mr. Chairman, believe the account is correct?

The CHAIRMAN said he did. He was speaking of the statement of accounts.

Mr. MILLER—You believe the statement to be correct? Then you must believe every detail of it to be correct.

The CHAIRMAN—I am speaking of the figures.

Mr. MILLER—Then we will take your figures. There is stock, \$15,000; the goodwill you cannot take in because it is merely nominal; you have plant \$4,000; cash \$330; sundry debtors \$2,000; fire insurance is no asset—

Mr. WHEELER—Let me interrupt for a moment. If the \$4,000 for goodwill was a good asset in the purchase and floating of the stock, it certainly should be so now. I do not see how you can object to it now.

Mr. MILLER—It is merely nominal.

Mr. WHEELER—In all these companies it is very much nominal. There cannot, in my opinion, be any objection to that.

Mr. MILLER—We will take the goodwill, then, at \$3,000, and our total assets are \$25,000. Against that we have liabilities to shareholders of \$23,000. That leaves us \$2,000. We have outstanding debentures and sundry debtors \$12,500, which are supposed to be covered by \$2,000, and we are therefore \$10,000 behind according to this statement, which means that nearly half the capital has gone.

Mr. WHEELER said he came there with the idea that it was only a supposititious statement, and that there could be nothing definitely known about the real affairs of the company till a statement was made in June. He came prepared to move the adoption of a merely supposititious statement.

The CHAIRMAN asked if any one would second the motion of Mr. Miller.

Mr. BROWER, who thought some of Mr. Miller's remarks were a little uncalled for, said one remark was quite correct: the statement was only a trial balance for it proved nothing one way or the other. He did not think it was worth while to pass it except as a trial balance, and if Mr. Miller would move its adoption in that sense he would second it.

Mr. MILLER then moved "that the title of this document be altered from 'statement of accounts' to 'trial balance, 31st December, 1896' and that as such it be adopted by the meeting."

Mr. BROWER seconded. The Chairman, with Mr. Blundell's leave, withdrew his motion, and Mr. Miller's motion was passed.

Finally it was resolved to call an extraordinary general meeting in June at which the Articles of Association will be revised, in the sense of only one balance-sheet per year being presented. The Chairman announced that the cost of the alteration would be between \$200 and \$300.

KOBE AND THE DIAMOND JUBILEE.

Mr. John Carey Hall, H.B.M. Consul, took the chair at the meeting of British residents held in Kobe, on Friday, to consider the best methods of celebrating the Queen's Diamond Jubilee.

Mr. BAGGALLAY proposed, and Mr. ABELL seconded, the following resolution:—"That the Queen's Diamond Jubilee be celebrated by the British residents of this port in some suitable way; that the celebration take the form of an evening fête with entertainments of various kinds, illuminations, &c., as well as a special entertainment for children; and that all details be left to committees to be appointed by this meeting."

Mr. GROOM, in a short speech, proposed the following amendment, which Mr. REYNELL seconded:—"That instead of a local celebration, British subjects mark the sixtieth year of Her Majesty's reign by presenting the money that would thus be expended towards relieving those suffering from famine in India; further, that we telegraph our congratulations to H.M. the Queen on the completion of the sixtieth year of her reign."

Mr. DIMOCK inquired how much had been subscribed towards the Indian Famine Fund in Kobe? The CHAIRMAN said the amount according to the last advertisement was \$3,716, which he considered was a handsome subscription from Kobe, seeing that many of the firms had also contributed handsomely in Yokohama as well. Kobe had no reason to be ashamed of its subscription.—(Applause.)

For Mr. GROOM's amendment only 10 hands were held up, while for Mr. Baggallay's proposition there were 33.

The CHAIRMAN said his own opinion was entirely in favour of Mr. Baggallay's proposition. The occasion was a unique one, which as loyal British subjects they should not pass over. They were all proud of their Queen, her scatheless reputation as a woman and her constitutional career and conduct as a sovereign. The period of her reign had been a glorious one, a period of progress and prosperity for the British Empire, and in celebrating the Diamond Jubilee it would not merely be an expression of their loyalty but they would be asserting the sea-girt isle at the end of the sixty years as being still one of the great Powers of the world. Great Britain was not a military empire, but an essentially peaceful commercial, and pacific empire—(laughter)—forming a bond of union between diverse peoples in all parts of the world.

Several committees were then elected to superintend arrangements, and with them will be left the choice of day—May 24th or June 20th—for the celebration.—Condensed from the *Kobe Chronicle*.

KOBE WATER WORKS.

The Kobe Water Works were projected in the 25th year of Meiji (1892) for the purpose of supplying pure water to the city. The cost, at first fixed at yen 970,000, was afterwards increased to yen 1,150,000. In April, 1896, a charter was obtained from the Home Minister, and the Government promised a subsidy of yen 300,000. As time went on, the scheme was enlarged, arrangements being made to supply water to 250,000 persons. Then followed the remarkable rise in prices, and it accordingly became necessary to increase the estimates to yen 3,200,000. The step was decided upon by the Kobe Municipal Council in February last. The works were commenced this month.

As a first step, the raising of Loan Bonds for yen 970,000 was publicly announced in the foreign and Japanese papers. These Bonds can be held for three years, namely, during the course of the work; after that they will paid off by lottery, extending over a period of 45 years.

The plans of the work are as follows:—Water will be supplied to 250,000 people, but if the population increases to 350,000, then further extension will be possible.

The quantity of water supplied per day per individual is estimated at over 18 gallons. Though the idea is to utilize the streams of the Nunobiki, Saido, Tenwo and Karasubara, at present only the Nunobiki and Karasubara will be tapped. At the junction of these streams reservoirs will be constructed. The embankments are to be built of concrete, and filter beds are to be erected in the Settlement. In regard to fires, fire-plugs will be provided, and 1,200 gallons of water will always be at the disposal of the Brigades. When the works are completed, the rates of payment in the Settlement will be:—For 20,000 gallons per month, yen 4; over 20,000 gallons per month, a reduction of 20 sen per 1,000; when the use exceeds 100,000 gallons per month, a reduction of 12 sen will be made. Foreigners may subscribe for the loan bonds and may be registered as their holders.

THE "KANAGAWA MARU."

The *Kanagawa Maru*, the first of the new steamers ordered by the Nippon Yusen Kaisha, of Messrs. D. & W. Henderson, Meadows, Patrick, Glasgow, has arrived at Kobe, direct from Singapore. She made a good run out, says the *Kobe Herald*, to whom we are indebted for the following particulars. The *Kanagawa Maru* arrived in Kobe on the sixty-seventh day since she left Glasgow for Middlesboro. She has four pole masts and one massive funnel, and somewhat resembles the *Tosa Maru* outwardly. Her dimensions are:—Length, 463 feet; beam, 49 ft. 2 in.; depth 33 ft. 6 in. Built to the requirements of Lloyds 100 A1 class, the vessel is in every respect a fine addition to the N.Y.K.'s rapidly growing fleet. She is a twin screw steamer—both propellers are of manganese bronze—and has two sets of triple expansion engines, having cylinders of 20 in., 33 in., and 56 in., by 48 in. stroke. Steam is supplied by two large double-ended and two single-ended steel boilers, at a working pressure of 200 lbs. to the square inch. Everything in and connected with the Engine Department is of the latest type, the ship being fitted with Weir's feed-heater, pumps and evaporator, Murdoch's combination steam governor, Whitherspoon and Davies' feed filter, Baird and Thompson's patent steam ventilating system, an automatic steam ash hoist, etc., etc. Not a hitch occurred during the voyage out, everything working with the utmost smoothness from the time the ship took her departure from Glasgow to her arrival here. Designed as the *Kanagawa* is to serve as a passenger and freight steamer, there are not the numerous derricks, etc., about the deck to which we are now accustomed in the modern ocean-going steamer, but there appears to be ample provision for the rapid handling of cargo, there being no less than twelve of Clarke, Chapman & Co.'s winches on deck. The ship is fitted with Caldwell and Co.'s patent steam-steering gear, and Fastie & Co.'s hand-steering apparatus. Chadburn's telegraph gives communication between the bridges and engine-room, the poop and fore-castle, and there is a steam warping capstan on the poop. The electric light installation is from the works of Martin & Co., and is duplicated throughout, there being two sets of dynamos and engines. For making the passage of the Canal at night-time, the ship has a powerful search light of 10,000 c.p., and numerous portable cluster lights for working cargo at night.

The first-class passenger accommodation is amidships and is very comfortable, the staterooms being more than usually roomy. Under the poop are the quarters reserved for the second cabin passengers. The rooms of the officers, engineers, doctor, purser, etc., open off the alley-way in the large deck-house amidships on the promenade deck, on which deck are also the entrances to the saloon, etc. In this respect the *Kanagawa* resembles the P. & O. Company's intermediate liners. It is gratifying to note that the designers have shown no niggardliness in the amount of space allotted the men whose homes, for greater or lesser periods, have to be made on board. The ship is heated throughout by steam, and for the greater comfort of passengers in the tropics, all the air ports have Broadfoot's patent swivel scuttles. Pneumatic bells connect each room with the stewards' quarters. The ship has a large refrigerating chamber (Linde's ammonia system), and has on board now some of the fresh meat and provisions taken on board before leaving Scotland. No supplies of fresh provisions had to be procured en route. The officers speak highly of the *Kanagawa's* sea qualities. The Chief Engineer says she is one of the steadiest boats he has ever been in, scarcely rolling at all.

THE REBELLION IN THE PHILIPPINES.

It is officially stated, says the *China Mail*, that General Jaramillo, who was the first to assume the offensive, stormed the Tranquero fort, near Baybay, at the point of the bayonet, on the 13th February. Two killed and five wounded were recorded on the part of the troops. The Commander General of the squadron, assisted by the maritime guerrilla of Casino Espanol, simulated to disembark on Naie, which has been shelled, as well as Bacoar. The forces of Dalahican have made a demonstration over Noveleta.

Colonel Barraquier, with his column, on Feb. 15, marched to Pamplona, which, being strongly entrenched and armed, defended the right of the Zapote river. Two thousand rebels made a stand there, but Barraquier attacked them; after a hard struggle, the troops came into possession of the

entrenchments and the town. The combat lasted about four hours. Such was the frenzy possessed by the troops that in their pursuit of the enemy they descended the Zapote, and on the right bank of the river they cut down hundreds of the rebels. The troops sustained the loss of Lieut. Ruiz and 18 regulars killed, and Capt. Barquette, Torrez and Suarez, and 43 men wounded. Lieut.-Col. Albert, with his battalion, occupy Pomplona.

General Jaramillo writes from the field of operations that the fort Bignay, situate one kilometer to the west of Baybayungan, was shelled and taken, but not before a long and prolonged fire and a charge at the point of the bayonet. The artillery had to be transported by hand, and were for thirty hours without getting water. The troops lost seven killed; Commander Noguera, Lieut. Macias of the Civil Guard, and 28 men wounded.

On the 15th at daybreak, admiral Montojo resolved to leave Cavite with the *Cebu*, *Isla de Cuba*, *Elcano*, *Leso*, *Leyte*, *Samar*, *Foto* and *Buluan*, in the direction of Ternate. Once there, the vessels took their positions, anchored near the shore, in front of the enemy's entrenchments from Ternate to Noveleta. The *cottas* were observed to be filled up with people, firing a lantaca but the moment a shower of projectiles and grenades fell over them they disappeared from that position, and several white flags were seen. The squadron simulated to disembark, all the boats full of men reaching the shore, firing all the time, protected by the guns of the men-of-war. After this success the vessels left for Paranaque, covering the line up to near Bacoar. While this was being done the Commander of the *Cristina* signalled to the *Castilla* to "follow the movements" and opened fire over the entrenchments and the town of Bacoar and the surrounding places, directing some of the shells to Imus, and caused great damage. It was observed that some of the shells fell over the place where the rebels were most crowded, and numbers of women and men were seen running away from the danger. At midnight, when it was least expected, the *Reina Cristina* projected her electric light over the town and opened fire over Bacoar; the *Castilla*, *Isla de Cuba* and some others joining in the action.

On the morning of the 16th, at 9 o'clock, the vessels took their positions as directed by the Admiral (one of the vessels entering the river of Imus), together with all the armed launches of the *Cristina* and some from the *Castilla*. The fire enveloped all the known fortifications from the Pinas to the Cavite-viejo, and it continued for two hours.

The *Comerico* correspondent writes from Paranaque on the afternoon of Feb. 15, that Pamplona and the river Zapote have been taken and the troops are occupying the opposite shore of the river as well. In the encounter the enemy lost 360 killed, and the troops 40. General Polavieja and General Galvis ascended the top of the church of Paranaque at 8 o'clock in the morning to observe the operation, but the foggy state of the weather prevented anything being seen.

THE "STRATHNEVIS."

It will be seen from the subjoined letter from Messrs. John Poole & Sons, of Lloyd's, that the underwriters have handsomely recognised the services of the Captain, officers, and others of the steamer *Strathnevis* after that vessel lost her propeller in the North Pacific:—

Lloyd's, January 16th, 1897.

Captain J. PATTIE, Dear Sir,—We have the pleasure of handing you cheque for £255 (to be divided as annexed) which has been subscribed by the underwriters as a token of their high opinion and appreciation of your, and your officers' services in endeavouring to bring your disabled steamer, *Strathnevis*, into port under very exceptional circumstances. The underwriters have retained £35 to purchase a watch for you, or any other article which you may suggest as a more enduring record of your exertions. They are also sending £30 each to the 3rd officer and the purser, who are now in China.

We are, dear Sir, Yours faithfully,

JNO. POOLE & SONS.

Captain J. Pattie	£100 and £35 watch.
1st Mate, D. M. Robertson	50
2nd Mate, W. McFarlane	25
1st Engineer, J. Rose	50
2nd Engineer, A. Bell	10
3rd Engineer, L. Colter	10
4th Engineer, J. Love	10

Cheque herewith

3rd Mate, A. B. Bain

Purser, R. McDonald

Watch for Captain

Amount Subscribed ... £350

SPECIAL TELEGRAM.

[From the Secretary of the General Government to the Spanish Minister in Tokyo.]

REBELLION IN THE PHILIPPINES.

Manila, March 8, 6.13 p.m.
Yesterday, the 7th instant, Salikan was captured by our forces. The loss on the side of the insurgents was heavy. Our casualties were, 10 killed and 30 wounded.

PRESIDENT MCKINLEY'S POLICY.

Washington, March 9.
In his Inaugural Address, the President of the United States recommends the early adoption of increased Customs duties, with the view of protecting American interests and labour, and of obtaining a larger revenue. He also announces that no effort will be spared on the part of the Government to secure international bimetallism, and that, in the meanwhile, every endeavour will be made to maintain parity between gold and silver in the United States. An extraordinary session of Congress will be convened for the 15th of March.

THE CRETAN CRISIS.

London, March 8.
On March 2nd the Powers demanded that Greece should withdraw her forces from Crete within six days. Greece, however, replied politely on the 8th that the autonomy granted to Crete would not answer the purpose and that the presence of Greek troops was necessary for the pacification of the Island. The future action of the Powers is uncertain. They may resort to a pacific blockade.

LATEST TELEGRAMS.

[SPECIAL TELEGRAM TO THE "JAPAN MAIL."]
KOBE AND THE DIAMOND JUBILEE.

Kobe, March 5, 6.35 p.m.
A largely attended meeting of British residents was held at the Municipal Hall this evening in accordance with a public notice issued by J. Carey Hall, Esq., Her Britannic Majesty's Consul. It was announced that St. George's Hall had been abandoned, and the meeting then decided to celebrate the Queen's Diamond Jubilee by an evening illuminated fête. In connection with the fête various entertainments will be organised, and in preference to subscribing a further amount for the Indian Famine, a special entertainment will be given for children.

[FROM THE "JAPAN GAZETTE."]
GREECE AND THE POWERS.

London, March 10th.
The Admirals of the squadrons of the Powers in the Levant have prepared a plan to coerce Greece by blockading the Greek ports and the Cretan coast.

Greece, in reply to the Collective Note of the Powers, deprecates the proposal for Cretan autonomy and urges the Powers to let the Cretans decide upon the nature of the reform of the Government.

[SPECIAL TO THE "KOBE CHRONICLE."]
HOSTILITIES RESUMED IN CRETE.

Nagasaki, March 8.
A Reuter's telegram states that Greece has sent a reply to the Collective Note of the Powers, refusing to evacuate Crete. Hostilities have been resumed and further trouble is expected.

[FROM THE "N.-C. DAILY NEWS."]

London, February 27.
Lord Salisbury has sent a despatch to the Foreign Cabinets embodying the policy of the Government, namely, that Crete shall be autonomous, but shall remain a portion of the Turkish Empire, and that if Turkey and Greece refuse, when required, to withdraw their forces, the Powers will impose their decision by force. The despatch further states that Lord Salisbury believes that these proposals are in accord with the views of the Powers, and he explains that it is not necessary for the Turks to withdraw from Crete immediately, but they will have to with-

draw ultimately, all except a handful of troops as a mere indication of sovereignty.

London, March 1.
Russia, Austria, and Germany are urging that a peremptory note be sent to Greece, threatening immediate drastic measures, including the blockade of Greek ports, unless the Greek forces are withdrawn from Crete.

The other Powers, while equally desirous to see the policy of the Concert of Europe promptly executed, desire to approach Greece more moderately, so as to enable her to give way without seeming to yield to compulsion.

London, March 2.
The Right Hon. G. N. Curzon, Parliamentary Secretary for Foreign Affairs, stated in the House that the British Consul-General reports that Russian officers are drilling Korean troops, but this is hardly consistent with the Russian pledge.

London, March 3.
The Powers have presented a Collective Note at Constantinople identical with that presented at Athens, declaring that Crete is autonomous under the suzerainty of the Sultan, and demanding that the Greek forces shall evacuate Crete within six days.

Speaking in the House of Lords, Lord Salisbury said that the Powers agreed with the British proposal except as regards the withdrawal of Turkish troops from Crete.

The Right Hon. G. N. Curzon, Parliamentary Under-Secretary for Foreign Affairs, speaking in the House of Commons, said that the union of Crete with Greece was impossible in the face of the present attitude of the Powers.

The Naval Programme for this year allows for the building of fourteen new ships including four battle-ships, and increases the personnel of the Navy by six thousand men.

The column sent by the Niger Company has captured Ilorin.

London, March 4.
The Collective Note appeals to the wisdom of Greece not to resist the resolutions of the Powers, who will not hesitate to take any coercive measures to enforce the evacuation of Crete. It is generally expected that Greece will refuse to comply.

London, March 5th.
The Greek Press are unanimous in urging the Government to reject the Note sent by the Powers.

The Greek Minister for War has resigned owing to the rejection of his advice to send reinforcements to Crete.

The Metropolitan of the Greek Church at Athens has wired to the Archbishop of Canterbury beseeching him to raise his voice in the name of Christ on behalf of the Cretans.

A number of Italian volunteers for Crete have arrived at Athens.

The Porte insists upon an Ottoman subject being Governor of Crete.

[FROM NATIVE CORRESPONDENT OF THE "N.-C. DAILY NEWS."]

Pekin, February 26.
The Emperor has sanctioned the Imperial Bank of China under the following conditions, as recommended by the Tsungli Yamén's report on H.E. Sheng Hsuan-huai's memorial on the above. Name in China to be, "Imperial Chinese Bank of International Commerce," but in Europe and America—where there will be also branch offices in the capitals of the principal Powers—the name will simply be the "Imperial Bank of China." Capital to be Tls. 5,000,000 with power to increase. Only half is required at the commencement. Of this H.E. Sheng, who is also to be President of the Board of Directors, guarantees Tls. 1,000,000 to be subscribed by shareholders in the China Merchants' and Chinese Telegraph Administration. The rest of the Board of Directors, (to be twelve in number) will guarantee another Tls. 1,000,000. The balance of Tls. 500,000 to be offered in the principal cities of the Empire and to be subscribed by Chinese only. The Head Office is to be in Shanghai, and will have at least three Managing Directors, and will be opened at the same time as the Branch Office in Peking—early next April. The Hongkong and Shanghai

Bank will be the model of the new Bank and there will be a large and responsible staff of foreigners, in the Treaty ports and foreign capitals. The Bank will be given the privilege of issuing notes, coining money, investing government deposits, and transmitting taxes from the interior to Peking. After paying interest at the rate of 8 per cent. per annum to shareholders, a certain proportion will be paid in the shape of bonus to Directors, and staff, and to form a Reserve Fund. Of the balance, 20 per cent. will be paid as royalty to the Government in return for protection and the above privileges, and 80 per cent. divided among the shareholders. Prospectus of Bank to be published in March, and three months after that date will be allowed for people in the interior to apply for shares, and six weeks for people in Shanghai.

[FROM THE JAPANESE PAPERS.]

Nagasaki, March 10.
The Russian steamer *Baital* leaves this for Vladivostok this evening on her first trip.

Kobe, March 10.
Rear-Admiral Inouye, Commandant of the Kure Port Admiralty, came here to-day and inspected the Kawasaki Shipbuilding-yard. Tomorrow he will inspect the port.

Hiroshima, March 10.
Mr. Burton, of the Home Department, and staff called here to-day on the *Kokura Maru* en route to Formosa.

Utsunomiya, March 11.
Fire broke out at 4 o'clock this afternoon in this town and several dozen houses were destroyed.

Matsuyama, March 11.
Small-pox cases in this Prefecture up to the 10th inst. totalled 149.

Nagasaki, March 11.
The British man-of-war *Archer* has left for Hongkong.

Sapporo, March 11.
An explosion of gas occurred at the Yubari Coal Mine, Hokkaido, to-day and four persons were killed, ten others being severely injured.

Hiroshima, March 11.
The Match Factory at Ote-machi caught fire at 1 a.m. to-day and was totally destroyed.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

STEINITZ-LASKER MATCH (GUNSBERG)
CONCLUSION.

The play in the last game may be taken as an excellent example of Lasker's best style. He shows, as indeed every other great player has done, remarkable independence of stereotyped play in the openings. Whenever the friends of a great player seize on any particular series of moves, and because they have been successful declare those moves to constitute the only and royal road to success in that particular opening, the great man laughs in his sleeve, and on the very next occasion when he thinks it necessary he will adopt a diametrically opposite line of play and drive a coach and four through every analysis based on his own previous play. These are the noteworthy attributes of originality. Lasker did the same in the last game by not playing P to QB 4, but contenting himself with P to QB 3. We have no hesitation in saying that any original player will find twenty different ways how to treat this opening in order to embark on the middle game with a fairly even chance. This Lasker did, and with his customary caution he remained behind his lines, contenting himself with deploying his men in such a way that on both wings he should be ready to rush into his opponent's lines on a favourable opportunity presenting itself. Lasker finally won the game in an artistic way, winning the match with the final score of 10 wins, 2 losses, and 5 draws.

59—K to Kt 2	59—Kt to R 5 ch.

And White resigned the game and the match.

Altogether, Lasker and Steinitz have played 44 games against each other. Lasker's wins are in the ratio of about 3 to 1 to Steinitz's as the following analysis shows:—

	Lasker's won.	Steinitz's won.	Dr'n.
First match, United States, 1894.	10	5	4
Hastings masters's tournament, 1895	1	—	—
St. Petersburg quadrangular tournament 1895	3	1	2
Nuremberg masters' tournament 1896	1	—	—
Last match, 1897	10	2	5
	25	8	11

Commenting on the last match, Mr. Leopold Hoffer, in the "Field," says:—"Taking any of the series of games played, and comparing the styles of the two players, it will be found that in Lasker's arrangement, whether as first or second player, his forces seem animated. Every single piece has functions, and performs the task assigned to it in the general plan, which embraces the entire battlefield. The forces are arrayed in strategically favourable positions, each one ready to hand when and where wanted. The opposing forces have no cohesion, whilst the absence of a general plan is felt. There are isolated assaults upon apparently weak spots; but it turns out invariably that the enemy was sufficiently prepared to defend them, and in beating off these abortive sallies replies with an effectual counter-attack. In short, it is good generalship opposed to bad generalship.

Steinitz has had his day; he was in the proud position of the most successful match player for a longer period than any other player before, or during his time, and he must submit to the inevitable fate of yielding the sceptre to younger hands, as Andersen and others were compelled to do in the height of their ascendancy."

GAME No. 673.

KINGS' GAMBIT DECLINED.

WHITE. (Schallopp.)	BLACK. (Blackburne.)
1—P to K 4	1—P to K 4
2—P to K B 4	2—P to Q 4
3—K P takes P	3—P to K 5
4—P to Q 3 (a)	4—Kt to K B 3
5—P takes P	5—Kt takes K P
6—Q to K 2	6—P to K B 4
7—P to K Kt 4	7—B to K 2
8—B to Kt 2	8—Q takes P
9—Kt to Q 2	9—Q to Q R 4
10—B takes Kt (b)	10—P takes B
11—P to B 3	11—Castles
12—Kt takes P	12—Kt to B 3
13—P to B 5	13—B to R 5 ch.
14—Kt to B 2	14—B takes P
15—P takes B	15—Q R to K sq.
16—B to K 3	16—B takes Kt ch.
17—Q takes B	17—R takes P
18—Q to Q 2	18—Kt to K 4
19—P to Kt 4	19—Q to Kt 4
20—P to Q R 4	20—Q to B 8 mate.

(a) A variation introduced by Charousek against Pillsbury.
(b) Charousek played here the right move, so—P takes P, and Pillsbury replied so—Kt to K B 3. It was found upon analysis afterwards that so—Kt to Q 3 is the better move. White's next move is fatal; the Bishop being necessary, and in an attacking position. The rest of the game is suitably played by Blackburne; but the opening is useful from a theoretical point of view.

GAME No. 674.

From the New York Tournament, 1889.

10—Q to K 4 (c)	10—B to K 3!
11—Kt takes P	11—Kt takes Kt
12—Q takes Kt	12—Kt to Kt 5
13—Castles (d)	13—Kt takes Q P
14—Q to R 5	14—B takes B
15—P takes B	15—R to K sq!
16—Kt to Q 2	16—Q to K 2
17—P to Q Kt 4	17—B takes P ch. (e)
18—K to R sq.	18—Q to K 8!
19—P to R 3	19—Kt takes B (f)
20—R takes Q	20—R takes R ch.
21—K to R 2	21—B to Kt 8 ch.
22—K to Kt 3	22—R to K 6 ch.
23—K to Kt 4 (g)	23—Kt to K 7!
24—Kt to B sq. (h)	24—P to Kt 3
25—Q to Q 5	25—P to R 4 ch.
26—K to Kt 5	26—K to Kt 2
27—Q takes R	27—P to B 3 ch. (k)

and Black mates in two moves.

(a) White should castle soon where this mode of defence is adopted and play P to Q 4 in preference to P to Q 3. The defence was a favourite with the unequalled Paul Morphy, and is in reality a counter attack of considerable force. It is unsafe for the first player to reply on the prospective weakness of his adversary's Queen's side pawns in the ending.

(b) It would be better to Castle.
(c) A h s-r-dous and misguided attempt to secure the pawn.
(d) It is scarcely too much to say that White is virtually lost from this point. He should take the Knight. Then if B takes Pch; 24—Kt to B 3, B takes B; 25—Castles, and he would still have a game to play.

(e) White's difficulties accumulate. Evidently 18—R takes B would lose the exchange at the very least, as if the two pieces were taken for the Rook, mate would follow in two moves.

(f) Black conducts all his operations with great skill. He must get more than an equivalent for the Queen if White refuses to go out and face the chance of mate at move 24, as in that case the Knight would be lost by 25—B to K 6 ch. Afterwards the doubling of the Rooks would soon prove decisive.

(g) Interposing would be no better, e.g. 35—Kt to B 3, Kt to K 7 ch; 34—K to R 4, R to K 3 ch; 35—P to Kt 4, B to B 7 ch and mate in two. White is in the toils and has no escape from mate or loss of his Queen.
(h) If 24—B takes R, R to Kt 6 ch; 25—K to R 4, P to Kt 4 ch, and Black would come out a Rook to the good.
(i) This was one of the most brilliant specimens of defence to the *Lepe* produced in the tournament. The Austrian master seems to have been taken wholly by surprise, from which he failed to recover until his game was beyond remedy.

Wm. Law, British ship, 1,631, Abbott, 28th February,—Middlesbrough 17th October, Coke and Pig Iron.—To Order.

LATEST COMMERCIAL.

IMPORTS.

A further drop in exchange and a rise in Raw Cotton has induced some business in Manchester goods at better rates. Yarn—Some business done all round at advancing prices, chiefly in 2-fold gassed, and 2/42 plain. Shirtings—A few spot sales have been made in addition to forward business. Fancies—Quiet, the only thing moving is T-reeds, and that to only a small extent. Woollens—Dull, with nothing doing.

COTTON PICK GOODS.

JAPANESE AND LOCAL SHARE LIST.

[Messrs. Bisset & Ure's Corrected List.]

LOCAL SHARES.

Yokohama, March 6th.

Mail advices from Hongkong dated the 26th ultimo report the following business done since the 24th:—Olive Mines A Shares have been sold at \$5 and B Shares at \$2.50. H. & S. Banks have changed ownership at 179 per cent. for 30th April and at 175 per cent. for cash; there are further sellers of cash shares. Hongkong Fires have been placed at \$400 and were offering. China Fires fetched \$109 ex dividend. Straits were booked for 31st inst. at \$29 and at \$28.75 for cash. Cantons realized \$187.50 but were on offer, \$145 was paid for China Sugars. Docks changed hands 234/236 per cent. for cash and at equivalent rates on time. A few Hongkong Lands were wanted at \$76.50. H. C. & M. Steamboats had buyers at \$34.25 at which rate business was done. Indo-Chinas again fetched \$47.

By wire received from Hongkong to-day, we are informed China & Manilas are wanted at \$75 and China Sugars are offering at \$148.

Yokohama, March 8th.

E. & I. Works.—A small lot of these are obtainable at \$135. Breweries.—Shares in this Company continue in demand. Business has been done during the week at \$305, but higher rates are demanded. Grands—A small forced sale at \$195 is all the business we have to report; there are strong buyers at this rate. Langfeldts.—A considerable business has been effected at \$195. At this rate a few shares are obtainable. Club Hotels.—Business has been done at \$67.50, and offers are wanted for shares. Oriental Hotels have buyers at \$140. Bretts.—Obtainable at \$8. In Debenture stocks, Y.U. Clubs are enquired for, and Breweries and Club Hotels have been dealt in at \$110.

Yokohama, 10th March.

The following quotations have been wired to us from Hongkong to-day:—H. & S. Banks have declined to 171 per cent. premium, at which rate there are sellers; Hongkong Lands have further advanced to \$77, at which rate shares are wanted; China Fires are in demand at \$109. H. & K. Wharfs at \$59, Doughlasses at \$61.50; Hongkong Fires at \$395, whilst H. & W. Docks are offering at 247 per cent. premium; H. & M. Steam Boats at \$35; Panjom Mines at \$10.50; Nationals at \$25; Indo-Chinas at \$48; Straits at \$28; and Traders at \$79.50. Raub Mines and Unions are quoted strong at \$9 and \$235 respectively, but a small line of the former could be secured at \$9.

The Yangtze pool having been arranged, there is an impression in some quarters that there is room for Indo-Chinas to strengthen. But so far the effect has been chiefly on H. C. & M. Steamboats.

We have to report business in Raub Mines from Hongkong at \$16.50; and in H. & K. Wharfs to that port at \$58 and in Shanghai Engineering Shipbuilding and Docks to Shanghai at 44.50.

Local stocks remain unchanged. Iron Works are on offer at \$135. Club Hotels at \$67.50; Bretts at \$8, and Club Hotel Debentures at \$110. Breweries are still enquired for at \$305. and North & Rae's at \$160. A few Langfeldts can be had at \$195 and Grand Hotels at \$197.50; but buyers are firm in their offer for the latter at \$195.

Yokohama, March 11th.

We have to point out an error that crept into our yesterday's report. Raub Mines were quoted strong with a few shares offering at \$9; but the rate should have been \$16. At this rate shares were purchased to-day from Hongkong.

The following quotations were received by wire from Hongkong to-day:—H. & S. Banks 171 per cent. Sales; Hongkong Land \$77 Sellers; China Fires \$108.50 Sellers; H. & K. Wharfs \$60 Sales; Douglasses \$10.50 Buyers; H. C. & M. Steamboats \$35 Sellers; Punjom Mines \$16 Buyers; Hongkong Fires \$305 Buyers; National Banks \$25 Sellers; Indo-China \$47.50 Sellers; Straits \$29.50 Sellers; Unions \$335 Steady and Traders \$70.50 Sellers. It will be noticed from the above that there has been no perceptible change in quotations, excepting H. & K. Wharfs, but the tone of the market seems weaker, with sellers ruling nearly every stock. This weakness can safely be attributed to the decline in H. & S. Banks, on which stock much of the upward or downward tendency of rates of nearly every Hongkong stock depends.

In local stocks there is no change to report. Club Hotels are offering at \$67.50, Club Hotel, Debentures at \$110 and Bretts at \$8. Grand Hotels are wanted at \$195. Breweries at \$305. Oriental Hotels at \$10 and North & Rae at \$160.

Yokohama, March 12th.

The only thing to report upon in the local share market is a transaction in Langfeldt's at \$195.

ITCHING SKIN DISEASES

Instantly
Relieved by
CUTICURA

A warm bath with CUTICURA SOAP, and a single application of CUTICURA, the great skin cure, followed by mild doses of CUTICURA RESOLVENT (the new blood purifier), will afford instant relief, permit rest and sleep, and point to a speedy, economical, and permanent cure of the most distressing of itching, burning, bleeding, scaly, and crusted skin and scalp diseases, after physicians, hospitals, and all other methods fail.

Sold throughout the world. British depot: F. NEWBURY & SONS, 1, King Edward-st., London, E. C. POTTER DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U. S. A.

Women and Women Only

Are most competent to fully appreciate the purity, sweetness, and delicacy of CUTICURA SOAP, and to discover new uses for it daily. In the preparation of curative washes, solutions, etc., for annoying irritations, chafings, and excoriations of the skin and mucous membrane, or too free or offensive perspiration, it has proved most grateful and comforting. Like all others of the CUTICURA REMEDIES, the CUTICURA SOAP appeals to the refined and cultivated everywhere, and is beyond all comparison the most effective skin purifying and beautifying soap in the world.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomed to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Uncertain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing and curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, MAR. 20TH, 1897.

BIRTH.

On the 12th inst., at 16 Tatsuocho, Hongo, Tokyo, the wife of Rev. H. H. COATES, of a son.

SUMMARY OF NEWS.

THE Sendai School strike has terminated.

THE House of Peers has passed the Press Law Amendment Bill.

MR. OZAKI, ex-Governor of Gifu Prefecture, has been declared bankrupt.

AFTER a week of spring-like weather, snow fell again in Yokohama on Friday.

A KOREAN Government Commission has been appointed to draw up a Constitution.

THE Queen of England, on her way to the Riviera, will have an interview with President Faure.

FOREIGN residents of Tokyo and neighbouring districts at the end of last year totalled 628.

A MEETING has been held in Hyde Park, London, to protest against the coercion of Greece.

THE rumour that Mr. Kurino, Minister to Italy, will shortly return home, is utterly without foundation.

MR. YANO FUMIO, who was appointed Minister to China, will leave the capital for his new post early next month.

ABOUT 130 houses were destroyed in the conflagration that occurred at Utsunomiya on the afternoon of the 11th inst.

ACCORDING to a telegram despatched by the Japanese Consul at Singapore, the authorities

of the Straits Settlements have notified that Moji is an infected port.

THE order for the despatch of the Suffolk Regiment to the Cape of Good Hope has been suddenly cancelled.

H.I.H. THE CROWN PRINCE returns to the capital from Numadzu on Monday, should the weather prove favourable.

It is reported that Colonel Fukushima left Bangkok for the lower portion of the Malay Peninsula on the 3rd instant.

BARON HAYASHI, the new Minister to Russia, and Mr. Ochiai, will leave for Russia by the French steamer *Salasie* on the 4th of April.

Two Commissioners will represent Japan at the International Postal Union Congress, to be held at Washington, United States in May.

ABOUT ten o'clock on Saturday night fire broke out at No. 5, Shiiori, Yokosuka, and over one hundred houses were burnt to the ground.

THE athletic sports of the Yokohama Boyekisho Seinen Kai (Yokohama Young Men's Trading Association), will take place on the 4th of April.

THE Budget Committee of the Reichstag has rejected the proposal for an outlay of 12,000,000 marks for the construction of new men-of-war.

THE two Houses of the Diet have agreed to a compromise with respect to some amendments introduced in the Budget by the Upper House.

FROM the 21st of May next the 15th National Bank will resume business as the 15th Joint Stock Bank. Mr. Yamamoto Naonori is the new manager.

ON Monday evening a train on the Iyo Railway Company's line Iyo Province, was derailed near the Kinuryama tunnel. Four passengers were injured.

A SPECIAL meeting of the Iehikawa-jima Ship-building Yard will be held on the 27th inst., when the present capital, yen 500,000, will be increased to yen 1,000,000.

RUMOUR is afloat that Vice-Admiral Baron Ito, Vice-Minister of the Navy, will resign on account of ill-health and Rear-Admiral Yamamoto Gombel will succeed him.

THE steamer *Seiko Maru*, of the Hiogo Seiko Kaisha, that left Kobe on the 5th inst. for Tientsin with a cargo of matches, caught fire off Eijo-wan, China, on the 9th inst.

IN regard to the Formosan Budget for the thirtieth fiscal year, a reduction of about yen 600,000 has been made, and instead of four Prefectures, there will only be two.

THE suggested alteration of the boundaries between Chiba Ken and Ibaraki Ken was approved by the Lower House the other day, and the bill will be handed to the Upper House at once.

THE centenary of the Kaiser Wilhelm I. will be celebrated by the German community in Yokohama on Sunday and Monday with a picnic to Omori and a reception on the German flagship.

THE 14th instant being the 53rd birthday of the King of Italy, the Foreign Ministers, the Ministers of State, and other officials proceeded to the Italian Legation and offered congratulations.

REUTER'S telegram relating to the statement of the Right. Hon. Geo. N. Curzon, Parliamentary Secretary for Foreign Affairs, in the House of Commons, upon the subject of the Russian

officers drilling Korean troops, is wrong. Mr. Curzon stated that the fact does not appear to be inconsistent with Russia's pledge.

THE 20th of April being the 100th day since the death of the late Empress Dowager, T.I.M. the Emperor and Empress will leave the capital about the 10th of next month for Kyoto to attend special services.

THE new Treaty concluded between Portugal and Japan was received by the Foreign Department several days ago. The translation into Japanese being nearly finished, it will be presented to the Emperor shortly.

It is understood that the Right Hon. J. Chamberlain, Secretary of State for the Colonies, has strongly protested against the "Transvaal Aliens' Act," as being a violation of the Convention between Great Britain and the Transvaal.

ON Monday morning the Commandants of various Army Divisions who have been summoned to the capital to take part in the military conference, proceeded to the Imperial Palace and were received in audience by the Emperor.

ACCORDING to a semi-official report in Vienna, Russia, Germany, and Austria have given instructions to their respective Admirals in Crete to blockade the coast of Crete and the Grecian ports. England, Italy, and France are likely to follow the example.

MR. ONISHI IYO (aged 52) of Iyo-gun, Ehime Ken, was murdered by his eldest son Tatsukichi (aged 29), with an axe, on the night of the 13th inst. He was sleeping at the time. The tragedy originated in the father's refusing to supply money to the son.

A TERRIBLE gun-accident is reported from the Island of Crete, whereby 17 lives have been lost and 20 men severely injured. The Russian steel, armoured barrette ship, *Sissot Veliky*, was at target practice outside the harbour of Suda, Island of Crete, when one of her guns exploded.

THE Chinese Government has appointed H.E. Chang Yin Huan, Vice President of the Board of Revenue, to proceed to England as a Special Ambassador to represent the Emperor of China at the Diamond Jubilee Celebrations of Her Majesty the Queen. His Excellency Chang has memorialised the Throne for the services of H.E. Taotai Chun Oi-ting, Manager of the Chinese Mining and Engineering Company at Tientsin.

A DULL, dreary week has been experienced by importers by reason of the continued fall in the value of silver. Although buyers profess to believe that the lowest point has been reached in exchange and that a rebound is near at hand, they still hold off. In consequence, sales are reduced to the minimum and a spirit of doleful discontent prevails in importing houses. A dull market is reported in metals, due to the same cause—the collapse of exchange—and the prospect is considered to be very gloomy all round. Kerosene is weak, in spite of the drop in exchange; and there have been large arrivals during the week. A fair business has been done in brown sugars at late rates, and for whites there is the usual demand for the time of year, at full rates. In regard to the Silk trade, the Raw market is very brisk with prices all on the rise. Dealers are clearing off stocks at remunerative prices, and it is thought that this will soon tempt Spring realings from the interior. Waste has seen a moderate business, and prices are well sustained. The season is over for Tea, and everyone is now anxious for Spring weather to induce garden musters of new leaf.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The subjects discussed by the vernacular press during the week are numerous and varied. No one topic has occupied journalistic attention to the exclusion of others. It might be supposed that a matter of such large national importance as the passage of the new Coinage Bill by the House of Representatives would have been generally and earnestly discussed. But Tokyo journalists appear to have made up their minds that little more need be said on that subject. At all events they devote very little space to it during the week under review, either being reconciled to the inevitable, or having exhausted the criticisms that presented themselves.

The policy adopted by Viscount Tani and his followers in the House of Peers seems to be reflected by a party of politicians outside the Diet. Their views find expression in the columns of the *Nippon*, and are enunciated in the forcible terms habitual to that journal. Starting with a query as to what the present Cabinet has done or contemplates doing to differentiate itself from its predecessor, the *Nippon* finds that the procedure of both Cabinets is equally disfigured by the same defect, namely, the dominance of the military element. One salient consequence of the absence of equilibrium between the civil and the military influences is that the country has been committed to a programme of warlike expansion distinctly out of proportion to its resources. For the inception of that programme the Ito Cabinet was responsible; but for its continuation the Matsukata Cabinet must accept the blame. It is true that Count Matsukata pleaded want of time as an excuse for making no departure from the extravagant lines mapped out by the Ito Ministry. But such an excuse has no real validity. The truth is that in both Cabinets alike the military element holds sway, and the question of expanding the empire's belligerent capacities is placed far above the question of husbanding and developing the country's material resources. Four years ago, before the war broke out, Marquis (then Count) Ito, introducing in the Diet a programme of Naval increase striking enough as compared with existing conditions, laid down the principle that a nation's expenditure for non-productive purposes, as the army and the navy, should not exceed one-third of its income—from one-fourth to one-third, that was the limit indicated by the financial history of Western countries. The principle thus enunciated by the Premier found general approval among the public. Two years later, the same Marquis Ito stood up before the nation, and proposed that the State should devote three-fifths of its revenue to military and naval expansion. What had become of the limit so confidently laid down in 1893? It seemed to have been completely forgotten in 1895. And how was it that a Diet which in 1893 accepted and endorsed that limit, agreed without demur to depart from it by a hundred per cent. in 1895? The explanation is that the Ito Cabinet was under the sway of its military and naval members, and that the Diet allowed itself to be swept off its feet by clamours about *sengo no kisei* (post bellum measures). Therein lay the great fault of the Ito Cabinet, and the Matsukata Cabinet has accepted the legacy of error and is living up to it, not because there was no time to plan a departure, but because the same influences dominated the new ministry. Of course, it is not to be denied that the Matsukata Government shows some improvement. Its attitude towards the question of freedom of speech is distinctly praiseworthy. The amended project of press law that it introduced left much to be desired, but, on the other hand, it has declared its willingness to accept the amendments of the Representatives provided that they obtain the endorsement of the Peers. The Peers have always proved a stumbling-block in the path of reform. Yet they can be amenable enough

when there is question of obeying the Government's behest, as is instanced by their conduct in the matter of the amended Civil Code, which they passed after an examination scarcely long enough for a cursory perusal of its articles.

At this point the *Nippon* diverges into a strong attack upon the action of the Ito Cabinet with regard to the Civil Code. It has discovered, by some unexplained process, that the Civil Code extends the privileges of foreigners, and it indignantly criticises the fact that, whereas the House of Peers showed the utmost complaisance in passing the amended Code as well as huge expenditures for the expansion of national armaments, it has invariably set its face against the extension of liberty of the press and the abolition of laws that impose undue restraints upon the personal freedom of Japanese subjects. The whole question of the Civil Code inspires the Chauvinist journal with deep indignation. In other countries a Civil Code is allowed to lie before the nation for years prior to its enactment as the law of the land. Men are given every opportunity of familiarizing themselves with its contents before the Legislature is asked to pass final judgment on it. But in Japan the Code may be said to have been rushed through all the stages of compilation and enactment with breathless haste, if not with absolute secrecy. The Ito Cabinet promulgated it as law just before the opening of the Diet, expressly, it would seem, to keep it beyond parliamentary purview; and finally, after the Diet had interfered to prevent such undue haste, and after a species of revision had been effected, Treaty Revision was used as a spur to drive the two Houses to pass the Code without any practical attempt to examine it. The *Nippon* dilates upon this hackneyed topic, and tries to convict the present Cabinet also of subverting national to international interests in connexion with the Code. For when Mr. Motoda Hajime had introduced in the Lower House a proposal to amend the second article of the Code, in the sense that foreigners should be eligible, not for all privileges conferred by the Code other than those specially interdicted, but only for privileges specially conferred, a Minister of the Cabinet is said to have invited the leading members of the Houses to Waseda, and explained to them the unwisdom of such a change. It is apparent to the *Nippon* that the statesmen holding office in Japan are, on the one hand, dominated by the military influences, and, on the other, much more solicitous about the convenience of foreigners than about the rights and liberties of Japanese.

The Cabinet's treatment of the problem of ship-building and navigation encouragement is severely criticized by the *Chuo Shimbun*, which has shown itself uniformly hostile to the present Ministry. It is understood to be the Government's intention to introduce a project of navigation-assistance law (*Koro Josetsu-ho*) in the Diet within a few days, the main purport of the new legislation being to provide an annual subsidy of 3,400,000 yen for the Nippon Yusen Kaisha during a period of ten years—namely, 2,600,000 yen for the Companies services to Europe, and 700,000 yen for its service to America, approximately. Last session an extensive scheme for encouraging navigation and ship-building was embodied in a law which received the Diet's assent and was promulgated over the Sovereign's signature. That law seemed, at the time, to be a most liberal and far reaching measure. But it is now to be supplemented by legislation which, in the *Chuo's* opinion, must be denounced as pure favouritism; the outcome of the present Cabinet's alliance with the capitalist class. Three reasons are alleged to prove the necessity of the new law. One is that the cost of carrying out the legislation enacted last session is too heavy. Another is, that the country is not sufficiently interested in navigation to foreign ports to justify it in indiscriminately subsidising vessels plying abroad. The third is that the system of examination for eligibility, as prescribed by last year's law, is so severe as to be virtually prohibitive. The *Chuo* condemns these reasons as wholly insufficient.

It does not believe that the outlay involved by the former law would have amounted to the sums that the Government would now pledge the country to pay. At all events, there has been no practical proof that such outlay would have been required. With regard to the second argument, it is one of degree. There is no possibility of deciding finally what foreign services might or might not be of national advantage, and, at all events, a hard-and-fast grant to certain lines under a new law will not abrogate obligations imposed by an old statute still in force. As to the severity of the system of examination for eligibility, the *Chuo* declares that the fault lies, not with the system, but with the ships that have been offered for inspection. They have been vessels of inferior quality and it was well that the country's money should not be spent for their maintenance. The Cabinet's project of supplementing the present law is not dictated by any genuine sense of national expediency. It is prompted by mere favouritism. The National Unionist organ classes this legislation with the Cabinet's general policy of cultivating the support of the wealthy classes, and adds that a corollary of that policy was the purchase of votes in the Lower House.

The Railway Council furnishes an object for attack by the *Nichi Nichi Shimbun*, but the charges preferred by our contemporary are of a very general character. It is claimed that the Council has fallen into perfunctory methods; that its examination of the various projects submitted to it is not really intelligent or scientific; that the members are often successfully subjected to undue influence by Railway projectors, and that charters are sometimes granted by the Minister of Communications to lines that have not been placed before the Council at all. The *Nichi Nichi* writes forcibly on this text, but adduces no concrete examples of the abuses that it condemns.

The Liberal organ (*Tokyo Shimbun*) writes with ability and conviction about the necessity of an alliance between China and Japan. This empire, it says, did not engage in the recent war with any intention of obtaining either territory or money from China. The sole object in view was to secure the independence of Korea, and that, too, was only a step towards preserving the peace of Eastern Asia by eliminating the opportunities for Occidental aggression. Already, though two full years have not elapsed since the signing of the Shimonoseki Treaty, the Japanese have forgotten all their grievances against China, and it may fairly be hoped that the Chinese are not less magnanimous. The time has come, therefore, to consider the future of the Far East dispassionately and with vision unclouded by enmity or revenge. China and Japan must be allies. When Russia, Germany and France interfered to save China from losing the Liaotung Peninsula, and induced Japan to retrocede it in consideration of a payment of thirty million taels, the Chinese evidently thought that they had received a great favour at Russia's hands. But the subsequent course of events must have shown them that Russia was working simply in her own interests. She has exacted the fullest compensation for her services on that occasion. She has obtained permission to run her Siberian Railway through Chinese territory; she has obtained the use of a naval basis of operations to the south of the Gulf of Pechili, and she has laid plans that may one day carry her system of Central Asian Railways to the Peninsula of the Regent's Sword. The Chinese are not richly gifted with patriotism. Individual interest is their engrossing object. But they must surely be able to perceive that their temporary gain in recovering the Liaotung Peninsula from Japan does not deserve to be mentioned in the same breath with the great and permanent loss that they have sustained in the payments exacted from them by Russia. Some time must still elapse before the Siberian Railway is completed. When it is completed, however, and when the details of Russia's now outlined programme are filled in, the Great Northern Power will hold the fate of China in

the hollow of her hand. In that day, can Japan hope to maintain her independence? Her interest is one with China's in repelling Russian aggression. The maintenance of the peace of Eastern Asia depends solely upon the two empires' ability to achieve that object. No cause of mutual hostility can weigh anything against the arguments for their mutual coöperation against such a danger. Countries that have been at war often retain feelings of anger against each other. A quarter of a century has passed since France and Germany fought, yet they still regard each other with feelings of unabated bitterness. That is wholly because no common danger threatens them. No union of three Great Powers menace their independence. A danger to be repelled with equal earnestness by China and Japan should draw the two nations together. If the Chinese can not be persuaded of that fact by Japanese explanations and by the evidence of accomplished facts as well as of visible contingencies, England is the Power to teach them the truth. England, equally with China and Japan, is interested in restraining Russia's advance southward and eastward. It is true that England herself is a growing Power. But the motive of her growth is purely commercial, and peace is always her prime aim. In that respect she differs essentially from Russia. The development of Russia is aggressive. The acquisition of territory is her object and war is her opportunity. Out of the war between China and Japan she drew large capital to aid her future designs against both, and by every quarrel of theirs she would be the ultimate gainer. England, on the contrary, is deeply interested in preventing such quarrels, and in securing the integrity of Japan and China as barriers against Russia's advance and as free markets for her own traders. The situation is quite clear. England should spare no pains to bring China and Japan together. Her voice is all powerful for such a purpose, since her motives must be above suspicion. The Japanese Government, on its side, should labour fervently for the same end. It is there that the tranquillity of Eastern Asia lies.

The same journal discusses the relations between Japan and Korea in strong but not extravagant language. It takes for its theme the question "what does Count Okuma intend to do about Korea?" When the Count was not in power, he spoke frequently of the obligation that devolved upon Japan to assist Korea in preserving her independence, but since he came into office, although several months have elapsed, no evidences are yet visible that he has given practical effect to his declarations. It is true that the King of Korea has returned to his palace, but Japanese influence had no part in bringing about that conjuncture, and despite the return, the Russian Minister remains as paramount as ever in the State Councils of the Kingdom, and Russian officers continue to drill the Korean troops. Japan fought to secure Korean independence, but, from the moment that the interference of the three Powers thrust her out of Liaotung, the leading place that she had acquired in Korea by her victories was usurped by Russia, and it may now be truly said that the upshot of the war has been to place Korea under Russian tutelage. Is it not possible to discover any remedy for such a state of affairs? Certainly it is not the state of affairs contemplated by the Yamagata Convention, nor yet by the Söul Memorandum. The object of those documents was to place Japan and Russia on an equal footing in the Peninsular Kingdom; not to eliminate Japanese influence and make that of Russia paramount. Recently the Honourable Mr. Curzon stated, in the House of Commons, that according to information received from Her Britannic Majesty's Consul-General in Söul, Russian officers were engaged drilling the Korean troops according to Russian tactics, and that the fact seemed contrary to Russia's pledge. It is easy to infer the importance that British statesmen attach to this point. Most important it surely is. Neither the Yamagata Convention nor the Söul Memorandum contains any

provision with reference to the drilling of Korea's troops, and Count Okuma had reason when he informed the House of Representatives that it rested solely with the King of Korea to appoint drill instructors of any nationality that suited him. But why, under those circumstances, did not Count Okuma bring pressure to bear on the Korean Government so that Japanese drill-instructors should be employed? The Russian Minister is everything in Söul. The Japanese Minister is nothing. Russian officers drill and organize the troops that were for a long time under the hands of Japanese officers, but no Japanese military man is any longer employed. There is no sign of any improvement in this state of affairs. Japan's effacement remains as complete as ever. It is to be regretted that Japanese statesmen do not take a leaf out of England's book. England has no trade with Korea at present. She does not keep a large naval force in Korean waters. She has no soldiers nearer than India, and her Indian forces are not at all as numerous as those of Japan. Yet we find her interesting herself keenly in this question of the Korean troops. Japan may not have a Foreign Minister worthy to be called Mr. Curzon's grandson in point of moral development and experience. But she may at any rate aspire to have one comparable with his great grandson.

The *Fiji Shimpö* has a curious article—an article which would scarcely command attention did it emanate from another source, but which, appearing in a journal of such undoubted authority and coming in the sequel of so many similar, though comparatively insignificant, utterances in the same columns, awakens interest. Our contemporary declares its conviction that combustible materials are steadily accumulating in the political arena, and that an explosion may be anticipated unless steps are taken to prevent it. Looking back at the history of Japan in modern times, it finds much that seems inexplicable at first sight. The fall of the Tokugawa Government almost without a struggle, although it was supported by the prestige of three centuries of undisputed power, and although it commanded immense resources; the voluntary surrender of their fiefs by three hundred feudal barons who, for three centuries, had occupied the position of local princes, guarding their territorial possessions with the utmost jealousy and defying all interference from without; the tame self-effacement of these magnates in whose families power had been an heirloom from time immemorial, and its paraphernalia had been a necessity of their existence; the announcement made by the Government in 1881 that the Diet should be opened and a Constitution granted ten years later—all these events were consummated in Japan with little more than a ripple of national agitation, whereas, in other countries, reforms of far less magnitude had plunged the people in war and deluged the land in blood. It is scarcely possible to assign any explicit explanation of such striking facts. No theory offers except that something in the air of Japan, something in the nature of the people, impels them to forefend disaster by timely compromise. The time has come for another display of the same spirit. Not that any terrible contingency like the wars of the Taira and Minamoto, or the struggle between the Northern and the Southern Courts, need be apprehended. The *Fiji* does not predict anything of that kind. But it does say that an explosion of some kind is at hand, and that the only way to avert it—and herein lies the curiosity of the article—is to put an end to the extraordinary honour attaching to titles of nobility. The finale looks like a puny mouse after the mountain that precedes it. Yet the *Fiji* has long been harping on this string, and the tune must have some power of appeal to Japanese ears.

Mr. Curzon's reported statement in the House of Commons is the theme of an article in the *Kokumin Shimbun* also. That journal remarks that, although in the early stages of the war with China the behaviour of one or two British men-

of-war gave much offence to Japan and rendered England unpopular, the attitude of the English statesmen at the time of the Liaotung affair, and England's treatment of Japan ever since, have inspired feelings of warm good-will, and this country now regards England as a genuine friend. Mr. Kato, the present Japanese Representative in London, has showed remarkable perspicacity in his conduct, for while the Ito Cabinet that had appointed him was devoting itself to cultivating Russia's amity, and was regarding England with comparative indifference, Mr. Kato lost no opportunity of improving Japan's relations with the nation to which he was accredited, so that Japan's name is now warmly received in Great Britain, and not a few publicists advocate alliance with her. England's sentiments about Korea are well illustrated by Mr. Curzon's recent statement in the House of Commons. Such a statement would not have been made had not the British Cabinet regarded Russia's doings with easiness, for, it must be remembered, that the same Mr. Curzon, speaking last year in the same assembly, denied the appearance of any signs that Russia was engaged in territorial aggression at Korea's expense. Just at present England may not care to actively oppose Russia's designs in the Far East. Downing-street has to deal with the Cretan problem and with the Egyptian affair. But England's attitude in these complications shows that her foreign policy is as active and resolute as ever. When the time comes, she may be trusted to put down her foot in Asia also. Meanwhile, it should be Japan's aim to lose no opportunity for displaying the friendship she entertains towards England and the trust she places in her. Even at the risk of giving umbrage to other Powers, as France and Germany, the Japanese Government has ordered, or is about to order, the bulk of its new men-of-war in England. And now an occasion offers in the approaching celebration of the Diamond Jubilee. Japan's procedure in that instance should be at least as courteous as was her action on the occasion of the Czar's Coronation.

Space fails us to make any detailed allusion to the subjects discussed in other journals. It must suffice to mention their titles, namely—the quality of the present Naval officers, and the increase of taxes as well as of national debts, by the *Fiji Shimpö*; the amendment of the Civil Code, and the Sendai School affair, by the *Seikat-no-Nippon*; the appreciation of gold and the depreciation of silver, by the *Shogyo Shimpö*; the reform of the subsidiary coinage, by the *Yomiuri Shimbun*; and the common errors of the House of Peers and the House of Representatives, by the *Tokyo Shimbun*.

"THE JAPAN TIMES."

According to the forecasts of the English local press in the various Settlements, the only newspaper that has anything to fear from the new *Japan Times* is the *Japan Mail*. They regard themselves as entirely outside the pale of competition. And why? Because the Japanese editors of the *Japan Times* are supposed to be men of trained ability, exceptionally well versed in Japanese affairs. We accept the veiled compliment with all gratitude, but must confess to some surprise that such a mood of humility has overtaken our contemporaries.

We hear that Count Itagaki, who has resigned the post of President of the *Fuyu-to*, will retire to Tosa after the rising of the Diet.

Mr. Kochibe, *Rigakuhakushi*, of the Geological Investigation Bureau, has been ordered to Kyoto and Osaka, to conduct a geological survey.

The Yokohama Silk Business Association have decided to raise its rates of commission on raw silk and waste silk by 20 per cent.

NOTES ON NEWS.

The St. Petersburg *Viedmosti* says that if war ever breaks out between Russia and Japan, the former will at once seize Fusan and Port Arthur. Sometimes predictions of this kind avert their own fulfilment.

It is a sadly ironical proceeding on the part of fate to condemn to bankruptcy a man so richly endowed by nature as the great English tenor, Sims Reeves. With such a voice the artist should have enjoyed a noble income, but he is now in the confessed position of having "no assets at all." On the other hand, his debts aggregate only £600.

The new Japanese opera, *Iride*, is said to have been sold by its writer, Signor Mascagni, to the Royal Opera Syndicate for two thousand pounds. We presume that the libretto only of this opera contains any trace of Japan or the Japanese, for certainly it is inconceivable that the music of Japan can have afforded any inspiration to a European composer.

The Yoshiwara quarter of Tokyo was visited by a calamitous fire on the morning of the 15th inst. The flames made their appearance in No. 25, Edo-machi, Itcho-me, and are said to have had their origin in a fire-box used as a bed-warmer (*anka*). The district bounded by Naka-no-cho, Sumi-cho, and Azuma-cho was reduced to ashes, 139 houses being destroyed, and two lives lost. The same quarter was swept by a conflagration in April 1892. The insurance offices involved are the Tokyo Fire Office (9,300 *yen*); the *Meiji* Fire (9,800 *yen*); the Saké Brewery Fire (5,000 *yen*); the Nippon Fire (700 *yen*), and the Osaka Fire (4,050 *yen*), making a total of 28,850 *yen*, or an average of 207 *yen* per house, approximately. One lad was burnt to death while a woman of Yamakawachiro is reported missing.

Among the methods of celebrating the Diamond Jubilee, descriptions of the growth of the British Empire and of the progress of the British nation during the Victorian era are likely to play an important part. Mr. Justin McCarthy, himself one of the literary lights of the era, has commenced a series of lectures on the subject; and Sir Charles Dilke has read a paper on "the progress of the British Colonial Empire." Sir Charles justly remarked that Hongkong might be regarded as having had, commercially speaking, the most flourishing history of any settlement in the world. This is a subject upon which Sir George Bowen used to dwell with delight, contrasting the squalid fishing hamlet of forty years ago with the magnificent colony of to-day, the Liverpool of the East, that does an annual trade of 50 millions sterling and enjoys the honour of being the principal coaling station of the British fleet in the North-west Pacific.

Many eminent Japanese economists think that the fall in the gold prices of commodities during recent years must be attributed, not to the demonetization of silver and the consequently increased demand for gold, but to the fact that the prices of former days were virtually monopoly prices, Great Britain being then almost the sole manufacturing country of the world, whereas she has now many rivals whose products find easy access to

every market owing to immensely improved facilities of communication. However that may be, British industry still occupies the premier place. From 1880 till 1895, the annual exports of the United Kingdom rose from 223 to 226 millions of pounds, and in 1896 the figure was 240 millions. In France the exports fell from 139 to 135 millions; in the United States they fell by 7 millions, but in Germany they grew from 145 to 166 millions. Germany's industrial development is undoubtedly one of the features of the close of the 19th century. Turning to imports, we find that Great Britain's imports per head are more than double of those of either France, Germany, or the United States.

It is amusing to note the extravagant statements into which anti-Japanese prejudice and ignorance of finance betray some local foreign journalists. One of our Yokohama contemporaries writes:—

The taking of a ratio so low as to depress the standard is an Oriental trick for which there is naturally no precedent amongst the nations of the West. It is quite indefensible, and it is a good index to the policy which the Government is endeavouring to conceal. The excuse that the new coin is thus made exactly half the value of the existing gold *yen* is absurd, seeing that no calculations are now made in gold *yen*.

Happily for the writer of that extraordinary statement, he is not required to explain it. He talks glibly of "a ratio so low as to depress the standard," but the ratio has no more to do with the standard than he has himself. As for the ratio, the Japanese Government has fixed the sterling price of the *yen*, pending its withdrawal from circulation, at 24.58 pence, and the actual value in the London market is now 24.69 pence. Thus this exceeding lowness, which constitutes an "Oriental trick," and is "naturally without precedent among the nations of the West," amounts to 0.11 pence; that is to say, less than half a farthing, per *yen*, and not as much as one half per cent. A terrible piece of chicanery, in truth! As to precedents among Western nations, the facts are that, in 1817, Great Britain over-rated gold by 1½ per cent. for coinage purposes; in 1795, the United States under-rated the yellow metal by 1½ per cent., and, in 1834, over-rated it by as much as 2.5 per cent. In the face of these figures, Japan's 0.44 per cent. is called an "Oriental trick" naturally without precedent among the nations of the West. It seems to us that journalistic giddiness and inaccuracy could scarcely be carried to greater extremes than they reach in the columns of the *Japan Gazette*.

An unhappy accident seems to have occurred in making up the "Japan Directory" for the current year. Four pages—253 to 256—have been dropped out of the Alphabetical List, the result being that the *U* and *Y* sections are greatly curtailed, and the *W* section is altogether missing. This is probably a mistake on the part of the folders, though it is difficult to imagine what can have become of the missing sheet. Possibly, only a limited number of the "Directories" have been bound, and a pile of paper, representing the absent sheet, is among the matter still lying in the printers' office. But, whatever be the explanation, the Directory, in its present form, lacks much of its usefulness.

Mr. Acting-Consul Layard, in his Report on the Trade of Tamsui and Kelung for 1896, says:—"The Japanese popu-

lation, whether from insufficiency of good spring water, or as a supposed antidote to the ill-effects of the malarial climate, is consuming great quantities of alcoholic beverages, the average per head being, I am informed, three times as much as in Japan proper. The favourite beers are of the lighter kinds, chiefly German, Lager, and Pilsener, imported from Hongkong, the beer of Japanese manufacture, although cheaper to import, commanding little sale, as it will not keep in this climate." Will not Kirin Beer endure the Formosa climate? It certainly goes to China.

It has often been remarked that if individuals and governments were as depraved as some newspapers habitually represent them to be, the world's moral plight would be a very sorry one. No public or private act, when reflected in the mirror held up by this particular class of journal, fails to assume distorted and unsightly proportion. For example, a Shanghai journal, referring to the fact that the Japanese have abandoned all idea of establishing cotton mills in Shanghai, says:—

"When the Japanese Government found out that other countries were going to be benefited by the Shimonoseki Treaty, and had decided to form companies and to build mills, they then, it appears, decided that the part of the Treaty referring to manufacturers should not be carried into effect, and their nationals learnt this before those of other countries, and quickly decided—although matters had not gone so far—not to build their mill."

Could anything be more thoughtless than to suggest that when Japan included in the Shimonoseki Treaty a clause providing freedom for foreign industrial enterprise in China she imagined that she could retain a monopoly of the privilege for herself? This of Japan, that had learned by twenty years' negotiation and bitter experience what the most favoured-nation clause means. It is too silly. Yet we find the paragraph from the Shanghai newspaper gravely quoted by a sensible, astute journal like the *Hongkong Daily Press*!

The Senate of Queen's College, Galway, have decided to confer on Professor E. Divers, F.R.S., the degree of Doctor of Science, *honoris causa*. Galway College is the successor of Professor Divers' *alma mater*. Hence, although, speaking generally, an academical distinction more or less can not seem of great moment to a man of science whose contributions to chemical knowledge are so well and widely known, it must be a source of congratulation to Dr. Divers, as it certainly is a satisfaction to his friends, to know that his long and patient researches, conducted amid many difficulties in a distant land, are not overlooked or unappreciated by the faculty of the institution where his studies commenced.

The *London and China Express* says:—"Nothing seems to be known in official circles of the alleged Russo-Chinese Treaty, where the provisions of the document are not believed in. The Chinese Eastern Railway Company is, of course, an accomplished fact, but outside that no treaty seems to find any credence." When the text of the alleged "treaty" was published by the *North-China Daily News*, we analysed its contents, and showed that, from internal evidence, the document could not be regarded as genuine. Our criticism was stoutly repudiated by our Shanghai contemporary, which sneeringly asked whether any newspaper was ever

so wise as the *Japan Mail* claims to be. In truth we were not sensible of laying claim to any particular wisdom. It was scarcely possible to read either of the so-called treaties, published at an interval of about a year by the *North-China Daily News*, without being inspired with the gravest doubts as to their genuineness. At all events, whether we be wise or unwise, it seems that we were right about this sensational treaty.

Captain du Boulay's book on the China-Japan War has appeared. It is called "An Epitome of the Chino-Japanese War, 1884-5." The title is not pretty, "Chino-Japanese" being a compound irreconcilable with any rational derivation. The *London and China Express* writes thus about the work:—

It starts by giving a *résumé* of the forces, naval and military, of the two empires on the outbreak of hostilities, and a few of the events leading up to the war, though, politics are, for the most part, carefully excluded. The Japanese forces are stated to have been well officered, well trained, and well disciplined, and incontestably superior to the Chinese. The record of the war is then given in a terse and succinct statement. Only essential details are given, and some inferential facts are omitted to enable a clear insight to be gathered. For instance, the original attempt of Marshal Yamagata to march overland from Fusan on proceeding to Korea to assume the chief command is not recorded. His reason was stated to be at the time the fear to risk the sea passage for his troops and staff whilst the Chinese fleet was in being. The one thing the Japanese had doubts about was the Chinese fleet, and they would have been justified had this fleet been in proper order for *materiel*, and been handled in accordance with the teaching of naval warfare. It will serve no purpose now to allude to the various engagements which are recorded, or to give any of the statistics, such as losses, expenditure of ammunition by Japanese, &c., which are recorded with completeness on the Japanese side. One point, however, Captain Du Boulay calls attention to is the following:—

The conduct of the war by the Japanese was marked by a very complete decentralization. Commanders of armies or detached forces were given definite objectives (one at a time) by the Imperial Headquarters Staff, and were then allowed a free hand in carrying out their work, and the same system was followed within the armies and divisions. Orders from Japan went by cable to Fusan, and thence by telegraph to the 1st Army. For the 2nd Army, up till Dec. 30, orders were telegraphed to Ping-yang Inlet, or Chemulpo, and thence taken by steamer to the Liao-tung peninsula; but on Dec. 30 the telegraph line round the coast by Takushan and Puzow to Chinchow was completed, so that from that time the 2nd Army was in direct telegraphic communication with Japan.

The Japanese have a saying *okame hachimoku*, which means that lookers-on have eight eyes. That appears to be the happy condition of the London critic. When did Marshal Yamagata make this "original attempt to march overland from Fusan"? We never heard of the incident. And how on earth would a sea voyage have been avoided by making Fusan a basis of operations instead of Chemulpo? It is related of an Irishman that, hearing of a friend's suffering from sea-sickness on the voyage from Kingstown to Holyhead, he remarked:—"Sure an it saved him right that would'n't go round be Belfast an' Liverpool an' miss the say intirely."

The usual spring exhibition of modern objects of art will be opened from the 1st of April in Uyeno, and is announced to continue until the 20th of May.

The art of lying has been developed to magnificent proportions by the modern advertiser. In innumerable cases it seems to be the aim of the composer of an advertisement to deliberately deceive the public. The grossest falsehoods are thus

concocted and unblushingly circulated. Yet public morality does not appear to be shocked. If a man obtains money by false pretences in the ordinary intercourse of life, he is quickly cited before a law court and punished. But hundreds of advertisers whose one business is to obtain money by false pretences escape even obloquy. It is surely a strange state of commercial morality; especially strange when we remember that the peoples among whom it prevails openly pride themselves on their integrity, and contrast it superbly with the guile and deceit of Oriental nations. Our own belief is that the article called truth has been distributed pretty evenly among the nations of the world, and that if the shares possessed by all could be separately weighed by impartial judges they would be found to differ by inappreciable quantities.

Here is an advertisement taken from the *American Grocer*:—

INDIAN AND CEYLON TEAS.

The Cultivation and Manufacture of these Teas explains their extraordinary quality.

MARK THE CONTRAST:

INDIA AND CEYLON.

Lands.—New and Fertile.
Gardens.—Large, well planted, central modern factories, daily manufacture of leaf.
Manufacture.—Modern, up to date, specially devised machines for twisting and drying leaf, *untouched by hand*.
Purity.—Full standard; never rejected from any port.

CHINA AND JAPAN.

Lands.—Exhausted centuries ago, fed with poisonous fertilisers.
Gardens.—Small, scattered; leaf kept in family dwelling houses, with pigs and poultry till marketed.
Manufacture.—Ancient; barbarous; leaf twisted by the hands of semi-nude moist Mongolians, amidst the sordid surroundings of a Chinese dwelling. No factory inspection and much sweating.
Impurity.—Adulterated, coloured, faced, "Lie Tea." Rejected on these grounds daily. A shipment recently rejected at New York was admitted through a Western Port of Entry. See daily papers and Importers' Confessions in Petition to Congress.

This pretty bit of composition is one of those half-truths hardest of all to combat. The *Shanghai Times* has a forcible article on the subject, but without entering into details, it is sufficient to note the essential difference between Indian and Japanese methods—we say nothing of Chinese—namely, that in India the whole business of growing and preparation is conducted on a large scale according to scientific processes, whereas in Japan the cultivation and drying remain virtually domestic industries and are managed in comparatively old-fashioned and primitive ways. The work of firing, as it used to be carried on in the foreign Settlements, was certainly open to a charge of want of cleanliness, but all that is now changed since firing machines have been introduced, and the attempt made by the advertiser in the *American Grocer* to create a prejudice against Japanese tea on the ground of dirt, is simply a falsehood. Whatever labour is required on the Indian tea plantations is Indian labour. Whatever labour is required on Japanese tea plantations is the labour of Japanese women and girls. As between the cleanliness of the two kinds of labour, there cannot be much difficulty in choosing.

"How much does the most expensive Japanese tea cost per pound," is a question often asked by foreigners. It elicits various answers. We ourselves have never heard of *bona fide* tea costing more than 16 *yen* a *catty*; that is to say, 12 *yen* a pound. But it is a tale current that an

American lady recently paid 125 *yen* for a pound of most remarkable *cha*. She was dilettanti, it seems, in the beneficent leaf, and the deity of dilettanti brought her into contact with an exploite—a guide, not to put too fine a point on it—who told her mysteriously of twelve packets of very particular tea that had just been prepared for the Emperor's use, one packet per month. Enormous obstacles lay in the way to procuring any of this sovereign stuff, but money might overcome them; 125 *yen*, for example, might procure a pound. The lady is said to have "hung on." We doubt not that she and her friends sipped that tea with becoming awe and admiration, though probably they concluded that only the specially educated palate of a Mikado could fully appreciate its flavour and its savour. It is not as record how much that other lady paid for the chrysanthemum seeds which could not be diverted from the uses of the Imperial Garden without risking the penalty of instant death on the scaffold, but a pot of the capital flowers ought certainly to have decorated the boudoir where the golden tea was imbibed.

We doubt whether the theory of the new system is clearly understood. Nothing could be simpler. There is absolutely no change in the coins themselves, so far as their composition is concerned. If the gold coins of the present system had the figures on their faces multiplied by 2, they would serve for the purposes of the new coinage. Thus the present 5-*yen* gold piece, weighing 2.22221 *momme* of 900 fineness, becomes the new 10-*yen* piece, the weight and fineness remaining absolutely unchanged. The present 10-*yen* piece, weighing 4.44442 *momme*, becomes the new 20-*yen* piece. Were there a 23-*yen* gold piece in the present coinage, it would become the 5-*yen* piece of the new coinage. But as there is no such piece, it has to be coined, and its weight will, of course, be exactly one-half of the weight of the present 5-*yen* piece. As to the silver subsidiary coins, they remain without change of any kind, either as to weight or denomination. The weight of the 50-*sen* piece ought to be more than one-half of the weight of the present 1-*yen* piece, since the latter is 900 fine, whereas, according to the new Coinage Law, the former is to be only 800 fine. But no indication of any such change appears in the table of weights appended to the new Law. The weight of the half *yen* is there given as exactly one-half of the weight of the present *yen*, and the 20-*sen* and 10-*sen* pieces remain unaltered. Hence, speaking briefly, nothing is to happen except that the denominations of the present gold coins will be doubled, and a new 5 *yen* gold piece will be added. As for the *yen*, there will be no longer any question of fluctuation in its sterling value. It may always be reckoned at two shillings and a half-penny, or, for purposes of more accurate calculation, at 24.5822 pence.

It is, of course, more or less an accident that the Japanese metrical system should lend itself so conveniently to coinage purposes; but certainly the Japanese are to be congratulated on being able to elaborate a coinage programme which, while in tolerably close agreement with the systems of Great Britain and America as to intrinsic values, has for its unit, a weight of pure gold expressed by the integer 2 *fun*. Compare this remarkably simply fact with

our own system. In the first place, we go to Abyssinia for nomenclature to describe the purity of our gold. We speak of gold's being so many *carats* fine, an absolutely unintelligible statement on the face of it. To understand it we must know that to be 24 carats fine is to be quite pure, and that there is no question of reason, but merely of arbitrary choice, in the employment of such terminology. Next, we have to learn that the unit of money is a gold coin 22 carats fine, and that it weighs 123.274 grains, a grain being the 480th part of an ounce. To have 22 parts fine out of 24, is to contain $\frac{11}{12}$ ths of pure gold, so we finally arrive at the conclusion that the unit of value in Great Britain is $\frac{11}{12}$ ths of 123.274 grains, or 113.0012 grains, of pure gold. No higher tribute could be paid to the robustness of the British intellect than to record that it has survived the use of such an appalling system of weights and measures.

The *Kwassui-Go-gakko*, or Girls School of the Water of Life, at Nagasaki, was founded on December 1st, 1879, with one student, and has now an attendance of 195. It is one of those institutions established by foreign missionary enterprise, that have contributed so materially to the educational progress of modern Japan. We observe that its periodical, the *Kwassui Quarterly*, started in August, 1896, has now reached its third number and that the contents give evidence of steady improvement. The second number contains a plea for the study of Latin, which, with algebra, geometry and plane and spherical trigonometry, forms part of the academic course. Our conviction is that girls should not be tormented with any of these subjects. If such knowledge be needed, it can be acquired in later life. To their lasting misery and crushing disadvantage, children in Japan are already condemned to the task of studying a script that taxes their faculties severely. There is too great a tendency to sacrifice health to mental culture in this country.

The *Meiji Shimbun* says that stenographers of foreign languages will be one of the needs felt after mixed residence becomes an accomplished fact. Why should that be the case, we wonder. Foreigners will not deliver political speeches or public lectures then any more than they do now, and even supposing that some of them developed a tendency of that kind, we fail to see why Japanese stenographers should concern themselves about the matter. *Foyaku kaisei, naichi sakkyo, chigai hoken no tekkyo*—these are terms that convey an evidently exaggerated impression to the minds of many Japanese. However, our Tokyo contemporary converts its hypothesis into a peg whereon to hang a panegyric of Mr. Tagusari Koki, who devised a system of stenography suitable to the Japanese language, a feat that certainly deserves warm praise. The *Meiji Shimbun* claims for this system that its use requires only one-third of the time demanded by the best Occidental system, and adds that Mr. Tagusari is now engaged adapting it to the Chinese and Korean languages. We must be permitted to doubt the former point.

Recently there was some talk of the possibility that Marquis Ito might be sent to England to represent Japan at the Queen's Diamond Jubilee. That never

seemed likely, in our opinion. If anybody went for such a purpose, it must obviously be a Prince of the Blood. The *Nichi Nichi Shimbun* now says that, in all probability, no special envoy will be despatched. Mr. Kato, Japanese Representative in London, will be instructed to do what is proper on the occasion. That will be very tame, but truly we do not see how anything more can be reasonably expected after the treatment that Japan has received at the hands of Western Courts in connexion with the death of the Empress Dowager.

The *Mainichi Shimbun* alleges confidently that the present Legislative Bureau is to be converted into a Councillors Bureau (*Sanji-Kyoku*), and that ten Councillors will be appointed at annual salaries of 4,000 *yen*. In that way the Cabinet will find means of giving appointments to men of talent now outside the ranks of officialdom. The nominations for the creation of the new Bureau are expected to take place in the middle of April.

The Prince Imperial, who has been staying at Numazu, in Shizuoka, for some time, is to leave that place by the 10 o'clock train on the morning of the 22nd instant, reaching Tokyo at 3.19 p.m.

The 20th of April will be the hundredth day from the death of the Empress Dowager. It is the custom in Japan to visit the tomb of a deceased person, and perform a special ceremony of incense-burning and prayer on the hundredth day after decease. The Emperor and Empress are expected to visit Kyoto for that purpose, leaving Tokyo on the 10th proximo. The two fifty-day periods of mourning will then terminate, and the sounds of military music will doubtless be heard once more in Tokyo.

The present session of the Diet would terminate on the 24th instant, in the ordinary course of events. But as business had to be suspended for several days owing to the demise of the Empress Dowager and the visit of the members of both Houses to Kyoto for the purpose of attending the State funeral, it appears probable that the session will be prolonged for 5 days, in order to allow time for the passage of important Government Bills now awaiting discussion.

The *Hochi Shimbun* publishes a strange story. It is to the effect that a certain Japanese resident of Osaka, having undertaken to procure an accurate map of the forts at Omotena and its neighbourhood, in the island of Tsushima, and having been promised a sum vaguely stated as *suman-yen*—say, sixty or seventy thousand *yen*—if successful, induced a first-class sergeant, to set about the compilation of the map. The sergeant's name is given by our contemporary—Nishiyama Katsutarō—and he is said to have been serving with the Tsushima garrison. His reward was to be fifty thousand *yen*, and he had nearly completed the map when the suspicions of his commanding officer were attracted, and his arrest being ordered, the map was found in his knapsack. His principal in Osaka has also been seized. The tale sounds somewhat apocryphal.

Never has there been so uneventful a session. Even the celebrated meeting of the Diet at Hiroshima in the fall of 1894, when military supplies were voted *nem. con.*, can scarcely be quoted in the same

category, for special considerations operated on that occasion to promote quiet and prevent discussion, whereas everything seemed to make for precisely the opposite result this session. When the Houses met, the Opposition appeared to have a large majority, and the public looked to see a collision of unprecedented magnitude between the Cabinet and the Representatives. But at the touch of some magic wand the ominous clouds dispersed in thin smoke, and the Government was found at the head of a phalanx beside which the Opposition's dimensions were insignificant. Mr. Tanaka Shozo and Mr. Inouye Kakugoro have vainly tried to evoke some thunderbolts from the clear sky. If Count Okuma contrived such a situation, he is undoubtedly a great strategist.

Count Itagaki is said to have again resigned the presidency of the Liberal Party. The source of trouble on this occasion is the attitude of a portion of his followers towards the question of Kobe harbour. It had been decided by the Council of the Party that the problems of harbour construction at both Osaka and Kobe should not be treated as party matters, but should be left to the discretion of the members themselves. Our readers probably remember that considerable excitement has arisen in Kobe and Osaka over the question, the citizens of each place naturally concluding that local prosperity would be materially affected by the possession of a good port. When Count Itagaki held the portfolio of Home Affairs, he approved of the Osaka scheme, and his views were endorsed by the Party. But since that time the Kobe folks have become keenly anxious to thwart a design which must attract the bulk of the maritime trade to Osaka, and their representative on the Liberal Council urged, at a meeting of the Council on the 16th inst., that the discussion of the problem should be again taken up. Count Itagaki observing a disposition on the part of the Council to fall in with this proposal, and being unable to control the situation, declared that both he and the Party were being treated inconsiderately, and resigned the post of President. The affair seems scarcely serious enough to create a permanent split.

The long desired amendment of the Press Law, in the sense of depriving the Administration of power to suspend or suppress a newspaper or periodical, may now be considered an accomplished fact. On the 17th inst., the House of Peers passed the Government Bill as amended by the Representatives, and the Government stands pledged, by its own declaration, to endorse the amendment. As is usually the case in Japan, this has been a compromise. The Bill submitted by the Government to the Lower House did not abolish the administrative power of suspension, but limited it to one week, and provided, further, that the incriminated matter must, in every instance, be clearly indicated. This Bill the House changed radically, eliminating the suspension and suppression clauses, and re-casting the measures so as to substitute the Courts of Law for the Administration, the latter's power being confined to preventing the circulation of the particular number of a journal or periodical containing objectionable matter, such action to be preliminary to citing the editor

and publisher before a legal tribunal. It seems strange that if the Cabinet was prepared to accept such a metamorphosis, it did not draft the original bill in a more liberal spirit. However, these are the facts. The Representatives, understanding very well that if they passed their amendments in defiance of the Government, the Peers would come to the latter's assistance, proceeded with more circumspection than in previous sessions, and before voting the amendment, obtained from the Government Delegates a promise that if the amendments were accepted by the Upper House, the Government's veto need not be apprehended. An attempt made in the Peers to restore the Bill to its original form, that is to say, to restore the administrative power of suspension for one week, was defeated by 95 votes to 66, and the Lower House's amendments were ultimately passed *en bloc*. We may, therefore anticipate the promulgation of the new law in a few days. It is a big experiment—much too big, in our opinion.

SENDAI SCHOOL DISTURBANCE.

The *Tōhoku Shinbun* publishes an account of an interview between one of its staff and Mr. Nakagawa, a member of the Mombusho Advisory Council. From it we gather the following particulars:—The Minister of Education regards with extreme regret the turn that affairs have taken in the Second Higher School, and in order to ascertain the real facts of the case, despatched, on the 11th instant, two officials to Sendai. The principal of these, Mr. Kinoshita, head of the Special School Bureau, was furnished with instructions for the Director, the nature of which Mr. Nakagawa was not at liberty to disclose. The commotion resembles a rebellion against law and order by a number of peasants, rather than an agitation by intelligent young men. In this affair the students are forgetting alike their duty to the State, to serve which they are now undergoing training; their duty to themselves as men, whose chief object in life is the attainment of knowledge in the quickest manner possible; and their duty to their supporters. To forego, on account of a trifling incident, the advantages to be derived from such an education as is given in the institution concerned, is surely most unwise. From every point of view, the men that have worked up the agitation are to be blamed. Whatever cause for umbrage they may have conceived, the implication of the whole school in the affair, the formation of a league, and the attempt to force the authorities to comply with their demand, cannot be too strongly condemned. If certain students objected to the Director, it was open to them to leave the school and pursue their studies elsewhere.

Since writing the above, we have learnt from other sources that the whole of the medical students have resumed their work at the school, and that it is generally thought in Sendai that, in the course of a few days, the affair will be settled. The parents and guardians of the pupils have assembled in large numbers in Sendai, and in combination with the Governor of the Prefecture and other officials are urging submission to the school authorities. The Imperial University students are deeply interested in the affair, and no less than seven old scholars of the Sendai School have gone to Sendai at their own

expense for the purpose of advising the agitators to pursue a more pacific policy. The students of the Sendai Higher School were informed, at the end of last week, that they would be given till the morning of the 14th instant to confess themselves in the wrong. This period for reflection was subsequently extended to the morning of the 16th. If the students avail themselves of this opportunity of backing out of an embarrassing position, it may reasonably be supposed that punishment will be confined to the ringleaders. But should the impetuosity and foolhardiness of youth lead them to fight the matter to the bitter end, then, we are given to understand, the Department will not shrink from adopting severe and sweeping measures.

Since the receipt of the news embodied in our leading article, we learn that the Sendai students, after having agreed to entrust the settlement of their difficulties to their parents, relatives, and guardians, suddenly conceived that it would be beneath their dignity to submit to that method of arrangement. On the night of the 15th, at a meeting of delegates from the classes, and representatives of the students' relatives and friends, the delegates unanimously withdrew their promise, and expressed the opinion that, since the affair concerned them and the school authorities only, they could not consent to the interference of outsiders, or submit to arbitration of any kind. On being asked to state their reasons for this *volte face*, they replied that they were simply doing their duty in the matter, but added that their would-be mediators need have no anxiety about the result, as there were circumstances that made their return to the school necessary (*Fuk'kō subeki jōjō aru*). It would be interesting to know what circumstances were alluded to. The newspaper from which we quote gives no information on this point. The meeting at which this decision was formulated was held at the Gojōkwan, and lasted 4 hours. The next morning, at 8 o'clock, the students returned in a body to the school, each one carrying a letter of apology for his conduct. The punishment to be inflicted is now engaging the attention of the authorities. It was announced that the Mombusho officials were to return to the capital on the 18th, so it may be inferred that no further trouble is expected, and that the school will resume its work within a few days, unless the punishment meted out appears to the students too severe, in which case it would not surprise us to hear that a fresh outbreak had occurred. It is confidently asserted that no distinction will be made between originators, promoters, and confederates, and that the most probable form of punishment will be suspension lasting several weeks. On this subject we shall probably be in a position to-morrow to furnish more definite information.

It is only fair to the students to state that, unlike many other school disturbances in Japan, the Sendai agitation has been entirely free from acts of lawlessness or threats of violence. As we write, there lies before us the account of the student riots at Athens supplied to *The Times* by its special correspondent, which furnishes a remarkable contrast to the Sendai episode and is herewith appended for purpose of comparison.

Athens, Jan. 27.

The disorderly conduct of the medical students at the University culminated in serious rioting to-

day. In the morning a number of medical students endeavoured to interrupt the lectures at the law school. The law students resisted, and a conflict took place in which revolvers and knives were used. The police appeared on the scene and made some prisoners. An attempt to rescue one of these was made on the part of the students, who stoned the police, and the latter were compelled to defend themselves with their revolvers and swords. Some of the students are reported to have been wounded and one gendarme was seriously maltreated.

The disturbances were renewed this afternoon, when the students sent a deputation to the Palace. The King, however, was absent at Platerium. The Librarian of the University was fired at by the students.

The troops of the garrison have been called out, the streets are patrolled, and the Palace is strongly guarded. The University is occupied to-night by 300 students who are closely watched by military and police.

The trouble originated in a rebuke addressed by Dr. Galvani, Professor of Medicine, to some students who interrupted him while he was performing a critical operation. The students, who consider themselves insulted, insist upon Dr. Galvani's resignation. Dr. Galvani, who is a man of courteous and conciliatory manners, is recognized as the most eminent surgeon in Greece. He has already assured the students that he had no intention of insulting them.

January, 28.

The revolt of University students continues. They appear to be abundantly supplied with firearms, and last night a considerable number of them garrisoned the University, armed sentries being posted at doors and windows, who challenged persons passing in the streets. Squadrons of cavalry occupied positions in the neighbourhood of the University and Palace throughout the night. To-day the authorities deemed it advisable to withdraw the troops from the vicinity of the University in order to avoid a renewal of the disturbances. The students have issued a manifesto to the Greek nation and have prepared a memorial to the King and the Prime Minister demanding the punishment of Professor Galvani and setting forth various grievances.

THE TOKYO BUILDING COMPANY.

Our readers have probably observed that a new enterprise, called the Tokyo Building Company (*Tokyo Tate-mono Kaisha*) has been organized, and is now advertising its initiation of business. The prospectus of the Company in English does not seem to have been issued as yet, but the interesting character of the project has led us to examine the Japanese prospectus. From it we learn that the Company has stepped in to supply a long felt want. Allusion has frequently been made in these columns to the great difficulty, we might almost say the impossibility, of procuring houses suitable for foreign residence in Tokyo or other Japanese cities. The fact is that since it has never been customary with Japanese of the upper classes to live in hired houses, the building of good edifices for the purpose of letting to tenants was not among the businesses undertaken by speculators in former times. Small, cheap houses were constructed in abundance with that object, but, until very recent years, no one thought of investing any large sums in such a line of enterprise. A company was then organized chiefly at the instance of Mr. Okura, but it fell into the fatal error of putting up buildings planned by young Japanese architects who had no adequate knowledge either of the requirements of foreign occupants or of the arrangements suitable to the climate. This *Doboku Kaisha*, as the Company was called, soon found itself in possession of a number of most ineligible dwellings, which naturally failed to find tenants, and the shareholders concluded that more profitable forms of investment could be found in other direc-

tions. The *Tate-mono-Kaisha* proceeds upon different lines. It offers to acquire sites selected by would-be purchasers or tenants, and to erect buildings in accordance with the plans of their intending occupants, leasing or renting the land or edifices in the ordinary manner, or else adding to the monthly payments such instalments of the purchase money as shall place the occupant in complete possession after a convenient term of years. Of course, so long as the old Treaties remain in operation, it is not lawful for foreigners to acquire land or buildings outside the settlements. The Company takes full cognisance of that difficulty. It offers to act as agent for foreigners desiring to obtain fixed property before the Revised Treaties go into force, giving full security for *bona fides* and undertaking to hand over the property so soon as the Treaties permit. Such transactions could not, of course, be recognised by Courts of Law, but they can be easily managed, we presume, so as to require no such recognition, and it is possible that many foreigners may be disposed to take advantage of the facilities thus offered.

An interesting feature of the Company's prospectus is the indication it affords of the altered spirit of the time. In 1893, when the agitation for strict treaty-enforcement was on the *tapis*, virulent crusades were inaugurated by the vernacular press against any Japanese suspected, or known, to have assisted foreigners to acquire real property outside the settlements. Our readers doubtless remember the case of Dr. Mayet. Public feeling ran so high that Japanese who, six months previously, would have been glad to lease or sell land to foreigners, announced their resolve to abstain thereafter from any such transaction, and there was talk of enacting a law which should visit with severe penalties any one lending his name to a foreigner desirous of purchasing extra-settlement land. By several observers the sentiment of that time was construed as a recrudescence of anti-foreign prejudice, and this journal was denounced as blindly partial because it denied the existence of any depth of antipathy to foreigners, and expressed the opinion that the whole excitement was merely an evidence of the impatient umbrage under which the nation laboured in consequence of the failure of its long efforts to recover judicial and tariff autonomy. It seems to us that our judgment is now vindicated. If the *Tate-mono Kaisha* felt that the offers it openly makes were in any sense opposed to public sentiment, it would never have made them. The mood of 1893 is a thing of the past. It never was more than the mood of a moment.

FOREIGN MOURNING FOR THE EMPRESS DOWAGER.

His Majesty the King of the Belgians has ordered eight days' Court mourning for the late Empress Dowager of Japan. The principle of "better late than never" applies with special force to this matter. Japan has always showed herself punctiliously observant of the rules of international etiquette, and we see no reason why similar courtesy should not be extended to her. Belgium has wisely differentiated herself from the majority of the European Powers in this instance.

TSUDA SANZO.

The death of Tsuda Sanzo, who attempted to take the life of the Czarewitch at Otsu, seems to have been of a suicidal character. The man was certainly of unsound mind, and from the time of his incarceration, his health was reported to be precarious. A fellow-prisoner, told off to look after him, has made a statement which appears in the columns of the *Fiji Shimpō*. He says that he was warned by the jail officials to be on his guard against displays of violence by Tsuda, who had some skill in the use of cutting weapons. During the first five or six days of his last illness, Tsuda ate his meals as usual. But after that, he utterly refused to take any food, and no persuasion could induce him to depart from his resolve. It became necessary, therefore, to feed him by means of an instrument. That was done for 14 or 15 days, at the end of which time the man having swallowed nothing but milk, was naturally much reduced. He entreated, however, to be suffered to resume convict labour outside, and was finally put to thresh straw. The task was, of course, beyond his strength, but he pleaded that if he were suffered to perform it, he would eat his food as usual. Finally, he dropped from exhaustion, and on being carried in, developed symptoms of inflammation of the lungs, a malady that very frequently results from the continued use of the stomach-pipe. Before his death, he wrote a long document, and begged his fellow-convict, whose term of imprisonment would soon expire, to convey the writing to his (Tsuda's) relatives, and to describe to them the manner of his death. The document was of course taken possession of by the authorities.

FOREIGNERS AND JAPANESE SECURITIES.

An advertisement published by the Mayor of Kobe inviting foreigners to subscribe for the Water-works Bonds of that city has again started a discussion as to the competence of foreigners to hold Japanese securities. The *Japan Gazette* has taken up the subject, and, true to its habitual methods, professes to think that every one differing from it must either be lamentably ignorant or wilfully deceitful. Regarding these peculiar polemical methods, we content ourselves with repeating the general statement that all unregistered Japanese bonds are legally purchasable by foreigners. A moment's reflection will show that such must be the case. "Unregistered" means that the bonds carry no name: they are the property of their holder, whoever, and of whatever nationality, he be. The first securities of that kind issued in Japan, so far as we remember, were the Nakasendo Bonds. They were placed upon the market in December, 1883, and the regulations under which they were officially issued declared them to be *mukimci shosho*, or bonds bearing no name. In other words, they were officially offered for sale to each and every would-be purchaser, without distinction of nationality. That is a plain, incontrovertible fact. Such bonds are on precisely the same footing as the *seiri kosai shosho*, or Consolidated Loan Bonds. The *Japan Gazette* is good enough to allege that when we described the Nakasendo Railway Bonds as purchas-

able by foreigners, we "knew perfectly well that we were writing a mere fiction." Our contemporary has doubtless perceived, by this time, that it has once more been the victim of a vertigo. As to the Kobe Water-works Bonds, it appears from the advertisement that purchasers can have their names inscribed on the bonds if they please. The *Japan Gazette* thinks it "much to be doubted if the Kobe municipality has any real desire to have foreigners buy their (*sic*) bonds, but have (*sic*) published the notice for appearance's sake." That kind of writing is really too silly to be treated seriously. If any foreigner makes a bid for the Kobe Bonds, he will soon learn whether the Kobe Municipality is fooling away its money by inserting sham advertisements in newspapers. With regard to the general question of foreigners' "combining with Japanese for the purpose of industrial enterprise in the interior," the sole difficulty is that the laws of Japan do not, and can not, under the present treaties, recognise foreign ownership of real property outside the Settlements. Otherwise, there is nothing to prevent a foreigner from taking part in any enterprise, provided—a very large proviso—that he is willing to accept the risks incidental to that anomalous position. The question of securities such as the bonds of the Kobe Municipality is a totally different matter. Holders of the bonds do not thereby acquire any title to fixed property outside the Settlements. They merely lend money to the Kobe Municipality, and accept its written promises to pay as marketable securities. Even if foreigners bought up all the bonds they would not thereby be able to control the Water-works.

A comically hysterical article appears in the *Japan Gazette* on the subject of the ownership of Japanese securities by foreigners. The question has practical interest, but truly it becomes difficult to treat any utterances of the *Japan Gazette* seriously when that journal is overtaken by one of its characteristic moods of gusty agitation. Our contemporary envelops itself in a thunder-cloud of verbiage, out of which flash such lurid lightnings as "the anfractuosities of the Mail," its "combination of Oriental cunning with European candour," its "consummate ingenuity," its "scorn of truth," and so forth and so on, until the astounded reader gets a bewildered sense that an awful fraud has been perpetrated upon the public, and that the *Japan Mail* is a past master in chicanery and duplicity of every kind. What is it all about? Simply this. Some months ago, we stated that "when the Japanese Railway Company was organized for the purpose of building the northern half of the main trunk line, it was officially announced that foreigners might hold shares." The statement was made in connexion with an action of the Chinese Government which recently adopted precisely the opposite course by excluding foreigners from the ownership of its railway bonds. Our language, however, was not sufficiently explicit. It led the *Japan Gazette* to suppose that we referred to the shares of the Nippon Tetsudo Kaisha, established in 1881, whereas our reference was to the first issue of railway bonds by the Japanese Government in 1883, for the purpose of constructing the Nakasendo road. In so far as our use of the words "Japan Railway Company" contributed to that misapprehension, the fault was

ours, but the facts in question were so well known that no mistake seemed possible. The shares of the Nippon Tetsudo Kaisha are of the kind called *ki-mei*: that is to say, they bear the name of their owner, and are not purchasable by foreigners. The Nakasendo bonds are *mu-ki-mei*: they bear no name, and can be bought and held by any one of any nationality. That fact evoked much comment when they were issued in 1883. Subsequently, many other public securities, of a similar character so far as freedom of ownership was concerned, were put upon the market. Our readers are probably familiar with them. They are, the Consolidated Loan Bonds, the War Bonds, the Naval Loan Bonds, the Tokyo City Loan Bonds, and the Kobe Water Works Bonds. Any of these securities may be openly purchased by foreigners, and their coupons may be presented by foreigners in their own names when interest falls due. We are at a loss to understand the *Japan Gazette's* perplexity about this point. It says, "the fact that the Nakasendo Railway Company sold bonds which did not bear the name of the holder is no proof" (i.e. of the competence of foreigners to hold shares in a Japanese company), "since foreigners could buy the bonds and present them for interest through the Japanese, just as the Tokyo Tate-mono Kaisha will enable foreigners to own houses in contravention of the Treaty." There is no such thing as a "Nakasendo Railway Company," but let that pass, for perhaps our own want of accuracy in originally alluding to a company may have misled the *Japan Gazette*. What we note, however, is that our contemporary labours under the impression that if foreigners desire to hold Nakasendo bonds, they must resort to surreptitious devices; must employ Japanese to "present them for interest." That is a delusion. Nakasendo bonds, in common with consols, war bonds, naval bonds, and so forth, are transferable just like bank-notes, and like bank-notes may be held by any one. Their ownership by foreigners involves no evasion of the Treaty. Surely our contemporary knows that one of the purposes contemplated by the Government in adopting the gold standard is to attract foreign purchasers for these various securities. In view of the constant fluctuations to which the ratio between the precious metals is liable, European and American capitalists naturally hesitate to invest in silver bonds, but it is hoped that five per cent., backed by Japan's credit, will tempt them when the bonds are placed on a gold basis. Would any such prospect be contemplated if the securities could not be openly dealt in by foreigners?

In connection with this question of foreigners' investing in Japanese public securities, we employed the phrase "buying Japanese consols, war bonds, or railway bonds at present is too obscure a business." The *Japan Gazette* quotes the phrase, and professes to think that it applies to the process of acquiring the securities. But the context in which the words were employed made it impossible that any ordinarily careful reader should attach such a meaning to them. We explained clearly that the obscurity referred to the future of the bonds. They might be converted at any moment; they might be redeemed at any moment: they did not, in fact, possess

sufficient permanency as an investment to greatly tempt foreign capitalists. As to the manner of purchasing the bonds, there is no obscurity whatever. Why does not the *Japan Gazette* reflect for one instant, only for one instant, before blundering so pitifully? Does it not know that the President of the Yokohama Specie Bank and an official of the Bank of Japan, recently visited London expressly for the purpose of getting Japanese Consols, War Bonds, and so forth, quoted regularly on the London Stock Exchange? Can there be any "obscurity" about the process of acquiring securities thus openly quoted, and openly offered for sale by reputable agents?

All this is quite apart from the question of foreigners' owning shares in Japanese companies. It is well to be perfectly explicit upon the point, lest some new confusion of ideas become the basis of a fresh journalistic tirade. Our contemporary says:—"What we are anxious to ascertain is, can foreigners own shares in Japanese companies." Of course they can not. What on earth is the use of repeating a question that was answered thirty years ago, and has never been in the smallest degree doubtful since the opening of the treaty ports? Every one possessing an ordinary share of the commonest information understands these things. Foreigners have acquired by treaty the privilege of carrying on trade within the limits of the Settlements, and only within those limits. Therefore partnership with Japanese companies which carry on trade outside the limits of the Settlements is not lawful for foreigners. Foreigners have acquired by treaty the privilege of holding real estate within the limits of the Settlements, and only within those limits. Therefore partnership with Japanese companies which hold real estate outside the limits of the Settlements is not lawful for foreigners. The *Japan Gazette* need not distress itself about this matter. Its own ignorance is the sole source of obscurity.

With regard to the new Treaties, the *Japan Gazette's* ideas are equally luminous. "The new Treaty," it says, "has been so carelessly drafted that people are in ignorance as to what will become of the various joint-stock companies existing in Japan. If it can be shown that foreigners are entitled to hold shares in Japanese companies, the question becomes one of the utmost simplicity as the new Treaty does not contain any clause rescinding such a right." The obvious precaution of reading the new Treaty before condemning it for "careless drafting" evidently did not occur to the *Japan Gazette*. We do not say that any amount of reading would discover in the Treaty a clause providing for the fate of "the various joint stock companies existing in Japan." Indeed, we venture to assert that not even in the nightmares by which the unfortunate negotiators of the Treaty were probably visited, did it occur to their afflicted fancies that they were required to decide what should "become of the various joint-stock companies existing in Japan," any more than it occurred to them that the high contracting parties should revise the taillessness of Japanese cats or the use of paper for pocket-handkerchiefs in Japan. They did, however, give lucid attention to the question of partnerships between foreigners and Japanese, and the result of their attention is embodied in the 3rd Article of the Treaty, which says:—

The subjects of each of the high contracting parties may trade in any part of the dominions and possessions of the other by wholesale or retail in all kinds of produce, manufactures, and merchandise of lawful commerce, either in person or by agents, singly, or in partnerships with foreigners or native subjects.

The portions that we have italicized place the whole matter on the clearest possible basis. British subjects are explicitly authorized to engage in partnerships with Japanese, and, therefore, it goes without saying that they will be entitled to purchase and hold shares in Japanese Companies. That is "the simple truth without distortion of facts" to learn which the *Japan Gazette* professes itself to be so anxious. Brief reference to sources of information universally available would have sufficed to teach our contemporary this "simple truth," but we are happy to be able to save it a task that seems so strangely uncongenial.

"JAPAN GAZETTE" DIRECTORY.

In a recent issue we drew attention to the fact that four pages had been dropped out of the Alphabetical List in the *Japan Gazette* Directory for the current year. This criticism—if criticism it can be called—has evoked from the *Japan Gazette* a species of protest in which our contemporary charges us with the "evident intention of conveying the impression that in the whole issue of the Directory four pages have been dropped out." There can be no question of "intention" in such a matter. Every reviewer bases his estimate of a book on the copy sent to him for review. We are glad to learn from the *Gazette* that our copy was exceptional and that our contemporary is not condemned to the loss of re-binding and re-folding a number of copies, and that its clients will be saved the inconvenience of having to wait a long time for this useful volume.

CYCLING.

A writer signing himself "The Don" sends us a column of notes on the subject of cycling. It covers an advertisement of the "Dunlop Tyres." But apart from motive, the notes contain one or two interesting points. We read, for example, that, at the recent show of cycles in Dublin, there was exhibited a wheel called the "Old Hobby Horse," said to have been ridden by the late Sir James Power, in 1812. We read, also, a very flat denial of the assertion advanced by a prominent cycling journal, namely, that there is less stress on a machine when "coasting" than at any other time. The composer of the column before us says:—

I should like to hear that writer arguing in support of his theory with a man who had ridden a bicycle for a couple of thousand miles in safety only to find it go to pieces the first time he indulged in the pleasure of "coasting." Experience has proved that far more machines break up under the stress and strain of bearing a rider's dead-weight—as in "coasting"—than in ordinary riding. Of course, an experienced "coaster" can humour his machine to such an extent as to avoid over-straining the frame and wheels. But, then, that experience has to be gained.

It certainly would be interesting to know why sitting steadily on a bicycle as it runs down a slope can strain it more than driving it along by the exercise of muscular force.

FAREWELL DINNER TO BARON HAYASHI.

On the evening of the 15th instant, the members of the Tokyo Club gave a farewell dinner to His Excellency Baron Hayashi, who leaves Japan by the M. M. steamer *Saghalien*, on April 2nd, to assume the post of Japanese Representative at the Court in St. Petersburg. Baron Hayashi enjoys exceptional popularity among all nationalities in Tokyo. A very large number of friends attended the farewell dinner, among them being the Foreign *Chefs de Mission*, and the Baron's health was drunk with much enthusiasm. It was proposed by Mr. G. Lowther, Foreign Vice-President of the Club, in the following terms:—

GENTLEMEN,—We have met together to-night to wish good-bye to our friend Baron Hayashi, who, as you know, is leaving Japan shortly to take up his appointment as Minister at the Court of St. Petersburg. I must again ask you to excuse me for addressing you in English. Were I to attempt to do so in Japanese, my speech would certainly have the advantage of brevity, but I make bold to say that it would not be intelligible to a single one of you. There is a common saying that "no man knows how many friends he has until he inherits a fortune." Removing from this saying all trace of the sting of sarcasm, I think we may adapt it to the present case and say somewhat as follows:—"No man knows how many friends he has until he leaves Japan for Europe." When this dinner was arranged it was decided, and this decision fell in with our guest's views, that it should not in any way partake of the nature of an official dinner, but should be merely a gathering of those who are privileged to call themselves Baron Hayashi friends. Considering how limited is the number of the members of this Club, and considering that within the last two years Baron Hayashi has been away a good deal from the country, I think he must feel gratified that so many of us have come together to wish him adieu.

I am fortunately debarred from talking politics in this place, but you will most of you admit that in speaking of a man who has filled very high positions in the government of his country, some allusion to his services is admissible. I will not take you back to all the positions Baron Hayashi has held with so much credit to himself and so much advantage to his country. It suffices to remind you that he occupied the post of Vice-Minister for Foreign Affairs during the late war with China, and that he then had most responsible and delicate duties to fulfil. It was my privilege at that time to be in almost daily intercourse with him, and I can assure you I spent many pleasant moments in his company and never a disagreeable one, and I always have heard from my colleagues that they found official intercourse with Baron Hayashi of the most pleasant character, and that business was much facilitated by his conciliatory attitude. It is certain that his services were appreciated, for he was shortly after the conclusion of the war selected as Minister to Peking, where he concluded negotiations of a delicate and important nature. But it is rather as a member of this Club and as one of your late Vice-Presidents that I wish to speak of our guest. I think we, as a Club, regard him as a Father. Without him and his paternal care we should not have existed—when I say existed, I mean in our present shape. We should probably have assumed humbler proportions and been stowed away in some hidden corner of the city—whereas now we boldly hold our heads erect in the most fashionable quarter of the capital. You are probably most of you aware that it was to Baron Hayashi's exertions that we owe the fact that we were presented with a sum sufficient to assist as very materially in building our present premises. We owe him a deep debt of gratitude for his valuable assistance. But do not let me be thought to say that he confined his exertions to this one effort. As Vice-President of this Club he always showed a keen and lively interest in the working of the Club and was a regular attendant at the meetings of the Committee.

Gentlemen,—In a few days the Baron leaves Japan for the Empire of the Czar. Our good wishes go with him that his mission, a most important one, may prove in every way successful, and that he may find his sojourn in Russia most agreeable. I ask you to drink to his health.

Baron Hayashi, who, on rising, was re-

ceived with hearty applause, replied thus, speaking in English:—

GENTLEMEN,—I thank you for your reunion here this evening and for the kind manner in which my toast has been proposed and drunk. This is the second time within a little more than twenty months that you have shown your friendship in this kind manner. Truly I have not adequate words to express my feelings of gratitude. During my stay in Peking, at dull moments in that out-of-the-way sort of place, my thoughts often turned towards this club. I am now going to reside in a totally different kind of city, but even in the great and brilliant capital which is to be the scene of my next duties, the remembrance of this club, and of the kind friends I leave here, will frequently recur to my thoughts. Mr. Lowther has spoken about my official service in high terms. On that subject I am at a loss how to express myself, except to say that my endeavors in this respect have been, and shall be, to promote as far as in my power lies, the benefit and good of all the parties concerned. He has also made reference to my service to this club. I am happy to know you appreciate any slight contribution I may have been able to make to your own efforts in arranging for the continuance of an institution that adds so much to the pleasures of life in Tokyo. Thanking you again for your kindness, I ask you to join me in drinking to the prosperity of the Tokyo Club.

KOREAN ITEMS.

The only incident worthy of special notice in connection with the removal of the King of Korea to the Kyengwon Palace from the Russian Legation, was that the students of the Paichai School formed line outside the soldiers and policemen guarding the street, and threw quantities of flowers to the King and the Crown Prince as their chairs passed.

The day after his removal to the Palace, namely, Sunday, the 21st of February, the King gave audience to the Foreign Representatives, and addressed them as follows:—"Just over a year ago We went to the Russian Legation under very unfortunate circumstances. But through the friendly spirit of the Russian Government and the hospitality of the Russian Minister, We spent one year in that Legation in safety and comfort. The country is again in peace, the circumstances have changed, and We returned to this Palace yesterday." A balder statement could scarcely be conceived, but what, after all, could the poor King say? According to reports from various quarters, his exit from the Russian Legation has placed him, more than ever, under the sway of influences injurious to the welfare of his Kingdom.

Writing of the edifices in foreign style that have sprung up in Söul, the *Independent* says:—

There are some buildings here which really improve the appearance of the whole town. In this respect, the French residents ought to be congratulated for their fine buildings which adorn various prominent places about the Capital. The French Legation, when finished, will be one of the most ornamental structures in the foreign settlement; the new Cathedral in Chonghen is the most imposing and beautiful church in Söul; and another Catholic Church in Yakhen, outside the little West gate, presents a very pretty appearance on the Western hills. The Russian Legation building is one of the prides of the foreign settlement. It is situated on very high ground, commands an unsurpassed view of the whole city, and the architecture is very pleasing. The British Legation, the Customs House, and the New Methodist Church in Chongdong all contribute their part in making the settlement look Europeanized. The new Japanese Consulate inside the South gate is one of the finest buildings in Söul. It is much more imposing than the Japanese Legation building, and the stone-trimmed brick wall around the new Consulate makes a very fine appearance in that part of the city. The Japanese Legation building is not particularly pretty from the outside, but it is a two-story foreign style building, containing many pretty rooms. There are other foreign buildings than

those, in the city. The Söul Improvement Company's buildings at the East entrance of Legation street improve the street very much. These buildings are not for dwelling purposes, but mainly for stores. The Methodist School, Printing Office, and the residence of Mr. Hulbert are all foreign style. They are not especially handsome from an architectural point of view, but they all blend together in making that part of the city look more like a foreign settlement.

It appears that the citizens of Pyengyang are determined to rebel against the extortions of tax-collectors, who make levies for which no warrant is furnished by the law. Unable to obtain redress by appeals to the magistrate, who seemed to think that money once fobbed by the collectors could never be refunded, they have had recourse to the *Independent*.

The King, after his exodus from the Russian Legation, issued the following edict:—

Since We left the Palace over a year ago, the laws of the Government have become confused and the people became anxious over Our staying in a foreign Legation. We have been cognizant of the facts, but, as everybody knows, it was unavoidable. The Ministers of State advised Our returning to the Palace, which request We have complied with by coming to the Kyengwon Palace. This will, to some extent, satisfy the hearts of the people. The confused state of affairs is largely due to Our unskilful administration of the Nation's affairs. We are aware of the fact that various matters of importance have been neglected by the officials on account of Our misdoings. However, hereafter We command Our officials and people to renew their energy and strengthen their hearts for the purpose of carrying out the laws and performance of their duties faithfully and intelligently. The provincial officials must love the people over whom they rule, and the soldiers of the Government must discharge their military obligations with patriotism and bravery. In order to launch the great ship of state successfully, the captain, pilot, and engineers must work together harmoniously with one object and one purpose of making the voyage safely and speedily. If any one of the officials neglect his part, the ship will go astray and danger will surely befall them all. We trust that Our officials will understand Our desires and hope in the matter, and do their duties with the one aim of raising the country from the imminent danger and present confusion.

It is certainly weary work to read cant of this kind. There will be hope for Korea when the King ceases to bow his head publicly in the dust.

The Wonsan correspondent of the *Independent*, after commenting on the long, cold winter that has been experienced there, says:—

Wonsan and 19 surrounding villages have been remembered in a substantial way by the kind generosity of the late Empress Dowager of Japan who sent some 650 yen to be distributed among the aged and the very poor. Those over seventy years of age received each one bolt of good Japanese muslin. The families of very poor people received each two *mal* of rice and three sheets of cotton. Of the former class there were 167; of the latter 330; so there were about 400 families who received something. In the midst of these trying times, this kind remembrance ought to be, and we believe is, received with much appreciation by the people.

It appears that the duty of attending at the various forms of sacrifices offered by the Board of Ceremonies to the spirits of deceased royalties in Korea, keeps the officials too busy to permit of their attending to anything else.

Min Yung-whan is the name of the special envoy appointed by the King of Korea to represent his country at the Court of St. James on the occasion of the Diamond Jubilee.

The Korean Government is about to establish a system of decorations. A committee is now considering designs and drawing-up rules.

A proclamation by the Police Department in Söul prohibits the smoking of long pipes in the streets.

Judicial officers in Korea are evidently open to the receipt of *douceurs* from suitors. The Law Department has issued an order forbidding the practice, and declaring that litigants convicted of giving or tendering a bribe, shall be non-suited incontinently.

MR. CHIROL'S SECOND SERIES OF LETTERS.

Mr. Val. Chirol, who visited the Far East for the second time last year as special correspondent for *The Times*, has contributed to that journal a series of letters almost as interesting as those that came from his pen a year previously, and were afterwards collected in book form. One of his latest contributions is directed to Li Hung-chang. Mr. Chirol follows exactly the lines adopted in our own leading columns some months ago, when people were writing enthusiastically about the "Bismarck of the East," and predicting his restoration to power and political influence after his return to China. Before the first encounter had taken place between Chinese and Japanese troops in 1884, we ventured to foretell that the impending war would ruin Li Hung-chang. Whatever reputations might be made, whatever successes achieved, or disasters encountered, the "Great Viceroy's" fate seemed to us to be sealed. And when he was on his way back from Europe and America, we found it impossible to regard him in any light save that of the man directly responsible for China's disgrace and humiliation. For years the Tientsin statesman had basked in the fame of enlightened liberality. He received the credit of being the most eminently progressive unit in his nation, and he justified the plaudits of sanguine on-lookers by devoting all available resources and opportunities to the organization of means to guarantee his country's safety. Wonderfully persistent was foreign faith in his competence. His naval squadron was spoken of as a thoroughly efficient fighting machine. No less an authority than the British Admiral, inspecting the Pei-yang fleet just before the war broke out, declared it superior, in point of material and *personnel*, to the Japanese Navy. His land forces were believed to be formidable to the last degree. His forts were supposed to be impregnable. Yet, at the first breath of Japan's cannon-balls, all this magnificent edifice, this stronghold of progressive intelligence and civilized energy, crumbled into ruins. If Li's preparations taught any lesson to China, it was a lesson unfavourable to foreign ships, foreign tactics, foreign arms, and foreign forts, at any rate in Chinese hands. Was there any hope that the old statesman could emerge from such a cloud of failure? He could no longer pose as an advocate of the systems that his own disasters had discredited. He could not turn his back upon those systems without confessing a life-long blunder. He could not admit the only true explanation of his catastrophe, namely, that while adopting the externals of Western material civilization, he had made no resolute effort to eradicate the old spirit of Chinese corruption and conservatism. Only some extraordinary political convulsion can raise Li from the grave of his old greatness.

COLLEGE OF SCIENCE IN THE IMPERIAL UNIVERSITY.

The second part of the ninth volume of the Journal of the College of Science in the Imperial University is now before us. It maintains the high standard of this College's publications, and shows that in the field of original research Japan's men of science are working industriously and successfully. The contents of the volume are of much too technical a character to permit any detailed reference in the columns of a daily newspaper. We confine ourselves to reproducing the table of contents:—

The Tinfoil Grating Detector for Electric Waves. By T. Mizuno, Rigakushi, Professor of Physics, First Higher School.....	111
On the Piedmontite-rhyolite from Shinano. By N. Yamazaki, Rigakushi, College of Science, Imperial University (With Plate VI.).....	117
The Atomic Weight of Japanese Tellurium. By Masumi Chikashige, Rigakushi, College of Science, Imperial University.....	123
Das Johanniskäfer-Licht. Von H. Muraoka, Rigakuhakushi, Ph.D., Prof. der Physik am Dai-San Kotogakko.....	129
On the Prediction of Solar Eclipses. By Shin Hirayama, Rigakushi, Professor of Astronomy, Science College, Imperial University, Tokyo.....	141
How Mercurous and Mercuric Salts change into each other. By Seihachi Hada, Rigakushi, College of Science, Imperial University.....	161
Imidosulphonates (Second paper). By Edward Divers, M.D., F.R.S., Prof., and Tamemasa Hada, F.C.S., Rigakushi, late Asst. Prof., College of Science, Imperial University.....	195
Amidosulphonic acid. By Edward Divers, M.D., F.R.S., Prof., and Tamemasa Hada, F.C.S., Rigakuhakushi, late Asst. Prof. College of Science, Imperial University.....	219
Molecular Conductivity of Amidosulphonic acid. By Joji Sakurai, F.C.S., Rigakuhakushi, Professor of Chemistry, College of Science, Imperial University.....	259
The Physiological Action of Amidosulphonic acid. By Oscar Loew, Ph.D., Prof. College of Agriculture, Imperial University.....	273
The Reduction of Nitrosulphates. By Edward Divers, M.D., F.R.S., Prof., and Tamemasa Hada, F.C.S., Rigakuhakushi, late Asst. Prof. College of Science, Imperial University.....	277
Economic Preparation of Hydroxylamine Sulphate. By Edward Divers, M.D., F.R.S., Prof., and Tamemasa Hada, F.C.S., Rigakuhakushi, late Asst. Prof. College of Science, Imperial University.....	291
On the Time-Lag in the Magnetisation of Iron. By Yoshijiro Kato, Rigakushi. (With Plate VII.XV.).....	295

REUTER AND MR. CURZON.

Reuter greatly misled the Far East with reference to the Hon. G. N. Curzon's statement in the House of Commons. He represented the Parliamentary Secretary as saying that Russia's action in supplying officers to drill the Korean forces "was hardly consistent with her pledge," whereas the special telegram, that we publish elsewhere, reports Mr. Curzon's words to have been "does not appear inconsistent with Russia's pledge." There is all the difference in the world between the two versions. Curiously enough, just at the time when Mr. Curzon conveyed this information to the House of Commons, Count Okuma was telling the Japanese House of Representatives that it lay entirely within the competence of the King of Korea to employ drill instructors of any nationality pleasing to him. Of course the Yamagata-Lobanoff Protocol and the Waeber-Komura Memorandum show that, in some matters, closely touching the sovereignty of Korea, the two Empires did not hesitate to come to an agreement without consulting the Korean Government at all, but neither document contains any clause restricting the Korean King's right to appoint drill-instructors of his own choice. There can be no reason against the employment of Rus-

sians now, any more than there was a reason against the employment of Americans originally, or of Japanese subsequently.

Reuter's mistake has served one good purpose, however: it has elicited some very emphatic expressions of policy from Japanese newspapers. The gist of the articles embodying these expressions will be found in our weekly review of the Spirit of the Vernacular Press. Plainly, a considerable section of the Japanese nation regards England as this country's natural ally, and has a rooted apprehension of Russia's aggressive designs.

THE HIGHER COMMERCIAL SCHOOL.

The Calendar of the Higher Commercial School for 1896-7 shows it to be in a flourishing condition. There are 430 students, and 39 Professors, Instructors and Lecturers, being an average of 1 to every 11 students. The lads certainly ought not to be in a position to complain that the teaching capacities of the institution are defective or insufficient, for among the names constituting the faculty are some of the most distinguished specialists of Japan. The list shows only three foreigners, Professor E. J. Blockhuys, whose specialty is the science and practice of commerce, and Messrs. Hara and Binda; the former, Professor of English; the latter, of Italian, Spanish and German. If the little volume now before us may be interpreted at all literally—and we see no reason why it should not—this School ought to have good material to train and mould. The entrance examination covers quite a number of subjects, beginning with that stupendous obstacle to all intellectual progress in Japan, ideographic penmanship, and passing on through Japanese and Chinese paraphrase and punctuation, to natural science, English (dictation, conversation, and translation) and gymnastics. Graduates with honours of public or private Ordinary Middle Schools are admitted without examination, under certain conditions. It is particularly to be noted that in order to obtain promotion from class to class a student must score at least 60 per cent. of the marks allotted to the whole course, and that graduation with honours is only possible for students who have scored a general average of 90 per cent. in all subjects. Such rules mean simply that marks cannot be assigned strictly on the merits of a candidate. In English universities the honour marks are 50 per cent. of the maximum obtainable; the pass marks, generally 30 per cent. We confess frank incredulity in the competence of any student, unless he is a species of phenomenon, to score a general average of 90 per cent. in all subjects from the time of commencing the principal course in such a school as this to the time of leaving it, especially when the number of subjects aggregates 19. Discerning persons set much greater value by a reasonable number of marks fairly and squarely obtained than by a large aggregate to which the leniency of the examiner must have materially contributed. As is usually the case in Japanese schools, the tuition fees are very small—20 yen annually in the preparatory year and 25 yen in the principal course. The list of men who have graduated and who are now profitably employed, totals 677. The number that actually graduated from 1877 to 1896 was 731, but the ominous asterisk indicating death occurs no less than 54 times in the list, showing that more than 7 per cent. of the graduates succumbed to the process of mental forcing unfortunately too common in Japan, and certainly carried to excess in a school where a student has to obtain 60 per cent. of the maximum marks in order to pass at all. For the rest, the high standard imposed at the School and the success that attends it are plain evidences of the fact that the pursuit of commerce has been elevated in Japan to a position very different from that occupied by it in feudal times.

THE SENDAI SCHOOL STRIKE.

SUNDAY, Monday, and Tuesday were days of great excitement in Sendai. The numerous meetings that were held at all hours of the day and night, and the sight of eager delegates going from one place of conference to another, gave to the town the appearance of being the scene of a hotly contested political election. Each body concerned had to decide on its plan of action *vis-à-vis* other bodies, and for that purpose many conferences were held. The class delegates, the University students, to whom we referred in a former issue, the parents, friends, and guardians of the pupils, and the school authorities, all had their meetings. In some cases the debating went on for hours, and terminated with voting on resolutions and amendments in parliamentary fashion. Each proposal sent by one body to another was promptly dealt with, meetings being summoned even in the middle of the night. Numbers of intercessors have reached Sendai from various parts, including such eminent men as Mr. FUKUCHI GENICHIRO. Most important meetings were held late on Sunday night, and it was at an assembly which commenced its deliberations at 1 o'clock in the morning that the first sign of submission to the school authorities manifested itself. A reply that had been drawn up by the delegates of the classes, the contents of which are not stated, but which was of a most hostile character, was made the subject of a long debate, the result of which was the abandonment of the document *nem. con.* The intercession of the relatives of the students, and of the University men, at length induced the delegates of the Classes to consent to the question of return to school being referred to the representatives of the friends of the pupils for settlement. When this step had been reached, a peaceful termination could not be far off, and it was confidently expected that by the night of the 16th, or the morning of the 17th, the crisis would be passed.

It is generally considered that much wisdom will be required in meting out punishment to the agitators. There is danger that very severe measures might lead to a fresh outbreak. We are given to understand that the Mombusho representative, Mr. KINOSHITA, is at present merely watching the proceedings, and that the School will exercise to the full its proper functions in dealing with the offenders. The authorities have a difficult task to perform, but they can rely on the sympathy of all educationists and lovers of order and discipline. The originators of the movement, doubtless think themselves brave fellows, but in the eyes of most people their conduct will not bear that aspect. Instead of taking upon themselves the responsibility of finding fault with the action of the Director, and suffering the

consequences of their interference, they worked upon the emotions of the whole of their fellow-students and availed themselves of the shelter of numbers.

The fact that the appeal to the mass of the students was so readily responded to, shows how ill-balanced are the minds of the rising generation in Japan at the present day. The same kind of thing has happened, however, in other countries at different times. Not long ago the newspapers informed us that students at Athens had actually seized the University and had to be besieged by Government troops before they surrendered. But such occurrences are very rare in the West. The excitability of the Japanese no doubt has a good deal to do with these affairs. We are inclined to think, however, that the conditions which produce them, to which we referred in a leading article on the subject, are quite transient, and likely to disappear altogether in another twenty years. The whole subject of discipline in Japan is one on which there is a great variety of opinion among foreigners. However stringent discipline in the Army and Navy may be—and there are those who maintain that it is not very stringent—it is, we think, generally acknowledged by persons competent to form an opinion on the question, that school discipline in Japan is more lax than in Europe or America. Some argue that this is not a disadvantage, and that, on the whole, schools are managed as well in Japan as in any part of the world. Everything generally goes on smoothly. The proportion of really earnest students is large, and they object to any conduct that hinders progress. It is not an uncommon thing for ardent workers to openly protest against disturbances in class. The love of order may be said to be a permanent sentiment with the average student. The outbreak we have recorded is abnormal, and it would not be fair to the student class in Japan to regard the incident as an indication of any deep-seated tendency to rebel against constituted authority. Any one that has had intimate acquaintance with the Japanese student of normal type can not but express admiration for his numerous good qualities. He is usually poor. He knows few of the comforts and none of the luxuries enjoyed by Western youths. But no amount of hardship turns him aside from his purpose. Insufficiently clothed, and often insufficiently fed, he makes his way to school through frost and snow, rain, or summer heat, bolts in about five minutes his frugal lunch at noon, and pores over his books from hour to hour with dogged perseverance unsurpassed in any land. His independence is magnificently displayed on a hundred different occasions. It is impossible to forbear from applying the term heroic to the greater part of his life. But he is not brave only: he is also very discerning. He knows a good teacher from a bad, and

holds in real veneration the men that have helped him along the road to knowledge. He is ambitious, but his ambition is of the virtuous kind and acts as a stimulus to exertion. Though he may have a fair amount of youthful conceit, it is by no means of an obstinate type, and yields easily to the assaults of knowledge. If kindly and considerately dealt with, he may be led almost anywhere and taught almost anything. He is fond of argument, but is, in all the calm moments of his life, amenable to reason. In the presence of such high qualities as these one can not but feel inclined to take a lenient view even of such a disturbance as has occurred at Sendai. There is all the difference in the world between the very occasional bad actions of men whose habitual life is passed on a high plane, and the bad actions of men who have few, if any, redeeming qualities. That there exist in the Sendai School a few students of the latter type we have little doubt, and if the authorities can discover these men and make an example of them they will have done all that is required. The main body of students can be left to pursue their own course. Their earnestness of purpose and common-sense will in the future, as in the past, enable them to steer clear of the quicksands that surround them.

IMPERIAL DIET.

TUESDAY, MARCH 9TH.

(CONTINUED.)

HOUSE OF PEERS.

The debate was resumed at 1.15 p.m., Marquis Kuroda Nagamasa, Vice-President, in the chair.

Mr. Miyamoto wished to know the number and names of the temples and shrines in question, and also what steps would be taken with regard to precious articles not specified in the Bill. Were such articles to be beyond the scope of the proposed law?

Mr. Nakamura, Government Delegate, explained that no period was fixed for the exhibition of *homotsu*, and that even in the case of objects of art other than those enumerated, a special allowance would be made by the Government, in accordance with Art. VIII. Formerly a sum of twenty-thousand *yen* had been granted every year for this purpose, but in the 15th and 27th years of *Meiji* a sum of ten-thousand *yen* only had been paid out, and a similar grant had been made to the Temple of Kofuku in Nara and the Temple of Shimizu-dera in Kyoto, in the 29th year of *Meiji*.

Mr. Miyamoto supported the Bill, but desired some explanation of the fact that the Government Delegate spoke of spending only fifty thousand *yen*, whereas the Bill put the appropriation at three or four times that sum.

The Government Delegate replied that such a sum as 150,000 *yen* or 200,000 *yen*, though mentioned in the Bill, could not be appropriated in the 30th fiscal year, and that therefore the programme could not come into full operation before the 31st year.

Baron Date thought that, if such were the case, a clause ought to be inserted, stating plainly that Government would pay the proposed sum from the 31st year.

Baron Chika considered that if the object of the Bill was to preserve old temples and shrines, the Government could not possibly be justified, in imposing upon temples the harsh necessity of exhibiting their precious relics in a museum. These relics had long been worshipped by de-

votes, and to transfer them to museums might impair the credit as well as the receipts of the temples.

Mr. Hirayama pointed out that the subsidy to be granted by Government would fully atone for any possible loss of revenue.

Referring to the fact that the Bill declared it to be an obligation incumbent on the priests of temples and shrines to exhibit their precious relics, Mr. Obata asked whether such a provision did not violate the owners' rights as individuals to do what they pleased with their property.

The Delegate replied that the precious relics in question were not personal property. The Bill was passed as amended by the Committee. The Bill standing third on the Order was also passed without dissent. It referred to the construction of a railway between Matsumoto, in Nagano, and Toyama, in Toyama prefecture, via Takayama in Gifu.

The principal articles embodied in the fourth Bill on the Order were as follow:—

Art. XVIII.—Measures should be taken in Cities, Towns, and Districts to establish a hospital or a separate house, for the accommodation of sufferers from zymotic diseases, under the direction of the Local Governor.

Art. XX.—The following provisions may be enforced, wholly or in part, when the Local Governor (in Tokyo, the Superintendent-General of Police) deems it necessary for the prevention of epidemics:—

1. Medical examination to ascertain whether any person is attacked by a zymotic disease.

2. Segregating the whole or part of a town or village.

3. Restricting or prohibiting the assembly of people for religious, theatrical, or acrobatic performances, or public meetings.

4. Restricting or suspending, the transport, or casting away, of second-hand clothes, rags, cotton, and other articles likely to be a source of contagion.

5. Prohibiting the sale, or transport, or casting away, of food and beverages likely to be media of propagating disease.

6. Ordering ships and vessels to secure the services of a medical man on board, or making necessary arrangements and precautionary measures in trains, ships, and other places where a number of people are brought together.

7. Ordering the enforcement of cleansing and disinfecting processes, or the abolition, change, repair, or abolishment of a well, water-course, drain, ash-pit, or water closet, or suspending, during certain hours, the use of places ordinarily resorted to for fishing or swimming, or of the water of such places.

Art. XXXV.—Vessels from foreign ports and from Formosa may be subjected to medical inspection regulations specially provided.

Mr. Nakamura, Government Delegate, explained that the present law for preventing epidemics had been issued in the 13th year of Meiji (1880) and that the progress of civilization rendered the alteration of the law absolutely indispensable.

Referring to the brevity of the Delegate's explanation, Dr. Miyako wished to know what particular points were deemed incompatible with the actual condition of the country. He insinuated that some of epidemics which could be effectually prevented, were allowed to spread among the people owing to official neglect of duty. Small-pox, which was very prevalent now, could not be suppressed even in Tokyo. The methods of prevention embodied in the Bill were to be employed in the interior of the country, only, and it must be regretted that no provisions were made with respect to epidemics coming from abroad.

Mr. Misaki, Government Delegate, pointed out that the superiority of the proposed Law to the former Regulations might be found in the facilities afforded to Cities, Towns, and Districts, for dealing with the epidemics promptly, and by means suitable to their respective local systems.

With regard to precautions against epidemics coming from abroad, the Delegate pointed out that as the revised Treaties were not yet in force, Notification No. 12 of the 15th year of Meiji must be applied at present, and that if the Harbour Regulations Bill, submitted to the House a few days previously, were passed, pre-

ventive methods would be framed on the basis of the Regulations.

The House was counted out at 2.45 p.m.

THURSDAY, MARCH 11TH.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of Day being:—

- 1.—Government Bill relating to the prevention of Epidemic Diseases.
- 2.—Government Opium Bill.
- 3.—Bill for amending the Law of Public Meeting and Political Association (sent up from the Lower House).
- 4.—Bill for amending Law No. 33 of the 17th year of Meiji.
- 5.—Bill for granting permission to a Private Railway Company for the construction of a railway borne on the State Programme.
- 6.—Bill for adoptive special measures with regard to Taxes to be levied in localities devastated by the late inundations.
- 7.—Bill for altering the boundary line between Chiba and Ibaraki prefectures.
- 8.—Petition for the Restoration of Pensions, etc.
- 9.—Petition for granting pecuniary donations to the families of men killed in war after the 7th year of Meiji.
- 10.—Petition relating to the remission of Local Land Tax.
- 11.—Petition for constructing the Uryu Railway in the First Term.
- 12.—Petition for appropriating a portion of the Chinese Indemnity to form a Capital Fund for Common Education.
- 13.—Petition with regard to the preservation of Old Temples and Shrines.
- 14.—Petition for the delivery of Government rice for sale.
- 15.—Petition relating to the establishment of Rules for the Control of the sale of Adulterated Fertilizers.

With regard to the first item on the Order, Mr. Takagi asked whether the proposed law conferred competence in the cases of epidemics coming from foreign countries.

Mr. Misaki, Government Delegate, replied that by the enforcement of the law, all epidemics might be treated with proportionately greater effect.

Mr. Takagi remarked that the prohibition or suspension of fishing in fixed places would deprive fishermen of their means of livelihood. Would the Government do nothing to compensate these unfortunate folks?

The Bill was handed to a Special Committee. The Bill standing second on the Order, namely, the Opium Bill, having been read, Mr. Nakamura, Government Delegate, explained that much inconvenience had been experienced under the present rules with reference to the sale and manufacture of opium. The Bill was introduced to insure greater advantages to manufacturers, and to secure stricter enforcement of the law in Formosa.

The principal points of the proposed Opium Law are as follows:—

Art. I.—No opium shall be manufactured without the permission of the Local Governor.

Art. II.—The Government shall examine opium already manufactured without the above permission, and shall grant compensation for such opium only as is found to contain the specified quantity of morphine, all unqualified opium being destroyed without compensation.

Art. III.—The opium shall be properly sealed by Government and allowed to be sold exclusively for medicinal purposes.

No person is allowed to sell, transfer, or possess opium other than that sold by Government.

Art. V.—The local Governor shall limit and nominate wholesale dealers in opium from among licensed druggists and apothecaries or other suitable persons within his jurisdiction in order that the sale of opium may be undertaken by such persons exclusively.

Art. VII.—No opium shall be sold unless a medical prescription is presented by the buyer.

Art. VIII.—The medical prescription, together with the name of the purchaser and the quantity of opium sold, shall be preserved for ten years.

Art. XI.—Any violation of Article II. shall involve a fine of not less than 30 yen and not more than 300 yen.

Art. XII.—Any violation of Articles VII. and VIII. shall be punished with a fine of not less than 10 yen and not more than 100 yen.

The Bill was handed to a Special Committee. At this stage, Viscount Tani introduced an urgency motion to the effect that an Address should be presented to the Emperor with regard to the estimates for military and naval expansion, and that the Order of the Day be changed accordingly.

The Viscount spoke to the following effect:—

The Minister of Finance had asserted that five or six millions of yen would suffice for the expenditures of Formosa; but what were the actual facts. All the assertions of the Ministers of State of last year had turned out erroneous. Should the schemes of the former Cabinet be adopted, the total amount of annual expenditure would exceed 310,000,000 yen. This sum had been curtailed to a little over 240,000,000 yen. There was every reason to expect that the expenses of administration would grow in the event of the enforcement of the revised Treaties, and that considerable changes would consequently occur in the country's financial affairs. It was undoubtedly to be desired that strong and perfect armaments should be contemplated rather than a vaguely extensive organization. The following point, might be urged for consideration:—

1. There was no necessity to maintain arsenals in separate places, more or less independently of each other. The various countries of Europe had already been taught by experience that it was most uneconomical to keep arsenals at government expense, and steps had been taken to entrust them to private companies.

Japan was not, of course, comparable with Europe, yet there could be no reason for the maintenance of separate arsenals here.

2. With regard to gendarmes: The situation of Japan differed widely in a political sense from that of Italy and Germany. Administrative police equipped with military arms were hardly necessary in this peaceful country.

3. The expansion of the land forces was distinctly disadvantageous. Such a step might be useful in Europe, but Japan's insular position constituted a special consideration. Apprehensions might be felt as to the extension of the Siberian railway, but even supposing that it reached the coast of Korea, still there would be great difficulty in sending troops thence to Japan. The military armaments of the country would certainly have been completed by that time. Moreover, excessive expansion of the military service would not only offend the Treaty Powers, but also expose the country to various losses. Even common education, the foundation of civilization, was disregarded at present, and in no way could the Government be justified in appropriating its resources almost entirely to military armament.

Referring to the above remarks, Count Matsukata, Minister President of State, said that the criticisms of Viscount Tani might have been dictated by loyalty as well as patriotism, but that the financial features of the country would not remain the same in future as at present, and the development of national wealth by the encouragement of agriculture and industry, would become questions of paramount importance, so that the sources of public revenue might be consolidated. A Minister of State ought to devote his power to strengthening the foundations of his country, and he could not be satisfied with the present condition of affairs. To improve the state of the finances would be essential as a means of maintaining the status of Japan. The Minister hoped that the proposed Address to the Throne would be withdrawn for re-consideration.

Viscount Okabe remarked that as the estimates for military armament were still in the hands of the Budget Committee, the discussion thereof could be better undertaken after they had been laid before the House. They could then be reduced, if necessary, according to the views of the members.

Supporting the motion introduced by Viscount Tani, Viscount Soga stated that the Government having declined to reduce the Budget as suggested by the Committee, if the House did not pass it, last year's Budget would again come into effect, so that the members would be deprived of any opportunity to effect the desired alteration. It was not a matter of surprise, therefore, that the alternative of presenting an Address to the Throne had been resorted to.

Professor Toyama wished to learn from the Cabinet Ministers whether the Government was really determined to refuse the decrease of thirty millions of yen proposed by the Budget Committee, and whether, if the Address to the Throne were presented, the Ministers of the Cabinet would resign?

Viscount Soga reminded Professor Toyama

that it was unnecessary to ascertain the opinions of a Minister in discussing an Address to the Throne.

Viscount Nomura, Minister of State for Communications, replied emphatically that the Budget could not be reduced by thirty million *yen*.

Dr. Takagi, Inspector General of Hospitals, remarked that the problem of military armament had been decided by the House last year upon the basis of experience and necessity. The extension of the national defences was a safeguard of peace, and schemes that had been framed for that purpose must be pushed forward with all zeal. Viscount Tani's statements, as remarked by Count Matsukata, were calculated to impair the prestige of the country in the eyes of foreign nations. The Viscount desired to appropriate the sum of thirty million *yen* to promote common education, but if that amount were divided among the whole population the share for each individual of school-going age would not exceed one *yen* seventy *sen*—a sum too insignificant to effect anything considerable.

The President having announced that the motion should be decided by closed ballot, the result was as follows:—

For the motion 69
Against 82

The House rose at 3.30 p.m.

HOUSE OF REPRESENTATIVES.

1.—The Coinage Bill.

Mr. Taguchi traversed Mr. Kawashima's statement that the ratio between gold and silver at present was 1 to 30. That was arithmetically incorrect. The general condition of the world showed that the principle of silver monometallism had not been rejected at all, as intimated by Mr. Kawashima. The Bill placed the ratio between the two metals at 1 to 28, and the adoption of the gold standard upon that basis was virtually a challenge to the nations of the world, who had already shown a tendency to adopt bimetallicism. The contest must then continue for five years to come. The direct effect produced upon Japanese finance by the alteration of the Coinage System would be a loss of about six million *yen*, if the silver *yen* fell ten *sen* in value, and if ten million *yen* imported from foreign countries, together with fifty millions of *yen* now in circulation in Japan, had to be exchanged for gold. The loss so sustained must be borne by the Treasury. Germany had been seriously embarrassed on account of similar losses. Even supposing that such losses do not actually take place, yet any considerable increase of the ratio of 1 to 28 would have the effect of causing the exodus of the subsidiary coins, to the last cent. Any fall, on the other hand, in the silver price of gold, will enhance the price of rice even to fifteen or sixteen *yen* a *koku*. Consumers would be subjected to serious distress. The extraordinary fluctuations that took place in the 23rd year of *Meiji*, had no effect whatever upon our country, simply because of the bimetallic system. All the views expressed in Europe and America in favour of bimetallicism are based on the fluctuations in the prices of commodities. The circumstances are almost the same as when there was a clamour in our country for a decrease of the land tax. The ratio between gold and silver ought to be determined, and by the average taken for a few recent years, but in accordance with the lowest market price of gold. The smallest divergence between the two metals after the 5th year was measured by the ratio of 1 to 15½ or 1 to 16. The best plan would be to adopt bimetallicism, which is calculated to give the greatest safety. The ratio for the subsidiary coins below fifty *sen* should be decreased to half of the proposed figure, and one-*yen* silver pieces should circulate as legal tender, as advised by the experts of Europe and America. Some may support the Bill in the hope of its enhancing the value of shares in their possession. But it is doubtful whether they will be able to reap the expected profit.

Mr. Soyeda, Government Delegate, replied that the Bill was founded upon the great economic

principles of demand and supply; that the fact of gold's being liable to less frequent fluctuations than silver was already scientifically proved, and that although the advocates of bimetallicism laid great stress on the scarcity of gold, it could not be denied that gold was prevented from depreciating by the brisk demand for it. The advantages resulting from the adoption of the gold standard might be inferred from the rise that had taken place in the prices of commodities. Moreover, the development of Japanese commerce was now checked by the danger of fluctuations in the rates of exchange. As regards Mr. Taguchi's remarks about Germany, it was to be noted that her embarrassment had been simply the result of scarcity of gold,—a contingency which need not be apprehended in the case of this country. Gold monometallism was everywhere adopted *pari passu* with the progress of civilization. That trade had expanded in Japan was a fact, but the development could not be ascribed to the use of silver. With regard to a reserve fund, it seemed fair to conclude that a sum of 150,000,000 *yen* would be sufficient to carry out the proposed scheme, being sixty per cent. greater than the average amount of the paper currency. The anxiety entertained as to probability of a future exodus of gold to foreign countries would at once be removed when it was known that a sum of ten or twenty million *yen* had been provided for exchange purposes.

If Mr. Taguchi's theory of maintaining the ratio between gold and silver at 1 to 16 were adopted, the prices of commodities would be reduced to half their present figures, and considerable losses would be inflicted upon the people.

At this stage the closure was moved, and carried by 126 votes to 119.

Mr. Suzuki moved that, in view of the importance of the Bill, the voting should take place by open ballot. The method of closed ballot might, in this particular case, interfere with conscientious voting.

The President said that it rested with him to determine the method of voting. He purposed taking an open ballot.

The result of the ballot was 151 in favour of the Second Reading and 96 against.

The House decided to proceed at once with the Reading.

Mr. Kosaka moved that the 20-*sen* silver pieces in Art. II. be changed to 25-*sen* pieces. He thought that the latter would be more needed in ordinary transactions.

Mr. Tajiri, Government Delegate, replied that 20-*sen* pieces having been coined since the establishment of the coinage system in the 5th year of *Meiji*, afforded no small convenience to the people, especially, in cases of making presents at tea-houses, or at seasons of festivity. If 25-*sen* pieces were coined their resemblance to 20-*sen* pieces both in size and form would lead to many errors. Moreover, the present 20-*sen* pieces must be allowed to remain in circulation for five or six years to come.

Mr. Hayakawa supported the idea of coins of one-fourth the value of a *yen*.

The proposition was rejected by the House.

Mr. Abe proposed that the following three changes be made in Article VI.:—

450 <i>sen</i> silver pieces	3 <i>monme</i> (22.5 <i>gras</i>)
400 <i>sen</i> " "	2 " (18.0 ")
300 <i>sen</i> " "	1 " (13.5 ")
200 <i>sen</i> " "	1 " (9.0 ")

The Bill placed the ratio between gold and silver at 1 to 28.75. He suggested that it should be 1 to 24. The subsidiary coins of all denominations in the Bill differed by only 10 per cent. in intrinsic value from the 1-*yen* pieces of which 60 millions were now in circulation. This is likewise the case in relation to the market price in London, where the ratio between gold and silver was 1 to over 32, thus showing a smaller difference in comparison with the market value in Japan in January, at which time the ratio between the two metals was 1 to 31.21. The average ratio between gold and silver for five years from the 25th of *Meiji* to December of the 29th year had been 1 to 28.01. The ratio fixed by the Bill was about that average, and it might easily happen that owing to appreciation of silver, the subsidiary

coins became relatively more valuable than the standard coins.

Mr. Tajiri, Government Delegate, replied that despite the views entertained by Mr. Abe as to the probable appreciation of silver, the Government had a strong belief that such a change would never occur. If Mr. Abe's advice were to be followed, the minting machinery now used must be expanded.

The Articles from VII. to XV. were passed without alteration.

Referring to Art. XVI., Mr. Nakano moved that the Government should take steps to deal with 1-*yen* silver coins within a year, obtaining a loan from the Bank of Japan for the purpose. Should the Bill be passed in its present form, the Government might see the bimetallic system in operation, despite its intention of adopting gold monometallism. Nothing was more essential than to deal speedily with the 1-*yen* pieces. The Government alleged that there was some difficulty in effecting the speedy exchange of the silver, as the coins were not used in ordinary transactions. According to information obtained by bankers it seemed that the amount of silver *yen* circulating in the interior was only ten million *yen*, while those in foreign countries did not exceed eight million *yen*. These were insignificant sums. With regard to the measures to be adopted for the exchange, the Government intimated that it could strike several millions of subsidiary coins each month, and that these coins would be appropriated for the gradual exchange of silver *yen*. But as it would be necessary to raise a public loan for obtaining funds, the impropriety of the Government's scheme need hardly be demonstrated. Thus it was obviously desirable to insert a clause for contracting a loan from the Nippon Bank. If the exchange of the silver *yen* be delayed, and the gold-price of silver rise in the interim, the *yen* pieces would not be presented for exchange, and the purchase of silver bullion from other sources would become inevitable for minting subsidiary coins.

Mr. Kimura advocated the substitution of one year for five years in the same Article.

After some discussion, the Bill was passed in its original sense.

Mr. Kurihara remarked that although the Government claimed to have introduced the present Bill in accordance with the views of a Commission appointed to investigate the monetary problem, yet Mr. Sakatani had been alone among the Commissioners in advocating immediate recourse to gold. A majority of the Commission had been in favour of the gold standard, but had considered the time unsuitable for its introduction. The question related to the financial policy of the Empire, and should in no way be treated as a party problem. Speaking from a mere party spirit, it might be hoped that the Cabinet would fall into the serious blunder of adopting the gold standard at once. The following points demanded close consideration:—

1. Whether the gold reserve was really sufficient.
2. Whether the gold reserve could be maintained, even granting its sufficiency, that is to say, whether it was sufficient to be independent of fluctuations in imports and exports.
3. Whether there were sufficient grounds for the immediate enforcement of the new system, even admitting that no difficulties existed with respect to the above points.

To the speaker it seemed that the Bill was destined to introduce a most dangerous bimetallic system under the name of gold monometallism. If it were true, as Count Matsukata asserted, that the advantages of the gold standard had been evident to him ever since the 19th year of *Meiji*, why did he take steps for the sale of gold coins at a cheap rate in May or June of the 23rd year of *Meiji* (1890)?

This motion was rejected and the Bill was passed through its Second and Third Readings. The House rose at 6 p.m.

FRIDAY, MARCH 12TH.

HOUSE OF PEERS.

The House met at 10.35 a.m., the Order of the Day being:—

- 1—Government Bill relating to the collection of Shooting Licence Fees. Continuation of First Reading.
- 2—Public Undertakings Special Finance Law Amendment Bill. Continuation of First Reading.
- 3—Bill relating to the inspection of Sires for Stud Purposes (sent up from the Lower House).
- 4—Government Bill for amending the Law of Public Meeting and Political Association (sent up from the Lower House).
- 5—Bill for amending Law No. 22 of the 27th year of Meiji.
- 6—Bill for granting permission to a Private Railway Company for the construction of a Railway in the State Programme.
- 7—Bill relating to the inspection of Silk-worm Eggs.
- 8—Railway Construction Law Amendment Bill.
- 9—Bill for adopting Special Measures with regard to the taxes to be levied in the Localities devastated by the late Inundations.
- 10—Bill for altering the Boundary between Chiba and Ibaraki Prefectures.
- 11—Bill for amending the Local Government System for Districts.
- 12—Bill for amending the Local Government System for Cities and Prefectures.
- 13—Representation with regard to the development of Statistical Affairs.
- 14—Representation for altering the Period of the Fiscal Year.

Besides the above Bills, there were eight Petitions, the same as those on the previous Order.

With regard to the first Bill, Count Ohara having reported that the Bill had been endorsed without amendment by the Special Committee, it was passed by the House without objection.

The Bill standing second on the Order was passed as revised by the Committee.

Marquis Matsudaira, in the capacity of Chairman of the Special Committee, reported that the third Bill, namely that relating to the Inspection of Stud Horses, had been approved by the Committee, with one alteration, namely, changing the fine in Art. VII., so as to read from two to twenty yen.

Mr. Kodama remarked that the provision for fines, prominent as it was, would have no effect whatever upon unregistered horses.

Mr. Fujita, Government Delegate, replied that it was intended to inflict punishment only upon those that used horses not qualified by examination.

The Bill was carried to its Second Reading. Questioned by Mr. Murata as to the method of punishing the forger of the Government mark stamped on a horse, for which offence no provision was made in the present Bill, the Government Delegate answered that offences of that kind would be dealt with according to the Penal Code. The Bill was passed as amended by the Committee.

The fourth Bill, together with the Bills from the 5th to the 8th on the Order, were handed to a Special Committee nominated by the President.

Referring to the Bill standing ninth on the Order, Mr. Megata, Government Delegate, explained that although the Land Tax Regulations had been promulgated in the 6th year of Meiji, and Rules concerning waste lands owned by private individuals were established, yet as no provisions had been framed for remitting the tax in the event of inundations, the Government could not consent to the Bill presented by the Lower House with regard to the remission of taxes. Last year's inundations, however, had been extraordinary and the Government, despite the absence of laws applicable in such cases, could not see thousands of people reduced to extreme misery and hardship, and steps were taken to remit the taxes, or postpone their payment to the amount of 180,000 yen. The deficiency having been made good out of the Central Relief Fund, that fund was considerably reduced, and the Supplementary Budget of this year had been inevitably laid before the House. The Bill was handed to a Special Committee of nine, nominated by the President.

Mr. Misaki, Government Delegate, stated that although representations had been frequently made by the Prefectural Assemblies of Chiba and Ibaraki with respect to the boundary line between the two prefectures, the Government could not give any definite reply as to whether it would consent or not.

Baron Funakoshi condemned the form of the Delegate's statement, in view of the fact that the alteration of the boundary was a matter of grave importance to the people.

The Bill was submitted to a Special Committee.

Referring to the eleventh item on the Order, Mr. Misaki said that the Government was ready to approve the Bill except on two points, namely, the method of Secondary Election and the system rescinding the existence of *ojinushi* (special privileges to owners of great estates).

This Bill, together with the 12th on the Order, were submitted to a Special Committee.

The House rose at 2.25 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1—Supplementary General Budget No. 1 of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 2—Supplementary Special Accounts Budget No. 1 for the 30th Fiscal Year of Meiji.
- 3—Government Bill relating to Bonded Warehouse Law.
- 4—Bill for restoring to private individuals forests, fields, and other national lands.
- 5—Bill for rescinding the Peace Preservation Regulations.
- 6—Bill for rescinding the Law of Premonition.
- 7—Representation for establishing in Local Offices machinery for administering Forest Affairs.
- 8—Bill for amending the Law of the Houses.
- 9—Bill relating to Amendment of the Law for the Organization of Law Courts. First Reading.
- 10—Registration Law Amendment Bill. First Reading.
- 11—Bill for altering the Boundary between Osaka and Niogo.

The proceedings commenced with a Question put by Mr. Moriya with regard to the River Takayama. The miseries caused by the inundations of that river were beyond description. Count Kabayama, himself, who is now in a position that renders him responsible for adopting measures to prevent inundations was moved to tears when he saw the people's suffering. The Government formerly endeavoured, as a rule, to evade the responsibility of adopting preventive measures against floods, upon the pretext that it was making investigations for the purposes. In these matters the Tokugawa Government had been far superior, and simply because it possessed a definite policy and followed it. In criticising the procrastination of the present Government Mr. Moriya went so far as to say that the engineers of the day, or the so-called "Engineering Professors," were no better than foremen of navies.

Mr. Suzuki Jubi declared himself much pleased with the answers given by Count Okuma in the House on the 26th ultimo, on the matter of the Russo-Japanese Stipulations. He regretted, however, that the second clause in his question had not been clearly explained, namely, that the Russian Government had despatched officers to Seoul to drill the Korean Army. The Count had admitted the fact, but had replied that it bore no relation whatever to the stipulations concluded. Yet the drilling of the Korean troops had already become a topic of discussion among the nations of the world, and seemed destined to produce serious consequences to Japanese diplomacy. It could hardly be believed that utter indifference had been shown on this point by Marshal Yamagata considering the light that he had to guide him at the time of signing the Protocol. Such a thing could never be imagined. The more credible conclusion, according to some critics, was that the Russo-Japanese Convention recently made public formed only a portion of the real stipulations. But Mr. Suzuki did not place any credence in rumours of that kind. He could not doubt, however, that Marquis Yamagata had opposed the project of the Russian Government for the drilling of the Korean army, when His Excellency's opinion was invited by that Government, in consequence of the Korean Envoy Bin's having been despatched from Seoul to request the aid of Russian drill instructors. Why, then, had this point been omitted from the Protocol? If it really had no connection with that particular Russo-Japanese agreement, then there should have been another convention providing for it; and even if there was no such convention, was there not some verbal understanding? While Japan was clamouring for the independence of Korea, why was she so irresponsible as to remain indifferent to these flagrant proceedings on Russia's part? Even England recognised the serious nature of the affair. Count Okuma had replied the other day that the troops drilled by Russian officers were barely

sufficient to protect the person of the Korean King, and had proceeded to say that the drill was undertaken in accordance with the will of the King. Was the Japanese Government disposed to leave such a matter to the will of the Korean King, and to suffer him to make his own choice as to the nationals that should drill his army? Mr. Suzuki wanted to know precisely what negotiations had taken place with Russia and Korea, and what had been their result.

With regard to the first and second Bills on the order, Mr. Motoda, in the capacity of Chairman of the Budget Committee, said that, as he had presented the Committee's report on a previous day, it was unnecessary to repeat it now, but he must speak a word about the fact that although the two Budgets standing on the Order had been presented to the House on the 24th of February, the projects of law connected with them had not been submitted till the 1st of March. That circumstance had inspired considerable doubt in the minds of himself and several members of the Committee as to the legality of the proceeding, and had induced them to ask for the presence of the Minister President of State, in order that the view of the Government might be ascertained. But Count Matsukata being absent at the conference of the Budget Committee in the Upper House, Count Okuma had appeared as the Cabinet's representative. Mr. Motoda had asked him whether the Government was entitled to introduce a Budget before the law on which it was based had been enacted. To this question the Count had replied that it rested with the Government whether it would issue the law or the budget first. Questioned again as to the fundamental principle of the matter, namely whether the law or the Budget should be discussed first, the Minister had answered in favour of the Budget. Another question had been put to him to ascertain whether there could be no objection to changes made in the law or notification in accordance with the result of the discussion on the budget, and he had answered emphatically in the negative. Mr. Motoda intimated that he entertained views different from those of the Minister who, while replying as described, had added, in a somewhat contradictory manner, that the procedure dictated by law must be followed.

After one or two questions had been put by Mr. Moriya, the Budgets were passed without discussion.

The third Bill on the Order was similarly dealt with.

The principal points to be noticed in the 4th Bill on the Order were as follow:—

Art. I.—With regard to lands, forests, or fields belonging to the nation, and trees or bamboos growing thereon, if any person can produce evidence that the right of ownership is vested in him, or the right of receiving the profits arising therefrom, wholly or in part, he may apply to a responsible Minister of State, through the Local Governor, for the recognition of such right, until the 31st of December of the 23rd year of Meiji.

Art. II.—Such right shall be recognised in the following cases:—

1. When there is evidence of possession in the old public register or other public documents.
2. When evidence can be adduced showing the extent of land received from the Government or of the tax paid thereon.
3. When evidence can be produced proving purchase, sale, mortgage, hypothecation, or voluntary contribution.
4. When evidence exists showing purchase from, or delivery by, the Government.
5. When evidence exists showing that trees, or bamboos, have been received, or money obtained by the sale of the same.
6. When there is evidence of plantation at the expense of the claimant.
7. When evidence can be adduced that the claimant has received the principal or secondary products of the land.
8. When there is other evidence confirming the claimants' possession from previous circumstances or customs.

Art. III.—With regard to lands, forests, &c., sold, transferred, exchanged, or consumed, before the application referred to in Art. I. is made, no compensation can be claimed.

Mr. Nakano, in the capacity of Chairman of the Special Committee, explained that the

seven clauses enumerated in Article II. were nearly the same as the regulations practically enforced by the Government up to the present day.

Mr. Saito remarked that as forests of the Imperial Household were also brought within the scope of this law, feelings of umbrage might be provoked against the Imperial House if any of the forests now held by the Crown were to belong to private individuals. In such cases the forests should be restored to the proper owners, and other State forests should be given to the Imperial Household, in order that the principle of loyalty towards the Imperial House should not be impaired.

Mr. Imai proposed that a note be added to the present Law, excluding from its purview forests of the Imperial Household.

The Second Reading of the Bill was voted.

Mr. Takahashi, Government Delegate, stated that the Government was disposed to endorse the revisions made by the Committee, but wished to know whether the right to receive profits, as laid down in the Law, referred to the principal or secondary products of the land. The right of taking these involved the duty of conserving the forest. If all the rights arising out of old customs were to be recognised in the case of private individuals it would manifestly be unreasonable that the corresponding duties should not be enforced. On the other hand, should such privileges be granted, innumerable difficulties would occur in exercising the power of control. The Government could not agree to this point.

Mr. Kudo offered some explanation in contradiction to the statements of the Delegate. Mr. Nakano argued on the impropriety of subjecting the possessions of the Imperial Household to legal restrictions.

With some trifling alterations the Bill was passed as amended by the Committee, and the House rose at 4.45 p.m.

SATURDAY, MARCH 13TH.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1—Bill for adopting Special Measures with regard to the Taxes to be levied in the Localities devastated by Earthquake. Continuation of First Reading.
- 2—Bill for preserving old Temples and Shrines.
- 3—Bill for rescinding the Peace Preservation Regulations.
- 4—Representation for rescinding the Law of Premonition.
- 5—Representation for establishing in local Offices machinery for administering Forest Affairs.
- 6—Bill relating to Amendment of the Law of the Houses.
- 7—Bill relating to amendment of the Law for the Organization of Law-courts.
- 8—Registration Law Amendment Bill.
- 9—Bill for altering the Boundary between Osaka and Hiogo.
- 10—Sake Brewing Law Amendment Bill. Continuation of First Reading.
- 11—Fire Brigade Bill. First Reading.
- 12—Registration Law Amendment Bill.

The President announced that a Question had been presented by Mr. Kanao with regard to cruelty alleged to have been displayed by the police in Omichi, Hiroshima Prefecture.

Mr. Kanao said that he had instituted an enquiry into the cruel steps taken by the water police in Omichi, Hiroshima, against one Otozo, of Miyoshicho, and that he desired to state the circumstances briefly. Otozo belonged to the country near Miyoshicho, and had been in the service of the Registration Office of a Law Court as a clerk, until last year. Intending to go to Tokyo for purposes of study, he happened to stop a night in Omichi on the 15th of February. That night some police constables came, and having arrested him on unreasonable suspicion, subjected him to exceedingly severe torture. Lately incendiarianism had prevailed in Omichi, and the incendiary not having been arrested, suspicion was entertained by the police that Otozo might be the culprit. The wretched man pleaded that he had not committed such a heinous crime, but the police would not listen. They hung him up, head downward, with his

feet and hands bound, and beat him cruelly. An examination made by a doctor proved all these facts. The affair was kept secret at first, but as it became impossible to conceal it, the Inspector General of Police of Hiroshima Prefecture proceeded to the district where the torture had been perpetrated, and dismissed one of the policemen, at the same time calling for and accepting the resignation of the Inspector of Police in Omichi. How could such a barbarous thing have occurred in a constitutional country? Had not the present Cabinet declared that it would pursue such a policy of administration as to extend the rights of the people? Yet the Government remained indifferent to this cruel incident, and allowed the affair to be settled by the dismissal of one policeman, who had inflicted severe injury upon an innocent man, while no steps had as yet been taken against the Chief Inspector of Police and the Governor. It could not be forgotten that the Otsu affair, some years ago, had deprived the Governor of Shiga and a Cabinet Minister of their offices? The present facts differed widely from the Otsu affair, but the Government could not possibly be justified in treating such a matter with utter indifference. He desired, therefore, that the Government should make full investigations and give a clear reply.

The first Bill on the Order was passed without any revision by the Committee.

With regard to the second Bill, Mr. Tajiri, Government Delegate, stated the Government could in no way comply with Article XVI. providing an appropriation of 150,000 or 200,000 yen.

Mr. Higashio demanded the reason why Mr. Tajiri could not consent, whereas Mr. Misaki, another Government Delegate, had approved the revisions made by the Upper House. Was it owing to the fact that the Government had no definite course of policy in this matter?

The Delegate still insisted upon the Government's inability to agree to Article XVI. He explained that provision had been made for an expenditure of over 500,000 yen in the 30th fiscal year.

The Bill was submitted to a Special Committee of nine, nominated by the President.

Mr. Nakamura, Government Delegate, urged that as the Bill for abolishing the Peace Preservation Regulations was closely connected with the other Bills for Police Supervision and for the control of Arms and Ammunition already submitted to the House, the latter Bills should be passed simultaneously with the one now in question. To abolish the Peace Preservation Regulations without enacting anything in their stead, would cause serious inconvenience in matters of executive control.

Mr. Toda Sakubei, in the capacity of Chairman of the Special Committee, reported that unanimous approval had been given by the Committee to the abolition of the Peace Preservation Regulations, the Committee being of opinion that such Regulations should not be left in operation even for a single day.

The Bill was passed without objection.

Coming to the fourth Bill on the Order, Mr. Toda urged that the Law of Premonition being unconstitutional in nature must be rescinded simultaneously with the abolition of the Peace Preservation Regulations. The Bill was passed.

Mr. Nakamura Yaroku introduced the Representation standing fifth on the Order. He said that considerable losses had been caused on account of forests being laid waste by natural calamities, and that the present scarcity of timber, and even the frequent occurrence of inundations, must be ascribed to the imperfect supervision of forests. The extension of railways, the development of telegraphs, and the construction of war-vessels would require the planting of forests to the extent of 1,050,000 *cho*, (2,625,000 acres), while the yearly increase of population would necessitate the maintenance of forests for fuel and charcoal to the extent of 400,000 *cho* (1,000,000 acres). The losses by inundation in the 26th year of Meiji had amounted to over 58,000,000 yen in the way of damages caused to roads and crops and of vessels and houses washed away. The Government seemed

to be without any policy to pursue at this juncture. The State ought to administer the national forests itself, and enforce strict supervision in the case of private forests. The Government forests at present were known to cover 7,500,000 *tsubo* (625,000 acres), from which a net profit of 500,000 yen was obtained. Should these forests be handed over to the people the land tax alone would amount to over 770,000 yen. Moreover, the faulty administration of forest affairs had been the cause of a considerable number of offences against the law. In the 28th year of Meiji, more than 6,900 persons had been convicted.

The Representation was submitted to the Committee already entrusted with the duty of investigating the Forestry Law.

The Bill for amending the Law of the Houses led to some discussion, but was ultimately passed, as revised by the Special Committee.

With regard to the eighth Bill, Mr. Suzuki Jubi said that the proposed amendment was destined to give publicity to the trial of all appeals to higher tribunals, in contrast with the present method of procedure by which publicity was prohibited. The change contemplated was as follows:—

Art. CXXI.—No Council of Judges shall be made public except in cases of judgments given on appeal. Reserve Judges and Assistant Judges, however, may be allowed to be present at a Council.

Publicity was, in itself, a guarantee of justice and impartiality, and might be commended for trials of all descriptions, but could not always be permitted in the case of processes involving inquiry into facts. In the case of appeals, however, the trial being confined to merely questions of law, no objection existed to publicity.

Mr. Yokota, Government Delegate, said that he fully appreciated the brevity and clearness of Mr. Suzuki's remarks, but that the Department of Justice could not give its consent to the proposed change, since practical experience had already shown the inexpediency of conducting all trials in public. The Judicial Department had originally desired to approve the change, except in criminal cases, but had finally determined to oppose the principle of indiscriminate publicity. The system of public trial was attended by at least as great disadvantages as benefits, and there was great difficulty in its practical enforcement. Were the method of public examination employed, judges would fall into the evil habit of holding private conferences among themselves, in order that as little discussion as possible might take place in public.

The Bill was handed to a Committee nominated by the President.

The object of the eighth Bill was chiefly to insert the following note after Article V. of the Registration Law:—"Note.—This provision shall not apply to the registration of land in which changes have occurred in consequence of natural calamity." The Bill also provided that the words "ten-thousandths of the value of the land," in Article V., should be altered to "five-thousandths."

Referring to the above, Mr. Kimura remarked that the proposed revision would decrease the Land Tax by thirty or forty thousand yen.

The Bill was submitted to the Committee already entrusted with the investigation of the Registration Law.

The ninth Bill was also handed to a Special Committee. The two remaining Bills were not discussed, the House rising at 5.15 p.m.

MONDAY, MARCH 15TH.

HOUSE OF PEERS.

The House met at 10.20 a.m., the Order of the Day being:—

- 1—Coinage Bill.
- 2—Special Financial Bill relating to the Coinage Adjustment Fund.
- 3—Bill for amending the Convertible Notes Regulations, promulgated by Notification No. 13 of the 17th year of Meiji.
- 4—Bill for amending Notification No. 14 of the 18th year of Meiji.

Count Matsukata, Minister of State for Finance, addressed the House as follows:—

Gentlemen—As the Coinage Bill has been placed on the Order for discussion, I desire to state the reasons for altering the monetary system, as indicated in the Bill.

The Coinage is one of the chief economic affairs of the State, and the nature of the system adopted exercises a marked influence on the welfare of the country and the interests of the people. Thus, any alteration in the Coinage system demands the utmost circumspection. The Government, after due consideration, has determined to revise the Coinage System of the country, and to adopt gold monometallism instead of the silver monometallism hitherto existing.

Our standard of coin has, as you are all aware, undergone various changes since the *Keicho* era, and has frequently constituted topics of discussion, as history shows. Leaving out all ancient matters, however, I will state the salient features of the coinage since the Restoration, in order that I may be able to fully explain the reasons for the reform now contemplated? You are all well acquainted with the fact that the system of coinage in our country fell into serious disorder in the 5th year of *Meiji*, and that it seemed at one time to be incapable of restoration to a condition of order. At the era of the Restoration, the government was involved in internal troubles and various financial embarrassments, which resulted in the issue of a fiat currency, known as the *Dajokwan-satsu*, so as to meet the exigencies of the moment.

In subsequent years, administrative affairs increased considerably, and further issues of paper became unavoidable. The south-western trouble, in the 10th year of *Meiji*, compelled the Government to put into circulation a large volume of inconvertible notes, and, as a natural consequence, the credit of the fiat currency diminished, and the Coinage Regulations of the Government failed to check the progress of depreciation, while imports exceeded exports by a considerable amount. By the 15th or 16th year of *Meiji*, the national economy assumed a most alarming aspect. Subsequently, on the resumption of specie payments with silver, in accordance with the Regulations for Convertible Notes, promulgated in January of the 19th year of *Meiji*, the former system of Coinage was practically changed, silver becoming the standard instead of gold. But the market value of silver was exposed to constant fluctuations, and the metal depreciated steadily. Not a little anxiety was felt by the Government at the time. Then, as you know, the adoption of gold monometallism in Germany in the 5th year of *Meiji*, induced Sweden and other countries of the Latin Union to prohibit the free coinage of silver; an action which contributed to the still further depreciation of silver. The fall in the value of silver was ascribable partly to the adoption of the gold standard by the various nations of Europe, and partly to a great augmentation in the production of silver. The production of silver, which amounted to only 70,000,000 ounces annually in the beginning of the *Meiji* era, has now reached 180,000,000 or 200,000,000 ounces. The relative value of gold and silver, which was formerly represented by the ratio of one to sixteen, is now almost double of that figure, the ratio being one to thirty-two. Yet silver still continues to fall, and the nations of Europe and America have shown a persistent tendency to reject the silver standard. Austria-Hungary changed her Coinage System in the 25th year of *Meiji*, and her example was followed by British India, which adopted gold monometallism. These proceedings contributed to the depreciation of silver. Our Government consequently appointed a Commission to investigate Coinage affairs, the object being to ascertain, by conference among prominent experts, which of the two metals should be adopted in Japan.

The deliberations of the Commission were completed in the 28th year of *Meiji*. Naturally, in view of the immense importance of the question, it evoked various opinions from the Commissioners, but the majority were in favour of the gold standard, two only supporting silver. But as no gold reserve existed at the time, the decision could not be carried into practice. The Shimonoseki Treaty, concluded after the war with China, furnished us with a considerable amount by way of indemnity, and although it was stipulated at first that the indemnity should be received in taels, yet, having received the report of the Coinage Investigation Commission, and having also considered the general condition of financial affairs in the world, the Government took steps to change the stipulation with China in the sense of receiving the indemnity in English gold coins, in order that preparations for altering the Coinage System in our country might be effected. The gold reserve thus deposited in the Bank of Japan amounted to over 100,000,000 yen, and,

on the other hand, the Japanese silver coins circulating in foreign countries constituted a very insignificant amount. I venture to say, therefore, that the time for introducing the alteration in our coinage system is fully ripe, and I have therefore presented a Bill for that purpose, as you see it now before the House.

I have yet a few points to submit for your consideration. Although anxiety is felt by some lest this change of the Monetary System should produce extraordinary fluctuations in the prices of commodities, the Government is disposed to believe that no such fluctuations will take place, and that no inconvenience will be felt with regard to the collection of taxes or to the affairs of commercial companies. Moreover, according to the revised system, the old gold coins will be worth just double of the new coins, as the fourth part of the former is to be one-half of the latter. This ratio having been determined with the greatest caution, as well as after the fullest investigation, I trust that no fluctuations in the purchasing power of gold are likely to inflict losses upon our country.

Among various things that ought to be adjusted after the late war with China, the most important is the reform of our Coinage System with a view to the consolidation of the foundations of the country's economic affairs. The Bill having been already passed by the House of Representatives, I earnestly trust that you will likewise approve and pass it.

Mr. Murata remarked that although the gold reserves held in the Bank of Japan amounted to 150,000,000 yen, yet the proposed change of standard would immediately drive the yellow metal out of the country. Japan's industries had not yet attained full development. The expenditures of the Agricultural and Commercial Department amounted to only 1,400,000 yen. Did the Government see no cause for apprehension in such a state of affairs?

Count Matsukata considered Mr. Murata's observations very reasonable. But it was to be observed that whatever effect the undeveloped state of Japan's industries might have upon the outflow of the precious metals, it would be equally felt under the system of silver monometallism. Japan, in common with other countries, possessed machinery to arrest any undue exodus of gold. The Bank of Japan, as Mr. Murata doubtless knew, had power to adopt precautionary measures against such a contingency, just as the central banks of other countries had. The responsibility of the Bank of Japan would be greater than ever in future. To take steps for the development of agriculture and industry was of paramount importance, but he wished the House to understand emphatically that the investigations in connexion with the Bill now before it, had not been conducted without due regard to the question of the import and export trade.

Mr. Obata asked what were the relative advantages of gold and silver monometallism.

Count Matsukata replied that the fluctuations in the value of silver, not only at present, but for many years past, had almost invariably enhanced the prices of commodities and endangered the position of the agricultural and commercial communities. For instance, a silk dealer had always to consider two things, the market value of his goods and the rate of exchange. Experience had shown that there was a tendency in foreign markets to hesitate to buy Japanese commodities since they were liable to serious fluctuations on account of exchange. An earnest representation on this point had been forwarded to the former Minister of Finance by an industrial corporation. In short, fluctuations in exchange obstructed the progress of agriculture, industry, and commerce. Gold was least susceptible to such fluctuations.

Mr. Murata again maintained that if gold once left the country it would never return, and that the silver system could not then be adopted without great inconvenience. Should such a misfortune occur, the Minister would not be able to accept the responsibilities of having betrayed the people. When Count Matsukata's Cabinet was first formed, he declared that he should pursue an administrative policy such as might promote agricultural and industrial enterprises. But the Budget presented this year was far from conducing to any such object. A Marine Products Bill had been introduced in the House in the 26th year of *Meiji*, and it was

known that investigations had been made on this subject last year by a Commission appointed for the purpose. Was that Bill now in the hands of the Minister?

Viscount Enomoto, Minister of Agriculture and Commerce, in answer to the last question, stated that the Bill referred to had already been investigated and was to be presented to the House on the 15th of March, and that the sum of 1,400,000 yen, alluded to by Mr. Murata as constituting the expenditures for the Department of Agriculture and Commerce, covered only the ordinary outlay of the Department.

Mr. Murata expressed satisfaction with this reply.

Baron Funakoshi remarked that the prohibition of the circulation of silver 1-yen pieces had long been desired by practical men. He asked for an explanation of Article XVI., referring to the withdrawal of these coins.

Count Matsukata replied that it was the intention of the Government to withdraw the 1-yen pieces at the earliest opportunity, but that as the period of their circulation had an important financial bearing, its determination should be left to the Administration's power, so that the Government might exercise discretion to prevent the anomaly of two standards existing side by side.

Mr. Nakajima observed that the adoption of gold monometallism would surely tend to depreciate silver still further. The white metal would be presented for exchange, in which case the maintenance of the gold reserve might be difficult.

Count Matsukata answered that the amount of Japanese silver in foreign countries probably did not exceed 500,000 yen in Hongkong and 8,000,000 yen in Singapore. The reason that such insignificant amounts remained in circulation in those countries was that the Japanese silver coins had been converted into bullion or sycee for use in the interior of China.

Mr. Nakajima then asked what was the total amount of 1-yen silver pieces now circulating in the interior of Japan.

The Count replied, about 25,000,000 yen.

Mr. Murata inquired whether the prices of commodities would not be enhanced by the adoption of the gold system, since the present 1-yen gold piece would assume a face value of two yen.

To that Count Matsukata replied, that the silver price of gold at present had virtually reached the point fixed by the Bill. No anxiety need be entertained as to the contingency of a sudden fluctuation in the prices of commodities. As to the apprehension that quantities of silver might flow into the country for purposes of exchange, steps could be taken by the Minister of Finance to avert such a contingency, in the interests of the country. For the rest, silver, discredited as it was, could not possibly be dispensed with for currency purposes. The subsidiary coins needed by each individual at present averaged no less than two yen, and accordingly eighty million yen worth of these coins must be provided for circulation. The subsidiary silver coinage was certainly the means of consolidating the monetary system of the country, and a reserve sufficient for their supply was always desirable.

With regard to Count Matsukata's statement that fluctuations in exchange had deterred foreigners from buying Japanese silk and other commodities, Baron Komatsu wished to know whether the Count drew that inference from the point of national economy or individual business.

The Count answered that the interests of the State and the interests of individuals were virtually one and the same.

The Bill was handed to a Special Committee of fifteen, nominated by the President. The next three Bills were also handed to a Committee without discussion.

After the mid-day recess, the following Bills were brought up for discussion:—

- 1.—Bill for maintaining the shares of the 15th National Bank (joint stock corporation) as the hereditary property of the nobles.
- 2.—Bill relating to Corporations of Dealers in principal staples of export.

3.—Bill for granting permission to a Private Railway Company to construct a railway on the Hokkaido programme.

4.—Bill for amending Law No. 20 of the 27th year of *Meiji*.

5.—Representation relating to the extension of Statistical Affairs.

6.—Representation for altering the period of the Fiscal Year.

Mr. Kanmuchi, Government Delegate, stated that the Nobles' Bank having been established in May of the 10th year of *Meiji*, the period of its charter would expire in May of this year; that the Bank had decided to continue its business according to the Regulations established for such purpose; and that the shares, 107,900 in number, chiefly composed of hereditary property of nobles, should continue to be held by the Bank under that denomination.

Viscount Ogasawara asked why the holding of shares as hereditary property was exclusively allowed to the Nobles' Bank, and why a similar privilege was not granted to other Banks also.

The Delegate replied that the Bank was not only historically connected with the nobles, but also had the reputation of being thoroughly trustworthy.

The Bill was submitted to a Special Committee.

Viscount Enomoto, Minister of Agriculture and Commerce, said that the second Bill on the Order had been presented in the previous session of the Diet; that it was the outcome of views long entertained by the commercial community; and that the people, both collectively and individually, had for many years desired the organization of the corporations referred to in the Bill. Foreign trade bore a close relation to the country's prosperity, and therefore required a greater share of aid from the Government than any domestic enterprise. But commerce had lately been crippled by imperfections in the method of manufacturing or producing all articles of export, and the trade credit of Japan had virtually fallen to the ground. The Government had formerly adopted measures for encouraging the organization of corporations of dealers in articles of export, but experience having indicated certain defects in the powers exercised by the corporations and the penalties provided for their control, the Bill was intended to correct these defects.

The Bill was handed to a Special Committee. The third Bill on the Order was passed in its original form.

Count Uyesugi moved that the Order be changed and that the Formosa Bank Bill be taken for discussion. His motion having been agreed to, he stated that the Bill should be immediately adopted in view of the want of machinery in Formosa for the circulation of money.

Baron Funakoshi enquired whether, in the event of the enforcement of the new Coinage System, inconvenience would not occur in the use of bank-notes in Formosa.

Mr. Soyeda, Government Delegate, replied that limits having been set to legal tender of subsidiary-coins, their receipt to the amount of more than ten *yen* might be refused. Nevertheless as the Formosans were fond of silver, it did not seem probable that any embarrassment would be experienced on that score.

After a few questions the Bill was carried to its Second Reading.

Mr. Mitsukuri remarked that the Bill must be regarded as constituting a special form of Bank Regulations. The Bank Regulations themselves were special provisions emanating from the Commercial Code. The Commercial Code, in turn, consisted of special provisions of the Civil Code. The Bill could not be discussed in relation to the Commercial Code alone, for it would be found to be equally connected with other laws. In order to avoid this multiplicity of connection, the Bill should be discussed under the heading of Bank Regulations.

Baron Fujimura traversed these remarks on the ground that, as Imperial sanction had to be given to the Bill in the sense of Commercial Law, it would be more convenient to treat it in that sense, especially as it lacked provisions

for the procedure to be followed in the organization of a bank, the decrease and increase of its capital, its dissolution, and so forth.

Mr. Yamawaki sought an explanation from the Government Delegate, who replied that the Government's reason for drafting the Bill in its present form, was that its enforcement by Imperial Ordinance seemed desirable.

The Bill was passed without further discussion. The fourth Bill on the Order was handed to a Committee nominated by the President.

With regard to the fifth Bill, Mr. Umayabara stated that the necessity for statistical organization need hardly be questioned, that as the Central Statistical Bureau had hitherto devoted itself to the compilation of a sort of statistical almanac only, with the most imperfect machinery, no satisfactory results could be attained. It would be absolutely essential to establish a new bureau for the improvement of statistical affairs, and also to institute a statistical assembly, in order that the various branches of the bureau might be enabled to hold communications with each other.

The Bill was passed without objection.

Mr. Watanabe introduced the Representation standing sixth on the Order. He said that, as the present period of the Fiscal Year was inconvenient from many points of view, it should be altered so as to commence on the 1st of June and end on the 31st of May, instead of being from the 1st of April to the 31st of March. The Representation was passed and the House rose at 4 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1 p.m., the Order of the Day being:—

- 1—Bill relating to National Forests.
- 2—Bill for adopting preventive measures against Sandalips. First Reading.
- 3—Bill relating to Special War Expenditure in the Naval Department for the 29th year of *Meiji*.
- 4—Bill for amending the Divisions of Land.
- 5—Bill relating to Public Corporations for which aid from the Treasury may be obtained.
- 6—Bill relating to Public Thoroughfares.
- 7—Government Bill relating to the Inspection of Sires for Stud purposes.
- 8—Private Railway Construction Law Amendment Bill.
- 9—Bill for amending Law No. 4 of the 23th year of *Meiji*.
- 10—Bill for cancelling certain provisions of the Registration Law.
- 11—Bill for amending the *Saké* Brewing Tax Law.
- 12—Bill for amending the Law of Taxation with regard to *Saké* for domestic use.
- 13—Fire Brigade Bill.
- 14—Bill relating to the period of Legal Procedure with regard to Registered Designs and Trade Marks.
- 15—Bill relating to the Local Government System for Tokyo.
- 16—Bill for establishing Chiyoda Prefecture.
- 17—Bill relating to expenses to be defrayed conjointly by Tokyo and Chiyoda.
- 18—Bill relating to Police Expenses for Tokyo and Chiyoda.
- 19—Bill for introducing a supplementary provision in the Law of Aid from the Treasury for increasing the Salaries of Common School Teachers in Cities, Towns, and Districts.
- 20—Bill relating to Physicians.

Mr. Tanaka Shozo stated that he had presented a written enquiry on the 21st ultimo, but had received no reply, although more than twenty days had already elapsed. He declared that the Department of Agriculture and Commerce must have fallen into a state of utter confusion on the receipt of his enquiry, probably in consequence of usually passing its time without work, and that it would be totally impossible to obtain from that Department a satisfactory answer to his queries.

Mr. Kaneko, Vice-Minister of Agriculture and Commerce, said that the first Bill on the Order was closely connected with the two other Bills already submitted, on the subject of Forestry Law and the restoration of State lands, forests, and fields to private individuals. The Forestry Law aimed at the general supervision of forests: the Restoration Bill confirmed private titles of ownership, and the present Bill was intended to establish the course of policy to be pursued for superintending as well as ad-

ministering affairs relating to national lands and forests.

Mr. Tanaka Shozo again demanded a reply to his Question from the Vice-Minister of Agriculture and Commerce, but was called to order by the President, who ruled that the Question had no relation to the Bill before the House.

With regard to Article XXI., which provided that lands or forests might be granted for the use of a public school or hospital, Mr. Ashizuka enquired whether this provision was not applicable to private institutions, such as Dr. Kitasato's Hospital, which certainly was not inferior to any other kind of public establishment.

To this question, Mr. Takahashi, Government Delegate, replied emphatically in the negative.

Mr. Ashizuka asked whether the concession was made in deference to the numerical superiority of private institutions or from some other causes.

The Delegate answered that all public institutions were destined for public benefit, and that, although private establishments might be equally advantageous to the people at large, yet the intention of the Government was to afford greater facilities to public institutions which were recognised as securing greater benefit. The Bill was handed to a Committee.

Referring to the second Bill, Mr. Nakamura, Government Delegate, explained that the growth of population and the development of enterprises having increased the demand for timber, many forests had been exhausted and many sand-slides had become frequent, injuring the condition of rivers and constituting sources of inundation.

The Bill was submitted to a Special Committee of nine, nominated by the President. The third, fourth, and fifth Bills on the Order were similarly treated without discussion.

With regard to the Bill standing sixth on the Order, Mr. Nakamura, Government Delegate, explained that the measure had for its sole object the improvement of public thoroughfares, by classifying them distinctly and adopting suitable methods for their management and repair.

Mr. Kono enquired the reason why Local Assemblies were not entrusted with the power of deciding matters of the nature referred to in this Bill.

Mr. Furuichi, Government Delegate, replied that financial considerations indicated the advisability of excluding these matters from the purview of Local Assemblies.

The Bill was handed to a Special Committee.

Mr. Fujita stated, with reference to the seventh Bill, that the improvement of horses, a most essential measure at present, could be attained only by the selection of stud horses, and that the establishment of suitable methods for their inspection was absolutely necessary, the methods formerly adopted in various localities for that purpose being extremely imperfect.

Mr. Ashizuka asked whether places of inspection were to be established in various parts of the country, and what amount of expense would be required for the enforcement of the scheme. He also pointed out that the proposed inspection might, in some cases, prove injurious to agriculture.

The Delegate replied that the inspection was to be conducted in the various localities by officials despatched for the purpose, and that the expenses to be incurred in connection with the project were estimated at six thousand *yen*. This sum was to be appropriated for salaries and travelling expenses of officials and surgeons.

The Bill was submitted to a Special Committee for investigation.

As to the eighth and ninth Bills on the Order, Mr. Mochizuki, in the capacity of Chairman of Special Committee, explained that the former was intended to correct conflicting points between the Railway Regulations and the Commercial Law, and the latter explained itself. These two Bills were passed by the House.

The tenth Bill had for its object the rescinding of that part of the Registration Law which

required payment of fees for recording the names and habitations of the people. Mr. Konishi, in the capacity of Chairman of the Special Committee, stated that the adjustment of the census being originally one of the duties to be discharged by the State, it would be most improper for the Government to impose fees for registration; that the burden thus inflicted in connection with the census, which ought to be recorded with strict precision, had had the effect of causing people to refrain from making reports; that the loss of revenue resulting from the proposed rescission would be amply compensated by the recent enormous increase of revenue stamps; and that, even if the revenue were more or less reduced, this most improper and most unjust impost must at once be removed.

These remarks were strongly opposed by Mr. Kogure, who held that there could be no reason why the Government should remit taxation on account of everything constituting part of its duty, as, for instance, the registration of land. The Registration Law provided for exemption from fees in the case of poor people, and the disorder alluded to in census matters was entirely incompatible with the facts. Moreover, the assertion that the loss of revenue resulting from the proposal, namely, some 1,300,000 yen, could be supplied by receipts from revenue stamps, was nothing more than a vague fancy. It must be remembered that the expenditure of the State grew year by year.

The Bill was passed through all its Readings with little opposition.

Mr. Kusakari affirmed that the Bill standing eleventh on the Order was intended to promote the interests of refined *sake* brewers alone, at the expense of the producers of *dakushu* (unrefined *sake*), and that the restriction in the amount brewed would not be any real safeguard against the illegal production or sale of the liquor.

Mr. Koizuka remarked that refined *sake* carried into Tokyo was liable to a tax of fifty *sen* per *koku*, and that the tax so imposed was appropriated to defray expenses incurred in altering the urban divisions of the city, expenses amounting to 500,000 yen every year, of which the *sake* tax supplied 70,000 yen. To cancel the provisions with regard to this tax on *sake* would decrease to that amount the fund available for improving the divisions of the metropolis. Every word of this special provision relating to the *sake* tax would therefore cost the inhabitants of Tokyo almost ten thousand yen.

Mr. Nakajima traversed the last speaker's remarks, on the ground that aid from the Treasury having been obtained to the amount of 150,000 yen for altering the municipal divisions of Tokyo, the sum of 70,000 yen might be dispensed with. He maintained that the levy of a tax of 70,000 yen from importers of *sake* into Tokyo, was inconsistent with the principles of justice.

The Bill was rejected by the House.
The House rose at 4.55 p.m.

TUESDAY, MARCH 16TH.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of the Day being:—

- 1—Bill for fixing the period of investigating Supplementary Budget No. 1 of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 2—Bill for fixing the period of investigating Special Accounts Budget No. 1 of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 3—General and Special Budgets of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 4—Bill relating to Liabilities devolving on the Treasury over and above the Budgetary items.

Viscount Tani stated that the Supplementary Budget, being very simple, could be investigated and reported on by the 19th of March.

This proposal was endorsed by the House with regard to the Bills standing first on the Order.

Viscount Tani, in the capacity of Chairman of the Budget Committee, reported that the Budget had been investigated between the 29th of February and the 3rd of March; that the general meeting of the Budget Committee had been held on the 5th of March; that considerable pains had been taken by the members

upon whom the investigation of the items relating to the Army and Navy devolved, those items being regarded as the most essential problems; but that the results of the investigation were far from satisfactory. With regard to the excessive expansion of the Army and Navy, proposals for a decrease of about thirty million yen had arisen, and consequently seven of the Committee had been chosen to refer the matter to the Government. But, at the same time, vehement representations were being made in the House on the subject of its competence to decrease the figures in the Budget. The speaker had organised strong opposition to such proceedings, in view of the fact that should the motion for curtailing the expenditures be passed, some disagreeable results might be produced in the Orient, for which the blame must rest upon Count Ito's Cabinet and also on the Liberals who had supported him. The Parliamentary decision of last year had led to the issue of an Imperial Ordinance with His Majesty's sanction, and steps having already been taken for the enforcement of the same, any sudden decrease of the estimates at present would affect the whole scheme. Nevertheless, all the Viscount's efforts having failed, a general meeting of the Committee had been held on the 9th March, and concluded on the 14th, the result being the report now in the hands of the members. The only revisions made by the Committee were a reduction of two thousand yen in the ordinary expenditure of the Home Department, and also the excision of the appropriation for the construction of two cruisers for the Navy.

Professor Toyama enquired why it was assumed that the House could not make reductions by its own decision, despite the fact that the Government objected to curtailing thirty million yen? He asked whether the Address to the Throne, introduced a few days previously, was not to be employed as a means of effecting such reduction, and whether the Committee had not contemplated the possibility of getting the House to agree to the proposed change?

Viscount Tani replied it was not because the Committee could not recommend the reduction, but because the reckless endorsement of the Government's Bill last session had brought about the construction of new barracks under Imperial Ordinance, and the people of Japan were too patriotic and loyal to endure the idea of making a reduction in the face of the Ordinance. In truth, it was hardly necessary to answer such a question.

Professor Toyama asked why the committee would not answer the point in issue. He was, however, called to order by the President, who ruled that his remarks were not an enquiry but an argument.

Count Matsukata, Minister President of State, desired that the item for the construction of two cruisers should be restored in consideration of the actual conditions existing in Europe and America.

Mr. Yamakawa enquired whether the Budget before the House had been based on the programme of armament expansion contemplated by the former Cabinet, and also what amount would be required for yearly military and naval outlays from the 38th year of Meiji onwards.

In reply to these questions, Count Matsukata said that the policy of a Cabinet in some matters could not be changed, whether that policy referred to the past or the present, and that the total amount of expenditures for the Army and Navy by the 38th year of Meiji would be 42,000,000 yen, of which 27,000,000 yen were for the former and 15,000,000 yen for the latter.

With regard to the items for the construction of vessels and arms, Baron Ito, Government Delegate, stated that as a reduction of over 16,000,000 yen had been made in those items by the Committee, he deemed it necessary to say a few words in opposition. Even children were perfectly familiar with the fact that it was absolutely indispensable for Japan to maintain a well organised naval armament. Half of the original scheme of expansion having been approved by the House last year, the other half had

been presented this year. Many observations had been made on the state of affairs in the Orient since last year, and, at the same time, the progress of the science of naval construction had necessitated the use of steel for building cruisers. The main squadron for future evolutions would consist of twelve vessels, including the *Fuji* and the *Yashima*, and this squadron would be the principal factor in maintaining the maritime power of the country. A reduction of two cruisers, as suggested by the Committee, would not only frustrate the general scheme of the fighting squadron, but would also interfere with the programme of construction in the case of the other four armed cruisers.

Baron Date enquired whether it was true that the Government had ordered two war vessels in a foreign country besides those estimated in the Budget.

The Delegate replied in the negative.

Being requested by Marquis Daigo to give an explanation as to the reason of the proposed reductions, Viscount Soga stated that, although the necessity of extending the armament was undeniable as a means of national defence after the late war, yet the budget of this year was so extravagantly large that it exceeded the limits indicated by the actual capabilities of Japan. The degree of the country's wealth did not allow the proposed extension of the navy. The reduction had been contemplated first on the side of the Army, but finding that impossible, the Committee had determined to curtail the expenses of the Navy.

Mr. Mayeda remarked that the extension of the Navy must certainly be regulated by the financial strength of the country, but that a universal cry for naval expansion had sprung up throughout the whole country, even in the common and intermediate schools. Should the proposed reduction be made, the nation would certainly resent it. Hence the augmentation of the Navy should proceed *pari passu* with the encouragement of agriculture and industry.

Finally, the whole Budget was passed as sent up from the Lower House.

The House rose at 3.25 p.m.

GERMAN NOTES.

The distinguished Berlin astronomer, Prof. Dr. Arthur Auwers, has received from the German Emperor a gold medal for his services to science.

Most of the German newspapers in their comments on the Cretan situation declare that war between Greece and Turkey is almost inevitable.

Mr. F. Martini, the inventor of the Martini rifle, and head of the Martini Company, died at Frauenfeld, after a protracted illness, on January 29th, aged 64 years.

A bill has been submitted to the German Diet for the conversion of the present Imperial four per cent. bonds into three-and-half-per-cent. bonds. These Bonds amount to only 450 million marks.

Owing to a celebration of the Kaiser's Wilhelm I.'s centenary on board the *Kaiser*, on the 22nd, the German community of Yokohama has decided to invite the Officers of all the men-of-war in harbour to a picnic at Omori, which will take place on Sunday, the 21st March.

Since 1890 the Liberals have lost much ground in Germany, but it is believed that the reactionary agrarian policy of the Government has estranged many thousands of electors, and that the Liberals, if they unite, will be able to gain a majority in the Reichstag at the next election.

Three new twin-screw passenger and freight steamers are now nearing completion for the Brazilian line of the Norddeutschen Lloyd Company. They are named the *Koblens*, *Mains*, and *Trier*. The first is to start from Bremen on the 10th of May for Bahia, Rio de Janeiro, and Santos.

On the 31st of January, the one-hundredth anniversary of the birth of Franz Schubert, the

great German composer, was duly commemorated by his numerous admirers in the Fatherland. Schubert died at the early age of 30, and was so little appreciated during his lifetime, that he found difficulty in getting two marks for a song.

The Reichstag for many years past has repeatedly passed resolutions providing for the payment of members, but the Bundesrath invariably refuses to entertain the proposition. The Government has now intimated that it is prepared to support the payment of members, if the Reichstag passes an amendment restricting the electoral franchise. The Reichstag, however, is not expected to accept this proposition.

The Berlin correspondent of the *Morning Post* says:—The giant statue of the First Emperor on horseback, with a female figure of Peace leading the steed, has just been removed from the workshop to its destination in Berlin, where it will be formally unveiled on March 22. There is a considerable amount of work to be done before the statue is completed, and in order to finish it by the date in question operations will be frequently pursued throughout the night by aid of the electric light.

Although the national election for the Reichstag will not take place before next autumn, the long-expected consolidation of the Liberals in Germany has been seriously undertaken by the respective leaders of the various wings. The two Radical wings, headed by Herren Richter and Rickert, have arrived at an understanding for united action, and all the Reichstag electoral districts represented by Conservatives are believed to be ready for a change. The South Germany Radicals are expected to enter the union. The Liberal press, and part of the National Liberal press, such as the *National Zeitung* and the *Kölnische Zeitung*, are advocating union between the parties, while the Berlin *Tageblatt*, the *Frankfurter Zeitung*, and the *Vossische Zeitung* are enthusiastic in its favour.

NEWS OF THE DAY.

A drunken artillery man severely wounded a private of the Imperial Guards, in Tokyo, on Sunday, and has been placed under arrest.

Three Japanese houses were destroyed by fire at Kobe on Saturday night. The outbreak occurred on the premises occupied by Messrs. Pollak Bros. at the corner of Sannomiya and Shimoyamatedori, Sancho-me.

A chess match played at Bangkok between Prince Devawongse and Commander MacKenzie, of the U.S. cruiser *Machias*, ended by three games in favour of the Prince. Prince Devawongse's prowess at chess is well known in the South.

The *Kobe Chronicle* suggests that a fitting memorial of the Diamond Jubilee would be the erection by foreigners—more particularly Britishers, of course—of a small infectious diseases hospital for the use of the foreign community of Kobe.

Twenty-five members of the Nippon Bicycle Club enjoyed a moonlight ride around the Road on Thursday evening. All the wheels were gaily decorated with Japanese lanterns, and as the procession wound its way along a very pretty spectacle was presented.

The Japanese Ministers of State have each contributed \$100 towards the Indian Famine Relief Fund. The contributions by charitable Japanese to this fund now reach a very large total, and as members of the British community we tender hearty thanks.

We are informed that the officers appointed to take charge of the S.A. Institution in Yokohama are Adjutant and Mrs. Ellis, from the S.A. naval and military home at Gibraltar. The adjutant was formerly in the hussars. He will be accompanied by Captain (Miss) Watson, who will remain to assist in the work here. Ensign Hatcher will remain for the present at this Port. The new arrivals are travelling by the P. and O. steamer *Ganges*, and are expected

next Sunday. The Salvation Army also acknowledge with thanks receipt of the sum of yen 68.22, kindly subscribed by the Captain, officers and men of H.M.S. *Undaunted*, towards furnishing the new wing which is being added to the S.A. building.

Advance sheets of the British Congregational Year-Book for 1897 show that there are now 2,867 ministers in England and Wales, 2,188 of whom are pastors actively engaged, and the number of churches and mission-stations is 4,607. Scotland has 187 churches and 201 clergymen; Ireland 27 churches and 28 clergymen.

The *Glamorganshire*, which has been lost near Capt. St. James, was a steamer of 1,843 tons net register and 450 horse-power, built in 1884 by the London and Glasgow Shipbuilding Co., for the Shire Line, and has been engaged in the China and Japan trade since. No particulars further than the fact that she will be a total loss are yet known. She was bound to Saigon to load a full cargo for home. Fortunately there was no loss of life.

The foreign community of Nagasaki, in response to an appeal from Mr. Joseph H. Longford, H.B.M.'s Consul, raised \$156.00 for the unfortunate lunatic King, alias Muir. The fund has been disposed of as follows:—Passage to Shanghai, \$31.50; gratuity to keeper, \$20.00; remitted to H.M. Consul-General, Shanghai, \$104.50. It is hoped that further sums may be raised in Shanghai, to enable the unfortunate man to return to England.

The Committee of the Kobe Cricket Club have decided, in view of the paucity of average matches last year, not to present any "average bats" for bowling or batting. In regard to finances, the receipts show an income of \$1,031.30, but the expenditure has been rather heavy, resulting in an overdraft of \$76.53. This was mainly due to repairs and alterations to the pavilion, amounting to \$196.60, and \$275.89, expended on flannel for blazers, &c., of which there is still on hand a stock valued at \$94.39.

According to a report sent to the Authorities by Mr. Saito, Japanese Consul at Tacoma, the total value of Japanese tea exported to the United States during the 29th year of *Meiji*, fell below that of the previous year by 30 per cent. Mr. Saito says, "This plainly resulted from exporting great quantities of low-grade teas, though it must be admitted that orders from the States insisted on cheap teas being sent. But there has lately sprung up in America a desire, shared by politicians and tea-brokers alike, to impose such taxes on inferior tea as may prevent bad leaf from being introduced." Mr. Saito concludes by strongly advising Japanese traders, if they wish to restore their credit in America, to export tea of medium quality and to refuse all orders for inferior kinds.

It is popularly supposed that the Bill providing special aid to the Nippon Yusen Kaisha for its regular services to Europe and America will follow the Gold-standard Bill. The proposed new grant amounts to 3,400,000 yen, the loss the company actually incurs by 24 voyages to Europe and 12 voyages to America per year being taken as a basis of calculation. The question which now presents itself for serious consideration is, whether the mail steamers of the N.Y.K. can maintain the schedule times demanded of similar vessels by other countries? The European liners of the N.Y.K. after leaving Yokohama call at Kobe, Hongkong, or Singapore, then go straight on to the Suez Canal. They have to call at Port Said to pay the Canal dues, proceeding thence to Marseilles, whence the mail is despatched to London by train. The steamers then continue their voyage past Gibraltar to London. On their return voyages, the vessels are to call at Port Said, Colombo, Singapore, or Hongkong, and then come direct to Kobe. If this schedule is maintained then Japan will be brought nearer in point of time to London by the N.Y.K. boats than by the English, French, and German mail-services. That is, of course, the object of the Nippon Yusen Kaisha, and for that reason the *Kanagawa* and *Kamakura* have been built.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.

KOBE WATERWORKS BONDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The advertisement inviting tenders for the above bonds affords no information as to the security to which bondholders have to look; nor from what date, how, when, or where, interest on the bonds is to be paid; and a letter of enquiry addressed to Mr. Narutaki Yukiyasu some days ago, has not elicited any reply. I had intended to apply for a few thousand yen of the bonds, but unless I can be enlightened upon the above points, I shall not do so; and I know some others who are deterred by the same cause. Apart from the discount exhibited towards my civil enquiry, if Mr. Narutaki Yukiyasu thinks foreigners are going to rush to lend their money upon any insufficiently disclosed proposal he will find himself egregiously disappointed. As you appear to be, to some extent, a kind of agent for the loan, I have thought that perhaps you may be able to afford the desired information.

I am, Sir, yours obediently,

Yokohama, March 17th, 1897.

[We are not in any sense agents for the loan. But the security is evidently that of the Hyogo Municipality. It is most unbusiness-like that no information is furnished to the public about the dates of paying interest.—Ed. J.M.]

FORMOSA AND THE TEA QUESTION.

(FROM OUR SPECIAL CORRESPONDENT.)

Taipeifu, Formosa, March, 7th.

Tea picking in Formosa usually commences early in April, and tea-merchants here are accordingly getting their quarters ready for dealing with the coming crop. The condition of trade has somewhat altered since the Japanese came into possession, many of the smaller Chinese merchants having left the field, thus throwing the business more into the hands of the foreign firms. However, several Japanese firms express themselves as desirous of engaging in the trade, although without agents in Amoy it would seem that they will be placed at some disadvantage. The American firm, Smith, Baker, & Co., who took over the business of Brown & Co., last year, are making alterations as well as additions to their quarters, no doubt with the intention of acquiring a larger share in the business.

At the beginning of the Japanese administration in Formosa, Count Kabayama announced that the people should be relieved from all taxes for the first year. It is now the intention of the Government to impose a tax on tea, and tax stations will be established at the principal points where tea is prepared. The impost is to be yen 2.40 per picul, which, with the addition of the Customs export tax, yen 1.10, gives a total impost of yen 3.50 per picul. Although this is large compared with the Japan tax, it is small in comparison with either the old Chinese tax in the island or the present tax on the mainland. The export duty during the Chinese régime was Hk. Tis. 2.50, plus 10 per cent per picul, and the *likin* yen 2.40, or yen 6.20 per picul. The present Amoy tax is an export duty amounting to yen 3.85 per picul, and the *likin* is about yen 3, or yen 6.85 in all. Considering the extremely heavy expenditures that the Japanese are called upon to meet in administering the island, it is not unlikely that such exports as can bear taxing will be subject to imports as large as can safely be carried. Commerce has not been impeded in Japan by excessive taxation, and it is confidently believed that officials interested in Formosa will keep an eye on Formosan trade and prevent it from being placed at a disadvantage.

Amoy is dependent, to a great extent, upon the Formosan tea districts for its prosperity. There has been some apprehension of Tamsui absorbing the business of that port by direct tea shipments to America. While no doubt some decreases may be expected in other exports of small importance, which formerly were sent *via* Amoy, it does not seem that there is any probability that tea will be shipped either to Japan for transshipment, or to America direct, for some years to come. The most convenient station of the tea district is Twatutia. After tea has been packed and rolled sufficiently to permit of transport, it is carried to the hoongs at Twatutia, where it is fully prepared for the foreign markets. Down the river to Hohe, where the shipping is done, is an easy sail of ten miles for cargo boats, and there the steamers are loaded with perfect ease. The cargo-

boat charge to Hohe is some 3 cents per half-chest, and the freight to Amoy is 10 cents. At Amoy the large American-bound steamships find a convenient port of call for the tea trade, as with the facilities for loading in that harbour they are only detained a few hours.

What can Kelung offer to obtain that trade? In its present condition, direct tea shipments are out of the question, but when the harbour has been completed—an undertaking of such dimensions that it will require years in itself—there are other difficulties nearly as great. As for the suggestion that the packing be done in Japan, it would seem necessary that the railway be furnished with big waggons, useful only during the tea season, to carry the tea to Kelung at the same rate as the cargo boats charge to Hohe—3 cents per half-chest—and that the steamers carry it to Japan for the same rate as it is now carried to Amoy—10 cents per half-chest—for the reason that the rates from Amoy to America and the rates from Japan to America are very nearly the same. Steamers cannot, however, carry tea from Kelung even to Nagasaki at 10 cents per half-chest and pay expenses. Again, it has been said that the American steamers would call in at Kelung and pick up the tea as they do now at Amoy. But it seems highly improbable that Kelung can be made into as safe and quiet a harbour as Amoy, and even were that accomplished, it is unlikely that the American steamers would care to take the journey around the storm-beaten shores of north Formosa, if the tea could be obtained at Amoy. There seems to be but one solution of the difficulty, and that is for the Nippon Yusen Kaisha, or some other company with lines to Formosa and America, to combine this trade, and carry tea from Kelung to America, making their own transshipment in Japan, at as low a rate as the other lines are prepared to do from Amoy. To make this successful, the Formosa railway would have to give assistance, and carry the tea to Kelung at probably something less than 10 cents per half-chest. For the foreign tea firms whose headquarters are so comfortably established in Amoy, it would require promises of marked advantage to induce them to forsake cozy Kulangsu for fever-stricken Kelung with its two hundred days of rain. The new firms would, however, gladly welcome the innovation, for the expense of establishing a branch at Amoy is considerable, and this could, to a large extent, be avoided if the final packing and shipping were done in Formosa.

NEWS FROM THE SOUTH.

The Singapore "Diamond Reign" Celebration Committee is to spend \$1,500 in Japan on lanterns and illuminations, and \$2,000 in Batavia for fireworks.

A scheme for dock accommodation in Calcutta, involving an outlay of nearly twenty lakhs of rupees, has been sanctioned by the Government of India.

The Naval Department of Siam has fixed four port lights at different stations along the east coast of that country. The lights are of French design and are visible ten miles at sea. They are fixed at Bangplao and Koh Kong, and at two other small ports on the coast. The Koh-chui light will be handed over almost immediately to the Siamese Harbour Department.

From the Chinese Customs Gazette, October-December, 1896, it appears that the total collections for the quarter as compared with last year were as follow:—

	1896. Hk. Tls.	1895. Hk. Tls.
Twenty-one treaty ports ...	5,753,447	5,212,340
Kowloon and Lappa	279,124	264,087
Lungchow and Mengtze ...	28,699	35,574

At Shanghai alone the collection amounted to Hk. Tls. 2,130,534, against Hk. Tls. 1,612,656 last year. The three new ports, Shasi, Soochow, and Hangchow, contributed Hk. Tls. 1,776,343, and 4,060, respectively.

A tragic occurrence took place at Lahore on the 2nd ultimo. A Ghazi stabbed to death a young European lady, the wife of a telegraph signaller, named Band, and severely injured the husband. They were coming out of a shop in the Anakhali bazaar when the Pathan rushed on Mrs. Band, and afterwards attacked Mr. Band, who went to her rescue. The murderer made off with the knife in his hand, but was pluckily arrested by a sowar belonging to a native cavalry regiment. The Ghazi stated he came to Lahore from Peshawar on purpose to take European lives. He was subsequently sentenced to death.

On March 4th, a triangular rifle match was fired over the Kowloon Ranges by teams representing H.M.S. *Centurion*, *Grafton*, and *Immortalité*. Some few days before, a match between

the *Grafton*, and the *Centurion*, was won by the *Grafton*, whose team succeeded in winning on this occasion, defeating the *Centurion* by 26 points and the *Immortalité* by 59 points. A. B. Moore (of the *Grafton*) had a fine score of 97, including a full score at 500 yards, one point ahead of Commander Sir R. K. Arbuthnot, who headed the *Centurion* score with 96.

Spring, says the *Hongkong Telegraph*, is making her appearance here at last. The hills are showing faint traces of green through the brown, dried up herbage of winter, and the birds are bursting forth on the few deciduous shrubs and trees which the island possesses. The widow and rain bird, the Hongkong counterparts of the cuckoo, are returning and we have already heard their doleful cry, while the butcher-bird has selected the most thorny bush he can find, and is busily employed with his mate in building a nest in readiness for his prospective family, pausing now and again in his labours to capture some luckless frog and impale him on a sharp thorn in readiness for the morrow's dinner.

Reference has been made in recent telegrams, says the *China Mail*, to the Island of Samos and the proposal of the Powers to grant Crete autonomy on the lines of the Samos government. Sixty years ago, during the Greek war of independence, the island of Samos threw off the Turkish yoke. It was handed back to the Turks by the Powers, but only on certain conditions. Samos is thus self-governed, though tributary to the Sultan, and is ruled by a Greek Governor who bears the title of Prince of Samos, but is controlled and assisted by a Greek Council and Assembly. Under this arrangement, Samos has prospered exceedingly. But the success of a similar experiment in Crete is rendered doubtful by the influence of the large party among the islanders who cry out for actual annexation to Greece.

A disturbance broke out in Penang harbour, on the 21st February, on board the steamer *Chelydra*, which was proceeding from China to India with men of the Hongkong Regiment on board. The row began between five of the Indians and the Chinese firemen. One of the former was killed, and three are reported to be wounded. One Chinaman is said to be seriously hurt. The case came before the Magistrate on the 23rd, and the captain and four of the crew gave their evidence. The case was then adjourned till the 2nd March. Ten Chinamen (two sailors and eight firemen) who are accused of murdering the dead Indian and of voluntarily causing grievous hurt were removed to the cells. The vessel was permitted to proceed on her voyage, and will probably return in time for the witnesses to give their evidence at the next Assizes.

Hongkong rejoices in the possession of a witty Governor, but Mr. Thomas Jackson, of the H. & S. Bank, runs his Excellency close in the matter of felicitous expression when introducing a speaker to a meeting of the colonists. The other day Mr. Granville Sharp addressed the Odd Volumes' Society on the subject of "Money: how to get and how to keep it." Mr. Jackson, after observing that Mr. Sharp was a great authority on the subject, said that prosperous men in all ages had despised money, even Solomon being amongst the number, but he (Mr. Jackson), preferred to say—

Oh! what an excellent thing is a dollar or two;

A very good thing is a dollar or two.

And Father O'Grath would h'ave us from wrath,

If he'd just heard the chink of a dollar or two.

Mr. Sharp was to tell them how to get money, but another portion of the subject was "How to spend it." The speaker was afraid Mr. Sharp had asked him to take the chair as an awful example of that.

The *China Mail* says that H.E. Chang, who is to be the Special Chinese Ambassador to England during the Diamond Jubilee celebration, was, some ten years ago, Chinese Minister at Washington. H.E. Chun, who will probably accompany him as interpreter and secretary, was educated in St. Paul's College in Hongkong, being a schoolmate of His Excellency Wu Ting Fang, the Minister-elect to the United States, Spain and Peru. For several years, H.E. Chun was lessee and proprietor of a Chinese newspaper, the *Chinese Mail* (*Wah Tsa Yat Po*), before entering the Chinese service and taking up official rank. He represented China in Cuba as Consul-General, and after his return from Havana became manager of the Chinese Mining and Engineering Company, one of the most successful concerns now carrying on business in China. He is a man of great personal attainments, of upright character, and intellectual capacity for the arrangement of detail. He speaks English and Spanish fluently. H.E. Chang could not have selected a better Secretary for his approaching tour.

"COMING EVENTS CAST THEIR SHADOWS BEFORE."

About a year and a half ago—write Messrs. John Birch & Co., Ltd., of 10 and 11, Queen Street Place, London, E.C.—we tried in a circular letter to answer the question "Is trade about to revive?" and the conclusion arrived at, was that there was every reason to suppose that we were on the eve of another period of marked activity.

How events have justified that opinion since then, may be gathered from the following comparison of prices of some leading articles in the Iron and Steel trades:—

	June, 1895.	Dec., 1896.
Bessemer Pig Iron.....	£2 5 0	£2 11 0 per ton.
Cleveland do No. 3 ..	1 15 3	2 0 9 "
Scotch Pig G.M.B. ...	2 4 3	2 9 0 "
Crown Iron Bars	5 7 6	5 17 6 "
Mild Steel Plates	5 0 0	5 10 0 "
Bessemer Steel Rails ..	3 12 6	4 10 0 "

As will be known to most, moreover, there has also been an improvement in the prices of almost all classes of products and of raw material in other trades.

Unmistakeable as the forward movement has been, it is apparently but an indication of what is yet to take place.

That the acute political crises of the last twelve months have not hindered the growth of the improvement is a somewhat remarkable sign of its strength, coming as these did, moreover, on top of the serious collapse in the Stock Markets towards the end of 1895, caused by the excessive speculation in mining interests.

Another proof of stability is shown by the state of the freight market, which has steadily improved owing to the greatly increased amount of exports and imports.

The factor which probably more than all others makes for improvement is a large Gold supply.

We showed in our last report that in the Transvaal Gold Fields alone the annual production had increased from 34,897 ounces in 1887 to 2,024,156 ounces in 1894, equal in value to over six million English sovereigns.

During last year the output has further increased although political and financial troubles had the effect of diminishing the output for the time being very considerably.

Increasing production, though not on so large a scale, is taking place in many other of the newer Gold Fields, so that there is a continuous and growing output and storage of the standard metal, without at present any signs of limitation to still further increase. We hold, without doubt, that the power of purchase thus created must lead to its employment.

Concurrently with the improvement which has taken place due to the better supply of gold, has been the subsidence of the bimetallic question, which goes to prove what we believe we pointed out some years ago, viz., that the silver difficulty will be practically solved as soon as gold is produced in a quantity somewhat exceeding that which is annually required for the purpose of the world's trade.

The bimetallic attitude, however, is slow to perceive the correlation of the plus and the minus signs. A distinction is not drawn between vexatious fluctuations in silver and its intrinsic value—hence the tears which are shed, and the conviction born of desire that the establishment of the practical impossibility of a dual standard would cure all evils.

But logic, as well as hard facts, show that to measure anything by more than one measure is to attempt the sublimated, and whether your standard be gold or diamonds, elephant tusks, or ostrich feathers, all other articles beside it become mere commodities.

The simplest explanation of what has happened lies in the realization of the fact that over-production in America and the over-storage of silver by the U.S. Government, which has now openly confessed its failure, are the true causes of the great depreciation of silver, a downfall accentuated by the hitherto limited supply of gold.

And here we may quote the remarkable and cogent words of Mr. Carlisle, the head of the Department of American State Finance, in a speech delivered at the Boston Reform Club on October 13th, 1895.

"No nation can reasonably hope to control the trade of a considerable part of the world, or even to realize the full benefits of its own trade, unless its exchanges are based upon a standard of value recognised as sound and permanent in all the centres of commerce. With a depreciated and fluctuating currency, or a currency in any respect inferior to that of other commercial nations, it must always occupy a subordinate and dependent position. The pound sterling has made

London not only the principal market, but the clearing house of the whole world; no matter what character of currency other nations may use, no matter what standard of value they may adopt, all their international balances are subjected at last to the test of the pound sterling, and all their international bills of exchange are naturally attracted to a common centre, because it is there only that a uniform and recognised measure of value will be applied to them. England not only realizes great profit from her own trade but takes toll out of the international trade of all other countries, for the simple reason that the balances are settled upon the basis of her standard of value, and the credits which represent them almost necessarily pass through the hands of her merchants and bankers."

From finance to politics is not a difficult transition and, fortunately or unfortunately, no estimate as to the probable course of trade can be considered a complete one, which does not take into consideration the international relations of the present time.

The previous year (1895) was rich in events which have left their mark on that which has just passed away, for the war between China and Japan largely shifted the centre of interest from West to East; it did not perform this without having, however, an upsetting effect on European equilibrium, and this effect may be traced in the too feeble unanimity with which European Powers have until quite recently dealt with the crises in Asia Minor and Turkey; this, too, has reacted upon the sudden crisis in South Africa, which seemed at one time likely, though unexpectedly, to bring some of the European Powers into conflict.

But 1895 brought about another striking event, viz., the coming into power in England of the strongest and most united Government which has been seen in this country since the passage of the Reform Act more than half a century since, from which may be expected a consistent policy both at home and abroad for many years to come. Since then it seems to have been discovered on the Continent that England is not exactly a *quantité négligeable*.

The general results of the events of the last two years seem to point to an eventual re-grouping of European nations. Germany, which so long as France was isolated, held to the Triple Alliance, though never without something more than a coquettish attitude towards Russia, having since become alarmed by the *rapprochement* between France and Russia, has sought by various means to detach the latter, even though it may be at the cost of breaking with Austria and Italy, and has also by the famous Wilhelm-Kruger message, and by a long continued expression of rancour on the part of her press and colonial party, alienated England from her tacit support of the Triple Alliance, and has alarmed her other and closer allies. It seems to be quite possible, therefore, that an understanding may come to pass eventually between the two autocracies of Russia and Germany, although at the present time the rather one-sided warmth of the *entente* between France and Russia stands in the way of such a policy. A reversion to the old grouping between France, Italy and Austria would then probably take place, while England would, by force of events, become sympathetic to this latter alliance, though unlikely to actually join it.

It does not seem to be understood why England should decline to pledge herself to those continental alliances, and yet the answer is a very simple one. Many efforts have been made during the past few years to induce England to join both the alliances, but were she to attach herself to the Triple Alliance, could it be doubted that Germany would soon after wage war with France in order to put an end to the intolerable burden of her armaments? On the other hand, were England associated with France and Russia, it cannot be supposed that, secure of having the English Fleet with and not against France, or at all events neutral, France would lose much time in endeavouring to obtain her long-wished-for revenge.

By keeping outside of such dangerous engagements, England not only consults best her own interest, which must of necessity be the first, but does more to preserve the general peace than she could do in any other way. Nevertheless, this unique position has earned her the dislike of both France and Germany; nor is her vast colonial expansion and activity other than a source of jealousy to them. Yet could they but realize that England, unlike most countries, is not self-contained, but has to support a population always growing and nearly as large as other great Powers on a far smaller extent of ground, and in a far more inhospitable climate, under which even half the food required for her population cannot be provided, they would understand that in colonial expansion and in foreign trade, and with the command of the

seas which these require, is constituted her sole possibility of existence.

And England, moreover, is the more driven to seeking of outlets in the more distant and less inhabited parts of the World, seeing that the continental Powers as well as the United States bar their doors to English trade by Customs tariffs, and therefore they should the less complain of her doing what in truth they assist in compelling her to do. Also it is not remembered that in the lands and colonies occupied by her English race the foreigner of whatever nationality can reside, possessing every right and privilege and advantage which an Englishman has, and that the goods of his country can be imported into that Colony on absolutely the same terms as English-made goods.

Whether this be good or bad from the English point of view is another question, but it is a policy of which England gives the only example on the face of the earth. As your leading journal lately said:—

"For great as the advantages are that we have derived from free trade, we sometimes have to suffer from the operation of a system under which the benefits of our vast markets are open to all competitors, while our trade is confronted in almost every quarter with hostile tariffs, and is sometimes fought by bounty-fed industries."

But to return to our subject. It will be seen that the present unrest, and the dangers attending the regrouping of interests and national sympathies must be borne in mind in considering the improvement in trade, and may at any time check it. Fortunately and undoubtedly, however, the actual tendency is on the whole pacific. Russia wishes for time to consolidate and to complete her strategic railways; Austria would be the last to break the peace; Germany, occupying as she does the most dangerous position in Europe, and in reality the most isolated country of all, cannot choose a disadvantageous moment for aggression; France, having recovered her self-esteem, will run no undue risks; and England, just entering upon the year which consummates a long and glorious reign, desires nothing better than that the peace of the world should be preserved.

The risk at the moment, if any, lies in the Turkish difficulty, or in one of those outbreaks of popular passion due to some sudden and unprovided-for incident which may arise in any part of the world.

This much, however, may certainly be said, that were war to break out between any of the Continental Powers in which this country was not involved, it would cause a great demand for British goods. And even were this country involved, its Navy may be relied upon to keep the trade routes open for its own ships, and closed to those of the enemy; so that even then we may expect a higher range of prices and considerable activity.

It may be added that, as large sums will be voted by Parliament this year for increase in the *matériel* and *personnel* of the Navy, the large number of war-ships which will have to be built will have a considerable effect upon the iron and steel trades and on the labour market.

The mention of labour induces reference to the effect of the socialistic growth upon trade. It is not so long since so competent an authority as M. Paul Leloy-Beaulieu wrote in *Le Journal de Débats*, as follows:—

"A fresh evil, the most insinuating, the most weakening, the most devouring of all, has come to be added, viz., state socialism. In the long run no financial system will be able to resist this two-fold pressure of military and naval demands on the one hand, and the immoderate and largely artificial demand for public works, education, poor laws, superannuation, etc., on the other. The weak States have already succumbed. The stronger States, Germany for instance and France, will hold out for a long time yet; but it will be by seeing their deficits accumulate, by indefinitely increasing taxes, by discouraging commerce and industry; and by unwillingly, indirectly, but inevitably, multiplying the number of those unemployed for whom everybody feels pity, yet the number of whom everybody helps to increase."

But at this moment, when trade presents a more prosperous appearance, when employment is more readily obtained, and there is a larger margin of profit in wages, the *spectre rouge* becomes less prominent, and apparently there is nothing in this particular direction to cloud the air or to detract from the immediate good prospects of 1897, though we may expect some strikes, of course.

Imports into the United Kingdom during 1896 show an improvement of 25 millions as compared with 1895, or about 6 per cent. increase, and exports an increase of 14½ millions, or about 6½ per cent.

"Stocks of Pig Iron in the three principal producing districts have been decreased by 66,000

tons, and, as pointed out by one of the authorities in this trade:—"Some idea of the enormous expansion in the iron trade during the past year will be formed when it is remembered that the production of 1896 exceeded that of 1895 by upwards of 455,000 tons, while the increase of stocks in 1895 amounted to about 400,000 tons, so that the consumption, including shipments of pig iron in 1896, exceeded that of the previous year to the extent of nearly one million tons. Good as these statistics are, however, the present position of the iron trade is even more encouraging than these figures indicate."

As the production of iron cannot now be much further increased, it follows that the growing demand now apparent will largely deplete stocks and raise prices still further, especially if speculative impulses come into play.

Railway enterprise at the present is very active, and locomotive builders are so heavily engaged that there are few, if any, firms who can take additional contracts of importance for delivery inside of a year.

Light railways, though making less progress in England than on the Continent, have nevertheless made a start, and in India and some of the Colonies a very rapid appreciation is taking place of the virtues of the 2 feet and 2½ ft. 6 in. gauges, either as feeders to main lines, or as openers out of districts which cannot support the standard gauge.

Railways which in ordinary countries can be put down at so low a cost of construction, permanent way, rolling stock and buildings, as £1,500 per mile (or £900 per kilometre) and which can carry no inconsiderable amount of traffic, can hardly fail to appeal quickly. Old prejudices about break of gauge are disappearing, but it should be clearly realized that a break of gauge to be economically effective must be the difference between the standard 4 ft. 8½ in. (or 5 ft. 6 in. as in some countries) and a really narrow gauge, such as those above mentioned, and there is little advantage, as a rule, in the adoption of such types as 3 ft. 6 in. and metre gauges, which possess all the disadvantages of break of gauge with but few compensations.

The question is not infrequently asked, "What is a light railway?" and obviously the term may cover either lines of standard or even wider gauges which are lightly laid, and over which engines and rolling stock of the main line, but of lighter construction, can be run, or over which the ordinary rolling stock of the main line can be operated, but at low speeds only.

Or a light railway may be one of metre gauge, or anything down to 16 or 18 inch gauge, or even less. Some definition is wanted, and perhaps the expression "light railways" might be confined to lines of the normal gauge of the main lines of any given country, but of lighter construction; while lines of the narrower gauges might be designated "subsidiary railways."

Shipbuilding, another great staple, has made of 1896 a record year. In 1889 a total of over 1,200,000 tons of shipping was built, that being the greatest output ever arrived at, but last year over 1,300,000 tons of shipping were put into the water.

The manufacture of cycles has grown, or rather has leaped, into a colossal industry; but extraordinary as have been the results of 1896 they seem likely to pale before the preparation being made for the trade of 1897.

An immediate result has been to give so great an impetus to the tube trade as to make it a matter of some little difficulty at times to obtain delivery of tubes for ordinary purposes.

From the *tout ensemble* it will be perceived that the times make for one of those rare periods of prosperity which seldom occur more than once in a decade, and that to all appearances "the wheel has come full circle" once more.

Unless checked by the unforeseen, by political complications, or by *force majeure* we have every reason to expect in 1897 a time of intense activity, of advancing prices, and also of difficulty in normal expedition of work, owing to the pressure from all sides.

And as the year grows older, and autumn gathers her fruits and sets free the value of the products of the kindly earth, we may expect an accelerated pace in the markets and possibly (if unhappily) the appearance of those speculative movements which too rapidly force prices up, and which bring sooner or later their own punishment.

Meantime, however, we are come to "a season of clear shining after rain" we move to brighter days in all the promise of the year. And so may we use the stately invocation of the Psalmist, "Peace be within thy walls and prosperity within thy palaces."

SPECIAL TELEGRAM.

MR. CURZON AND KOREA.

London, March 12.

Reuter's telegram relating to the statement of the Right. Hon. Geo. N. Curzon, Parliamentary Secretary for Foreign Affairs, in the House of Commons, upon the subject of the Russian officers drilling Korean troops, is wrong. Mr. Curzon stated that the fact does not appear to be inconsistent with Russia's pledge.

TERRIBLE GUN-ACCIDENT—17 LIVES LOST.

London, March 17.

A terrible gun-accident is reported from the Island of Crete, whereby 17 lives have been lost and 20 men severely injured. The Russian steel, armoured barrette, *Sissot Veliky* (8,000 tons, 8,500 h.p., and having a speed of 16 knots), was at target practice outside the harbour of Suda, Island of Crete, when one of her guns exploded. When the smoke had cleared away it was found that seventeen men had been killed outright, while 20 were lying around severely injured.—*Fiji Shimpō*.

(FROM THE "CHINA MAIL.")

THE EUROPEAN SITUATION.

London, March 5.

Four French war-ships at Toulon have been ordered to be in readiness to sail for Crete at a moment's notice.

One hundred members of the House of Commons, including Sir Charles Dilke and Mr. Herbert Gladstone, have wired to the King of Greece, landing his services to civilisation.

The situation in Crete and on the Thessalian frontier is critical. Two Greek war-ships have left the Piræus under sealed orders.

THE CAPE REINFORCEMENTS.

London, March 7.

The order for the despatch of the Suffolk Regiment to the Cape of Good Hope has been suddenly cancelled.

TURKEY, GREECE, AND THE POWERS.

It is understood that Greece will reply to the Collective Note to-morrow by refusing to recall the fleet and troops, on the ground that it would be the signal for pillage and murder.

The Porte, in reply to the first Note, accepts the proposals in principle, but desires to discuss the details of the proposed autonomy of Greece.

A meeting has been held in Hyde Park to protest against the coercion of Greece.

GREAT BRITAIN AND FRANCE.

The Queen, on her way to the Riviera, will have an interview with President Faure.

BRITISH SYMPATHY WITH GREECE.

Volunteers are leaving England to join the Greek Army.

THE GERMAN NAVY.

The German Admiralty asks for an extra vote of £9,000,000 for new war-ships.

THE EUROPEAN BOURSES.

The European bourses are very flat owing to the gloomy view taken of the situation. It is doubted whether the Concert of Europe will stand the strain of actual coercive measures.

CHINA AND THE QUEEN'S DIAMOND JUBILEE.

Pekin, March 8.

The Chinese Government has appointed H.E. Chang Yin Huan, Vice-President of the Board of Revenue, to proceed to England as a Special Ambassador to represent the Emperor of China at the Diamond Jubilee Celebrations of Her Majesty the Queen. His Excellency Chang has memorialized the Throne for the services of H.E. Taotai Chun Oitang, Manager of the Chinese Mining and Engineering Company at Tientsin.

(FROM THE "JAPAN GAZETTE.")
GREAT BRITAIN DISSATISFIED.

London, March 11.

The British Government is dissatisfied with the Greek reply to the Collective Note of the Powers and considers it necessary for the Greeks to quit Crete.

PARLIAMENT NOT TO BE CONSULTED.

Mr. Balfour, First Lord of the Treasury, has declined to pledge the Government to take no step in the Cretan question without first consulting Parliament.

(FROM THE "N.C. DAILY NEWS.")

REPLY OF GREECE: A PLEA FOR CONSIDERATION.

London, March 16.

The reply of Greece to the Note sent by the Powers urges them not to insist on the autonomy of Crete, which would be inadequate to prevent anarchy and fanaticism, but rather to restore Crete to Greece. It states that Greece cannot withdraw her troops nor abandon the Cretans to the mercy of the Mussulmans, but that part of the fleet may be removed; and appeals to the Powers to let the Cretans decide as to the reform of their Government.

FRANCE'S INDISPOSITION TO COERCION.

M. Hanotaux, French Minister for Foreign Affairs, promised that France would take no action in coercing Greece without consulting the Chamber of Deputies.

THE OUTLANDERS' GRIEVANCES.

It is understood that the Right Hon. J. Chamberlain, Secretary of State for the Colonies, has strongly protested against the "Transvaal Aliens' Act," as being a violation of the Convention between Great Britain and the Transvaal.

(FROM JAPANESE PAPERS.)

GERMAN NAVAL ESTIMATES.

London, March 15.

The Budget Committee of the Reichstag has rejected the proposal for an outlay of 12,000,000 marks for the construction of new men-of-war.

CRETE.

It is semi-officially declared in Russia that as the Powers have decided to maintain the peace of Eastern Europe pressure should be vigorously brought to bear upon Greece.

Troops continue to pour on to the frontiers of Macedonia, and the situation is critical.

According to a semi-official report in Vienna, Russia, Germany and Austria have given instructions to their respective Admirals in Crete to blockade the coast of Crete and the Grecian ports. England, Italy and France are likely to follow the example.

London, March 16.

Speaking in the Chamber of Deputies, M. Hanotaux, French Minister of Foreign Affairs, said that Crete must be blockaded, and if necessary all the ports of Greece. A motion based upon the statement was at once approved by 356 against 143.

Later.

M. Hanotaux, Minister of Foreign Affairs, in the course of his speech in the Chamber, added that the United Powers would dispatch 600 soldiers each to Canea, to occupy the town and adjacent districts.

BIG FIRE AT A COTTON MILL.

Osaka, March 16.

About 8 o'clock on Monday night fire broke out in the second mill of the Osaka Seimen Kabushiki Kaisha (Osaka Cotton Factory), and the whole of the buildings and six adjacent houses were destroyed.

The loss is estimated at about yen 100,000. The fire is said to have originated from friction caused by certain parts of the machinery.

A FRATRICIDE.

Matsuyama, March 16.

Mr. Onishi Iyo (aged 52) of Iyo-gun, Ehime Ken, was murdered by his eldest son Tatsukichi (aged 29), with an axe, on the night of the 13th inst. He was sleeping at the time. The tragedy originated in the father's refusing to supply

money to the son. Tatsukichi was sent to Matsuyama Local Court to-day.

VICE-ADMIRAL ITO.

Kobe, March 18.

Vice-Admiral Ito, Chief of the Naval Command Bureau, and staff, arrived here yesterday afternoon from Yokohama by the *Saikyo Maru*. This morning they proceeded to Kyoto.

THE ROKUJO SCANDAL.

Kyoto, March 18.

Judgment was given in the Kyoto Chiho Saibanho to-day, regarding the Rokujo family scandal. Kamabe, the principal defendant, was sentenced to 2 years' hard labour and a fine of yen 20, with 10 months' police supervision; Aburakoji, to 6 months' hard labour and a fine of yen 8; Hachijota, to 4 months' hard labour and a fine of yen 5, with 6 months' police supervision.

ARREST OF A JAILER.

Tokushima, March 18.

Wakabayashi Sadajiro, a jailer of the Tokushima Prefecture Gaol, was arrested to-day on suspicion of having stolen some spun thread belonging to the gaol, on the 13th inst. Four other jailers are also implicated.

KOREAN NEWS.

Soul, March 18.

Mr. Bin Eikan, Minister to Russia, will leave the Peninsula for Shanghai by the *Sendai Maru* on the 23rd inst. The Russian Representative and Mrs. Waerber, will accompany him to Shanghai.

A Government commission has been appointed to draw up drafts of Law and a Constitution.

STREET LIGHTING.

REPORT OF THE GAS COMMITTEE FOR THE SIXTEENTH YEAR, FROM FEB. 16, 1896, TO FEB. 15, 1897.

RECEIPTS.

Subscriptions, March, 1896, to February, 1897	\$3,531.60
Interest on deposit in Bank at 5 per cent.	55.00
	3,586.60
Balance from last year	1,397.64
	\$4,984.24

EXPENDITURES.

Payment to the Gas-works:—	
For 4½ months 132 lamps at \$249.48 per month	1,122.66
For 7½ months 139 lamps at \$262.71 per month	1,970.33
Secretary's Commission, \$30 per month	360.00
Payments for Stationery 24 00—	3,476.99
Balance, cash in hand	\$1,507.25

A. DUMMLIN,
Hon. Treasurer.

Yokohama, March 17th, 1897.

Amount collected for the year ending Feb., 1896	\$3,651.27
Amount collected for the year ending Feb., 1897	3,531.60

Decrease	\$ 119.67
Expenditure for the year ending Feb., 1896	\$3,377.76
Expenditure for the year ending Feb., 1897	3,476.99

Increase

The Committee: A. O. GAY, Chairman, A. DUMMLIN, Hon. Treasurer, J. H. BROOKS, W. B. WALTER, HENRY BASHR, R. A. MEES, Secretary. Yokohama, March 18th, 1897.

The Nippon Boyeki Kyokai (Japanese Trading Association), held a regular meeting on Tuesday evening. Among those present were Mr. Miyagawa Tsunejiro, late Consul at New York, and Mr. Nakamura Yaro, M.P. The former delivered a speech regarding the gold standard, while the latter spoke upon business prospects and forestry in Siam. Afterwards, as a result of the report presented by a committee in reference to the gold standard, the new system was approved and the meeting dispersed at eleven o'clock.—*Kokumin Shimbun*.

White to play and mate in two moves.

SRINITY.

We regret very much to learn that the strain of the match with Lasker had a very prejudicial effect on the veteran's health; and that a month ago he was in hospital at Moscow suffering from brain fever. We sincerely trust that the master is now convalescent and that he will be spared to the Chess world for many years to come. We are all waiting anxiously for the second part of the

famous "Chess Instructor," and there is room among us for a Nestor as well as an Ajax.

CHESS IN EDINBURGH.

| 20—Kt to K 6 | |

Here the game was abandoned as drawn, though there is scope for much manoeuvring.

If 20—... R to Q B sq.
21—K takes B P takes B
22—K Kt takes P P to K Kt 3
White can force the draw by
23—Kt to B 7 ch. and
24—Kt to R 6 ch.

THE ANGLO-AMERICAN MATCH.

This was played on 12th and 13th February by cable; and on this occasion the British team won by 5½ to 4½, thus reversing the verdict of a year ago. The Newnes Cup returns across the Atlantic to London. This makes one win to each team and the rubber will be a mighty struggle worthy of the combatants. When Great Britain meets Greater Britain in a contest either of Chess or Commerce then indeed comes a "tug of war."

NOTES BY C. VON BARDELEBEN.

- (a) A dull continuation. I prefer the usual moves 4—B to Kt 5 or 4—P to K 5.
(b) The right answer.
(c) I believe that at 11 better would be 11—P takes P; the game might proceed then in the following: 12—6—B to Kt 5 ch., 13—Q to Q 3; 14—Q takes P, 15—B takes B; 16—P to K Q 3; 17—9—Kt to Q B 4; 18—Kt to B 3 and Black has the better development.
(d) The attack induced by this and the following move is not sound. White should have played 13—Q R to Q sq.
(e) At this juncture 13—P to Q B 3 was absolutely necessary to prevent the following move of Black.
(f) Very well played. Black, after having exchanged the hostile Kt, runs the risk of weakening his pawns on the King's side to obtain attacking prospects.
(g) This square is very unfavourable for the Queen. Better would have been 18—Q takes Q.
(h) Of course not Q takes P because of 18—Kt to Kt 6 ch winning the Queen.
(i) This proves to be fatal at once, but the White game is no longer to be saved. If, for instance, White defends the Queen's Knight's Pawn with 22—R to Kt 2, Black answers 22—Q to Kt 3.
(j) He should have played 24—K—K, but only if prolonging the struggle. Black has played the attack very cleverly.

| 34—Q to K 5 ch. | 34—P to B 3 |
| 35—Q to K 7 ch. | 35—Kt to B 2 |
| Resigns. | |

(a) Preferable is 6—Kt to B 3. 6—B to Q 3 may also be played combined with 6—P to Q 4 in which case White has to avoid 7—P to K 5 the latter move being in Black's favour.

(b) says by Z. that it is against Blackburne in the first match.

(c) Zukertort castled.

(d) A hazardous combination.

(e) For reply to black's excellent 13... B to R 3 he is compelled to the weakening 14—P to Kt 5 which in itself proves the advantage of the pawn to have been pre-arranged; but the subsequent 15... R to B 3 which gives Black an open R file, is still a rather objectionable.

(f) The combination initiated with 19—P to B 3 and ending here, is quite new and Black having seen further into it than White. The capture of the Rook proves no gain, as the sequel shows.

(g) Black now concludes the game elegantly.

(h) He could have played 30... Kt to B 3, and if 31—B takes Kt, then 32... Q to Q 6 ch, (h) 33... P takes R, because of 34—Q to K 8 ch, a mate next move, 35—K to R sq, B to Q 3, ch, and mate next move.

GAME No. 679.
Played in the Hamburg tournament, 1885.
CENTRE GAMBIT.

WHITE.	BLACK.
W. Paulsen.	E. Schallopp.
1—P to K 4	1—P to K 4
2—P to Q 4	2—P takes P
3—Q takes P	3—Kt to Q B 3
4—Q to K 3	4—Kt to B 3
5—P to K R 3	5—B to Kt 5 ch.

18—K to B 4	18—Q to Q 6 mate.

CHESS 5,000 YEARS OLD.

The *British Chess Magazine*, in a recent issue, publishes the following in reference to the antiquity of chess.—The latest excavations on the pyramid field of Sakkara have led to an extraordinary discovery as to the origin of chess. Hitherto it was assumed that the ancient Indians had invented the game, that it was introduced from India to Persia in the sixth century, and that by the Arabs, and in consequence of the Crusades it spread from East to West. This theory was substantiated by the fact that an Indian, Persian and Arabic influence in traceable in the character of the figures at present used, and in some of the words connected with the game, such as "shah" (check) and "matt" (mate). Now, north of the pyramid of King Tetu or Teti two grave-chambers have been discovered which were erected for two high officials of that ruler. Their names were Kabin and Mernker, called Mera. The grave chamber ("mastaba") of the former consisted of five rooms, built up with limestone. Its walls are covered with exceedingly well-preserved bas-reliefs and pictures representing various scenes. The other grave-chamber, that of Mera, is the most valuable. Up to now no fewer than twenty-seven halls and corridors have been uncovered. There are beautiful graven columns; in the chief room there is, in a niche, a tinted statue of the departed, about seven feet high, with a sacrificial table of alabaster before it. Among the many wall paintings in this and other rooms, hunting and fishing scenes, a group of female mourners, the three seasons, Mera and his sons, holding each other by the hand and Mera playing chess, are to be seen. King Tetu belonged to the sixth dynasty, and his reign was assigned by Professor Lepsius to about the year 2700 B.C. Professor Brugsch, correcting this chronology, puts it back to still greater antiquity, namely, to the year 3300 B.C., so that chess would have been known in the once mysterious land of Mizraim something like 5200 years ago.

YOKOHAMA CHESS CLUB.

We learn that there is a sort of mutiny in this Club against the "powers that be," and that the President has been requested to call an "Extraordinary General Meeting." The business proposed is:—"To reorganise the Y.C.C.; to elect fresh officers, and draw up new rules." We had no idea that our premier Club was in such a bad way, and in need of so much sudden doctoring. We await further events with interest.

LATEST COMMERCIAL.

IMPORTS.

Everything has come to a dead stop owing to the upset in Exchange. Buyers profess to believe that the lowest point has been reached, and that a rebound will soon come from the present low rates for Bank Paper: so they are waiting with what patience they can for this amelioration in their lot. Meantime, sales are practically nil and Importers are perforce idle, "chewing the cud of discontent."

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of the limbs. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAR. 27TH, 1897.

SUMMARY OF NEWS.

THE Sendai School strike has terminated.

THE Upper House passed the new Coinage Bill.

THE Crown Prince returned to the capital on Monday.

AN outbreak of the plague is reported from Formosa.

IT is announced that a Constitution is to be drawn up for Korea.

THE Imperial Diet was prorogued on Thursday after a quiet but important session.

THE British Minister, Sir Claude Macdonald, arrived at Seoul on the 23rd instant.

BARON SHIRANE, late Minister of Communications, has suffered a serious relapse.

THE new Chinese Minister to the U.S.A., passed through Yokohama on Friday.

THE Bill for encouraging the direct export of silk has passed both Houses of the Diet.

MANY houses were destroyed by fire on Tuesday in the village of Tsurumi, near Yokohama.

MR. KURINO, Japanese Minister to Italy, is now

staying in Greece observing Cretan affairs generally.

As a result of the late session of the Imperial Diet, Japan is now in possession of a free press.

THE *Fiyu-to*, after mature deliberation, have decided to accept the resignation of Count Itagaki.

MR. SOME, Japanese Representative in Paris, will start for Japan on the 28th inst., on leave of absence.

HER MAJESTY the Queen has appointed the 25th June as a day of thanksgiving for her record reign.

THE united cotton factories of Japan have collected about yen 3,000 towards the Indian Famine Relief Fund.

THE Postal authorities of Great Britain have purchased 10,000 bicycles, to be used in the mail delivery service.

THE Spanish Government has been raising considerable funds in London to defray the war expenses in the Philippines.

OWING to the exceptionally low tides, the villagers of Honmoku, Yokohama, are reaping an enormous harvest of shell-fish.

THE Six Great Powers are blockading Crete and the ports of the Pireus to induce Greece to withdraw from her position in Crete.

ACCORDING to a report despatched from the commander of the *Yoshino* at Manila, the rebellion in the Philippines has been put down.

THE Budget for 30th fiscal year of the Yokohama Japanese Chamber of Commerce is yen 8,883, an increase of yen 2,000 over last year.

AN electric car on the Kyoto Electric Railway Company's line, caught fire a few days ago, but the flames were put out before harm was done.

ACCORDING to the recent decision of the U.S. Congress, Japanese matting will henceforth have to pay a duty of ten cents (gold) per square yard.

THE Diet in the late session dealt with 179 measures, of which 112 were passed; 18 rejected; 10 withdrawn; 3 ruled out; and 36 were not discussed.

OWING to the rising of the Diet on Thursday, the proposed Government subsidy to the Nippon Yusen Kaisha, submitted on the 22nd inst., has not been discussed.

THE Shinagawa Station is to be removed nearer to Takanawa owing to the extension of the railway. The site of the present buildings will be turned into a public garden.

DR. YERSIN has been nominated by the French Government an Officer of the Legion of Honour, in recognition of his successful cures in China in plague-stricken localities.

THE new import duty on silk entering the United States will be 60 per cent. on piece-goods; 75 per cent. on handkerchiefs, both *ad valorem*; raw silk will remain free.

A SCHEME to establish a large Japanese commercial firm at Vladivostok, backed by a capital of yen 500,000, with branches in the principal towns of Siberia, is now maturing.

ON Thursday morning Mr. Mizuno, President of the Formosa Administrative Bureau, had audience with the Emperor at the Palace, and Messrs. Komatsu and Yukawa, secretaries of the Communications Department, who are to

be despatched to the International Telegraphic Convention, were also received by the Emperor.

OPINION is divided at the Agricultural and Commercial Department, in regard to the Ashio affair. One side proposes to stop work at the mine, while the other insists on the mine's continuing.

COUNT SAWO, President of the Japan Red Cross Society, is at present somewhat indisposed, at his residence, Takanawa. The Count will go to Yagahara, Idsu Province, for the benefit of his health in a few days.

MR. OKURA KINACHIRO gave an entertainment at his residence, Akasaka, to Marquis Saigo, the British Representative, Baron Iwasaki, President of the Bank of Japan, and other gentlemen on Tuesday evening.

MR. MUTSU, son of Count Mutsu, ex-Minister of Foreign Affairs, who has been appointed secretary of the Japanese Legation in Washington, left Yokohama on Wednesday afternoon by the *Gaifc* for the States.

ALTHOUGH the people of Greece are greatly excited and many newspapers still discuss the situation warmly in leading articles, it is now certain that if the Turkish troops evacuate Crete the Grecian troops will do the same.

ON Wednesday a pedestrian suddenly died in the street at Atago-cho, Shiba. Upon examination he was found to be a native of Toyama Ken, named Hashimoto Umekichi, aged 26. The cause of death was heart-disease.

A NUMBER of steamers have been chartered by the British Government to take stores to Malta, and war stores are being constantly despatched to the Cape. Six hundred of the Seaforth Highlanders have been ordered to proceed to Crete.

IT is stated at Peking that the West River Agreement is operative on the 4th of June next. Wuchow and Samshui will in future be regarded as Treaty Ports under the arrangement, and Consuls will accordingly be appointed to both those places.

ANOTHER comparatively quiet week in imports has to be entered on the record. A turn was given to Yarns, singles and 2/42, but "gassed" were untouched; in shirtings a few holders, anxious to ease stocks, disposed of a few thousand pieces at low rates and then shut up again. T-reds and a few Italians have also been sold, but all else is stagnant, while no life prevails in woollens. Metals are very slow, buyers refusing to meet importers: the latter, of course, are endeavouring to push rates up a bit to compensate for the fall in exchange. A much better feeling is reported in Kerosene, dealers operating freely at fair prices. As a result, 10,000 cases have changed hands during the week. Arrivals exceed sales in Sugars, and China and Formosa sorts have fallen 25 cents in consequence; Manila's hold their own well, while in white sorts good business has to be entered. Another week of boom has been seen in Raw Silk, and prices have gone up day by day; so now the market closes strong with unwilling sellers and smaller stocks. Buyers are very anxious for spring reelinings to make their appearance. Two large buyers entered the waste silk market during the week and about one half of the stock mentioned last week was cleared by them. Fresh supplies are expected from the interior shortly. The Tea season is closed. Reports from consuming districts are unfavourable and prices are expected to rule low next season. Exchange has recovered a point or so during the week.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The vernacular press devotes its columns to various topics during the week, neither the political nor the parliamentary world having furnished any one subject of absorbing interest.

There is considerable obscurity, says the *Yiji Shimo*, about the Bill for encouraging the direct export of silk. What is to be understood exactly by "direct export"? Does it mean that the direct exporter must have a store of his own in some city abroad and must keep the silk exclusively in Japanese hands until the moment of its sale to the foreign consumer; or does it mean that the silk need only be shipped by its Japanese owner, and the business of selling it in Europe or America entrusted to a foreigner? The former would seem to be the only proper interpretation of "direct export." But can it be reasonably expected that Japanese traders, with their present defective experience and small capital, will incur the expense and risk of establishing stores abroad? On the other hand, if the mere shipping of the staple in the name of a Japanese suffice, then evidently foreigners will be in a position to employ Japanese agents simply for the sake of borrowing their names, and thus the Japanese Government will find itself in the position of paying bounties to foreigners. To obviate that result, it would be necessary to have the article under supervision from the time of its leaving the producer's hands until the time of its entering the consumer's. But such a course would mean nothing more or less than a deliberate attempt to exclude foreign agents altogether from the silk trade; a course not only too illiberal to be seriously contemplated by Japan, but also flagrantly inconsistent with the spirit of the new Treaties. Further, the idea of granting bounties on a sliding scale—the higher the quality of the silk the larger the bounty—is sure to encourage fraudulent practices, thus defeating the very end contemplated by the Bill. The fact that "direct trade" has not progressed in proportion to the growth of the country's foreign commerce, is attributable to three things; want of intimate knowledge of the conditions existing in foreign markets; injudicious choice of agents, and want of cheap capital. These are defects that can not be remedied by a system of bounties. Signs are apparent that the remedy is gradually being found, and that direct trade, if left to itself, will develop on a sound and wholesome basis. Instead of advocating such a petty device as the granting of bounties, Japanese economists are chiefly concerned about the advisability of abolishing the export duties.

The *Shogyo Shimo* is equally hostile to the Bill, but adopts a somewhat different line of argument. It notes that the proposed law seeks to limit eligibility for bounties to Japanese subjects alone. Hence, in the face of the Revised Treaties, all of which guarantee absolute equality of treatment to foreigners and Japanese, the seven-year period fixed for the operation of the Bill would be practically limited, so far as its avowed object is concerned, to a year and a half; namely, the interval between the time of its going into force (April 1st, 1898), and the time of the Revised Treaties' becoming effective (July 16th, 1899). After the latter date, foreigners would be entitled to the bounty. Moreover, even during the period antecedent to the operation of the Revised Treaties, the measure must prove quite futile. For it is not to be supposed that foreign silk-men will quietly resign themselves to being heavily handicapped in their business, when they can avoid any such unpleasant contingency by the simple expedient of carrying on all their transactions in the names of Japanese agents. Hence, whether before or after the operation of the Revised Treaties, foreigners would be recipients of the bounties just as much as Japanese, and the Japanese people would be uselessly taxed to foster a trade that needs no such protection. In the third place, the Bill is disfigured by confusion of purpose. The grading of bounties accord-

ing to the quality of the silk places the measure in the same category with the Bill providing for corporations of dealers in principal staples of export: in other words, its object is to promote improved methods of manufacture and production. But the fact that bounties are to be given only to Japanese subjects engaged in direct export, stamps the Bill as an attempt to eliminate foreigners from the trade. The former purpose is superfluous, in view of the simultaneous enactment of the Corporations Bill; and the latter is unworthy and impracticable. Instead of resorting to such futile devices, a far better plan would be to abolish the export duties altogether.

The Bill relating to corporations of persons trading in principal staples of export is roundly denounced by the *Yiji Shimo*, which dubs it a "mad measure." From a practical point of view, the programme contemplated by the drafters of the Bill is hopeless. In the first place, they do not hesitate to resort to an altogether unwarranted degree of official interference with trade when they impose upon every one the duty of joining the proposed corporations, under pain of being summoned before a court of law and fined. The age for that kind of thing has long passed. It must prove an impediment to trade and can not possibly promote it. In the second place, the idea that all articles held by members of a corporation shall be subjected to inspection, for the purpose of correcting defects of production and manufacture, presupposes the existence of competent inspectors. But that is an extravagant hypothesis. In the case of an article like silk, mechanical means of examination are available, and its qualities may be tested accurately and stated intelligibly. But in the case of virtually all other articles, the eye of the inspector is the only judge, and even supposing that inspectors in one district were found to be of the same opinion, those in another would probably differ, so that this device of inspection would fail to secure uniformity, or to bring about any marked increase of credit for the staples in question. On the other hand, it would put a premium upon dishonest practices, exposing the inspectors to corruption of all kinds; and it would constitute a heavy tax upon the inspected goods; for the organization and maintenance of the corporations, the cost of inspection and so forth, would all have to be levied on the articles. Traders who, by industry and integrity, have already succeeded in establishing a reputation for themselves and their goods, do not want to join such associations: it would be distinctly a hardship for them to have to do so. In truth, the measure would have the effect of dragging down to a common level those that have raised themselves above the ordinary crowd, and by impeding the development of healthy individual competition, would check, instead of encouraging, the growth of the export trade.

The *Shogyo Shimo* is not less emphatic than the *Yiji* in its opposition to the Corporations Bill. Its two great objections to the measure are that it is an unwarrantable exercise of official interference with individual freedom, and that no practically applicable standard could be adopted by inspectors. With regard to the former point, it is scarcely necessary to recapitulate our contemporary's arguments. They suggest themselves at once to any one reading a Bill which provides that the punitive authority of courts of law may be exercised to compel the entry of merchants into an association; that the goods of producers and manufacturers shall be subject to inspection whether their owners wish it or not, and that a Minister of State may order the organization of a trading association. With regard to the second point, the *Shogyo* remarks that only one defect can be properly held to disqualify a product or manufacture, namely, fraudulent preparation, as adulteration, forgery, and so forth, against which abuses the law already supplies sufficient protection. Cheap articles of rough manufacture or wholesale production are often best suited to the purposes of commerce, and if the inspectors of corporations are to direct

their efforts to discouraging such goods, injury, not benefit, may be done to trade. In short, the *Shogyo* concludes that the programme is to be condemned in theory and practice alike.

The Bill receives similar treatment at the hands of the *Chu o Shimbun*, which denounces it as the compilation of officials guided wholly by theory and altogether lacking experience of practical business. Failures compose a great part of the record of the Department of Agriculture and Commerce. Its scheme of silk-worm eggs inspection failed; its scheme of silk conditioning failed; its scheme of agricultural examination stations failed; and yet it refuses to take warning. The *Chu o* then denounces the Bill as an example of pernicious official interference. Moreover, while ostensibly leaving producers and manufacturers free to determine for themselves whether corporations shall be formed, it really invests the Minister of Agriculture and Commerce with absolute power to order the organization of such associations, and to enforce inspection whenever he thinks fit. With regard to inspection, the *Chu o* takes much the same view as the *Shogyo*; namely that producers must be left to suit their goods to the demand of consumers; that commerce contains within itself machinery far more competent than official inspection to improve manufacturing and producing methods, and that the practical effect of the proposed programme would be to hamper rather than to promote trade.

A long article is published by the *Yiji Shimo* on the subject of the special subvention asked for by the Nippon Yusen Kaisha on account of its American and European services. It is understood that the directors of the great steamship company are dissatisfied with the Navigation Encouragement Law already in operation, and ask for an independent agreement because, without such agreement, they can not tell the moment when State aid may be withdrawn; and because the Law makes no practical provision for fixed services. These reasons are not without force, but, at the same time, it is necessary to take due account of Japan's precarious resources. England, for example, with a State income of 928 million *yen*, devotes only 6½ millions annually to the encouragement of navigation; France, with an income of 1,344 millions, devotes only 9.97 millions; and Germany, with an income of 566 millions, devotes only 2.54. Japan's income is 120 million *yen*, yet an expenditure of 4½ millions is contemplated under this heading. It does not follow, of course, that the figures of foreign countries must be slavishly followed by Japan. Special considerations apply to her case. She has just entered the comity of nations as a progressive country, and it is not to be endured that she should be content to see her mails and goods carried entirely by foreign ships. Here, however, another consideration presents itself, namely, that subsidies on account of navigation are limited in foreign countries to mail steamers, on the principle that the public at large is vitally interested in the carriage of its letters, and that its money may properly be applied to secure speed of transit and certainty of delivery. From that point of view State aid is granted with regard to the steaming qualities of vessels; and these, in order to develop great speed, must devote so much space to engines and boilers that their passenger accommodation is encroached upon. Hence, another title is established for subsidizing them. But it is understood that the steamers ordered by the Nippon Yusen Kaisha in England for its European service are to be 5,800 tons and to have a speed of only 14 knots. They can hardly be classed higher than cargo boats, and it is not recorded that State aid is anywhere extended to cargo boats. On the other hand, to procure steamers worthy to rank with the magnificent vessels belonging to the mail category in Great Britain, would involve an outlay that no Japanese company could contemplate at present, and would necessitate corresponding State assistance. Besides, Japan differs from England in not having

colonies and possessions all over the world with which rapid and sure communications must be maintained. She need not pay so much attention to the mail-carrying qualifications of her steamers. In point of fact, even supposing her European service established, she could not transmit letters to London by that route in less than 42 days, whereas they can be sent *via* America in 28 or 29. That, indeed, seems to be an argument opposed to granting any subsidy to the Nippon Yusen Kaisha's European line, but there are other points to be considered. Under the existing Navigation Encouragement Law the Company would be entitled to receive 2,118,400 yen annually for this service. It asks for 2,394,900 yen. The difference is not great, and, in return, it agrees to make 26 voyages annually instead of 24; to submit to rigid official inspection, and to conclude a hard and fast agreement in the sense that its steamers shall start and arrive on schedule time. These are points of great importance as matters of public convenience, and, in truth, no small advantages are secured by the method of special convention, carrying with it, as it does, the convenience of special agreement. Japan can not hope to have first-class mail steamers for some time still, but the inspection provided by law should be honestly and fairly carried out by competent experts, instead of being perverted into a device for disqualifying vessels and thus avoiding the necessity of subsidizing them, as seems to have hitherto been the case. Referring to the American service, the *Fiji* is also in favour of acceding to the Nippon Yusen Kaisha's proposal. It notes that the Toyo Kisen Kaisha is said to have ordered three large steamers in England, which are to have a speed of 17 knots, to be finished in 13 months, and to be placed on the Japan-San-Francisco line. If such vessels are procured, they will deserve encouragement, but, as yet the Toyo Kisen Kaisha is only a name.

The *Nichi Nichi Shimbun* also writes on this subject, and approves the idea of granting a special subsidy to the Nippon Yusen Kaisha, but offers some shrewd criticisms of the provisions of the present Navigation Encouragement Law, and thinks that the latter needs amendment if the system of special subsidies is to be introduced.

The *Nippon* writes at considerable length on the subject of manning the Navy. It alleges that the framers of the programme of naval expansion have devoted their attention chiefly to the question of procuring ships and guns, paying little heed to the fact that such things are practically useless without men and officers to handle them. The Japanese authorities do not appear to have awakened to the importance attaching to the problem of animate material in Europe and America, they think mainly of inanimate material. By way of illustrating its point, our contemporary enters into a detailed description of the methods of promotion in Western navies; the average times of service in the upper ranks, and many other technical matters with which it is not necessary to weary our readers. Some of the contrasts between Japanese and Occidental methods in these matters are remarkable, but then the radical difference of conditions has to be taken into account.

In the *Mainichi Shimbun* we find a long and somewhat tedious article about the conduct of the Japan Railway Company. The immediate text of the essay is the fact that the Company has asked for a seven-years' subsidy of 1,900,000 annually from the Government, and that a Bill in that sense has been submitted to the Diet. According to its original charter, the Company is entitled to State aid such as shall ensure to it a profit of 8 per cent. on each section of its line. It may be earning 20 per cent. upon several sections, but that fact does not lessen the Government's liability to make good whatever falls short of 8 per cent. on any one section: That method of subsidy proves so onerous that the Treasury sees its account in agreeing to a fixed sum for a given

number of years as a method of final release from its obligations. The *Mainichi* alleges that the Special Committee of the Lower House, charged with the duty of examining and reporting upon the Bill, has been subjected to undue influence, and that steps should be taken to investigate the fact, but this vague charge appears to be advanced merely to attract attention to the main proposition, namely, that the Company runs only one train daily between Tokyo and Awomori, and that Post Office facilities are consequently very defective. Unless a letter for Awomori is posted in Tokyo by 11 a.m., it does not leave the capital until 3 p.m. the following day, and whatever steps are taken to improve the postal communications from Hokkaido southward to Awomori, the fact that only one train leaves the latter place daily for Tokyo, defeats all the efforts of the Hokkaido authorities. The *Mainichi* alleges that the Company deliberately refrains from running a second train so as to keep the line from paying 8 per cent., but that appears to us to be a wild accusation.

The state of Formosa naturally causes uneasiness in Japan. The Formosans are foreigners with the name of Japanese, says the *Kokumin*. They are, in effect, rebels, whereas they ought to be Japanese in heart as well as in title, ready to fight for the mother country, and die for it, if need be. So far are they, however, from having developed any such sentiments, that they dislike the Japanese, and would turn against them were Japan at war with a foreign country. Is it for that end that the Japanese nation is spending ten or twelve million yen annually on Formosa? The truth is that the administration of the new territory has never been directed by fixed principles. It has been weak at one moment and strong the next. The first period of the island's new history is over, however, and the second opens. It is time to try and win the people's hearts by kindness and consideration.

According to the *Yomiuri Shimbun*, there is a distinct improvement in the relations between Japan and Korea. Those relations began to be bad in October of the year before last, and reached their worst stage in February of the following year—dates which students of Korean affairs will have little difficulty in connecting with events that account for the condition referred to by the *Yomiuri*. But happily last season proved an exceptionally prosperous era for Korea. Her harvests were splendid; she exported exceptional quantities of cereals and purchased an unprecedented amount of foreign goods, the great bulk of which reached her through the hands of Japanese merchants. Count Okuma has often said that commerce is the most important factor in international intercourse. Korea's case goes to establish his theory. For the Koreans, brought into these busy trade relations with the Japanese, have gradually laid aside much of their hostility, and are displaying a friendly mien. Even the celebrated question of the Sŏul-Fusan Railway promises to be carried to a satisfactory conclusion before long. It is for the Japanese, as Count Okuma recently told the Chambers of Commerce in Korea, to take care that their rough ways and masterful methods do not reproduce the old state of estrangement.

CENTENARY OF KAISER WILHELM I.

On Sunday the members of the Yokohama Club Germania entertained the officers of the German squadron now assembled in this port to a picnic at Omori. The affair was most enjoyable, notwithstanding the bleak and unpropitious weather. On Monday, the centenary of the birth of H.I.H. Emperor Wilhelm I. was generally celebrated in Yokohama by all German subjects, and many others. Several of the business houses were dressed with flags in honour of the occasion, as were all the men-of-war in harbour. At 10.30 a.m. a Festival Service was held according to the rites of the Lutheran church, on board the German

flagship, *Kaiser*. This was attended by a large number of the German community, as well as by officers from the other German men-of-war, boats being provided to take off visitors from the English *Haio* from 10 a.m. Upon the arrival of the Consul-General for Germany, Mr. Schmidt-Leda, on board the *Kaiser*, the Band struck up the national anthem and the marines and blue-jackets presented arms. A Choral was performed by the Band, and the Rev. Mr. Ronnbard, Chaplain of the Fleet, delivered an impressive address on the life and work of the great Emperor William I. Afterwards he gave a sermon, which was followed by sacred music. After the service refreshments were served to all.

Just before noon the Divisional Commander of the day made a speech suitable to the occasion, and this was followed by three lusty cheers. Then the ships fired a royal salute of 21 guns, which was responded to by the Russian and Japanese men-of-war in the harbour and the fort at Kanagawa. In the evening, a festival was held on board the Flagship, to which all German residents and others at Yokohama were invited. The ships were illuminated, as were several private houses in town. Some private theatricals took place on the flagship, followed by dancing, which was kept up till a late hour.

HONOURS TO SIR N. HANNEN.

An American journal announces that the Governments of the United States and Siam have finally agreed to submit to arbitration the claim of Mrs. Sarah B. Cheek, of Oakland, Cal., against the Siamese Government, for damages which amount to nearly \$100,000. This claim is the result of the seizure by the Siamese Government of the property of the late Dr. Marion Cheek, because he failed to pay a Prince's claim at a stated period. The arbitrator is Sir Nicholas John Hannen, British Consul-General at Shanghai and Chief Judge of Her Majesty's Supreme Court for China and Japan. Sir Nicholas graduated at the London University in 1864. He was called to the bar in 1866, and appointed Acting Judge at Yokohama in 1871. Seven years later he was appointed Crown Advocate at Shanghai, and in 1881 was made Judge of Her Majesty's Court for Japan, finally becoming Chief Justice in Shanghai. He was knighted by the Queen in 1895.

FIRE ON THE "TACOMA."

Kobe Herald reports that a fire broke out on board the N. P. steamer *Tacoma* on Thursday morning. Captain Whistler was just about to sit down to breakfast when an officer reported to him that there was a fire in the main-hold. Hurrying to the hatch and springing down, the Captain saw to his astonishment that the bales of cotton were on fire in half a dozen different places. Bales several feet apart were on fire, just as though some one had taken a match, or candle, and deliberately set fire to the cotton. The pumps were at once got to work and the bales removed as soon as possible, water being kept playing upon the cotton all the time. Altogether about 30 bales were damaged. A little delay or indecision would probably have entailed grave consequence, but as it is, the damage is not likely to exceed \$600. The cotton amongst which the fire occurred was intended for Kobe and has been landed.

RESCUE AT SEA.

The Japanese steamer *Fuyo Maru*, Captain Ternick, which arrived from Nagasaki last night, reports that when ten miles south-west of Omisaki, she picked up part of the crew of a shipwrecked junk, which had been blown off shore and dismasted in the late gale. On getting alongside the wreck, the *Fuyo* found three of the crew dead: the remaining two were brought to Yokohama.

THE BUDGET.

Although Viscount Tani and his followers failed to effect the sweeping reductions proposed by them in the Budget for the incoming fiscal year, the House of Peers did not suffer the document to emerge from its hands in the form that it bore when passed by the Representatives. Various amendments of a minor nature were effected, some of them being so minute as to involve changes of only a few hundred *yen*. No such step had ever been previously taken by the Peers. They had always contented themselves with a semblance of revision, passing the Budget finally without any alteration whatever. Thus, by their own complaisance, they gradually established the principle that their function with regard to the Budget was purely formal, and that the duty of practically supervising the finances of the State devolved wholly upon the Lower House. On the other hand, it was noteworthy that the Peers invariably found themselves placed in an embarrassing position as regards the Budget. They always received it from the Lower House, at such an advanced stage of the session, that any attempt to effect revisions seemed likely to prevent its final passage, or, in the words of the Constitution, to bring about its "non-existence." In view of such an undesirable contingency, they prudently refrained from making alterations; a self-effacing rôle eminently conducive to the progress of parliamentary business, but calculated, at the same time, to create the impression that the Peers regarded the Budget as lying practically outside their revisory competence; that, in short, they were content to accept without question the financial judgment of the Representatives. This session, however, they took effective steps to dispel that impression by subjecting the expenditures of the State to a scrutiny more minute, so far as its effects were concerned, than the scrutiny of the Lower House itself. That meant, of course, that the amended Budget had to be sent back to the Representatives for their approval or rejection of the Peers' amendments, and it goes without saying that the Representatives promptly rejected them. A conference of "Managers," ten from each House, thus became necessary. Such conferences usually lead to a compromise, but in the present case there was one element of uncertainty, namely, that the Lower House might altogether resent the interference of the Upper. A speech made by Mr. Takahashi in the Representatives, when moving the rejection of the Peers' amendments, clearly indicated a disposition to suggest that the Upper House should not be allowed to meddle with the Budget, and that if it were suffered to do so on this occasion, a very inconvenient precedent might be established. However, any obstinate assertion of such a principle, moreover, quite unsupported by the Constitution, which makes no discrimination between the revisory function of the two Houses—must have prevented the passage of the Budget altogether, an issue equally unwelcome to each House. Hence, when the Managers came together, they quickly elaborated a programme of give and take, and the Houses, with corresponding alacrity, yesterday endorsed the compromise. The Budget is, therefore, out of danger, and the Peers have re-established their right of financial supervision:

PROROGATION OF THE DIET.

Contrary to general expectation, the period of the Diet's session was not prolonged beyond the 24th instant. The Houses having lost fully ten working days in connexion with the death of the Empress Dowager, some extension of their regular three months' period would have been natural. But as no Bills of paramount importance remained to be discussed, the session was suffered to terminate on the day originally appointed. The Peers sat until 9.55 p.m. on the 23rd, in order to pass Bills sent up to them by the Representatives, and the latter remained in session until 7.50 p.m. But with the exception of that one effort, both Houses treated their legislative duties in a very easy-going manner this session. For the rest, the session certainly stands out as the most surprising parliamentary experience on record in Japan. When the Houses met in December, the situation looked thoroughly gloomy from the Cabinet's point of view. The Opposition seemed to have complete mastery. Yet, no sooner did practical legislation begin, than the Ministry was found to command an overwhelming majority. We presume that the clever tactics by which a result so unlooked for was attained, are attributable to Count Okuma. If so, he is certainly a most adroit strategist in the field of party politics.

Mr. Hatoyama, President of the House of Representatives, addressed the following words to the House just before it rose:—

GENTLEMEN—I have the honour to report that the tenth session of the Imperial Diet closes to-day. It has been a most important session, the duty having devolved upon it of continuing the work of its predecessor in the matter of *post bellum* measures. The Budget, also, reached a very large figure, and no less than 179 Bills, independently of petitions, were submitted for your deliberation. On the other hand, the recesses taken by the House in connexion with the decease of the Empress Dowager Eisho, and on account of legislative convenience, were so numerous, that the working days of the session did not exceed thirty. That you have discussed so many measures in so brief a period speaks highly for your industry, I venture to think. In accordance with precedent, I have now the honour to submit a report of the work of the session.

REPORT OF THE WORK OF THE TENTH SESSION OF THE HOUSE OF REPRESENTATIVES.

Government Bills submitted to the House, 103. Of the above, the Bills passed by the House numbered 88; the Bills rejected, 4; the Bills withdrawn, 7; and the Bills not decided, 4.

Private Bills submitted to the House, 57. Of the above, the Bills passed numbered 17; the Bills rejected, 11; the Bills withdrawn, 3; the Bills not decided, 24; the Bills ruled out, or not considered to require discussion, 2.

The number of Addresses to the Throne was 2, both of which were adopted.

The number of Representations to the Government was 16; of which 5 were adopted; 1 rejected; 1 decided not to require discussion, and 8 were not discussed.

The number of Resolutions submitted was 1, which was rejected.

Summarizing the above, it appears that the total number of measures was 179, of which 112 were passed; 18 rejected; 10 withdrawn; 3 ruled out or decided not to require discussion, and 36 not discussed.

In addition to the above, there were three Settled Accounts, and 823 Petitions. Of the latter, 346 were adopted for presentation to the Government; 281 were handed to the Government, or to the Petitions Committee, for purposes of reference; 122 were rejected by the Budget Committee, and in the case of 3, the discussion was postponed or not concluded.

The ceremony of official prorogation took place on the 25th instant, the Minister President of State reading the Im-

perial Speech from the dais of the House of Peers, as follows:—

We inform the House of Peers and the House of Representatives that We, this day, order the Imperial Diet to be prorogued.

We approve the diligence with which you have discharged your labours.

THE SPECIAL SUBSIDY TO THE NIPPON YUSEN KAISHA.

The Diet has risen without discussing the special subsidy that the Government proposed to give to the Nippon Yusen Kaisha. The Bill embodying the subsidy did not find a place on the Order of the Day until the 22nd instant, and the House of Representatives then handed it to a Special Committee of 18 nominated by the President. That killed the measure, and was intended to kill it, for the House knew on the 22nd that its session would not be prolonged beyond the 24th, and that, consequently, a Bill handed to a Committee within 48 hours of the time of prorogation could not possibly make its way through both Houses. What is to be the outcome of the situation it is difficult to foresee. The Nippon Yusen Kaisha can scarcely be expected to continue its newly established services to Europe and America at a heavy loss but, on the other hand, to abandon them at this early stage would be injurious to the reputation of the Company and of Japan alike. It must be confessed that the Navigation Encouragement Law passed by the Diet last session has proved a veritable fiasco. So far as we know, the Treasury has not paid out a *sen* under its provisions, though, at one time, the vernacular press led the public to imagine that the State finances were likely to be over-taxed by bounties to shipping companies. If navigation is to be encouraged at all, if the measure framed last year and passed through the Diet with so much *eclat*, is not to remain a dead letter, the Department of Communications will have to make its experts descend from the cloud-land of theory to the realm of practical common sense. Nothing can be gained by straining after the impossible. The Department's standard of eligibility for the bounty, being evidently beyond the reach of Japanese shipowners at present, had better be lowered. It is not pleasant to think that the drafters of the Navigation Encouragement Law knew so little about the condition of the people for whom they were legislating that they framed a measure offering no possibility of practical application. That conclusion, however, is the only alternative to supposing that the experts appointed to examine ships applying for bounties are quite unsuited to discharge such a duty. A ridiculous *cul de sac* has been reached, some how or other, and we shall be surprised if a practical statesman like Viscount Nomura fails to find some exit.

THE NEW U.S. TARIFF.

We understand that information has reached Yokohama by cable from Washington, U.S.A., that it has been decided to place the duty on silk piece-goods imported into the United States at 60 per cent. *ad valorem*, and on silk handkerchiefs at 75 per cent. Raw silk will remain free. Matting, we further hear, is to have a specific duty of 10 cents, gold, per square yard.

THE BILL FOR ENCOURAGING THE DIRECT EXPORT OF SILK.

Both Houses of the Diet showed similar alacrity in passing the Bill for encouraging the direct export of silk. It will interest our readers to learn something of the debate that took place in connection with the Bill. It came up for discussion in the House of Representatives on the 24th instant.

Mr. Ebara Soroku, Chairman of the Special Committee, reported that although the Bill was brief and simple, its importance could not be ignored. Moreover, its provisions might be found to conflict more or less with the Revised Treaties when the latter went into force. The Committee had therefore discussed the question very minutely. The Bill had to do with Japan's most important staple of export, silk. The House was probably aware that, until recently, the silks of the world ranked in the following order:—Italian first; French second, and Japanese third. But, of late, such improvements had been made in the preparation of Chinese silk that it now ranked above the Japanese product. There was, consequently, imperative necessity to introduce improvements in Japanese sericulture so that one of the country's chief sources of wealth might not be impaired; and, at the same time, it was desirable to contrive that the trade in this great staple should not remain entirely in the hands of foreign merchants. Hence the project of law now before the House for encouraging direct export. The Committee approved the principle of the Bill, but suggested certain amendments. Of these the most important was the rescission of the second article—in which three classes of silk are defined, and the subsidy to be allowed for each is set down—and its replacement by a provision to the effect that the amount of the subsidy and the classification of the silk shall be determined by Imperial Ordinance. The reason of this amendment was that the silk classed first in the Bill—namely, silk of the finest lustre, 80 *travelleres*, 2 *deniers* of variation, and 30 ribs per catty—was practically unproducible in Japan. By using Chinese seed and exercising extraordinary care, silk satisfying such description might be obtained, but the feat would be very difficult. Even the second and third classes enumerated in the Bill were of decidedly high quality. On the other hand, to reduce the standard, and fix hard and fast limits by law, would not be wise, for Japanese sericulturists were clever folks, and would doubtless succeed in gradually improving the quality of the staple so as to bring their silk within the prescribed qualifications. The wisest course, therefore, was to leave these matters to be settled by Imperial Ordinance, according to the conditions of the time. The Committee further suggested that the period of the new Law's operation should be shortened from 7 years to 5, in consideration of the fact that the Revised Treaties would go into operation in 1899, and as various modifications of the laws might then be found necessary, it did not seem advisable to give this piece of legislation too long a life. For the rest, the Committee had been unanimous in approving the Bill.

Mr. Sato Chubo opposed the Bill. It was a very attractive project in name, but when put into practice, great disadvantages might result. In fact, he regarded it as a most dangerous Bill, and his reasons were these. As the Chairman of the Special Committee had briefly noticed, the measure could not be dissociated from Treaty Revision. When the Bill was read for the first time, Mr. Komuro had questioned the Government Delegate upon that point, and had received an answer which they would find in the stenographic record; namely, that the subsidies provided in the Bill would become enjoyable by foreigners as well as Japanese subjects after the Revised Treaties went into force, or that the Law would have to be revoked. Explicit as was the phraseology of the first article in limiting the privilege to Japanese subjects, its extension to foreigners at that time was thus declared inevitable. The alternative, namely, that the Law should be rescinded before the Revised Treaties went into force, involved a most inconvenient situation. For the operation of this Direct Export Law was fixed for April 1st, 1898, and the Revised Treaties would go into operation in July, 1899. Hence, even supposing that the abrogation of the Law could be only effected in that interval, it would follow that sericulturists, who would doubtless have expended capital and labour to qualify their products for the subsidies, would find themselves exposed to loss and disappointment. Further, to enact a law nominally for a period of 7 years or 5, to in-

sert a provision to that effect in the text, and then to abolish it after it had been little more than a year in operation, would be deceiving the public; nothing more or less. If, *per contra*, the textual number of years were adhered to in practice, not only would the spirit of the first Article of the Law be flagrantly violated, but Japan, with her very limited financial ability, would be compelled to grant subsidies to an unlimited number of foreigners; an unendurable contingency. It might be contended that if Japanese sericulturists succeeded in producing silk of such high quality as to satisfy the standards laid down in the Bill, the advantage to Japan would be so great that she could afford to pay subsidies even to foreigners. But that was a most superficial view. After the Revised Treaties went into operation, there would be nothing to prevent foreigners from renting land in Japan. They might then start unlucrey plantations, and using seed procured from abroad and even alien labour, might produce silk of the quality prescribed. Japan would thus derive no benefit at all, and would be condemned to absolute loss in the matter of subsidies. State aid to industrial or productive enterprise might be most injurious if imprudently bestowed. The immediate effect of the proposed subsidies would be to enable their recipients to sell Japanese silk in European and American markets at prices lower by the amount, or nearly the amount, of the subsidies than the prices now ruling. Obviously that would mean a general fall in the selling price of Japanese silk, and thus, merely for the sake of benefiting a few favoured individuals, not only all the silk-men in Yokohama and Kobe, but also all the sericulturists throughout the empire would suffer, while, at the same time, a blow would be dealt to Japan's greatest staple of export. The many would be robbed for the enrichment of the few, and the country's resources would be impaired. Even if subsidies were to be granted to Japanese alone, the thing might pass; but when they were to be extended to a multitude of foreigners, the project lost every redeeming feature, and became like a dose of morphine enclosed in an envelope of sugar. For the rest, the business of direct export was by no means profitable. He did not urge that objection as conclusive. Doubtless the framers of the Bill fixed their eyes on the ultimate gain to the country, and did not allow themselves to be deterred by the prospect of present loss. He himself did not condemn direct export and would not be averse to encouraging it. But he did most strongly object to the method of encouragement provided by the Bill. If the reasons lying at the root of the failures hitherto made by direct exporters were investigated, it would be found, doubtless, that want of capital and deficiency of experience were largely responsible. But another, and in his opinion the chief, reason was that no financial machinery was available to Japanese traders abroad. Instead of having recourse to measures such as this Bill provided, the better plan would be to provide such machinery, by aiding a Japanese bank to open branches at the principal silk centres. To discuss that point, however, would carry him beyond the legitimate limits of the Bill. The objections already pointed out were amply sufficient to condemn the Bill. As for the Committee's amendment of the 6th Article, namely, the reduction of the period of the Law's operation from 7 years to 5, he failed to appreciate it. The period of such a measure's operation depended entirely on the question whether the purpose of the measure could be attained within a given number of years. If the State having stepped in and given aid to an enterprise, suddenly withdrew its aid before the enterprise had developed strength to stand alone, the effect would be, not to prop up the enterprise, but to pull it down. Japanese merchants had been struggling for 24 years to develop the direct-export trade in silk. I could not reasonably be supposed that a little official assistance extended to them during a brief interval of 5 or 7 years, would accomplish what their own efforts had failed to achieve in four or five times that period. But it could be confidently predicted that if State protection were withdrawn after a few years' bestowal, the effect would be to discourage and destroy, temporarily at all events, the whole business of direct export of silk. The Committee's duty was to determine, if possible, during what length of time State aid must be extended to direct exporters in order to establish their enterprise on a basis sufficiently strong to be independent; whereas the Committee had lightly set itself to abbreviate the period for reasons entirely extraneous to the purpose of the measure; and the framers of the Bill seemed to have been equally superficial when they fixed 7 years. He conjured the House not to give its consent to such a mischievous piece of legislation.

Mr. Tada Sakubei inquired whether, despite the very clear limitations contained in the first

article, foreigners would really become eligible for the bounty.

Mr. Kaneko Kentaro, Vice-Minister of Agriculture and Commerce, said that the provisions of the article were clearly intended to limit the privilege to Japanese subjects, but in point of fact, the Revised Treaties with Great Britain and Germany provided that the subjects of these Powers should be entitled, within Japanese dominions, to all the privileges enjoyed by Japanese. Mr. Sato had said a great deal on this subject. He craved permission to reply briefly. The truth was that when the Revised Treaties went into operation, not this Law alone, but the laws of patents and trade-marks, and, in fact, all Japanese laws whose provisions conflicted with the principle of foreign intercourse on equal terms, would have to be revised. He would not undertake to say definitely whether foreigners would necessarily be eligible for the bounties fixed by this law, but, with reference to the contention that no good could be achieved by such a measure operating through the brief period of a year and a half, he desired to point out that, where there could be no doubt of the desirability of promoting an enterprise for the sake of its great national value, partial accomplishment was better than complete neglect. It seemed to the Government that bounties granted even during such a short period as a year and a half, would have the effect of educating the spirit of enterprise in the desired sense, and would sow the seeds of increased sericultural effort. That a few years of State aid would suffice to place this kind of trade on a permanently independent basis, the Government did not think. But they were moved by the fact that whereas Japanese silk had ranked next to the silks of Italy and France until three years ago, it had been ousted from that place by Chinese silk since the year before last, and was in danger of losing its channels of sale. Already 24 filatures existed in Shanghai, and some five or six were projected by foreigners and Chinese combined at the new ports opened by the Shimonoseki Treaty. The object of these enterprises was to drive Japanese silk out of the American and European markets, and the Government could not contemplate such a contingency without disquiet. Whatever plan was adopted no effort should be spared to promote the export of Japan's chief staple, and, for the rest, the Government did not think that either producers or dealers would suffer any injury from the proposed programme.

Mr. Hayakawa thought that if Mr. Sato were better acquainted with commercial affairs, he would not have spoken in opposition to the Bill. The fact was that Japan's two greatest staples of export, tea and silk, were seriously threatened by Chinese and Indian competition. So far as concerned either China herself or India herself, Japan might be trusted to hold her own. But at the back of China and India were Great Western nations, whose aim was to improve Chinese silk and Indian tea to such a degree that exports of these staples from Japan would find no place in the markets of the Occident. The very life-blood of the country's resources was in danger, and the Government would be most culpable if it stood by listlessly. A rich and powerful country like America did not fail to foster its industries by means of high protective tariffs, and it behoved the Japanese nation to see that its principal sources of wealth were not cut off. In theory many arguments might doubtless be adduced against the system of subsidies, but the practical fact stared them in the face that, unless some precaution was adopted, Japanese tea and Japanese silk would be driven out of the American market in a very few years.

Mr. Taguchi would have spoken in opposition to the Bill, but the closure was put and carried.

The Bill was passed without further debate, as amended by the Special Committee.

In the House of Peers the Bill received no discussion whatever. The Special Committee appointed to investigate it, presented a brief report, recommending for adoption the amendments of the Lower House, and the Second and Third Readings being dispensed with, the measure was adopted *nem. con.*

CHINA MUTUAL S.N. CO.

Messrs. W. M. Strachan & Co., Agents of the China Mutual Steam Navigation Company, Ltd., are in receipt of telegraphic advice that the Directors have just declared a dividend on preference shares at the rate of 3 per cent. for the half-year ended 31st December last, and 6 per cent. on ordinary shares for the year. The dividends are payable on the 31st instant.

TAXABLE CAPACITIES OF THE JAPANESE.

Concerning the question whether the Japanese people are competent to bear the apparently increased burden of taxation now imposed on them, the *Fiji Shimpō* gives some interesting calculations. We are confronted by the fact that the revenue has grown from 62 million *yen* in 1878 to 120 millions in 1897. In other words, it has nearly doubled. But it has to be remembered that this increase leaves the agricultural population absolutely untouched. The Land Tax remains the same as it was twenty years ago, namely, 2½ per cent. of the officially assessed value of the land, which is about one-third or one-fourth of the market value. On the other hand, the prices commanded by the products of the soil have greatly increased. A *koku* of rice, which sold for 6 or 7 *yen* in former years, now fetches 10 *yen*. Thus, if a holding of 2½ acres (1 *cho*) be taken as the basis of calculation, it appears that the ratio between the Land Tax and the market value of the produce, stands as follows:—

	Value of Pro- duce per a ¹ cre, <i>Yen</i> .	Ratio of Tax to Value of Produce.
Standard Figures.....	67.040	0.149
Actual figures for.....1877	65.440	0.153
do1878	75.200	0.133
do1879	92.480	0.108
do1880	100.480	0.100
do1881	85.760	0.117
do1882	77.760	0.129
do1883	69.440	0.144
do1884	69.280	0.144
do1885	88.800	0.113
do1886	81.280	0.123
do1887	75.360	0.133
do1888	69.920	0.143
do1889	88.960	0.112
do1890	130.400	0.077
do1891	109.760	0.091
do1892	112.000	0.089
do1893	113.280	0.088

It will be seen from the above that taxes originally assessed at 149 *yen* may now be said to represent only 88 *yen*. If this proportion held in respect of all taxes, it would not cost the people any greater effort to contribute 100 million *yen* to the Treasury at present, than it cost them to contribute 60 million *yen* in 1877. The *Fiji* then proceeds to compare the agricultural products in 1878 with those of 1895:—

	Agricultural Products in 1878.	Agricultural Products in 1895.
Rice ... 25,282,540 <i>koku</i> .	39,920,882 <i>koku</i> .	
Barley .. 9,411,460 "	19,526,123 "	
Cocoons 19,138,400 <i>catties</i> .	52,257,688 <i>catties</i> .	
Tea ... 2,761,523 <i>kwan</i> .	8,615,074 <i>kwan</i> .	

With regard to the amount of mineral productions, these figures are given:—

	1893.	1894.
Gold, 72,687 <i>momme</i> .	211,578 <i>momme</i> .	
Silver, 2,637,632 "	19,360,536 "	
Copper, 1,135,023 <i>kwan</i> .	5,308,840 <i>kwan</i> .	
Iron, 2,711,322 "	5,182,463 "	1895
Coal, 679,707 "	4,261,218 "	

Turning, now, to the development of industrial enterprise, the *Fiji* gives this table:—

	1890.	1895.
Number of Cotton-spinning spindles ...	277,895	580,945
Cotton yarn produced..	5,132,588 <i>kwan</i> .	18,411,094 <i>kwan</i> .
Silk fabrics.....	3,876,762 <i>tan</i> 1890.	8,674,957 <i>tan</i> 1894.
Cotton fabrics.....	32,163,425	49,594,848

The figures relating to maritime enterprise are equally striking:—

	1894. Tons.	1895. Tons.
Tonnage of ships and boats capable of coasting voyages	1,106,773	5,146,054
Merchant vessels of foreign build	63,520	254,692

Meanwhile, the foreign trade grew from 65½ million *yen* in 1879 to 290½ million *yen* in 1896, and the accommodation given by banks increased from 382,900,545 *yen* in 1892, to 1,210,391,551 *yen* in 1895. Taking all these figures into consideration, the *Fiji* thinks that there is no reason whatever to regard the present programme of military and naval expansion as out of proportion with the country's resources. The revenue actually raised must not be made the final basis of calculation, but rather the revenue-paying capacity of the nation. Our contemporary urges the advisability of a still more extensive scheme of naval development, and advocates harbour improvement, extension of foreign intercourse and its organs, development of educational facilities, and reform of the prison system.

SILVER.

The gold price of silver shows signs of slight recovery. There seems to be a strong opinion that New York was the centre of depression, and that a deliberate attempt was made to bear the white metal in order to frighten Japan into abandoning her scheme of gold monometallism. Those that advance this explanation of the curious synchronism between the drop in silver and the publication of Japan's programme, allege, with evident reason, that the Americans regard Japan as a good customer for silver, and are unwilling to see the market for the white metal narrowed by her defection. Hence the effort to teach her by a vivid object lesson the instability of the discredited metal, and the hopelessness of attempting to link it to gold by any permanent ratio. The plan having failed, however, New York is now "letting up," and silver begins to appreciate. The fact is that Japan's operations are not at all likely to disturb the relations between gold and silver to any appreciable extent. She never needed much silver for currency purposes, and she will now need just as little gold. With the exception of subsidiary coins, the precious metals are virtually unemployed in monetary transactions. We doubt whether bank-notes are more generally and thoroughly appreciated in any part of the world than in Japan, and the cheque system, which has developed immensely of late years, promises to become equally popular.

JAPANESE GOODS AND THE AMERICAN TARIFF.

It is reported that the new American Tariff is likely to bear very heavily upon Japanese products and manufactures, especially raw silk. It passes our comprehension to understand why raw silk should be penalized under a protective tariff, seeing that America can not be said to grow any competing article. But protection being illogical *ab initio*, can not be expected to be rational in any of its operations. It may be that Mr. Porter's outcry about the chimera of Japanese industrial competition has raised apprehensions more serious than folks on this side of the water imagined.

"DIRECT EXPORT" BILL.

A correspondent, who is an expert in silk, gives us the following interesting information about the term used in the Japanese original of the Direct Export Bill, translated in our columns on the 24th instant:—"By long years of experience it has been found that a *fileuse*, or *ouvrière*, attending her two frames in the winding room, can piece up two hundred and forty threads in an hour; that is to say, can mind 240 breaks in that time with ease. Therefore 3 cuts, or breaks—as the Japanese say—to each *tavelle* means that she can attend to 80 *tavelles*, and therefore the winding quality of the parcel of silk is known as 80 *tavelles*. Similarly, 4 cuts corresponds to 60 *tavelles*; 5 cuts to 48 *tavelles*, and so forth. One hundred *tavelles* is considered the maximum, and means practically a perfect winding silk. I have seen in the mills some silk which virtually never breaks at all; the girl sitting on a stool doing crochet or knitting, only getting up occasionally to repair a break. Even this has been beaten in the old days in England when winding some of the prime Jaysaams of North China. There they would fill the swift when they left the mill at night, and find the silk all ready wound when they returned in the morning, no attendant being there but the ordinary night watchman—fact!" This explanation makes the Japanese nomenclature quite clear so far as the "cuts" are concerned, but it remains to be ascertained what is meant by, say, "30 nibs," without any definition to indicate the quantity of silk in which that number of *fushi* occur. Presumably a picul is to be understood.

COINAGE BILL IN THE UPPER HOUSE.

On Tuesday, the Bill for adopting the gold standard was passed by the Upper House with unexpected unanimity. Mr. Obata led the Opposition, but his followers were few, not a dozen in all, and his arguments were half-hearted. He did not attempt to combat the principle of the measure, but confined himself to asserting that the time had not yet come for carrying it into operation. Count Matsukata himself replied to this contention, and the House seemed entirely satisfied that Mr. Obata's objections had been effectually disposed of. A good many questions were asked, but finally the Second Reading was voted by an overwhelming majority. An amendment of the 16th article was proposed, in the sense of shortening the period of circulation for one-*yen* silver coins, but the House would not listen to any change. Each article was passed in its original form, and the Third Reading having been dispensed with, the Bill was passed almost unanimously. The die is, therefore, cast. It has been a singularly rapid specimen of legislation. At the same time we may note, as an interesting fact, that when Marquis Ito returned from Europe thirteen years ago, he was full of the idea of adopting the gold standard as speedily as possible. But Japan was then confronted by the problem of resuming specie payments, and that achievement, even when undertaken with the cheaper of the precious metals, taxed her ability to the utmost. Certainly she could not have adopted the gold standard a day sooner than she has done.

FINANCIAL DISAGREEMENT IN THE U.S. CABINET.

Following the example of other members of President McKinley's Cabinet, Mr. Sherman, the Secretary of State, authorized the publication of his views upon financial and other questions of national importance, a few days before the installation of the new Republican Government. From a statement given by him to a leading New York newspaper, it seems evident that the popular hope of harmonious action in the White House is doomed to disappointment. Mr. Gage, the Secretary of the Treasury, in a frank declaration of opinion which the *Japan Mail* has reproduced, asserted his belief that the retirement of the United States "greenbacks" was an indispensable condition of currency reform. These notes, he affirmed, were at variance with the true principle of paper money, and further reliance upon them would be "both idiotic and immoral." National bank notes, in his estimation, more nearly conform to the requirements of the community, and would satisfy all public needs, but for the unreasonable restrictions imposed by the Government upon their efficiency and elasticity. Mr. Sherman, on the other hand, finds no words too emphatic to express his distrust of the measures proposed by the advocates of national bank notes, whose motives he condemns unsparingly. "They want the greenbacks out of the way," he says, "so that national bank notes may take their place. In other words, they wish to retire the best currency in the world, on which the Government pays no interest at all, and substitute in its stead national bank notes, which the banks take out at the cost of an infinitesimal tax and then loan out at interest." The Secretary of State points out, not for the first time, that the national bank notes are valueless as legal tender. If an attempt were made by Congress to confer upon them that quality, the act would, in his judgment, be at once pronounced unconstitutional by the Supreme Court. But he has faith in the ability of Congress to see that no benefit can follow the substitution of bank notes for Treasury notes, except to the private institutions which issue the former.

With regard to the depletion of the gold reserves, Mr. Sherman is troubled by no apprehension, provided the national revenue is made secure. Such raids as those of the past three years were possible only because the national income was not properly sustained. If the Government's resources are sufficient, the assaults cannot be repeated. On this point, Mr. Sherman offers the following facts and suggestions:—"From 1866 to 1893 there was never a deficit in the Treasury. From January 1st, 1879, when we resumed gold payments, until 1893, the gold reserve never fell below one hundred million, and it never cost us one dollar to maintain it. Gold came naturally to the Treasury in the course of trade. Foreigners brought it here and exchanged it for American paper money, which every one prefers in the ordinary transactions of business. In all the years I was Secretary of the Treasury, and for twelve years after that, only \$38,000,000 in gold was drawn out of the Treasury by the presentation of greenbacks, and in the same time we paid off nearly two

thousand million dollars of interest-bearing debt."

Mr. Sherman attaches no importance to the argument that the withdrawal of the greenbacks would relieve the Government from demands for the gold which they represent. He holds that with ample revenue there would be no excessive demand. But he foresees great danger if the national banks should ever be called upon for heavy gold payments. "I believe," he says, "they would become hopelessly involved in the first time of severe strain,—possibly within a year. Suppose that all our gold was divided round among 3,500 private banks. The first panic or general fright would start a general scramble for gold. How rapidly these banks would fall if they were required to furnish the gold! How quickly gold would go to a premium if they failed to meet the demand!"

After reviewing the situation as set forth by various contending parties, Mr. Sherman sums up in these words:—"It is the rich and powerful nation which the people trust, not the banks. Even in the darkest days of the dark years through which we have just passed, the great masses of our people have never doubted either the integrity of the Government or its ability to meet all of its obligations. The financial panic of 1893 was bad enough, but who can say how immediately worse it would have been if the people had been forced to look to the banks and not to the Government for the ultimate redemption and maintenance of the currency. As to getting gold, the Government never has difficulty when confidence exists and when the national revenues are equal to the expenditures. I am willing to stake my reputation on the result. If the Government gets revenue to pay its expenses the gold reserve will take care of itself. The moment that the people see that provision is likely to be made for ample revenue and that the Treasury redemption fund is adequate, that moment confidence is strengthened and the flow of gold towards the Treasury begins, even when, as now, there is a steady drain upon the Treasury because its revenues are less than its expenses."

Mr. Gage's dissent from these views has been placed on record. The financial policy of the Administration will naturally be directed by the Secretary of the Treasury, but Mr. Sherman's voice is powerful, and he will not hesitate to give free utterance to his convictions. Mr. Gage will not, however, be his only opponent. General Alger, the Secretary of War, has declared himself a supporter of the movement for cancelling United States notes, believing that "under a sound currency system there should be no place for them." He regards them as "a continual menace to the country," and as equivalent to an "endless chain process of emptying the Treasury of gold." He is also persuaded—again in contradiction to Mr. Sherman—that "the national banks could have borne the demand for gold during the past three years much better than the Treasury did," if the greenbacks had been out of the way.

Upon the question of bimetalism, Mr. Sherman has always been outspoken. He has never ceased to advocate an international agreement for the permanent relative valuation of gold and silver, but has little expectation that the objections of Great Britain can be speedily overcome.

While serving as Senator, in 1887, he attended a monetary conference at Paris, in which it was proposed to make English, French, German and American coins interchangeable at a fixed valuation. He was prepared to introduce a bill in Congress to that end, but the plan did not meet with favour in England, and was abandoned. It is understood that he will support the President in any effort to bring about a renewed bimetallic conference, even if the prospect of success is small; believing that practical results can be secured only by unceasing endeavor.

THE "JAPAN TIMES."

The *Japan Times* is now launched, and we may frankly congratulate its editors on the first-fruits of their labours. It seems curious to us to be writing of a new *Japan Times* in this year of grace so close to the end of the century. For the title *Japan Times* belongs to us, and though we cannot restrain a Japanese subject's use of it, we could interfere effectually if one of our own nationals appropriated it. The *Japan Times* was the predecessor of the *Japan Mail* in the good old days before local journals had grown as thick as blackberries. Passing into the possession of Messrs. Lay and W. G. Howell, the latter of whom became editor, the title was changed to *Japan Mail*. But in 1878, the *Japan Times* was revived by Mr. Charles Rickerby. Some protest was advanced that Mr. Rickerby had no right to exhume the old title; that he had sold it with the plant and stock in trade to the ex-Inspector-General of Customs and the Shanghai merchant. But Mr. Rickerby thought otherwise, and Mr. Rickerby's thoughts were tolerably Median and Persian. However, before the revived *Times* had entered its second year of existence, it passed explicitly into the possession of the *Japan Mail*, which, after the absorption, became the *Japan Mail and Times*; an amalgamation that ceased to be published after an interval the length of which does not recur to us now. Now, once more, the resurrection of the *Japan Times* has taken place, and we are permitted to hope that it will not contradict history by absorbing the *Japan Mail*. Meanwhile, as few performances are harder to guard against in sincerity than one newspaper's criticisms of another, we confine ourselves to greeting our new contemporary and congratulating it upon its contents and "make up."

SENDAI SCHOOL AFFAIR.

We learn that the students who struck work at the Sendai School have been suspended for the space of two weeks, dating from the 22nd instant. Thus the section of the School to which they belonged will not resume work until April 5th. It is a peculiar form of punishment. We suspect that there would be a good many strikes in English schools if nothing worse than a month's cessation of work—for that is what it amounts to in the case of the Sendai School—were to be apprehended. However, Japan is not England. The Sendai lads have been defeated and punished. Those are the salient facts that will survive in their memories.

QUEENSLAND AND THE REVISED TREATY.

The Colony of Queensland has availed itself of its right to establish commercial relations with Japan on the basis of the Revised Treaty with Great Britain. The following is the text of the document relating to this subject:—

PROTOCOL.

Whereas, Queensland, a Colony of Her Britannic Majesty, has this day, in due form, acceded to the Treaty of Commerce and Navigation between Japan and Great Britain, signed in London on the 16th day of the 7th month of the 27th year of Meiji, in accordance with the provisions of Art. XIX, thereof:—

The undersigned, His Imperial Japanese Majesty's Minister of State for Foreign Affairs, and Her Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary, duly authorized thereto by their respective Governments, have agreed:—

1. That the stipulations contained in the first and third Article of the above-named Treaty, shall not in any way affect the laws, ordinances and regulations with regard to trade, the immigration of labourers and artisans, police and public security which are in force or may hereafter be enacted in Japan or in the said Colony of Queensland.

2. That the said Treaty shall cease to be binding as between Japan and the said Colony of Queensland, at the expiration of twelve months after notice shall have been given on either side of a desire to terminate the same.

In witness whereof, the undersigned have signed the present Protocol and affixed thereto their seals. Done at Tokyo, this 16th day of the 3rd month of the 30th year of Meiji.

ERNEST SATOW (seal).

OKUMA SHIGEMORU (seal).

It will be observed that Japan pledges her subjects, visiting, or trading with, Queensland under the Revised Treaty, to abide by the laws, ordinances and regulations of the Colony with regard to trade, the immigration of labourers and artisans, and so forth; the Queensland Government accepting a similar obligation *vis-à-vis* Japan. In fact, this Empire, so far as we understand its policy, does not seek to raise any difficulties about legislation that its Treaty Powers may deem essential in their own interests, provided only that they reciprocally recognise similar legislative independence on its part. Doubtless all the Australian Colonies will join the Treaty circle on the same terms.

GREECE AND THE POWERS.

Greece has pushed matters to extremities and is now feeling, in a very substantial form, the pressure that six Great European Powers are capable of exercising. It is hard to understand where this bellicose little State hopes to reach. The spirit of Anompharetus seems to have revived after two thousand years, and moved her to a display of fool-hardy obstinacy. She will have to yield, of course, and plenty of emotional folks will be silly enough to dignify her mischievous truculence by the name of "heroism," or "Attica pluck," or some other pretty epithet, but in truth she appears to be simply relying on the immunity that attaches to smallness. Much of the trouble is attributed to the efforts of a secret organization known as the Ethniké Hetairia, which collects and utilizes patriotic contributions in furtherance of Pan-Hellenic aspirations. The Sultan seems to have been delightfully insolent over the whole affair. He virtually told the Powers that their meddling had produced all the complications in Crete, and that if they didn't settle matters pretty quickly, he would take the settlement into his own hands; a significant alternative. The Powers, on their side, allege that the massacres and counter-massacres were the direct outcome of the obstruction offered by the Sultan to the creation of an international gendarmerie for the protection of life and property. On whichever side the right may be—and there can not be much doubt on this point, we imagine—Greece ought to have understood that the route into which she has allowed herself to be pushed by hot sentiment, could lead only to a *cul de sac*. There have been some displays of sympathy with her in England. There always are displays of sympathy in England when any small, weak nation steps boldly into the ring. But the common-sense of the British people was doubtless expressed by *The Times* when it wrote:—

The landing of Greek troops or active participation of any kind by Greece in the struggle would convert the insurrection into a war between Greece and Turkey, and the outbreak of such a war, it is hardly necessary to insist, must almost inevitably lead to consequences of the utmost gravity to the peace of Europe. It would be the height of rashness on the part of the Greek Government, whatever may be their domestic embarrassments, to embark on such a course in reliance upon the sympathies of the Powers. Sympathy with Greece may be felt in more quarters than one, but, as the *Temps* points out, the Powers have to take into account other considerations besides their feelings. In the first place, they are bound by solemn engagements to maintain the integrity of the Ottoman Empire. In the next, they know that to disregard those engagements would be to incur the imminent risk of a general war. "The succession of Turkey is not yet open," as the Paris journal remarks, and Greece certainly will not be allowed to open it. The Powers have devoted months of laborious negotiation to the establishment by peaceful means of tolerable relations between the Sultan and his subjects. They certainly will not stultify themselves by suffering the result of their harmonious labours to be brought to nothing by the rash action of one of the smallest of European communities. They are resolved on this point, and they possess ample means of giving effect to their resolution. From St. Petersburg, from Vienna, and from Berlin we hear the same determination reported.

JAPANESE BANKS AND FOREIGN CLIENTS.

On our front page appear two banking advertisements that should prove of great interest to foreigners living in, or passing through, Japan. One relates to the 100th National Bank, Limited, and the other to the Tokyo Savings Bank. The time is fast approaching when the new Treaties go into operation and the closer the bonds of friendship and commerce are drawn between Japanese and foreigners the better. Already a considerable volume of business is conducted by Japanese banks for foreign clients, and since the close of the war these transactions have largely developed in scope and number. The One Hundredth National Bank, Limited, has taken a prominent part in building up this new class of business and its operations, on a large scale, extend to the principal cities of Europe and America. The Bank was established in 1878 under Government regulations, and at once made rapid strides to the front, till now it stands as high as any bank of its kind in the Empire. The latest business report of the Bank gives the following figures:—

Paid-up Capital.....	\$400,000,000
Reserve Fund	\$647,000,000
Turn-over last half-year	\$533,073,350,986

Although Japanese banks generally hold a reserve much below their paid-up capital funds, the Hundredth National Bank has pursued a different policy, and its reserves are more than ample to meet all emergencies. The fact that the Bank's transactions during the past half-year totalled over 500 million yen, shows the position it holds in the business world of Japan. Its facilities for foreign customers have lately been

increased and it appeals with confidence for a larger share of their support.

The Tokyo Savings Bank was started in 1880 by leading officials belonging to the One Hundredth National Bank, and it is the first of its kind established in Japan. The deposits at the end of last year amounted to yen 1,361,934,000. This Bank is also ready to conduct business for foreigners. Both Banks have offices at Shichome, Honcho-dori Yokohama.

TROUBLE AT HONOLULU.

When the Japanese steamer *Shinsu Maru* arrived at Honolulu, on the 8th March, a considerable amount of excitement was caused owing to Port Surveyor Stratemeyer's recommending that 534 of the 670 passengers on board be refused landing, having failed to produce the necessary qualifications. Of this number 351 declared to be free labourers and 183 contract people. In the case of the alleged free labourers many were said not to have the necessary \$50 as evidence of their ability to support themselves, while the remainder were judged to be lacking generally in the qualifications required by the Immigration Act of Hawaii.

The *Hawaiian Star* wrote on the 8th of March:—"Captain Nishiyama has filed a written demand with the Collector-General for a permit to clear from this port and it has been denied him. The next move will be to carry the matter into the Courts. Already attorneys have been engaged, and preparations are being made on both sides to fight the case to the bitter end. W. J. Gallagher, agent, and B. Shimizu, at the head of the Kobe Immigration Company, who were arrested yesterday, charged with importing contract labourers to the islands without first having obtained permission from the Board of Immigration, will not be tried until Wednesday. The immigrants who will be permitted to land are 123 free labourers, 7 contract labourers, and the six cabin passengers."

Two days later the same paper remarked:—"At present there are 36,000 Japanese living in Hawaii, and if immigration continues at the present rate the Japanese population will soon gain the upper hand here, particularly since a great many soldiers, who took part in the war with China are now settled here with their families. The Japanese element is a danger for all seafaring nations."

The Hawaiian papers are naturally full of the affair, and, according to latest advices, petitions for writs of *Habeas Corpus* have been applied for. Meanwhile the 535 Japanese rejected by the Hawaiian Government are kept in quarantine.

Our correspondent, writing on the day the P. M. steamer *China* left Honolulu, says:—"The Japanese will hold a mass meeting this evening at 7 o'clock, at which they will draw up a petition to the Government praying for the release of the immigrants now in quarantine, and quoting as the reason and right for this demand 'the most favored nation' clause in the treaty between the two countries."

The consensus of opinion among the conservative Anglo-Saxons in Hawaii is that an amicable settlement will be arrived at, but that the Courts will uphold the action of the Government officials. The hot-heads are predicting all kinds of trouble. The Japanese, on the other hand, are fully confident of success and the final release of the immigrants.

The new *Yifu* party met at the office, Moto-sukiyacho, Kyobashi, on Wednesday, and held a discussion in regard to the Formosan Railway and the Government's special subsidy to the Nippon Yusen Kaisha. Mr. Ishidzuka, Governor of Gamma *Ken*, was present.

Messrs. Yukama Kankichi and Komatsu Kenjiro, secretaries of the Communications Department, who will represent Japan at the International Postal Convention at Washington, United States, in May, left Yokohama on the 24th inst. by the American steamer *Gaith*.

LEGISLATION FOR ENCOURAGING INDUSTRY.

THREE Bills submitted to the Diet this session by the Government have special interest for foreigners. The first is a Bill relating to corporations of dealers in principal staples of export (*Chōyō naru yushutsu-hin dōgyō no kumiai*); the second is for the encouragement of deep-sea fishing (*genyō gyagyo shōrei*), and the third is for the encouragement of the direct export of raw-silk (*Kiūto choku-yushutsu shōrei*). The three Bills belong to the class of legislation known in the West as "paternal." They find their excuse in two facts: first, that special steps seem necessary to guarantee Japanese products against the defective or fraudulent methods that threaten to check the development of all export business in this country; secondly, that without freer access to capital, Japanese industrials can scarcely compete successfully with foreigners. Speaking generally, foreigners have no direct concern with measures adopted by the Japanese Government for the development of the country's resources, unless violations of the freedom of trade provided by the Treaties be involved. But since the time is now only 28 months distant when submission to all Japanese laws will become incumbent on the foreign resident, legislation destined to affect trade or industry in the near future acquires a very vivid interest for everyone commercially connected with this country.

The first of the three Bills is, perhaps, the most striking. Its ostensible, and doubtless genuine, object is to promote improved methods of production and manufacture, and to prevent frauds, in the case of articles constituting principal staples of export. It has evidently seemed to the authorities, prompted, presumably, by producers and manufacturers themselves, that the best way of attaining that object is to organize corporations among all persons engaged in any particular branch of the export business, so that the articles in which they deal shall be subjected to inspection by experts acting in the common interest. The idea is not new. It was conceived several years ago, and found practical expression in regulations resembling these embodied in the present Bill. But the drastic character of the new legislation constitutes an emphatic difference. If the Bill obtains the consent of the Diet—as it probably will—a consensus on the part of four-fifths of the men connected with any one branch, or even with different branches, of the export trade in a given district will constitute a *fait* to which the remaining one-fifth must bow by joining the corporation, under pain of fine; and a similar penalty is provided against a member's failure to contribute his share of the corporation's expenses. A corporation once formed, all the goods in the possession of a member

become liable to inspection by experts appointed by the corporation, as well as by experts appointed by the Minister of State for Agriculture and Commerce. Such is the Bill in outline. Its spirit is at obvious variance with the principle of individual freedom, for it invests a majority of dealers with power to compel the co-operation of the minority. The framers of the Bill and their advisors are, of course, more competent than outsiders to judge whether unions of the kind are necessary to purge the abuses now impeding the development of manufacture and production. Evidently, if the corporations honestly devote their strength to the enforcement of better methods, they may be able to accomplish something. But the scheme is beset with practical difficulties, to say nothing of its pernicious character as an example of flagrant official interference in trade concerns. The Government appears to think that inspectors of thorough and recognised competence grow upon every bush in Japan. The tobacco monopoly scheme was framed upon that supposition, and the same curious faith underlies this Corporations Bill. We can not imagine that any manufacturer or producer would willingly submit his goods to inspection of the kind contemplated. In truth the whole project seems to us clumsy in conception, to say nothing of the tax it must impose on the staples whose produce and manufacture it is intended to encourage. Nothing can be more disappointing than to find that a necessity for such legislation is still thought to exist in Japan, and that the only sound factors of improvement, free competition and practical experience, can not yet be trusted to work effectively. Looking at the matter from another point of view, the conclusion is suggested that a law of this nature must tend to confine the foreign trader to the open ports, and to prevent him from taking an active share in enterprises of production and manufacture in the interior. He will prefer to remain at the open ports, because there, by joining with his fellow-Occidentals, he can organize a minority strong enough to prevent the formation of an inconvenient corporation. He will avoid operations of manufacture or production in the interior, because there, in the presence of an overwhelming number of Japanese, he can not hope to avoid compulsory combination. Referring to the guilds organized under previous regulations, nominally for the same purpose as that contemplated by the new law, we have frequently had occasion to remark that, so far from applying their combined strength to the useful purpose of their creation, they employed it chiefly as a means of bending the foreign merchant to their will, or of supporting one of their members in an unjust campaign against a European or an American dealer. The Kimura-Cornes case was a flagrant example. It is permissible to hope, however, that the closer connection between

the proposed corporations and officialdom will provide a guarantee against repetition of such abuses. By reserving to the Minister of State for Agriculture and Commerce power to dissolve a corporation, or subvert its decisions, should he deem its methods mischievous, the Government virtually constitutes him supervisor of those methods.

The second of the three Bills provides bounties for persons engaged in deep-sea fishing. In connection with that valuable branch of their country's resources the Japanese have certainly shown a want of enterprise that contrasts strangely with their activity in other directions, and doubtless the theory is correct which attributes the defect to pecuniary inability on the part of the coastwise folk to provide themselves with proper boats and appliances. We find nothing strange in the Government's disposition to devote a small sum of public money towards the development of this highly important source of national wealth.

The third Bill, namely that for encouraging the direct export of silk, is a cognate measure. It provides that a bounty of from 20 to 50 *yen* per picul (133 lbs.) shall be given to encourage the direct export of raw silk; direct export meaning, of course, the placing of the staple in European or American markets without the intervention of a foreign middle-man.

An interesting feature of these last two Bills is their relation to the clause of the Revised Treaty which provides that "the subjects of each of the High Contracting Parties shall enjoy, in the dominions and possessions of the other, * * * perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities, and drawbacks." Would foreigners be entitled, under this clause, to receive the bounties provided in the above two Bills? We do not think so. The reasons for a negative answer are not the same in each case. As to deep-sea fishing, the bounty is of a personal character, and it is obvious that such cases can not have been contemplated by the framers of the Treaty. No one would contend, for example, that because the Nippon Yusen Kaisha, or the Osaka Shosen Kaisha, is entitled, under the provisions of the Law for the Encouragement of Navigation and Shipbuilding, to receive a subsidy for a service to America, or for a steamer built abroad, therefore the Pacific Mail S.S. Company will be entitled, under the revised Treaty, to receive a similar subsidy on the former account, or the Peninsular and Oriental S.S. Company a similar bounty on the latter. That is not the intention of the Treaty; and, for the rest, British subjects, at all events, have no desire to receive Japanese state aid for the purpose of engaging in deep-sea fishing off Japanese coasts: if they want to compete in this industry, their sense of justice would rebel against

the idea of competing by Japanese assistance. The silk bounty, however, is different. There we have a case that seems to fall precisely within the intended scope of the Treaty, since the object of the subsidy is to strengthen the hands of the Japanese in their trade competition with foreigners. Yet, it is plain that such a bounty is precluded by its nature from being enjoyable by foreigners, inasmuch as the term "direct export" (*choku-yushutsu*) applies only to the operation of placing goods in a market abroad without foreign intervention. From the moment that a foreigner engages in the business, either as purchaser of the silk in Japan, or as its shipper, there ceases to be any question of *choku-yushutsu*, or "direct export." That, however, is a purely technical difficulty. The fact can not be gainsaid that the purpose of the Treaty is to protect foreigners against such discrimination, and if the Japanese Government attempts to maintain this system of bounties after July 1899, it must be prepared to receive vigorous protests from foreign States. As for the scheme itself, it seems quite futile. The object of encouraging Japanese exporters to work independently of the foreign merchants at the open ports is inexplicable. Better agents could not possibly be discovered than the foreign merchants. They pay ready money and take upon themselves all the risks connected with finding a market for the staple. But even if it were desirable to eliminate them, this system of bounties could effect nothing. For the foreign exporter can secure the bounty for himself by the simple device of sending forward his silk in the name of a Japanese. It would be found, before long, that "direct export" had largely increased, in appearance, and that the Treasury was paying out a considerable sum in bounties for the benefit of the foreign merchant. Of course, that method of evading inconvenient discrimination could not be reconciled with the principles of strict morality, but when the Government openly throws down the gauntlet by offering to make grants of public money in order to take the trade out of the hands of foreigners, the latter would scarcely be blamable for defending themselves in any and every way. It is reassuring to see that the leading Japanese journals uncompromisingly condemn the Direct-export Bill and the Corporations Bill. If the Diet passes these measures, it will not be with the approval of public opinion.

COURT MOURNING FOR THE LATE EMPRESS DOWAGER.

IT is very greatly to be regretted that the Courts of Europe, with only two exceptions, have neglected to comply with the forms prescribed by international courtesy in the matter of the late Empress

Dowager's decease. The exceptions are the Courts of Spain and Belgium. Spain took the initiative, and, at a comparatively early date, announced five days' mourning, but the King of the BELGIANS seems to have awaited the receipt of written despatches, when, as already announced in these columns, HIS MAJESTY ordered Court mourning for eight days. No other European Court has followed the procedure strictly observed whenever the demise of a royal or imperial personage takes place in a Western country. If Japan herself had shown any remissness, there might be some excuse for the neglect of which she is now the victim. But for the past sixteen years, she has most punctiliously discharged her duties in this respect. The matter is of such importance that we append a list of the instances when Court mourning has been observed in Japan since 1881:—

COURT MOURNING OBSERVED BY THE COURT OF H.I.M. THE EMPEROR OF JAPAN.

Countries.	Names.	Titles, etc.
Russia	... Alexander II.	... Emperor.
Spain	... Alfonso XII.	... King.
Germany	... William I.	... Emperor.
Germany	... Frederick II.	... Emperor.
Austria	... Rudolph	... Crown Prince, Arch-Duke.
Portugal	... Don Louis I.	... King.
Germany	... Augusta	... Empress-Dowager.
Italy	... Victor	... Duke, King's brother.
Korea	... King	... Queen Dowager.
Holland	... William III.	... King.
China	... Chung	... Emperor's Father.
Hawaii	... Kalakaua	... King.
Russia	... Constantine Nicolaievitch.	Grand Duke, Emperor's Uncle.
Russia	... Alexander III.	... Emperor.
Korea	... Min	... Queen.
Austria	... Charles Louis	Arch-Duke, Emperor's Brother.

Date of Death.	Dates of Court Mourning.	Duration.
Mar. 25th, 1881.	From Mar. 25th to April 3rd, 1881.	at Days.
Nov. 25th, 1885.	Nov. 25th to Dec. 12th, 1885.	27
Mar. 9th, 1888.	Mar. 20th to Mar. 26th, 1888.	at
June 25th, 1888.	June 27th to July 7th, 1888.	at
Jan. 30th, 1889.	Jan. 31st to Feb. 14th, 1889.	15
Oct. 19th, 1889.	Oct. 21st to Nov. 8th, 1889.	19
Jan. 7th, 1890.	Jan. 8th to Jan. 28th, 1890.	21
Jan. 18th, 1890.	Jan. 21st to Jan. 26th, 1890.	6
June 4th, 1890.	June 9th to June 27th, 1890.	19
Nov. 29th, 1890.	Nov. 29th to Dec. 12th, 1890.	23
Jan. 1st, 1891.	Jan. 7th to Jan. 12th, 1891.	6
Jan. 1st, 1891.	Jan. 3rd to Feb. 20th, 1891.	20
Jan. 24th, 1891.	Jan. 26th to Jan. 31st, 1891.	6
Nov. 1st, 1894.	Nov. 2nd to Nov. 20th, 1894.	19
Oct. 8th, 1894.	Oct. 9th to Dec. 21st, 1894.	74
May 29th, 1895.	May 31st to May 31st, 1895.	1

It will be observed that the record commences with 1881, when the civilized world was shocked by the terrible fate of the Emperor ALEXANDER the Second. Up to that time, Japan's intercourse with the Occident had not been sufficiently intimate to suggest the observance of such ceremonies. But when the unfortunate Sovereign of RUSSIA met his death under circumstances inexpressibly painful, the Russian Representative in Japan suggested the advisability of Japan's uniting with other civilized nations in paying the usual tribute to the memory of the deceased monarch. Japan readily complied, and since that time has carefully followed the excellent precedent thus established. At the outset, there may have been some instances of neglect, for though the proper etiquette was observed in the case of ALEXANDER II, rules for future guidance in such matters were not immediately drawn up by the Japanese Board of Ceremonies. But from 1881 to the present date, the Court of the MIKADO has been irreproachably punctilious. In nine cases mourning has been ordered for reigning monarchs, and in seven cases for the fathers, mothers, uncles, or eldest sons of sovereigns. Russia and Germany are

especially involved in this matter. Court mourning has been observed in Japan for two Czars and for a Grand Duke, the uncle of an Emperor; and, in Germany's case, for two Emperors and an Empress Dowager. Similar etiquette has been followed twice on account of Austria-Hungary, namely, for the Crown-Prince RUDOLPH and the Arch-Duke CHARLES. It would appear that some special obligation of reciprocity ought to have been thus created, independently of any civilized principles general by operative, and we are obliged to confess with shame that no such justification suggests itself for the neglect now shown by European Courts towards Japan. Probably there does not exist a nation more sensitive in such matters than the Japanese. They have made every possible effort to secure the esteem and confidence of Western peoples, and, prior to this unhappy incident, it appeared that they might congratulate themselves upon having succeeded. They have been constantly admonished that all discrimination against foreigners, as such, is illiberal and uncivilized. Yet now they find themselves discriminated against by Europe in a matter that touches them profoundly. Even without the very striking evidences of national feeling evoked by the death of the Empress Dowager, it must have been well understood by all residents in Japan that such an event assumes quite exceptional proportions in the eyes of a people pledged to the peculiar creed of filial piety observed in this country. The Foreign Representatives in Tokyo can not have failed to appreciate the fact, or to inform their Governments that nothing could possibly cause greater pain and offence to the Japanese nation than that the Courts of the Occident should fail to conform, *vis-à-vis* Japan, with the rules of courtesy invariably obeyed in cases where death invades royal and imperial circles in Europe. We must assume, therefore, that the omission is entirely ascribable to the conservatism that differentiates the West from the East in the eyes of European potentates, and that the Japanese Court's uniform displays of respectful sympathy with the bereavements that have befallen the families of reigning Sovereigns in the Occident during the past sixteen years, have either passed unnoticed, or been regarded as acts beyond the pale of reciprocal consideration. The foreign residents of Japan have reason to protest strongly against such illiberal and discourteous omissions. They themselves, out of respect for the feelings of the Japanese nation, did not hesitate to conform with fashions of mourning altogether in excess of anything to which they are accustomed in their own countries, and they now find the grace of their acts entirely marred by the studied indifference of their countries' Courts to Japan's just claims of courtesy. It is upon the Euro-

peans living in Japan that the consequences of this neglect fall. They have to suffer by the sentiment of umbrage and resentment thus inevitably inspired. We can not doubt that the Japanese EMPEROR himself is deeply pained by the neglect shown towards his father's consort, and if, in the face of such a convincing proof of the hopelessness of breaking down the racial prejudices that still disgrace Europe, the members of the Imperial Family and of the nobility in this country should conclude that any further efforts to win foreign good-will are futile, and that they are now entitled to return like for like, on what grounds can they be convicted of error? We write under the firm conviction that this most unhappy incident has shocked many leaders of thought in Japan; men whose continued influence in the cause of liberal progress it should be the object of all intelligent foreigners to promote. Nor can we doubt that a nation imbued with such profound sentiments of loyal respect for everything pertaining to its SOVEREIGN, sympathises strongly with the neglect of which HIS MAJESTY'S family has now been the victim. At the same time, we desire to remind the Japanese people, for their own sakes, that it would assuredly be quite erroneous to construe this incident in the sense of a deliberate slight. They must remember that Europe is still in the presence of traditions made venerable by centuries of observance. Japan is the first, the very first, Oriental nation that has ever won access to the circle of Christendom. Until a few years ago, European statesmen would have scouted the idea of submitting their nationals to the jurisdiction of a non-Christian Eastern State, or of regarding any Oriental Power as entitled to enjoy the full privileges of international law and comity. By patient and undeviating advance along the path of enlightened progress Japan has succeeded in breaking down the greater part of these conservative barriers, and though it may shock her to find that they still retain some strength, it would plainly be in the last degree fatal to her own interests that she should abandon the struggle because complete victory is deferred. The negative attitude maintained by the Courts of the Great European Powers on the present occasion is ascribable simply to the tyranny of immemorial habit; tyranny nowhere more inexorable than in the realm of Court etiquette. There is certainly no idea of slighting Japan. It has not occurred to the European Sovereigns that she could feel herself slighted merely by their continued observance of procedure never hitherto deviated from in the case of an Oriental State. This incident was needed to suggest a new departure, and it will be for Japan to turn the event to good account by broad-minded appreciation of the real facts, not by any petty display of pique.

IMPERIAL DIET.

TUESDAY, MARCH 16TH.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m., the Order of the Day being—

- 1—Bill relating to Payments from the Reserve Fund for the 28th year of Meiji (Report of the Committee).
- 2—Bill providing for Payments not covered by the budget or in excess of the budgetary items, for the 28th year of Meiji, by appropriations from the surplus of Revenue.
- 3—Bill providing for payment from the Reserve Fund in the Special Accounts for the 28th year of Meiji.
- 4—Bill providing for payments not covered by the Budget, or in excess of the budgetary items, by appropriations of Surplus Revenue and of Funds included in Special Accounts for the 28th year of Meiji.
- 5—Government Bill relating to Forestry Law.
- 6—Government Bill for the control of Arms, Gunpowder, &c.
- 7—Customs Tariff Bill.
- 8—First Reading of a Bill for promoting Deep Sea Fishing.
- 9—Bill for encouraging the Direct Export of Raw Silk.

The proceedings commenced with the report of Mr. Komuro on behalf of the Petitions Committee. He stated that the number of petitions received up to the 13th of March had been 210, showing an increase of 120 as compared with the figure for the preceding session; that the most important of these, as those referring to the construction of harbours at Osaka and Kobe, had been investigated by a special committee; and that the petitions so investigated amounted to 179, several of which had been set apart for submission to the House or for transmission to the Government.

The Bills from the first to the fourth were taken together for discussion.

Mr. Mori, in the capacity of Chairman of the Special Committee, reported that the Committee had decided to recommend the four Bills without revision.

Mr. Orita said that although he could approve the first, third, and fourth Bills, he must oppose the second, on the ground that the measures taken by the Minister of State with regard to payments from the Surplus in cases of earthquake or other natural calamities, were inconsistent with the principles of law, if Article LXIV. of the Constitution was to be applied. The Minister could adopt such measures on his own responsibility only.

In spite of this opposition, the Bills were passed by the House without further dissent.

Reporting on the fifth Bill, Mr. Nakamura said that the Committee had cancelled Article XXX., which provided that no horse or carriage should be taken into or through the forest of another, and that no person carrying an axe or a saw should be allowed to enter therein; also another article, which prohibited work in a forest before sunrise and after sunset, this provision being contrary to the actual customs of the country; and lastly, two more articles requiring the inscription of the owner's name on axes or saws, and imposing fines upon those that failed to take measures for extinguishing forest fires. This last provision was considered impracticable, unless salaried watchers were maintained in ordinary times.

The Bill was carried to its Second Reading and passed with various amendments.

With regard to the Bill standing sixth on the Order, Mr. Toda Sakubei, in the capacity of Chairman of the Special Committee, reported that the Committee had decided to recommend the Bill for adoption, as being necessary for the maintenance of public peace and tranquillity. Concerning Article III., namely, that no article containing swords or rifles, nor any arms the external form of which had been changed, shall be carried by any person—two different opinions were expressed; one advocated its entire cancellation, the other simply suggested that official sanction must be obtained for carrying such arms. The latter proposition had been adopted by the Committee. Besides the word "arms" had been excluded from Art. VI., and the punishments set forth in Art. VII. had been mitigated.

In reply to a question put by Mr. Ayai as to the reason for prohibiting the carrying of arms the external appearance of which had been changed, Mr. Terahara, Government Delegate, said it was because such arms could conveniently

ly be used for purpose of sudden assault, and consequently were regarded as particularly dangerous. A few questions of little importance having been asked and answered, the Bill was carried to its Second Reading.

Mr. Suzuki wondered how the Government could have been induced to present such a Bill. It was equivalent to a confession of improper action on the part of the Ministers of State, who, while allowing their own guards to carry sword-sticks, now wanted to establish a law forbidding such proceedings. That was a curious contradiction. If sword-canes were to be prohibited as dangerous to public peace, then arms of all descriptions must be forbidden to be carried.

Mr. Ichishima Kenkichi remarked that the necessity for the control contemplated by the Bill had originated in the prevailing habit of carrying sword-canes, and that, in view of the frequent occurrence of public meeting under the Constitutional system, and of the approach of mixed residence, the use of dangerous weapons must be subjected to strict control in the interests of the country. Total prohibition might be intolerable, but to carry arms with official sanction might be justifiable.

In opposition to these remarks Mr. Konishi urged that the provisions under discussion should be entirely rescinded, inasmuch as arms were carried rather for the protection of the owner's person than for the purpose of injuring others.

Article III. was rejected and Article IV. was passed as revised by the Committee, thus becoming:—

"Any gendarme or policeman may, if he deems it necessary, inspect the ammunition possessed by any person." With reference to the second clause of the sixth Article, namely, "Any gendarme or police constable may, in such cases, if he deems it necessary, inspect, or take into his own charge, arms and ammunition, and this provision shall be applicable also to articles other than arms and ammunition, the use of which by their possessor is held to constitute a source of danger"—with reference to this Mr. Kusakari wanted to know what was meant by "articles the use of which is held to constitute a source of danger." Would a pole used by coolies for carrying burdens be included in this category?

The Government Delegate replied in the negative, and explained that cutting weapons were referred to.

Articles VI., VII., and VIII. were passed without dissent, the word "authorities" alone being cancelled from Article VIII.

Referring to the eighth Bill, Viscount Enomoto, Minister of Agriculture and Commerce, stated that the fishing enterprise of the country was yet in a state of immaturity, that the people were always defeated both in the North and South Seas in their competition with foreigners, who had command of considerable capital and possessed strong vessels; and that the Government had introduced the present Bill with a view to the development of maritime industry and to promotion of the national wealth.

The ninth Bill was taken simultaneously for discussion. With regard to this Bill, the Viscount said that silk bore a most important relation to the national finance, and that although business connected with it seemed to have been gradually developed during the past few years, yet it had not attained a perfect condition. The recent production of excellent silk by Italy, France, and China threatened almost to displace Japanese silk in foreign markets. Silk dealers, therefore, ought to correct all abuses of faulty production for purposes of direct export, and should exert their utmost efforts to restore the former reputation of this important article, which had already lost much of its credit abroad.

Observing that special protection for the encouragement of the direct export of silk, as provided in the Bill, was to be confined to Japanese subjects, Mr. Komuro enquired whether circumstances would not occur requiring the extension of the privilege to German or British subjects, in the event of the revised

Treaty with Germany and England going into operation.

In reply to this question Mr. Fujita, Government Delegate, said that the bounty might be extended to Japanese and foreigners alike at that time, but that a necessity for the entire abolition of the protective measure now in contemplation might also be expected to occur.

The two Bills were handed to a Special Committee for investigation, and the House rose at 5.25 p.m.

The discussion of the 7th Bill was adjourned until the following day.

WEDNESDAY, MARCH 17TH.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of the Day being:—

- 1.—Press Law Amendment Bill.
- 2.—Bill relating to the Inspection of Silkworm Eggs.
- 3.—Bill for granting permission to a private Railway Company for the construction of a Railway in the State Programme.
- 4.—Railway Construction Law Amendment Bill.
- 5.—Opium Bill.
- 6.—Bonded Warehouse Bill.
- 7.—Bill for adopting special measures with regard to Land Tax to be levied in localities devastated by the late Inundations.
- 8.—Bill relating to Amendment of the Law for Preventing Collisions at Sea.
- 9.—Bill relating to Amendment of the Regulations for granting Lands to Colonial Troops.
- 10.—Bill for amending Law No. 26 of the 28th year of Meiji.

Viscount Tani, in the capacity of Chairman of the Special Committee, stated that all the members were perfectly familiar with the Press Law Amendment Bill, which had been passed every year by the Lower House but rejected by the Upper. This year it was presented as a Government Bill with some revisions made by the Lower House. The Committee having fully investigated it, had arrived at the conclusion that it was destined to meet the wishes of the public by granting full freedom of speech, and was, at the same time, calculated to enable the administrative authorities to exercise sufficient control over the privilege. The majority of the Committee had, therefore, passed the Bill. Some defective wording was noticed, but nothing so serious as to call for amendments necessitating renewed reference to the Representatives. The Bill had consequently been adopted in its present form, and was recommended for approval, its suitability having been guaranteed by Mr. Mitsuaki, a prominent barrister, and by Mr. Kojima, an eminent judicial authority.

Questioned by Viscount Hotta as to whether the Government was disposed to give full approval to the Lower House's amendments, Mr. Kanmuchi, Government Delegate, replied that the discussion connected with the Bill had induced the Government to consent.

The Bill was carried to its Second Reading. Count Ogimachi, on behalf of the minority of the Committee, remarked that the provision for suspending the publication of a newspaper had always constituted a grave problem during recent years, as was familiar to the members. The House of Representatives had invariably insisted upon the entire abolition of such a provision, despite the opposition of the Upper House, where the provision was considered necessary for the maintenance of public peace and tranquillity. The revised Bill proposed to deprive the administrative authorities of the power of suspension, and to transfer it to the Judiciary. To suspend a publication after a law-suit had been instituted by a Public Prosecutor could by no means meet the object of suspension or suppression. Moreover, the "editorial notes of similar purport," referred to in Article XXXIII., could be construed in two ways. Even granting that the phrase ought to be understood in its widest sense, yet the Administration would be unable to attain its object, and the amended law must therefore be condemned as an ineffectual measure. The minority of the Committee advocated restoring the Administrative power of suspension with the proviso that appeal could be made to Administrative Courts in case a measure taken

by the Minister for Home Affairs was considered improper. Article XXXII., provided against "language impairing the dignity of the Imperial House," but no language of such a nature had hitherto appeared in a newspaper, and even if it did appear, punishment could have been inflicted under the Penal Code. This Article, together with Article XXXIII., ought to be cancelled.

Mr. Mitsuaki opposed the minority report on the ground that while conferring the power of suspension upon the Ministers of Home Affairs and of Colonization, it would be most improper to private individuals to appeal against the exercise of that power. Such would be the outcome of the revision recommended by Count Ogimachi. Fruitless strife would invariably take place between the Administrative Authorities and administrative courts of enquiry, while private individuals would be, in most cases, the sufferers.

Mr. Kodama advanced three arguments in opposition to the Lower House's Bill: 1. Against the cancellation of Articles XVIII. and XIX. Although the Government Delegate had asserted that the infliction of punishments ought not to be within the competence of executive officials, yet such steps could legitimately be taken by them in certain cases as, for example, when dangerous substances were purposely placed on the public highway. If such a contingency as the abuse of this penal competence by executive officials was to be apprehended, special provisions might be established to obviate anything of the kind. 2. Mr. Mitsuaki's remark as to the probable casting of private individuals in all law-suits, was scarcely worth contradiction. 3. The Government proclaimed its desire to extend full recognition to freedom of speech. Why, then, did it agree to the elimination of Article XXIV? The registered publisher or editor of a newspaper was, in most cases, a mere substitute. Thus punishment was never suffered by the real writer of an article.

In approval of the Special Committee's revision Mr. Watari stated that as the Press Law had been established in the days of absolute government, it must be altered in the sense of recognising the rights of individuals under the present constitutional system.

A closed ballot was taken with reference to the revisions advocated by the majority of the Committee, the result being:—

For the Amendment 66
Against 95

The President announced that the amendments having thus been rejected, the original Bill was adopted as sent up from the House of Representatives.

Count Ohara, in the capacity of Chairman of the Special Committee, reported that the Bill standing second on the Order had been introduced last year, and that the Government having raised no objection to the revisions made in the Lower House, the Committee had unanimously decided to adopt the Bill.

Mr. Mayeda remarked, that although the Bill was far from being perfect, yet it was much superior to that presented last year, and that dealers in silkworm eggs were highly satisfied with it, and would not fail to suggest gradual revisions for its greater perfection.

The Bill was passed by the House.

Viscount Soga, Chairman of the Special Committee, reported that the third Bill contemplated the construction of a railway to Port Kure, in Hiroshima, by a private railway company to which special permission would be granted.

The Bill was passed without objection.

Having pointed out that the fourth Bill on the Order had also been before the House last session, Viscount Soga explained that the railway contemplated by the Bill was to connect the Central Line with the Tokaido Railway.

The Bill was passed at once.

Prince Tokugawa, in the capacity of Chairman of Committee, reported, with reference to the fifth item, that some amendments had been made by the Committee after various questions put to the Government Delegate.

The Bill was carried to its Second Reading, and passed, the committee's amendments of Articles X. and XVI. being endorsed.

The sixth Bill on the Order was expounded by Mr. Megata, Government Delegate, who said, that it had a most intimate relation with Treaty Revision: The Bill was handed to a Special Committee nominated by the President.

The seventh Bill was similarly treated.

Referring to the eighth Bill, Mr. Suzuki, Government Delegate, explained that the present law for the prevention of collisions at sea having been established on the basis of a conference held in America in the 22nd year of Meiji (1888), both England and America subsequently urged Japan to make alterations in the law. He further remarked that the Bill was intended to establish rules common to all nations. This Bill, together with the two last Bills, were submitted to Special Committees.

The House rose at 4.05 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.30 p.m., the Order of the Day being:—

- 1.—Bill for granting permission to a Private Railway Company for the construction of a railway in the Hokkaido Programme.
- 2.—Formosa Bank Bill.
- 3.—Bill for adopting special measures with regard to State Lands in Hokkaido that remain unclaimed.
- 4.—Customs Tariff Bill.
- 5.—Bill relating to the Collection of National Taxes.
- 6.—Bill for conserving Old Temples and Shrines.
- 7.—Fire Brigade Bill.
- 8.—Bill relating to Registered Designs and Trade Marks.
- 9.—Bill for abolishing the Special Municipal System for Tokyo, Kyoto, and Osaka.
- 10.—Bill for Supplementing the Provisions in the Local Government System for Cities.
- 11.—Bill relating to the Local Government System for Tokyo.
- 12.—Bill for establishing Chiyo-da Prefecture.
- 13.—Bill relating to certain expenses to be borne jointly by Tokyo and Chiyo-da.
- 14.—Bill relating to the Police Expenses for the City of Tokyo and the Prefecture of Chiyo-da.
- 15.—Bill for supplementing the Provisions as to Aid from the Treasury, with a view to increasing the Salaries of Common School Teachers in Cities, Towns, and Districts, according to the period of their service.
- 16.—Bill relating to Physicians.
- 17.—Bill for altering the Organization, or effecting the Amalgamation, of Commercial Companies.
- 18.—Bill for amending the Railway Construction Law.

The first Bill on the Order was submitted to a Committee without discussion.

Referring to the second Bill, Mr. Soyeda, Government Delegate, explained that, owing to want of machinery for the circulation of money in Formosa, the profits of that territory had fallen into the hands of foreigners, which did not conduce to the interests of Japanese or Formosans; and that, although a Japanese Bank and another known as the *Chyuritsu Ginko* (Neutral Bank) had begun operations, they were far from affording the necessary accommodation.

Mr. Ito Tokutaro enquired which of the two metals—gold or silver—would be used when notes payable at sight were presented for exchange.

The Delegate replied that he was unable to give a definite answer, prior to the settlement of the Coinage Bill, and that, even if the Coinage Bill became law, the Formosans being particularly fond of silver, the white metal ought to be employed for redeeming notes, the latter being chiefly of the face value of five *yen* and ten *yen*.

Questioned again as to whether silver would be used even if, say, ten notes of ten *yen* each were presented for exchange, and whether no objection would arise in such cases, the Delegate answered that the liking for silver entertained by Formosans would prevent them from offering any opposition.

Being still further questioned as to how Japanese would be treated when notes aggregating more than ten *yen* were presented by them, the Delegate replied that their demand for gold could not be refused.

The Bill was handed to a Special Committee. With regard to the third Bill on the Order, Mr. Sone, Government Delegate, explained that although unclaimed lands in Hokkaido had hitherto been dealt with according to Cabinet Ordinance No. 16 of the 16th year of Meiji, the methods embodied in that Ordinance having proved very imperfect, the present Bill was introduced.

The Bill was submitted to a Special Committee nominated by the President.

Mr. Abe, in the capacity of Chairman of Committee, stated that the Committee had been in conference since the 1st of March for the investigation of the Bill standing fourth on the Order, and had decided to recommend it in its original form without any revision, except in the table, where the following changes were considered advisable:—

	Present rates, per cent.	Amended rates, per cent.
Clocks and fittings	15	20
Watches and fittings—		
(a) Gold and platinum	20	30
(b) Silver and others	15	25
Butter and Cheese	10	15
Coffee	10	15
Fruits, fresh and dried	10	15
Hams and bacon	10	15
Condensed and powdered milk	10	15
Pepper	10	15
Salt fish	10	15
Tea	15	25
Other edibles	10	15
Port, sherry, vermouth and red and white wines	25	35
Coal and Coke	10	5
Lamps and fittings	15	20

The provisions embodied in the Bill ought to have been established long ago in Japan, and the want of them having been one of the most serious legislative defects of the country, no further criticism need be invited. The unanimous approval of the House should be given to the Bill as amended by the Committee.

The Second Reading having been taken, Mr. Hashimoto proposed that the rate for sugar, which appeared low on the table in comparison with the rates for other articles, should be increased to ten per cent.

Mr. Megata, Government Delegate, explained that the total production of sugar in Japan did not exceed 13,360,000 catties, while the import reached 223,000,000 catties. That a considerable demand for the commodity existed in Japan could thus be easily inferred, and five per cent seemed the most suitable rate.

The Bill was passed as revised by the Committee.

The fifth and sixth Bills also were passed without discussion.

With reference to the seventh Bill, Mr. Kitagawa said that the Fire Brigade Regulations now in force, being extremely imperfect, had served chiefly to paralyse old customs, without substituting anything in their place, thus practically hindering the enforcement of measures for the extinguishing of fire. The Bill aimed at establishing a fire brigade in each village according to the methods of former times.

The Bill was handed to a Committee of nine nominated by the President.

Before entering upon the discussion of the eighth Bill, Mr. Tanaka Shozo ventilated a grievance about the non-attendance of officials from the Department of Agriculture and Commerce when he delivered his speech in the House with regard to the mineral poison from the Ashio Mine.

In reply to this complaint, Mr. Kaneko, Vice-Minister of Agriculture and Commerce, said that the non-attendance referred to had been simply due to the absence of himself and his fellow-officials at meetings of Committees, and that a written reply to the queries concerning the Ashio affair had already been prepared, and referred to the Home Department for presentation to the House in a few days.

The eighth Bill was submitted to a Committee without discussion.

The matters dealt with in the ninth and tenth Bills were stated by the Delegate to be in course of investigation by the Government. Hence no definite declaration could be officially made about them at the moment.

The Bills were entrusted to a Committee.

Mr. Koizuka moved that the Bills from the 11th to the 14th be taken together for discussion. He said that whereas, under the ordinary system of Local Government, the management of affairs was entrusted to four officials—one Headman and three Assistants—the special system for Tokyo, Osaka, and Kyoto delegated the manage-

ment to the Governor and Secretary. Hence, not a little inconvenience had been felt by the people owing to delay in the transaction of business. The Governor, as the Head of the Municipality, ought to discharge his functions under the direction of the Local Council, but, in many cases, he was required to depart from that principle as a Government official. Consequently the various Bills on the Order had been introduced to separate the eight Rural Divisions from Tokyo, with a view to enforcing an independent system of Local Government in the metropolis.

Mr. Misaki, Government Delegate, emphatically declared that the Government could in no way consent to such drastic proposals as those embodied in the Bills referred to.

The Bills were all rejected.

Referring to the fifteenth Bill, Mr. Kashiwada remarked that although 223 out of 420 Private Schools throughout the country were used as substitutes for Public Schools, yet as no provisions existed for increasing the salaries of their teachers according to the period of their service, frequent changes occurred among the teachers, to the great detriment of educational progress.

Mr. Kiba, Government Delegate, explained that, as the so-called "substituted schools" had hitherto been maintained by tuition fees only, the rates of which were much lower than those at public schools, they were inevitably imperfect, and as there was no satisfactory method of supervision at present, the Government could not give its consent to the Bill.

The Bill was handed to a Committee of nine nominated by the President.

The principal provisions with regard to Physicians embodied in the sixteenth Bill are as follow:—

Art. I.—Any person who desires to become a physician must pass a satisfactory examination in accordance with Rules specially established for that purpose.

Art. II.—Graduates of a Medical Colleges bearing the title of *Igakushi* (Professor of Medicine), graduates of a Medical Department of Higher Schools (*Tokugyōshi*, Bachelor of Medicine), and graduates of Medical Schools under the control of a City or Prefectures, are allowed to be physicians without examination.

Art. IV.—The following persons are not allowed to be physicians:—

1. Those who have committed crimes, unless rehabilitation after political offences has taken place.

2. Those who have committed offences against the Throne, offences of forgery, false witness, theft, fraudulent exaction of money, abortion, or other offences against public morals.

Art. V.—Physicians whose civil rights have been suspended are not allowed to pursue their occupation during the period of such suspension.

Art. XI.—Physicians must establish a definite place or hospital for the examination of patients within the jurisdiction of the Local Office of the district to which they belong, and must report the fact to the Local Authorities.

Art. XII.—In case a physician diagnoses a patient to be suffering from a contagious disease, he must report the fact according to law.

Art. XIII.—In case a physician diagnoses a patient to be suffering from mental derangement, he must report the fact to a police station of the place to which he belongs, within forty-eight hours.

Art. XIV.—No physician is allowed to deliver a certificate of examination to a patient unless he has himself examined or treated him.

Art. XV.—No physician is allowed to issue a certificate of death for a patient unless he has himself examined or treated the deceased.

Art. XVI.—Physicians are required to establish a society of their own membership in each locality to which they belong. Branches of such society may be organized in each Rural or Urban Division in the case of Cities, and in each Rural Division or Town in the case of Prefectures.

Art. XXI.—No physician is allowed to examine or treat patients until after he has joined the Physicians' Society.

Art. XXVIII.—In case a physician acts contrary to this Law or to the Rules of the Physicians' Society, the Chairman of the Society, in accordance with the decision of an ordinary or general meeting of the Society, may present a memorandum to the Minister for Home Affairs, through the Local Governor, with a view to procuring punishment for the offending physician.

Art. XXIX.—Disciplinary measures shall be adopted in four different ways, as follow:—

1. Reprimand.
2. Suspension of occupation for a period of less than one year.
3. Dismissal from the Society.
4. Prohibition of occupation.

Referring to the above, Mr. Nakajima remarked that as physicians had to deal with the body and life of human beings, they ought to be subjected to strict control and supervision.

Mr. Kusakari objected to permitting graduates of various schools and colleges to practise as physicians without examination. The anti-University movement had already shown the impropriety of appointing legal councillors and judges from among unexamined graduates.

Mr. Goto, Government Delegate, stated that the Government could not consent to the provision disqualifying graduates of foreign medical colleges or possessors of foreign medical certificates to pursue the occupation of physicians without examination, and also those prohibiting the issue of a temporary medical licence to physicians in a place where there was no licensed practitioner.

The Bill was handed to a Committee of nine nominated by the President.

Commenting upon the seventeenth Bill, Mr. Mayebara said that, in view of the great number of commercial companies that were constantly being formed at present, their amalgamation, or measures for altering the organization, became necessary in the country's interests, which were more or less impaired by the absence of any definite provisions for such purposes.

This Bill was handed to a Committee.

The House was counted out at 5:30 p.m.

THURSDAY, MARCH 18TH.

HOUSE OF PEERS.

The House met at 10.30 a.m., the Order of the Day being:—

- 1.—Bill for maintaining as Hereditary Property of Nobles the shares of the 15th National Bank, organized on the principle of a joint-stock corporation.
- 2.—Bill for making Payments from the Reserve Fund for the 28th year of Meiji.
- 3.—Bill for making payments over and above the Budgetary Items, by appropriations from the Surplus Revenue for the 28th year of Meiji.
- 4.—Bill relating to the Reserve Fund included in the Special Accounts for the 28th year of Meiji.
- 5.—Bill for making Payments over and above the Budgetary Items, by appropriations of surplus Revenue and of the Fund included in the Special Accounts for the 28th year of Meiji.
- 6.—Bill for amending the Law of the Houses.
- 7.—Private Railway Construction Law Amendment Bill.
- 8.—Bill for amending Law 140, 4 of the 28th year of Meiji.
- 9.—Bill for amending the Regulations for the Construction of Private Railways.
- 10.—Bill for eliminating certain provisions in the Registration Law.

Besides the above Bills, there were eight Petitions, which had already appeared on the Order of a previous day.

The proceedings commenced with a question put by Mr. Kubota on the subject of common education. He remarked that children of school age not at present attending school aggregated 2,800,000; and that the whole number of common schools in the country was 24,000. There was an obvious necessity for constructing 15,000 more. Further, the number of teachers did not exceed 60,000, which total was 22,000 short of the required complement. The salaries of common school teachers at present were about 10 yen a month, on the average. Such paltry remuneration could never tempt competent tutors. They ought to be treated, in respect of salary and rank, in the same way as ordinary Government officials, and should be granted official position and decoration. The expenditures of the Educational Department were insignificant as compared with those of other Departments, and proper schemes of education could not be carried out by recourse only to such appropriations as a City, Town, or District could furnish. Aid from the Treasury must be afforded. No educational Bill had ever been presented by the Government, and Mr. Kubota wanted to know whether any serious plan of education had ever been contemplated by the Administration.

Referring to the first Bill, Prince Uyesugi doubted the security of the 15th National Bank in the event of its being converted into a private

institution, with its shares registered as the hereditary property of the nobility.

Mr. Kanmuchi, Government Delegate, replied that the Bank having already acquired considerable experience during past years, no anxiety need be entertained about converting its shares into the hereditary property of the nobles. Indeed, 110,000 shares out of 180,000 had already been voluntarily registered as such. The period of the Bank's charter drew to a close, and the present Bill had consequently been laid before the House.

The Bill was passed.

The Bills from the 2nd to the 5th (inclusive) were handed to a Special Committee nominated by the President.

The sixth and seventh Bills were similarly treated.

The object of the eighth Bill on the Order was to rescind a clause in the Railway Regulations, providing that shares of a private railway company are not saleable or transferable until one-fourth of their face value has been paid up.

Mr. Mitsuaki objected to the proposal. He pointed out that the purpose of the clause in question was to prevent the pernicious class of speculative transactions known as dealing in "potential shares"; that is to say, selling and buying shares of a Company not yet actually in existence, and possibly not destined ever to come into existence. Could the Government consent to such an alteration of the Regulations?

Mr. Matsumoto, Government Delegate, said that Mr. Mitsuaki seemed to be labouring under a slight misapprehension. The shares in question were those of a company already organized and about to commence work under a temporary charter—a company upon whose shares one-tenth of the face value had been paid up. There was no question of potential shares. But it might happen, and sometimes did happen, that men who had purchased shares failed to pay up the installment of one-tenth, without which the company could not start, and the company then had no choice but to sell the forfeited shares. The Government was as anxious as any one to put a stop to gambling in potential shares. Possibly the Bill might be drafted more clearly, so as to confine the sale of shares to the case he had cited. In that event, the Government would be able to give its consent.

This Bill, together with the ninth and tenth, were submitted to a Committee for investigation. The Petitions were similarly dealt with.

The House rose at 11.45 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.30 p.m., the Order of the Day being:—

- 1.—General Budget of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 2.—Supplementary General Budget No. 1 of Revenue and Expenditure for the 30th year of Meiji.
- 3.—Supplementary Special Accounts Budget No. 3 of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 4.—Budget relating to liabilities devolving upon the Treasury in excess of the Budgetary items.
- 5.—Bill relating to disbursements in the Section of Special Expenditure of the Naval Department for the 29th year of Meiji.
- 6.—Bill relating to the Inspection of Sires for Stud Purposes.
- 7.—Bill relating to Expenses of Prisoners.
- 8.—Bill providing for payment of Tobacco Tax in cash by Producers of Tobacco.
- 9.—Bill for improving the Divisions of Farms.

The President announced that the amended Budget sent down from the Upper House would be taken for debate.

With reference to the Budget, Mr. Makino stated that he had been informed that the reductions made by the House of Peers in the estimates for the Home Department and the Department of Agriculture and Commerce, were based chiefly on a desire to prevent these two Departments from granting any extra remuneration to their salaried officials. Investigations made by him on the subject having given unexpected results, he asked for an explanation from the Government Delegate.

The Delegate replied that these remarks about the motive of reducing the expenditures of the Agricultural and Commercial Department had been made in the Upper House, and that it

was customary to grant extra remuneration to salaried officials when there was a surplus available for the purpose. Such an item of expenditure had, of course, been left to the discretion of the two Houses. If they decided in favour of reduction or rescission, that course would become inevitable, provided only that the special provisions established by Imperial Ordinance on the subject should in no way be affected.

Mr. Takahashi remarked that the amendments made by the Upper House were so excessively minute as to throw discredit on the procedure of the Lower House, and ignore its right of precedent discussion. He urged that they should be rejected.

The House having voted against the amendments, the President announced that a Conference would be held by ten members from each House.

The second, third, and fourth items on the Order were passed without dissent.

At this stage Mr. Tanematsu enquired what effect the construction of the harbour of Osaka would have upon Kobe; what relation it would bear to military affairs, and how the land reclaimed in the process of digging the harbour would be dealt with.

Mr. Furuchi replied that the construction of the harbour would have no consequences whatever for Kobe. Neither could it contribute to the decline of the latter's commerce or industry.

Mr. Fujita moved that a secret session be held as he had to present some questions on military affairs. He was called to order by the President, who ruled that the necessity for secrecy must be ascertained before voting for such a conference.

Mr. Kodama, Government Delegate, explained that Japan being destitute of a suitable port for military purposes, Ujina was regarded as the best available for the present, on account of its proximity to the town of Hiroshima, where barracks might be established, and whence boats could communicate with vessels in whatever direction the wind blew. But the harbour being situated very far to the south, overland transport thither could be effected only by the Sanyo railway. In the case of Osaka, however, far greater facilities could be attained. The city being much larger than Hiroshima, there was correspondingly greater space for the establishment of barracks, and transport by land could be effected by several railways. Even docks had been built there, and the fact that the place was located in the centre of the country constituted an additional superiority from a strategical point of view. The War Department had therefore advocated the scheme of building a harbour at that place, and had expressed a wish to be able to anchor vessels of 12,000 tons close to the shore. But as financial considerations did not allow such a scheme to be carried into operation, the programme had been reduced to harbouring vessels of 6,000 tons only.

Mr. Fujita enquired how many regiments could be sent out of the harbour to the transports.

Mr. Kodama, Government Delegate, said that a vessel of 6,000 tons, being capable of containing half a corps d'armée, one corps could be embarked in two divisions, and that it would take eighteen days by the present railway to bring to Osaka all the corps stationed eastward of that city.

A few other questions put by Mr. Obata were all answered by the Delegate.

Mr. Hayakawa, on behalf of the minority of the Committee, stated that the Bill had been adopted by twenty-three votes against fourteen, and that, although the minority did not entertain views entirely contrary to those of the majority, they had suggested the necessity of avoiding all enormous expenses during these eventful years. He feared that Osaka and Kobe being so closely connected as to deserve the name of brothers or sisters, the construction of a harbour in the former city would inevitably tend to the decline of the latter. These points had to be fully investigated.

Mr. Yumoto remarked that the Government had not made sufficient efforts to investigate

the Bill, or formed a definite policy for the construction of the harbour, and that such an enterprise as harbour building ought not to be undertaken for the present, inasmuch as the necessity of increasing the national armaments and the disorder of the finances did not justify such large expenditures.

Mr. Nakano strongly opposed that view, and maintained that the enterprises to which Japan ought to direct her most strenuous efforts at present were no other than the construction or repair of harbours. Among State undertakings, inland enterprises had made considerable progress and attained fair development, but why were the most indispensable affairs neglected in a country surrounded by seas on all sides? The cause might be attributed to the difficulty of the enterprise itself or of its investigation. Yet nothing could be so important for the present as to construct a harbour in Osaka. The people of that city having fortunately volunteered to bear a large amount of the expenses for the construction of the port, it would be the duty of State to afford suitable aid to such a worthy enterprise. Osaka being the centre of the country's commerce, any imperfection in its harbour and consequent inconvenience of transportation must not only entail serious losses upon merchants, but also be a source of disadvantage to the nation at large. Critics of the Osaka harbour scheme were not absolutely opposed to making a port there, but differed as to the means to be employed for the purpose.

The problem being of the greatest importance, the President announced that it would be decided by closed ballot. The result was as follows:—

For the Bill	172
Against	73

The Bill was passed.

Referring to the fifth Bill, Mr. Tanabe reported that it had been rejected by the Committee.

The sixth Bill, viz., the Bill concerning the inspection of stud horses, was carried to its Second Reading as sent up from the House of Peers.

Mr. Oshima enquired whether owners of horses in remote parts of the country would not suffer by the reduction in the number of sires owing to the restrictions imposed by the Law.

Mr. Fujita, Government Delegate, replied that no such inconvenience would occur, as the restrictions were to be adopted to local conditions, the Law aiming only at prohibiting bad horses of defective quality.

The 2nd and 3rd Readings being dispensed with, the Bill was passed.

Mr. Terahara, Government Delegate, explained, with reference to the seventh Bill, that it was intended to collect in the main prison all serious offenders, and to rescind the first Article of the Prison Regulations now in force, by which culprits of all descriptions could be kept within the precincts of the same prison, without regard to the nature of their offences.

Questions were put by Mr. Kogure and two other members as to the expenses to be defrayed, and the Bill was submitted to a Special Committee of nine, nominated by the President.

The eighth Bill was similarly treated without discussion.

With regard to the Bill standing ninth on the Order, Mr. Konishi reported that the Committee recommended it with certain amendments. When carried to its Second Reading, Mr. Kusakari and Mr. Hirada proposed a few revisions, but it was passed by the majority in its original form.

At this stage the House was counted out; and rose at 5.45 p.m.

FRIDAY, MARCH 19TH.

HOUSE OF PEERS.

The House met at 10.15 a.m., the Order of the Day being:—

- 1.—Supplementary General Budget No. 1 of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 2.—Supplementary Special Accounts Budget No. 1 of Revenue and Expenditures for the 30th Fiscal Year of Meiji.
- 3.—Bill relating to Forests.
- 4.—Bill relating to the restoration to Private Individuals of State Lands, Forests, and Fields.

- 5—Bill relating to the collection of National Taxes.
- 6—Bill relating to Amendment of the Law for preventing Collisions at Sea.
- 7—Bill relating to the Prevention of Epidemics.
- 8—Representation relating to the Compilation of School Text books at the National Expense.
- 9—Petition for rescinding the Special Local Government System for Cities.
- 10—Petition for the Restoration of Pensions, &c.
- 11—Petition for opening Special Ports for Export and Import.
- 12—Petition for employing Moji and Shimonoseki as Special Ports for Export and Import, outside the category of Open Ports.

Viscount Tani, in the capacity of Chairman of the Budget Committee, reported that the Budget standing first on the order was the result of decisions previously adopted by the Diet with regard to an increase of funds for the Osaka Arsenal and the Senju Cloth Factory, and that it had been passed by the Committee unanimously.

This Budget, as well as the second on the Order, were passed by the House.

Viscount Soga moved that the Order of the Day be changed in order that the Bill relating to Corporations of Dealers in Staple Articles of Export be discussed.

The motion having been approved by the House, the Viscount stated that the Bill having been investigated from the morning to the evening of one day, had been adopted by the Committee with some amendments. Among articles of export, those regarded by the Government as the most important were fifty-five or fifty-six in number, and the shipments of each amounted to over 100,000 *yen* in value every year. The presentation of this important Bill to the House had originated in the Government's earnest desire to correct defects of production and manufacture which had led to loss of credit abroad and to diminution of demand. The Committee had made a slight amendment in the part of Article VIII. where officials were mentioned, and had cancelled the penal provisions of Article XVII., on the ground that Article X. would suffice for purposes of punishment. The "District Court of Law" in Article VI. had been changed to Local Court. The Government had consented to these alterations.

Mr. Obata declared himself absolutely opposed to the Bill. The problem of imposing restrictions upon the commercial or industrial freedom of individuals was of the gravest character, yet no enquiries had been addressed on the subject of this Bill to the High Council existing for precisely such purposes. The Bill was intended to bring about uniformity of quality in articles of export, but its drafters failed to take cognisance of the great abuses that might result from such legislation. It was virtually destined to obstruct the progress or development of inventions, and to present an effective obstacle to persons contemplating special enterprises.

Mr. Mayeda asserted that the statements just made by Mr. Obata were simply the outcome of his own views, or the result of vague confidence reposed by him in the allegations of persons having no connection whatever with commerce and industry. The plan now before the House embodied the long cherished desire of the practical community. The industries of Sakai range, porcelains, lacquer work, and textile fabrics had all had to be promoted under the auspices of Government. The opposition to the Bill had been inspired by prejudices against the union of great commercial and industrial enterprises with smaller ones. Should the proposal be considered as improper, what better measure could be found to replace it?

The Bill was carried to its Second Reading. Articles from I. to VII. and from IX. to XVI. were passed in their original form. Article VIII. was amended.

Mr. Namura insisted upon the necessity of leaving the law-court as originally indicated instead of changing it to "Local Court."

Articles XVII. and XIX. were passed as amended by Mr. Namura.

The rest of the Bill was passed as amended by the Committee.

The third and fourth Bills were submitted to a Special Committee without discussion.

At this stage the President announced that the Order of the Day would be changed for the

discussion of the General Tariff Bill, which contained numerous articles and for which the greatest promptitude was required.

Count Matsukata, Minister of Finance, stated that the Bill had a most important relation to the economy of the State. It had been drafted with the utmost discretion and due reference to the actual conditions of commerce. The rates of duties were heavy in the case of luxuries, and light in the case of articles of daily necessity. The tariff in general having been compiled in accordance with the progressive features of the time, in order that the revenue might be increased and industrial enterprises promoted, unanimous approval should be given to it. The Tariff had to be promulgated before the enforcement of the revised treaties; and being very bulky it must be investigated by the House with the greatest possible promptitude.

The Bill was entrusted to a Special Committee nominated by the President.

The fifth Bill was similarly treated without deliberation.

Referring to the Bill standing sixth on the Order, Mr. Mitsukuri, Chairman of Committee, stated that the various nations of Europe had already consented to the revisions made by England and America in the Law for preventing Collisions at Sea; and that the Bill, an exact translation from the English, had been passed by the Committee. The Bill was to be enforced from July of this year.

It was passed by the House without dissent.

The reading of the seventh Bill on the Order was postponed.

Mr. Kogure, speaking on the Representation standing eighth on the Order, remarked that although the school text-books now in use had been examined by the Educational Department, yet many of them were found to contain errors.

Questioned by Mr. Honso as to where such errors could be found, Mr. Kogure pointed them out clearly.

The Representation was passed by the House.

Viscount Tani opposed the Petition for opening Shimonoseki and Moji. He urged that the military importance of the places rendered such procedure unwise.

Mr. Yasuba declared that matters of industry and commerce ought also to be taken into consideration, without undue partiality for questions of military importance.

The President announced that the debate would be adjourned, and the House rose at 3.05 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.40 p.m., the Order of the Day being:—

- 1—Bill relating to enterprises of a Public Corporation, for which aid may be obtained from the Treasury.
- 2—Bill relating to the Prevention of Sandalips.
- 3—Bill for encouraging Deep Sea Fishing.
- 4—Railway Construction Law Amendment Bill.
- 5—Bill for the Control of Fertilizers.
- 6—Bill for rescinding certain provisions in the Regulations for the enforcement of the Code of Civil Procedure, as contained in Law No. 50 of the 23rd year of Meiji.

Proceedings commenced with a report by Mr. Taketomi, who, reporting the result of the Conference of the Houses on the Budget, stated that the Managers of the Lower House had urged the acceptance of the Budget as passed by the latter, and the Managers of the Upper House had similarly insisted on its amendments. Finally, slight concessions having been made on both sides, a satisfactory result was arrived at. The item concerning the receipts from forests under the superintendence of the Agricultural and Commercial Department, was restored, and all the other amendments of the Upper House were rejected. The results of the Conference so concluded admitted no further change, the only course being to approve, or not.

A motion was then made that the Order of the Day be altered so that the revised Budget might be taken. Mr. Nakamura Yaroku urged the Government that in order to avoid the numerous offences connected with forests, measures should be taken to introduce drastic reforms in the Department of Agriculture and Commerce.

The Budget was then passed.

Mr. Motoda asked for a reply to a question he

had put some days previously with reference to the German-Japanese Treaty. He also moved that by changing the Order of the Day the Formosan Budget should be discussed.

The Budget was passed as revised by the Committee.

The first Bill on the Order was passed without discussion.

With reference to the second Bill on the Order, Mr. Orita censured the Government for presenting such a Bill, which contained fifty Articles, in the closing days of the session.

The Bill was carried to its Second Reading.

Mr. Komuro considered that the craftiness of the Government had been too serious to be overlooked. It had poured out Bills like showers towards the end of the session.

Mr. Hayakawa, in the capacity of Chairman of Committee, reported that the Bill standing third on the Order had been adopted by the Committee unanimously.

Mr. Taguchi asserted that the proposal subsidies would be injurious to fishermen. Although the Bill was intended to assist Japanese to compete with foreign fishers, it must be confessed that the proposal only indicated the ignorance of the responsible authorities of the actual circumstances of the case. The foreigners that carried on fishing every year in the American or Southern Ocean, or in the Sea of Kinkwasan, near Ogasawara Island, had acquired enormous profits, and had never depended upon paltry sums of subsidy. That the Japanese fishers who were longing for a subsidy could in no way attain their original object of deep-sea fishing, was proved by the fact that the aid given by the Imperial Marine Products Association had already been a failure. The fishers referred to might have been delicate gentlemen notorious in the Shimbashi quarters for their stories of love. Bold and adventurous seafarers who had failed to learn even the simplest form of letters, could never have persuaded themselves to apply to the Department of Agriculture and Commerce for a subsidy of some five or six hundred *yen* for each vessel in their possession. The programme would be detrimental to legitimate fishermen.

The Bill was carried to its Second Reading, and passed.

The Bill standing fourth on the Order having already been reported on by Mr. Mochizuki, Chairman of Committee, Mr. Mori enquired the reason for relinquishing the construction of a railway between Kotohira in Sanuki and Ikeda in Awa.

The Government Delegate replied that it was a matter of expense.

Mr. Ayai remarked that although the railway contemplated by the Bill had been planned nominally in connection with national defence, yet in fixing Tokushima, in Awa, as the starting point, and extending the line to Yawatahama, the scheme was not only strategically bad, but also financially unwise. Last year, Mr. Kodama, Government Delegate, declared that Marugame, in Sanuki, was to be the starting-point; this year it was changed to Tokushima by the Committee. Surely some occult reason must have swayed the members of the Committee. The question of railways had a close connexion with the permanent solidity of the country in respect of coast defence and national finances. The fullest consideration as well as the most minute investigation were absolutely indispensable. The speaker then moved that the following lines be omitted from the programme and that the discussion of the Bill be postponed until next session:—A railway between Tokushima in Kochi prefecture, and Yawatahama, in Sanuki, *via* Kochi and Matsuyama; a branch to Susaki, Kochi, and a line connecting it with Takamatsu.

The Bill was passed in its original form, with some amendments by the Committee.

Referring to the fifth Bill on the Order, Mr. Kusakari opposed it on the ground that the State ought not to interfere with such things as fertilizers by legal enactments. He was contradicted by Mr. Fukuda, who said that even

America and England had established laws for that purpose.

The Bill was rejected.

The House rose at 4.30 p.m.

MONDAY, MARCH 22ND.

HOUSE OF PEERS.

The House met at 10.20 a.m., the Order of the Day being:—

- 1.—Report of the Chairman of the Petitions Committee.
- 2.—Bill for making payments from the Reserve Fund for the 28th year of *Meiji*.
- 3.—Bill for making payments over and above the Budgetary Items, from the Surplus Revenue for the 28th year of *Meiji*.
- 4.—Bill providing for payments from the Reserve Fund included in Special Accounts for the 28th year of *Meiji*.
- 5.—Bill providing for payments over and above the Budgetary Items, by appropriations of Revenue and of Funds included in Special Accounts for the 28th year of *Meiji*.
- 6.—Bill relating to the prevention of Epidemics.
- 7.—Bill for making payments in arrear on account of the Naval Department, for the 29th year of *Meiji*.
- 8.—Bill for improving the Divisions of Lands.
- 9.—Bonded-warehouse Bill.
- 10.—Customs Tariff Bill.
- 11.—Bill relating to Amendment of Regulations for granting lands to Colonial Troops.
- 12.—Bill for amending Law No. 6. of the 28th year of *Meiji*.
- 13.—Bill for encouraging Deep-Sea Fishing.
- 14.—Bill for dealing with Family and Reward Pensions.
- 15.—Bill relating to Pension Bonds Loans.

Mr. Umayabara, Chairman of the Petitions Committee, reported that the number of petitions received by the Committee since the 1st of March had reached 295. Of those mentioned in the fourth list, eighteen had to be submitted to the House for discussion. In the fifth list, 15; in the sixth list, 16; others had been rejected as unworthy of consideration, and the rest were in course of investigation.

Prince Tokugawa, Chairman of Special Committee, reported that the Committee had decided to recommend the financial measures from the second to the fifth on the Order.

With reference to Article XXVI., of the sixth Bill on the Order, Mr. Sakatani, Government Delegate, insisted upon the necessity of maintaining the phrase "one-sixth of the expenses to be borne by the Treasury," which had been changed by the Committee to "one-third." The Department of Finance had originally refused to defray expenses connected with the prevention of epidemics, on the ground that such outlays ought to be borne exclusively by the localities where the diseases prevailed. Not without great difficulty had the Department been persuaded to defray one-sixth of the expenditures. To change that amount to one-third would cause much confusion of accounts. The Constitution entrusted the duty of compiling the Budget to the Government, and the Houses had no authority to insert new items.

In opposition to these remarks, Mr. Kubota stated that although the right of compiling the Budget rested with the Government, yet the Houses were not precluded from discussing the items, or enacting whatever laws might be needed in connection with them.

A desultory but somewhat acrimonious debate ensued, several members traversing the principle laid down by the Government Delegate, and some urging that the Government's method of discharging its financial duty could not be called very successful in view of the numerous supplementary Budgets that had to be presented.

Mr. Miura deemed it useless to engage in a wordy and fruitless contention about a paltry matter such as a difference of one-sixth. At the same time he suggested that the Delegate should withdraw all expressions calculated to impair the dignity of the House, or to imply that the members laboured under a misapprehension as to the proper interpretation of the Constitution.

Mr. Sakatani, Government Delegate, declared that he had never intended to suggest any misapprehension on the part of the members.

Mr. Miura insisted that the Delegate withdraw the reference made by him to the Constitution.

The Delegate readily consented to this.

When the Bill was about to be carried to its Third Reading, Mr. Obata moved that its discussion be adjourned until next session. If the expenses estimated in the Bill were not to be defrayed by the Government the decision of the House must have no practical result, and the provisions for preventing the spread of contagious diseases would be ineffective.

The Bill was passed with slight verbal amendments.

Mr. Kawakami, Government Delegate, explained that the expenses embodied in the seventh Bill referred to donations which ought to have been distributed during last year. While in transit to Formosa, together with decorations and various documents, they had been lost through dishonesty on the part of a native coolie.

The Bill was handed to a Special Committee nominated by the President.

The eighth Bill on the Order, as expounded by the Government Delegate, was intended to effect alterations of dykes in rice fields, with the object of correcting sinuosities that had proved very inconvenient to the farmers.

The Bill was handed to a Committee.

Viscount Nabeshima, Chairman of Committee, reported that the Committee had decided to recommend the ninth Bill with only slight verbal alterations, its necessity for commercial development being unquestionable.

The Bill was passed as amended.

The Customs Tariff Bill was also passed without dissent. The eleventh and twelfth Bills were similarly dealt with, the only amendment made in the twelfth Bill being that no buildings or horses granted for the use of colonial troops should be allowed to be transferred, mortgaged, or distrained for debt.

Mr. Fujita, Government Delegate, referring to the thirteenth Bill, said that, apart from coast-wise fishing, deep-sea fishing ought to be earnestly promoted, with a view not merely to the development of industry, but also to fostering the seafaring spirit that was absolutely indispensable for naval purposes.

Mr. Isobe enquired about the limits attaching to the expression "distant sea," and was answered that the words were used simply in contradistinction to coast wise operations. Their limits could not be assigned.

The Bill was entrusted to a Special Committee.

Marquis Kuroda Nagashige, reported that the 14th Bill as well as the Bill for adjusting the Pension Loans had been adopted by the Committee. These Bills were intended to correct bungling committed by the responsible authorities on the occasion of the abolition of the clan system, in dealing with hereditary pensions. The misery now suffered by a certain class of *shisoku* in consequence of these mistakes was so serious as to require immediate redress.

Count Matsukata, Minister of Finance, remarked that the Government had never assumed an attitude of opposition to the Bills in question, but that the necessary investigations not having yet been completed, approval could not be immediately given.

Baron Ozaki asked how the Government would proceed in case redress was considered indispensable.

To this question the Count replied that legislative or administrative measures would be taken as the case might require.

Baron Yasuba said that, despite the statements of the Minister of Finance, some of the *shisoku* had failed to receive their dues solely through official bungling, while others, by mere luck, had obtained disproportionate amounts of pension. No time should be lost in remedying the injustice.

Viscount Tani stated that the late Prince Iwakura had already directed his efforts towards redressing the wrongs of the indigent *shisoku*, but the Government was embarrassed, in the majority of cases, by want of evidence as to the exact facts of their misfortune.

The Bill was carried to its Second and Third Readings and passed.

The last Bill on the Order was laid aside, Viscount Tani having pointed out that it must

be replaced by a Government estimate based on the 14th Bill.

The House rose at 4.20 p.m.

TUESDAY, MARCH 23RD.

HOUSE OF PEERS.

The House met at 10.25 a.m., the Order of the Day being:—

- 1.—Coinage Bill, and four correlated measures.
- 2.—Forest Law Bill.
- 3.—Bill relating to Liabilities devolving upon the Treasury in excess of the Estimates.
- 4.—Bill relating to the Prevention of Sandalips.
- 5.—Bill relating to the Collection of National Taxes.
- 6.—Bill with regard to Taxes in the Localities devastated by the late Earthquake.
- 7.—Railway Construction Law Amendment Bill.
- 8.—Bill for rescinding certain provisions in the Code of Civil Procedure.
- 9.—Bill for altering the Regulations for the Construction of Private Railways.
- 10.—Bill for amending Law No. 4 of the 28th year of *Meiji*.
- 11.—Bill with regard to Taxes in Localities visited by the late inundations.

Marquis Kuroda Nagashige, Chairman of Special Committee, reported that although the importance of the coinage problem dictated the utmost deliberation and care, yet, as the session was drawing to a close, the Committee had decided to recommend the Bill for immediate adoption. It seemed essential to adopt the standard least liable to fluctuations. The so-called bimetalism might be a suitable system, but could not be safely followed without international agreement. Japan could hardly expect to successfully adopt that system by her own unaided strength. The only alternative for her was to choose between gold and silver monometallism. Silver, however, being liable to serious fluctuations, the various nations of the world had already shown a tendency to make gold their unit of value. The same considerations applied to Japan's case. Her commercial interests would be better promoted by adopting gold monometallism. Trade would certainly be the gainer. The risks hitherto incurred by using silver had sensibly injured commerce. The foreign trade of the country could not be placed on a firm basis except under the gold standard. Further depreciation of silver might produce more or less inconvenience in transactions with China; but Japan's foreign commerce being carried on chiefly with gold-using countries, she ought to consider the large side of the question rather than the small. Some writers had ascribed the development of her industry and commerce to the depreciation of silver and the consequent appreciation of commodities. But depreciation had now reached its climax, and the former profits could no longer be hoped for. The issue of the late war had brought a large indemnity in gold, and Japan could expect no better opportunity for the adoption of the gold standard.

Mr. Obata saw that the tide had set entirely in the direction of gold, yet he ventured to raise his voice in opposition. Alluding to the proceedings of the Coinage Investigation Committee, Count Matsukata, Minister President of State, had alleged that the majority of the Committee had approved the gold monometallic system. Yet the fact was the majority had been in favour of the silver standard, if those advocating bimetalism were included. Some economists attributed the rise in the prices of commodities, especially rice, to the depreciation of silver, but that was not actually the case. The late inundations had been the chief factor in enhancing the prices of commodities, whereas the appreciation of public loan bonds had been caused by the increased volume of currency resulting from an over-issue of convertible notes by the Department of Finance. Again, the unfavourable results of the country's commerce with America last year could not be ascribed solely to the depreciation of silver, but must be attributed to the fact of the latter country's being in a state of vacillation as to the adoption of gold or silver monometallism. It was doubtless necessary that the standard of value should be as secure as possible against fluctuations. But it was not plain that the enhancement of the prices of commodities had

really been owing to depreciation of silver or appreciation of gold. For his own part, he considered that the yellow metal had suffered greater fluctuations than the white. This alteration of the monetary system might prove to be but a blind submission to the general trend of foreign public opinion. Abject poverty in Europe and America appealed to Government to relieve its misery and distress, but the poor in Japan had never clamoured for any revision of the coinage system. Asiatic trade must suffer by the change. Two-tenths of Japanese commerce would fall into the hands of foreigners. Competition with China in the markets of Europe and America would surely be disadvantageous to Japan hereafter. The proper period for revising the coinage system had not yet come, and preparations ought to be made now, deferring the actual change at some future date.

Count Matsukata addressed the House as follows:—

The Coinage Bill now under discussion having frequently been explained and commented on by me in the House, I imagine that you have all become perfectly familiar with its provisions. Nevertheless, I have to notice some points on which I differ widely from Mr. Obata. He has asserted that the cause of the rise in the price of rice does not lie in the depreciation of silver, but is to be traced to recent natural calamities, and also to the war with China. That may have been the case. But when did the price of rice begin to rise? No commercial commodity is independent of the depreciation of silver. The fact that prices rose in India and Austria in the year immediately following the revision of their coinage systems corroborates the assertion that silver had lost some of its purchasing power.

It is quite natural that rice which formerly cost five *yen* should rise to ten *yen* as soon as silver fell to half its former gold price. Thus the enhancement in the price of rice is in no way attributable to natural calamities. In years of scarcity, Japan can import grain from foreign countries to preserve the average price of rice. The grain imported in the 22nd and 23rd years of *Meiji* represented a value of 14,000,000 *yen*, and the price of rice was thus maintained at its ordinary level. I may illustrate the fact by one more example. Suppose a deposit of a hundred *yen* was made in a foreign country about twenty-six years ago. The silver thus deposited would now be worth only one-half of its then gold value. On the other hand, prices in Japan have risen steadily with the depreciation of silver, until the climax seems to have now been reached. A French economist, in a work published in the 26th year of *Meiji*, expressed profound apprehension with regard to the future augmentation in the prices of commodities consequent upon the depreciation of silver. I hope you will deeply consider whether an increase in the price of commodities is really beneficial to trade or not. Mr. Obata further remarked that the labourers of Europe and America have suffered considerably from gold monometallism, but it is probable that he derived that view from the writings of Mr. Cox, an Englishman now in the service of the Government, who holds that the distress among the labouring classes of England is chiefly due to the gold system adopted in that country. Yet facts have shown the ability of English labourers to make large savings from what they earn. Now is not the time for argument, but for practical investigation.

The general tendency of the world has long been towards gold monometallism. We are not required, of course, to blindly follow that tendency. But the principles of demand and supply now operating in the world have already settled the silver question. If we suffer ourselves to remain quietly in our present condition, the country will probably have to encounter serious troubles to remedy which will be out of our power. I request you to approve the Bill in the interests of the country.

Baron Ozaki wanted to know whether the one-*yen* silver coins were to continue in circulation subsequently to the enforcement of the new system, or whether a limit would be fixed. Another comment was to be made. When the country first established its monetary standard, in the beginning of the *Meiji* era, the gold monometallic system had been adopted. But later on, that system had changed automatically to silver. There had been a time when the Baron himself received his salary in gold. The gold system now adopted might again revert to silver in the course of years as had been the

case with the present system. An explanation of this point would be welcome.

In reply to this question, Count Matsukata stated that although he had already replied to the first query on a previous day, he was very willing to explain whatever might be asked of him. In the first place, there seemed to be no grounds for apprehension in connexion with the one-*yen* pieces, to whatever extent silver might depreciate. It was true that a large quantity of Japanese one-*yen* coins had left the country, but investigations showed that these coins were not circulating in Hongkong to a greater amount than 500,000 *yen*, or in Singapore to a greater amount than 8 millions. These coins did not circulate in the interior of China. So soon as they passed into the hands of the Chinese, they were taken into the exchange shops and there disfigured with a stamp. Therefore, the amount of silver not disfigured would not exceed ten million *yen*. These statements were based on the latest information. Baron Ozaki doubtless knew that the country was swamped with Daijokwan notes in the beginning of the *Meiji* era, and an exodus of gold to foreign countries had been the inevitable result, in accordance with the fundamental laws of political economy. To repeat the experiences of the opening years of the *Meiji* era would be unworthy of the present state of civilization.

Viscount Tani said that the problem now before the House had been upon the *tapu* since the 26th year of *Meiji*, and that the Ministry of that time had appointed a Commission for the investigation of the Coinage system. The views of practical men and financiers had been invited, but an opportunity had not been found for enforcing the change recommended by them. The time had at last arrived for the adoption of the gold system. The indemnity still remained unspent, and this opportunity was not to be lost. Foreign trade, in particular, could only be developed by the use of the monetary standard common to all nations. Competition without recourse to such steps would place the country at a disadvantage. To make preparations for future success in competition by adopting the gold standard was absolutely indispensable. It might be argued that fluctuation in the market prices of commodities would be inevitable under either gold or silver monometallism. But the former metal was less liable to changes than the latter. Gold monometallism was not altogether free from sources of anxiety, but its defects were apparently less serious than those connected with any other system.

The Bill was carried to its Second and Third Readings and passed by a large majority.

Marquis Kuroda proposed that the correlated Bills be taken together for debate, as they were closely connected with the first. All these Bills were passed by the House in their original form.

Referring to the second Bill on the Order, Viscount Soga, in the capacity of Chairman of Special Committee, stated that, while everything else has made progress since the Restoration, the administration of forest affairs had remained in a most unsatisfactory state. To that fact might be attributed the late inundations, variable weather, and other troubles. The enactment of proper laws for the control of forests was absolutely essential.

The Bill was passed with slight verbal alterations.

At this stage Viscount Tani moved that the Order of the Day be changed, for the purpose of discussing the Bill relating to Liabilities devolving upon the Treasury. The object of the Bill was to revise the amount of subsidy paid by the Government to the Japan Railway Company. The Lower House had reduced the amount to 1,300,000 *yen*, but a contract having been duly made at the outset between the Government and the Company, this alteration by the Lower House, if not complied with by the Company, could only have the effect of discrediting the Diet. The Committee had therefore rejected the revision and recommended that the Bill be passed in its original form.

The Bill was passed and returned to the Lower House.

Mr. Murata asked what outlay would be incurred in connection with the fourth Bill on the Order.

Mr. Furuichi, Government Delegate, replied that the expenses allotted for the prevention of sandalips in each city and prefecture amounted to 40,000 *yen* for the 27th year of *Meiji* and to 60,000 *yen* for the 28th year. The enforcement of the new system, however, would increase the amount.

The Bill was entrusted to a Special Committee, nominated by the President.

The 6th and 7th Bills were passed, but the 8th was handed to a Committee.

The 9th Bill also was passed.

Viscount Soga opposed the 10th Bill on the ground that if transactions in shares one-fourth of the face value of which had not been paid up, were declared invalid, the business of commercial and industrial companies might be injuriously impeded.

The Bill was rejected.

Viscount Yuri, Chairman of Committee, reported in favour of the 11th Bill.

Baron Tajiri, Government Delegate, said that the Government had extended the limits of the Relief Fund, and adopted various measures of relief in the localities devastated by the late inundations. Should this Bill be passed, the Government would have to extend fresh relief to those who had already been succoured. Japan was exposed to a peculiar wind known as the monsoon, in consequence of her geographical position, during three months from July to September. It blew chiefly from the direction of the Philippines between Shikoku and Kiu-shiu. Special reductions of the Land Tax were therefore made in the case of these territories. No further bounty could be granted. The remission of tax contemplated by the Bill would virtually exempt all riverine districts from paying the regular rate of tax, and serious inconvenience would result in the administration of local affairs for Towns and Districts.

Mr. Megata, Government Delegate, contended that the Land Tax ought not to be increased or decreased according to years of plenty or of scarcity. As no previous allowance could have been made for natural calamities, such as earthquakes, special measures might fairly be adopted; but in the case of inundations, due reductions had been made in view of their occurrence, and any further remission of tax could not be justified. Speaking generally, to remit taxes in the case of a failure of crops, even though the land had not been laid waste, was unpracticable. The taxation of land ought to be an unchanging affair. Variations merely for the sake of inundations could hardly fail to create serious abuses.

Mr. Tomita contended that the terms "abundance or scarcity of crops," occurring in the Land Tax Regulations, might be construed to refer to the nature of the harvest, and to point to a remission of taxes in case of death caused by inundations. Such remission would certainly create a deficiency in the Government's revenue, but what would happen if the sufferers from the late disaster had no money to pay the tax?

The discussion of the Bill was adjourned till the following day, and the House rose at 4.45 p.m.

NEWS OF THE DAY.

Kobe had a very joyous celebration of the Kaiser Wilhelm's centenary.

M. Ulysse Pila recently lectured on the economical development of China and Japan before the Geographical Society of Lyons.

Mr. Justice Mowat and Mrs. Mowat returned from Shanghai and the South by the *Empress of Japan* on Thursday afternoon. We are glad to learn that his Honour is almost restored to health again.

Owing to the pressure of "mail-night," only eight members of the Yokohama Chess Club were present at the extraordinary general meeting on Thursday and the discussion was consequently postponed for a week.

About 8 o'clock on Tuesday morning, a block

of four houses at Kusunokicho, Kobe, near the Nanko temple, which were under repair, suddenly collapsed. A woman, says the *Chronicle*, was killed on the spot and two men injured.

Captain Yui, of the Japanese Army, has been attached to the 3rd Infantry Brigade at Aldershot for six months.

Owing to stress weather the *Tenku Maru*, of the Asano Kerosene Company, had to jettison 150 cases of kerosene—out of a cargo of 400 cases—when off Haneda on Tuesday. Seventy of these cases have since floated ashore.

According to the New York papers, Mr. E. T. Mason, of New York, and Mr. Frank Coombs, of California, are the only two prominent names mentioned for the post of U.S. Minister to the Court of Japan. Mr. Coombs has been accredited to Japan before.

About half-past 9 o'clock on Tuesday night fire broke out at the village of Tsurumi, in Kanagawa Ken. Fanned by a strong northerly wind the flames spread rapidly, and twelve houses were soon destroyed. Incendiarism is said to have been the cause of the conflagration.

On Monday morning while torpedo-boat No. 1 and four others were manœuvring between Uruga and Yokosuka, a Japanese junk, known as a *godairiki*, with two *sendo*, collided with torpedo-boat No. 2 and sank immediately. One *sendo* was saved, the other is still missing.

The *Yushin Nippo* states that the Kobe Waterworks Loan has so far proved a success. The amount applied for up to the 19th inst. was 315,650 *yen*, and applications were being received continually. Applications, it is said, have been received from several foreign residents at Kobe, and foreigners at Yokohama have applied for application forms.

In connection with the celebrations to mark the completion of the sixtieth year of the Queen's reign, it has been arranged, says a London telegram appearing in Australian papers, that a service of thanksgiving shall be held on the 22nd June in the open air on the western steps of St. Paul's Cathedral, so as to avoid the necessity for her Majesty leaving her carriage. The Archbishop of Canterbury (Dr. Temple) will deliver an address on the occasion.

"Betay" was given at the Gymnasium, Kobe, on Friday evening. The *Kobe Chronicle* says that "the ladies and gentlemen who represented Mr. Burnand's exceedingly amusing farce are to be highly congratulated upon the success of their efforts. The piece went briskly, with its full share of vivacity, and without a noticeable hitch. It is an extravagantly funny piece, and 'the night was filled with laughter,' which at times many found difficult to restrain."

The British Community of Yokohama has decided to celebrate the Queen's Diamond Jubilee with an out-door fête, something on the lines of the Jubilee celebration of 1887; and to open a list to raise funds for the rebuilding of Christ Church. We regret that exigencies of space prevent us from giving a fuller report of the very interesting proceedings, and more especially Mr. Fraser's eloquent contribution to a most harmonious meeting.

The San Francisco *Chronicle* says that the President McKinley's Cabinet is composed as follows:—

Secretary of State—John Sherman, of Ohio.
Secretary of the Treasury—Lyman J. Gage, of Illinois.

Secretary of War—Russell A. Alger, of Michigan.

Secretary of the Navy—John D. Long, of Massachusetts.

Secretary of the Interior—Cornelius N. Bliss, of New York.

Secretary of Agriculture—James Wilson, of Iowa.

Postmaster-General—James A. Gary, of Maryland.

Attorney-General—Joseph McKenna, of California.

Vernacular newspapers say that the editor-in-chief of the *Yiyu Shimbum* has been arrested in connection with the Niigata-text-book scandal. This affair is somewhat obscure. The story hitherto current is that some of the prin-

cipal book-stores of Tokyo, as the Kinko-do, the Kokkwo-sha, and so forth, being keen competitors for the business of supplying textbooks to the Niigata schools, resorted to improper methods of persuading the Text-book Investigation Committee of that prefecture to entertain their proposals. The Committee fell a victim to these wiles, and in the sequel three of its members, as well as the local agents of the Tokyo book-stores, were arrested. The matter having been brought before the Tokyo Local Court, the Judges ordered the apprehension of Messrs. Hara Ryosaburo, Sakakami Hanahichi, and Kobayashi Yoshinori, and search of their houses is said to have revealed incriminatory documents. Apparently, Mr. Kamibayashi, of the *Yiyu Shimbum*, is similarly implicated.

A dreadful mining disaster has happened at Zacatecas, Mexico. A fire broke out in the Zanamor mine, the property of the Zombrerete Company, and the flames communicated to the San Francisco mine. The principal shaft in the former is 3,300 feet deep, and a rescuing party, consisting principally of Cornish miners, went down to the bottom, but were nearly suffocated by smoke. Ten bodies were recovered by them, however, all showing signs of asphyxiation, and there is no longer any doubt that 170 miners perished. Zacatecas, of which the City of Zacatecas is the capital, is the great silver-producing State of Mexico. It is estimated that in the last three centuries its many mines, which were first exploited by the Spaniards in 1540, but which had previously been worked in a rude way by the Indians, have yielded over a thousand million of dollars. In the mines clustered around the City of Zacatecas, about 15,000 men are employed. The surrounding hills are supposed to be full of silver. The City of Zacatecas is situated in a deep ravine 440 miles northwest of the City of Mexico.

Captain Curnow, of the N.Y.K. *Idsumi Maru*, has been fined \$400—in default three months' imprisonment,—for refusing to go into quarantine when ordered to do so by the Hongkong Port Medical Officer on the 20th January. A case of small-pox was discovered on board the *Idsumi* when she entered Hongkong harbour, and the patient was removed to Hospital. The ship was then ordered into quarantine. The order was not obeyed and the ship went away. For the defence Mr. Looker said the captain was under the impression that the patient having been removed, there was no necessity for the ship to go into quarantine, and that it would be for the authorities at the next port he touched at to decide whether or not quarantine should be imposed. If he had been told that the law compelled him to go into quarantine, he would have obeyed the law. He carried mails for the Japanese Government and was liable to a heavy penalty if he failed to keep the scheduled time. His Worship, in giving judgment, said he could not conceive of a more gross violation of the quarantine law.

Eighteen hundred and ninety-eight will be the third centenary of Hideyoshi, the *Taiko*, who probably deserves to be ranked as the greatest soldier and statesman that Japan ever possessed. Seven years ago, an association called the Hokoku-kai was organized, for the purpose of keeping green in the minds of his countrymen the memory of the hero. Naturally the members are desirous of celebrating 1898 in some worthy manner. Their idea is to erect a *gorin-no-to*, 15 feet high, at Amida-ga-mine, in Kyoto. A sum of 150,000 *yen* is said to be required for the purpose, and 40,000 was subscribed by various noblemen some time ago. It is expected that the remainder will be raised without difficulty. Why such a large amount should be needed, we do not know. A *gorin-no-to* is simply a five storied pagoda of stone, each storey more or less elaborately sculptured. It has never been our good fortune to see an edifice of the kind that suggested an expenditure of even one-tenth of a hundred and fifty thousand *yen*. But, perhaps, if the finest white marble were used and the most ornate chiselling employed, the latter sum could be spent.

CORRESPONDENCE.

THE DIAMOND JUBILEE CELEBRATION.

TO THE EDITOR OF THE "JAPAN MAIL."

DEAR SIR.—Much as I would have liked, I was unable to attend the meeting of British residents held at the Consulate yesterday afternoon. To a business man 3 p.m. was a most inconvenient hour, and my regret at being unable to attend the meeting owing to pressing business engagements, is the more keen, as those present apparently split on the very rock it was most advisable to avoid. I hold and urge that all Britishers wish in some way or other to show their loyalty to our Queen and Empress, and to do so in a manner in which all may join irrespective of sect or rank. This cannot be done if the Church restoration scheme is dragged into it.

Let the Jubilee celebration be a distinct matter and the Church restoration another. In no way should we mix them up. I urge this the more as I look on the Jubilee celebration as a British affair, whilst the restoration of Christ Church is a Yokohama Episcopalian matter pure and simple. There are many amongst the Church's members of other than British nationality, and they will, I am sure, bear their share in rebuilding when asked for subscriptions, altogether apart from the celebration, or commemoration, of the record reign.

Yours truly, AN OLD RESIDENT.

Yokohama, March 23rd, 1897.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Like your correspondent "An Old Resident," I was unable to attend the meeting on Monday owing to the inconvenient time fixed upon, and adhered to, in spite of numerous protestations.

I entirely agree with the opinion expressed by "An Old Resident" that the Church scheme should in no way be identified with the celebration of Her Majesty's glorious reign. Let all British subjects contribute according to their means towards the necessary heavy expense of providing a suitable observance of the day itself; and let the promoters of the Church scheme and their supporters carry on that undertaking on its merits alone.

Yours truly,

ANOTHER RESIDENT.

Yokohama, March 24th, 1897.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I fully endorse the remarks in the letter appearing in to-day's *Mail* from "An Old Resident," and I would crave space to say in addition, that while, as he says, there may be many Episcopalian Churchgoers here who, although not British, will in all probability be willing to contribute towards the re-building of Christ's Church quite independently of the Jubilee, there are probably quite as many British subjects who are either not Episcopalian, or from conviction (like myself), do not attend Church at all, and to whom therefore such a method of celebrating what ought to be purely a national and secular demonstration appears utterly distasteful when diverted into what is now not only a religious but a sectarian channel.

If there are others holding the same views as myself, I think now is the time they should add their opinion and protest, to that of

A BRITISH SUBJECT.

Yokohama, March 24th, 1897.

THE DIAMOND JUBILEE.

WHAT YOKOHAMA INTENDS DOING.

The Court-room at the British Consulate, Yokohama, was crowded with a large gathering of British residents on Monday afternoon, the meeting having been called by Jas. Troup, Esq., H.B.M. Consul, for the purpose of considering what form the celebration of Her Majesty's Diamond Jubilee should take in Yokohama. Her Majesty's Consul was voted to the Chair, and among those present were Sir Ernest Satow, K.C.M.G., H.B.M. Minister; Messrs. J. A. Fraser, Jas. Walter, R. D. Robison, W. B. Walter, J. P. Mollison, A. C. Read, H. Vincent, Rev. E. C. Irvine, W. F. Mitchell, J. P. Reid, J. T. Griffin, E. F. Kirby, J. G. Gargan, P. E. F. Stone, F. Owston, A. Owston, C. Klugsell, H. Neville, H. Eddison, L. Healing, H. Moss, J. Esdale, C. J. Strome, B. Hyde Pearson, R. S. Schwabe, N. Walter, F. E. White, E. B. S. Edwards, C. D. Moss, Jas. Dadds, H. J. Snow, C. B. Dunlop,

G. Sale, C. M. Duff, A. J. Wilkin, H. M. Bevis, H. C. Litchfield, A. B. Walford, J. R. Parsons, R. N. St. John, F. S. James, F. J. Hall, T. Thomas, W. Y. Showler, F. H. Hooper, C. K. M. Martin, and many others.

The CHAIRMAN having briefly opened the proceedings, Mr. Chalmers was appointed acting secretary of the meeting.

The preliminaries of the meeting were arranged, and then

Mr. J. A. FRASER rose and expressed a hope that the gathering would come to some decision as to what form the celebration of the Diamond Jubilee day should take. If those present were in favour of an out-door fête he would cordially support the proposal. He also hoped that something more solid and permanent would be done to commemorate the record reign of Her most gracious Majesty, and in this respect he thought that no more fitting, or more suitable, form could be devised than the raising of funds wherewith to restore Christ Church. A fund had already been opened, he knew, and this had been liberally subscribed to. Of course they were not all of one way of thinking in regard to a matter of this kind, still as British residents they might feel willing to give a moiety of their subscriptions toward such an object. Christ Church was one of the oldest public buildings in the Settlement and was beginning to look very dilapidated and feel the burden of its years. He did not wish to be understood as implying that the place was dangerous but expert opinion had been obtained in the matter, and that was adverse. In an eloquent peroration, Mr. Fraser sketched the salient features of Her Majesty's long reign in regard to the development that has taken place during its course in science, morals, learning, arts, and the humanities generally, and in conclusion, after a passing reference to the piety that has ever been the distinguishing characteristic of the Queen, expressed a hope that the meeting would do something for the cause he had advocated. The speaker resumed his seat amid well-merited applause.

The Rev. E. C. IRWINE, who heartily approved of an out-door celebration of the day, thought that the matter should not be decided by any small minority. He took his hearers back in recollection to the meeting held in 1887, when the Victoria Public School scheme was carried by a few, though many in the room, amongst them himself, were opposed to the scheme. In reference to the Church Rebuilding project referred to by Mr. Fraser, the speaker announced that several subscriptions had already been received, among them being \$500 from Sir Ernest Satow, who was heartily in favour of the project, and much more had been promised within the past few days. The present Christ Church was built in 1862 on land leased in perpetuity, by the joint efforts of the British Consular and Diplomatic bodies and subscriptions of the residents. Under the deed of trust it belonged to the community and anyone, of whatever denomination, was eligible for election on its governing body, provided they were subscribers to the church and had resided in Yokohama for six months. The reverend gentlemen then described more particularly the rights of the community in the Church and the provision made in the Trust for the perpetual provision there of seats for the Diplomatic and Consular Services. He concluded by urging the importance of rebuilding Christ Church upon the meeting.

At a hint of the Chairman,

Mr. FRASER rose to put his suggestion in more definite form, that a Committee be appointed to consider what form the celebration should take, and report at a subsequent meeting. He was in favour of an out-door gathering where all could meet together and make the day a harmonious success. The question of the Church might also be considered.

Mr. WILKIN asked what the cost of a new Church would be? The Committee should have full powers to ascertain that.

Mr. J. T. GRIFFIN rose and said he thought that that meeting should decide whether a celebration should take place or not. He reminded those present of the Jubilee celebration of 1887. It began with a service at Christ Church, at which all nationalities were represented; then there were sports on the Cricket-ground, while in the evening two entertainments took place, theatricals at the Public Hall, and a ball at the Naval depot. He thought that on this occasion a similar scheme should be organised, only it should be more so. He put this forward as an amendment.

Mr. SCHWAB seconded.

Mr. WILKIN seconded Mr. Fraser's motion, Mr. Fraser accepting Mr. Wilkin's suggestion that the number of the Committees should be 15.

Mr. W. B. WALTER saw no direct conflict between the amendment and the original proposal. If all were agreed that a celebration should be

organized then they could proceed to elect a committee. It was for that meeting to say whether there should be a celebration or not.

Mr. GRIFFIN said that that was his idea. He thought they all were of opinion that something should be done, and it was merely necessary to elect a Committee to determine how it should be arranged.

The CHAIRMAN thought the proposals were not quite consistent, and a short discussion ensued. Eventually Mr. Griffin's proposal that a celebration should be arranged—somewhat on the lines of the 1887 affair—for the 25th June, on or about, by the British community, was carried with only three dissentients.

A question then arose as to whether the majority of those who voted understood what they had voted for, and after some little discussion it was determined that no misapprehension had been occasioned. Mr. Griffin remarking that it was evidently the sense of the meeting that the Diamond Jubilee celebration should take place on or about the 25th June and should be somewhat on the lines of the fête in 1887, only more hearty and more extensive. The matter having been arranged satisfactorily the meeting proceeded to the next proposal.

The Rev. E. C. IRWINE proposed that in addition to the out-door celebration the meeting should vote upon the question of the restoration of Christ Church.—Mr. CECIL GUINNESS seconded.

Mr. GRIFFIN thought the two matters should be kept distinct. The celebration had to be arranged for three months hence; the Church restoration was a matter of years—he was afraid three years.

Mr. DUNLOP thought that at any rate the meeting could at least go so far as to provide a stone or so for the new Church.

The CHAIRMAN thought that before the matter was discussed further he would put the natural conclusion of Mr. Griffin's motion, "that a committee be appointed to take charge of the affair."

Mr. GRIFFIN thought that 15 would be a good number for a representative Committee, but eventually 20 was decided upon. The members, were nominated by various persons, and after some withdrawals the following were declared a duly elected Jubilee Celebration Committee:—Messrs. Jas. Troup, J. A. Fraser, R. Townley, E. Flint Kilby, B. Hyde Pearson, A. B. Walford, F. J. Hall, J. T. Griffin, Rev. E. C. Irwine, W. G. Bayne, H. J. Sharp, R. N. St. John, W. B. Walter, C. M. Duff, C. Chalmers, H. Tennant, W. F. Mitchell, J. P. Mollison, F. H. James, and Jas. Steward.

The Rev. E. C. IRWINE then proposed that a separate list be opened and circulated in regard to the rebuilding of Christ Church.

Mr. GUINNESS accepted this addition to the original motion.

In reply to questions, the Rev. E. C. IRWINE said that a new brick and stone church, without any unnecessary ornament, would cost, in the opinion of a well-known Tokyo architect, about \$20,000: with the addition of a tower or other luxury, to use the architect's words, it would cost another \$5,000. He added that \$3,000 had already been subscribed, while one of the Church Committee, who was going to England this year, had promised to interest old Yokohama residents, old members of the congregation, in the project.

The proposal was carried unanimously.

A discussion next ensued on the question of electing a Church Rebuilding Sub-committee. It was eventually decided to appoint eight members, with power to increase their numbers to ten: they were:—Messrs. W. F. Mitchell, J. F. Lowder, W. B. Walter, Jas. Dodds, J. A. Fraser, Jas. Walter, C. Guinness and the Rev. E. C. Irwine.

Mr. GRIFFIN next proposed that the Celebration Committee be authorised to collect subscriptions from the British communities of Yokohama and Tokyo, and that the Tokyo community be asked to join with Yokohama in the celebration. This having been carried, the meeting closed with votes of thanks to the Chair and Mr. Chalmers.

ASIATIC SOCIETY OF JAPAN.

ORIGIN OF THE JAPANESE RACE.

A meeting of the Asiatic Society was held at the Parish Building, Tsukiji, on Wednesday, March 17th, at 4 p.m. Dr. Divers occupied the chair.

After the preliminary business had been transacted, the CHAIRMAN called on Rev. Isaac Dooman to read his paper on the Origin of the Japanese Race. Of this paper the following is an abstract:—From the very dawn of history to the present

day two distinct races and people have inhabited Japan. One of the two represents the most active, progressive and lively impulses of human nature, as the other does the most passive and dormant. But these two races, so opposite to each other in all their mental faculties, possess some striking facial resemblances, and to a certain extent linguistic kinship also, so that many European scholars who have investigated the subject have reached the conclusion that they both belong to the same racial family. Dr. Rein, summarizing the opinion of German scholars, says: "the Ainos are Mongolians who differ less, perhaps, from the Japanese, than the Germans from the Roumanians, though the straight eyes, and firm features, and above all the strong growth of the beard among the men, lends to them a certain likeness to Europeans. This is only apparent, and disappears on a nearer examination." To this I would answer that there is more resemblance between the Semitic Jew and Aryan German than there is between the Ainos and Japanese. The differences between the Semitic and Aryan races, if deeply studied and investigated, will be found mostly to be the differences of the stages of existence through which they have passed, and nothing more. We find that they both have been governed and guided by the same laws of progress. The grafting of the religion, or language, or any ideas of one race upon another can be accomplished without any appreciable difficulty. In art we find that Greece was nothing but a refined Egypt, and Egypt nothing but a grander Assyria. Notwithstanding this close kinship and sympathy of ideas and thought between them, still we have been accustomed to ascribe them to two different and distinct races, and strive to find the peculiarities, linguistic, physical and mental of each.

Judging by the standard which separates the Semitic from the Aryan, the French from the Syrian, we are obliged to separate the Japanese and Ainos into two distinct races. The study of ethnology requires a very large field of investigation. One country is not sufficient. If we take at present the continent of Asia and exclude the two above-mentioned races—Semitic and Aryan—there still will remain two centres, so to speak, which have for ages been the habitation of two races. These two centres are the territories lying to the north of the Himalayan chain, and the territories lying to the south. The peoples inhabiting land north of this famous chain have gradually developed into large communities which have eventually become powerful nations and played considerable parts in the drama of human civilization. Consider the Turkish empire, Hungary, the Central Asian civilization, and empires, the Mongols, the Tibetans, the Chinese, till we come to the Koreans, the closest neighbours of the Japanese. While the nations inhabiting the South Himalayan territories, mainly India, do not possess any aptitude for progress, nor have manifested any inclination for adapting a higher form of life than that with which they have been surrounded for centuries. To-day the aborigines of India are in just as low a strata of civilization as they were a couple of millenniums ago, when the Vedic Aryans met them for the first time in their migrations to the South; and described them as "stupid," "barbarians," "godless," "eaters of raw flesh," &c.

In my opinion the present Aino belongs to this South Himalayan race, which must have migrated to Japan in same pre-historic age. Lyall, in his "Principles of Geology," speaks of the connection of Japan with the mainland, and as a proof of this, Wallace who devoted years of labour to the study of the fauna of the islands of the Asiatic archipelagoes, states that Japanese snakes have an Indian origin, and must have immigrated here before the formation of the country.

Physical similarity between the Ainos and the aboriginal Indian is far greater than that between the Aino and Japanese. And those features—"straight eyes," "firm features," strong growth of the beard," which makes Dr. Rein find some ephemeral similarity between them and Europeans are Indian, that is aboriginal Indian features, and not European.

In the language also we find considerable similarity between the Aino and Japanese, although both are classified as agglutinative. Mr. Chamberlain has gone into this subject, and the reader is referred to "The Language &c., of the Ainos."

After this I think, it is not difficult to identify the Japanese nation with the North Himalayan nations. The similarity of language is very striking. Mr. Aston has brought out in a small pamphlet, the affinities between the Japanese and Korean; and here I shall give a few instances of close resemblance between the Japanese and Turkish—two distant branches of the North Himalayan race. The Turkish language

for several centuries falling under the influence of the Arabic and Persian,—one a Semitic the other an Aryan language, and feeling its poverty, naturally—tried to borrow extensively from them. Hence in the Turkish we find a good illustration of the gradual development of a language from its agglutinative grammar to an inflectional one. If we take the Turkish verb *Achmak* "to open," Japanese *acheru*; we find that in the Archaic Turkish the present tense is simply like the Japanese was a *chiyoer* "I open," the persons and numbers were developed afterward in imitation of the Persian and Arabic languages. Then again, the position of the words in a sentence, and especially the principal feature of all agglutinative languages, namely, the chaining of the sentences together by means of the gerundial form of the participle instead by means of conjunctive particles. To illustrate this allow me to give an example:—If we said "I went to Yokohama, drank a glass of water and came back" in the spoken Japanese, the archaic Turkish would be:—*Jap. Yokohama ye itte mizu ippai nonde kairimasho.* Turk. *Yokohama ya gedab soo ichaab hayithin.* In any two other languages of the same family, take French and English, this sentence would not possess more elements of kinship than in the above mentioned two North Himalayan languages.

Beside the language we find all the features, mental and physical, which distinguish the North from the South Himalayan not only dormant present in the Japanese nation and people, but fully developed, as is manifest in the arts, science, and all the institutional organizations which separate a civilized from a savage race.

The question will occur, whether, there has not been any primeval racial connection between the North and South Himalayan races, between the primeval Japanese and primeval Aino? In all probability there is: but the subject is beyond the sphere of the present paper.

Dr. DIVERS, after thanking the reader for an interesting contribution, invited those present to offer remark upon it.

Sir E. SATOW said he had not had the advantage of hearing the earlier portion of Mr. Dooman's paper, having come in late, but he gathered that he based his theory of the origin of the Japanese race upon what might be called mental characteristics, philological grounds and probably also upon physical comparisons. On the last of these he did not feel competent to speak, as it seemed to be within the exclusive province of the biologist. With regard to mental characteristics, he thought it would be found that there was not such a complete uniformity amongst Japanese; in different parts of the country as to warrant the assumption that they were a homogeneous race. The test of language seemed to him apt to prove fallacious. It by no means followed that all the populations speaking the same tongue were sprung from one stock. The French, Italians, Spaniards and Portuguese spoke languages which were all derived from the Latin, but no one would maintain that they were identical in origin. For instance, the descendants of the Franks had completely lost the Germanic speech of their forefathers. There was a fourth line of investigation to which he thought attention should be directed, namely national traditions. As Mr. Chamberlain had shown, chiefly from the evidence of place names, the race of which the Ainos were the surviving remnants had at one time been spread over the whole of Japan, even as far as the south of Kinshiu, and had been gradually driven northwards till they were finally expelled. The process in fact had gone on down to historical times, when the greater part of the main island north of Tokyo was peopled by the same race. In the wars that took place the men were killed and the women, probably appropriated by the conquerors, so that a substratum of Aino must be assumed. The first invaders of Japan settled according to tradition in Idzumo. They probably were a more or less civilized race, acquainted with agriculture and some of the other arts of life. After a while they were followed by other invaders coming from the south, who landed in Kiushiu, and being of a more warlike character than the previous inhabitants gradually conquered them, and overran the whole country. He was disposed thus to consider the present Japanese nation to be formed out of at least three main elements. Supposing, however, for the sake of argument, that the linguistic test was the only valid one, he would suggest that the first step was to compare the Japanese language with its nearest neighbour. He regretted that his ignorance of Turkish did not enable him to discuss the points of resemblance between it and Japanese which had been mentioned by Mr. Dooman. But it had been shown by Mr. Aston that there was a close connection be-

tween Japanese and Korean. Firstly, there was the resemblance, which might be termed physiological, between the conjugation of the verb in both languages. Then there was the interesting fact that the adjective in Korean, is conjugated as a verb, which was also the case to a large extent in Japanese. There was also the use of particles in both languages. A cursory examination of the vocabulary by the aid of a dictionary did not at first sight seem to give much result, but it must be remembered that in comparing two cognate languages it was often found that a particular word had in the course of time come to have considerable divergent uses. Such must be familiar to every student of languages, and there were many instances of the kind that would be recalled by any one acquainted with both English and German. But the fact remained that there were a good many words in Korean and Japanese which were identical in meaning. It would be observed, however, that in Korean the substantives generally ended in a consonant, whereas in Japanese they terminate at a vowel, the modern Japanese finding it almost impossible to pronounce a final consonant. He suggested as an explanation of this fact that the second race of invaders were a warlike but less civilised people than those who had learnt the language of the latter, pronouncing it, however, in accordance with their own habits of enunciation. Such cases were not infrequent: for instance, the Manchuk conquerors of China had learnt the Chinese language, but pronounced it in their own fashion, thus giving rise to the present Pekingese dialect. Welsh pronunciation of English, and Alsatian French were similar instances. As illustrations he would mention the Korean *Kom*, bear, Japanese *Kuma*, Korean *mul*, water, Japanese *mizu*. Many others might be cited. It was generally admitted that Korean, Japanese, Manchu and Mongol belonged to the same group, that of the so-called Turanian languages. An interesting observation had been made by Mr. Aston that there was a certain physiological similarity between this group and another set of languages, the Dravidian spoken in Southern India. This had suggested to him that the corresponding races had at one time inhabited the region stretching from India to Korea round China, and their intercourse had been severed by the Aryan invasion of India descending from the north-west and parting them after the manner of a wedge. But this side of the question still awaited fuller investigation. To sum up then, he thought tradition pointed to a conquest of Japan from the side of Korea, by a population settling in Idzumo and speaking a language allied to Korea. That these were followed by a race of warriors coming from the south and landing in Hiuga, it might be Malay, or perhaps a branch of that warlike and intelligent race of which a branch survived in New Zealand, speaking originally a language rich in vowel terminations, who conquered the less warlike but more civilised inhabitants they found in possession and adopted their language, with modifications peculiar to themselves. He did not know what value there might be in this theory, but he begged to be allowed to offer it for Mr. Dooman's consideration.

Mr. DOOMAN, in reply, said that he was much interested in what he had heard. The great difficulty he had found was in getting any scientific works on this subject, or any well developed theories from students of ethnology. The criticism made by Sir Ernest Satow would have great value for him and others in throwing additional light on this obscure topic.

The CHAIRMAN stated that at the last meeting a series of resolutions had been read making certain changes in the constitution. If there were no dissenting opinions he would declare these resolutions carried. As there was no opposition, the Chairman stated that they were carried, after which the meeting adjourned.

PROJECTS OF LAW.

PROJECT OF LAW FOR THE ENCOURAGEMENT OF THE DIRECT EXPORT OF RAW SILK.

(*Kiito Choku-yushutsu Shōrei Hōan.*)

Art. I.—Japanese subjects, or commercial companies of which the shareholders are all Japanese subjects, engaged in the Direct Export of Raw Silk, as specified below, to foreign countries, shall receive bounties for the encouragement of such export under the provisions of this Law:—

(a.) Silk produced in Japan.
(b.) Silk bearing a duly registered trade-mark.
(c.) Parcels of silk weighing at least 500 catties each, which have duly passed inspection at the inspecting warehouses, and which fall under one of the categories of Art. II.

Art. II.—Bounties for encouraging the Direct

export of Raw Silk shall be of the following three classes:—

Class I.—Fifty yen per 100 catties of Raw Silk.

Lustre of the highest quality; variation of weight, 2 deniers; not more than three breaks, and not more than 30 nibs.

Class II.—Thirty yen per 100 catties of Raw Silk.

Lustre of good quality; variation of weight, 3 deniers; not more than six breaks, and not more than 60 nibs.

Class III.—Twenty yen per 100 catties of Raw Silk.

Lustre of fair quality; variation of weight, 4 deniers; not more than nine breaks, and not more than 90 nibs.

[We have translated the original literally to show the Japanese method of describing the European technical terms "colour and quality," "regularity in size," "tenacity and elasticity," or "winding properties," and "cleanliness." Rendered into the terminology of the Western Silk-man, the above characteristics of first-class silk would be:—Best colour and quality; 10/12, or 11/13 or 12/14 etc. as the case might be; 80 tavelles; clean. (There is a little uncertainty about the expressions, "30 nibs;" presumably the intention is to say 30 nibs per picul, which would make the silk of excellent cleanliness).]

Art. III.—Any person fraudulently obtaining the bounty contemplated by this Law, shall be liable to a fine of from 200 to 2,000 yen; shall be required to return the bounty, and shall thenceforth cease to be eligible for a bounty.

Any person attempting, but not consummating, the crime mentioned in the above clause, shall be dealt with under the provisions of the Criminal Code relating to unconsummated crimes.

Art. IV.—In the case of a commercial company, the above punitive provisions shall be applicable to their responsible members and managers.

Art. V.—Regulations for the detailed operation of this Law shall be enacted by the Minister of State for Agriculture and Commerce.

Art. VI.—This Law shall go into force from the 1st day of the 4th month of the 31st year of Meiji (April 1st, 1898), and shall remain in force for a period of seven years, namely, until the 31st day of the 3rd month of the 38th year of Meiji (March 31st, 1905).

LAW RELATING TO CORPORATIONS OF DEALERS IN PRINCIPAL STAPLES OF EXPORT.

(*Chōyō Yushutsu-kim Dōgyō Kumiai Hōan.*)

Art. I.—Persons engaged in the business of producing, manufacturing, or selling principal staples of export may form a Corporation with others pursuing a similar occupation, or closely connected with them in trade, according to this Law.

The principal staples of export and the classification of occupations having a close connection with trade in those staples, shall be determined with the approval of the Minister of Agriculture and Commerce.

Art. II.—The object of Corporations of dealers engaged in similar business shall be to correct abuses connected with their trade, so as to maintain the credit of their wares by the united efforts of the members.

Art. III.—In case a Corporation is to be organized, its location must be previously determined, and with the consent of at least four-fifths of the persons engaged in similar occupations, a general initiatory meeting must be held, in order that the rules of the Corporation may be decided upon, and the sanction of the Minister of Agriculture and Commerce obtained thereon.

If persons of two or more different occupations propose to form a Corporation, the consent of more than four-fifths of those engaged in each occupation must be obtained.

The Minister of Agriculture and Commerce may, if he deems it necessary, define or alter the extent of the location, as well as the classification of the dealers to be admitted into a Corporation.

Art. IV.—Any person pursuing an occupation similar to that of the members of a Corporation, within the limits of the locality where such Corporation is established, must become a member of the Corporation. This provision, however, shall not apply to cases where the Minister of Agriculture and Commerce considers such membership unnecessary, in view of special circumstances connected with the occupation.

Art. V.—A Corporation may, as a legal person, hold property, or become plaintiff or defendant in law-suits.

A Corporation is not allowed to undertake money-making enterprises.

Art. VI.—A Corporation may establish a union

of several Corporations in order to facilitate mutual communications, or for the attainment of a common object.

If a Union of Corporations is to be established, a general initiatory meeting shall be held, in order that the rules of such union may be decided, and the sanction of the Minister of Agriculture and Commerce obtained.

Art. VII.—Any alterations to be made in the regulations of a Corporation or a Union of Corporations, shall be determined in accordance with the rules of such Corporation, and the sanction of the Minister of Agriculture and Commerce shall be obtained.

Art. VIII.—A Corporation as well as a Union of Corporations shall, in order to administer its affairs, appoint officials from among the members of the Corporation, and obtain sanction thereto from the Minister of Agriculture and Commerce.

All officials shall be honorary.

Art. IX.—A Corporation or a Union of Corporations may, according to its regulations, establish rules for the inspection of articles of trade held by members of the Corporation.

The Minister of Agriculture and Commerce, if he deems it necessary, may cause rules for inspection to be drawn up.

Art. X.—In case a Corporation, or Union of Corporations, deems it necessary to impose a fine or fines for violations of agreement, such fines may be fixed according to the regulations of the Corporation.

Art. XI.—Estimates of expenditure, and methods of procuring funds for the same, in the case of a Corporation or Union of Corporations, shall be prepared according to the regulations of the Corporation, and the sanction of the Minister of Agriculture and Commerce shall be obtained.

A statement of settled accounts of expenditures, and of all facts relating to debtors and creditors, as well as a report on the general condition of business, shall be presented to the members of a Corporation, and also to the Minister of Agriculture and Commerce, at least once in each year.

Art. XII.—A Corporation, or Union of Corporations, may forward a memorandum to the local administrative office with regard to its business affairs, or prepare a report embodying investigations when enquiries are addressed to it by responsible authorities.

Art. XIII.—A Corporation or Union of Corporations may not object to the process of inspection pursued by officials appointed for the purpose by the Minister of Agriculture and Commerce, and candid replies must be made to all questions put by such officials.

Art. XIV.—The Minister of Agriculture and Commerce may, if he deems it essential to the public advantage, cause a Corporation or Union of Corporations to be organised.

Art. XV.—The Minister of Agriculture and Commerce is empowered to take the following steps where he deems that the proceedings of a Corporation or Union of Corporations, or of its officials, or the decisions taken at meetings of a Corporation or Union of Corporations, are contrary to Law or Ordinance, or calculated to prove of public injury, or to be at variance with the legitimate object of such Corporation or Union of Corporations:—

1.—Dissolution of the Corporation or Union of Corporations, or suspension of its business.

2.—Re-election of the whole or part of the functionaries.

3.—Rescinding of the decisions of the Corporation.

Art. XVI.—If a Corporation, or Union of Corporations, is to be dissolved, the sanction of the Minister of Agriculture and Commerce must be obtained by forwarding a statement of the fact.

Art. XVII.—Any violation of Articles IV. and XIII., or failure to contribute to the expenses of a Corporation, shall involve liability to a fine of not less than 2 yen and not more than 100 yen.

Fines must be imposed by order of a law court in the locality where a Corporation is established. Appeal from such order may, however, be immediately made.

Art. XVIII.—Any person who fraudulently attaches the inspection certificate of a Corporation or Union of Corporations to articles in which he trades, or who forges such certificate, or attaches a forged certificate to articles, shall be liable to a fine of not less than 5 yen and not more than 100 yen.

BONDED-WAREHOUSES LAW.

SECTION I.—GENERAL RULES.

Art. I.—Bonded-warehouses shall be used for storing all sorts of merchandise on which import dues remain unpaid.

Art. II.—Goods detained in Bonded-warehouses shall not be regarded as imported goods during the period of detention.

Art. III.—Import duties on goods held in Bonded-warehouses shall be imposed according to the quality and quantity of the goods, at the time when such goods are taken into the godown.

Art. IV.—When goods on which import charges have not yet been paid are to be taken into, or transported from, Bonded-warehouses, the same must be conveyed along roads specified by Departmental Ordinance.

Art. V.—The classification of goods that may be deposited in Bonded Warehouse shall be determined by the Minister of State for the time being.

Art. VI.—With regard to the import of goods held in such Warehouses, which are not included in these Regulations, the Customs Law and Regulations shall be applied.

Art. VII.—Goods may be stored in a Warehouse for one year from the date of entry.

Art. VIII.—In cases where bonded goods are transferred from one Warehouse to another, the period of bonding shall be calculated from the date when they were first taken into a Warehouse.

Art. IX.—In cases where goods on which import charges remain unpaid are transported, the authorities may order the owner to make provisional payment of such charges.

If the above goods fail to reach their destination within full year from the day of their landing, import duties will be collected on them.

SECTION 2.—GOVERNMENT BONDED-WAREHOUSES.

Art. X.—With regard to goods taken into Government Bonded-warehouses, a storage note shall be issued.

Art. XI.—Such storages note may be transferred by endorsement.

Art. XII.—In case a storage note is stolen, lost, or damaged, the fact must be reported to the authorities at once.

In case that a legal decision is given rendering the above note invalid, according to the provisions of the Code of Civil Procedure, a new storage note will be issued.

Art. XIII.—In case a person is found in possession of an invalid note the delivery of goods from the Warehouse will be suspended until the rightful owner of the goods has taken proper steps in connection therewith.

Art. XIV.—Goods in a Bonded-warehouse will be delivered in exchange for storage notes.

Art. XV.—In case a law suit is instituted as to the right of receiving goods from a Warehouse, the persons involved may claim a prolongation of the period of storage.

Art. XVI.—In case no delivery is taken by an owner at the expiration of the period of storage, the goods will be regarded as unclaimed, and the authorities will advertise their marks, numbers, names, amounts, etc.

If no one takes delivery of goods mentioned in the foregoing Article within six months from the date of such advertisement, the authorities concerned will submit the goods to public auction, so as to recover the import duties, expenses of advertisement and auction, warehousing fees, and other expenses. Should there be any surplus, the same shall be returned to the consignor.

Art. XVII.—In case there reason to fear that the goods are likely to injure other articles owing to decomposition, or other circumstances, the authorities shall advertise the fact, and issue an order that they be taken delivery of within a period specified; and if the goods are not taken away at the expiration of that period, the authorities may take steps to destroy them, and similar measures may be resorted to even within the specified term if urgent necessity arises.

No import dues shall be collected on goods so destroyed.

SECTION 3.—PRIVATE BONDED-WAREHOUSES.

Art. XVIII.—Any person who desires to carry on, by the establishment of bonded-warehouses, the business of warehousing of goods on which import charges remain unpaid, must obtain permission from the Minister of State concerned.

Art. XIX.—Owners of Private Bonded-warehouses will be under the supervision of the authorities.

Art. XX.—Owners of Private Bonded-warehouses will be held responsible for all goods placed in their charge, and will not be allowed to evade responsibility in case of natural catastrophe, loss, destruction, or theft, under any circumstances whatever.

Art. XXI.—Owners of Private Bonded-warehouses shall, according to specifications to be made by Ordinance, present either money or national loan-bonds as security for import dues to be paid on goods in their charge.

Art. XXII.—No private goods belonging to the owner of such warehouse shall be so stored and bonded.

Art. XXIII.—At the expiration of one year from

the date of storage, import duties shall be collected on the goods in the warehouse.

Art. XXIV.—Regulations for Private Bonded-warehouses, as well as warehousing fees, shall be determined by sanction of the Minister of State concerned.

Art. XXV.—Customs officers may, if they deem it necessary for purposes of supervision, inspect goods or account books of the warehouses, and similar inspection can be made on the spot when goods are on their way to the warehouse.

Art. XXVI.—Special licences connected with Private Bonded-warehouses will lose their validity in the following cases:—

1. When the owner of the warehouse has relinquished the business.

2. When the owner dies.

3. When the owner has been declared bankrupt.

4. When the period of special licence has expired.

5. When the Minister of State concerned has withdrawn the special licence.

Art. XXVII.—In case a special licence relating to Bonded-warehouses becomes invalid, the authorities concerned shall advertise the fact so that the owners of goods may be enabled to take due steps for recovering the same within the period specified.

This provision, however, shall not apply to cases where another person applies for a special licence to continue the business of a former warehouseman, within one month from the date of his giving up the business.

If the owner of goods fails to take steps for recovering his property even at the expiration of the term, as specified in the preceding clause, measures will be taken by the authorities to transfer the same to a Government or a private Warehouse. The expenses incurred in the transfer must be borne by the owner of the goods.

Art. XXVIII.—The owner of a private Warehouse or his successor, whose special licence has become invalid, shall not be allowed to evade responsibility for any matter relating to Bonded-warehouses, until the delivery, or transfer, of the goods has been effected.

Art. XXIX.—In case a transfer of goods has been made in accordance with the second clause of Art. XXVI., the owner thereof is bound to observe the various rules and regulations relating to private Warehouses.

Art. XXX.—The Minister of State concerned may withdraw the special licence in the following cases:—

1. When laws and orders relating to the business specified are not complied with.

2. When there is doubt that the proprietor of the Warehouse will be unable to pay the import duties.

3. When the proprietor has been found guilty of misdemeanour or crime.

SECTION IV.—RULES OF PUNISHMENT.

Art. XXXI.—No goods can be taken out of the Warehouse unless permission is first obtained from the authorities. The violation of this provision will be attended with confiscation of the goods. In case the goods have been already sold or consumed, the price thereof shall be demanded.

Violators of Art. IV. will be subjected to punishment similar to that prescribed in the preceding clause.

Art. XXXII.—No goods can be taken into the warehouse without permission of the competent authorities. Any one violating this provision will be condemned to a fine of not less than three yen and not exceeding thirty yen.

Art. XXXIII.—Any person who fixes warehousing fees or establishes a Private Bonded-warehouse without the sanction of the Minister of State concerned, will be liable to a fine of not less than five yen and not exceeding fifty yen.

Violation of the provisions of Art. XXII. will be attended by punishment similar to that prescribed in the preceding clause.

Art. XXXIV.—Any person who refuses the inspection prescribed in Art. XXV., or attempts to escape it, or throw obstacles in its way, will be fined not less than two yen and not more than twenty yen. As regards offences for which express provisions in the Penal Code are provided, the latter shall be invoked.

Art. XXXV.—This Law will be enforced on and after the 1st of May of the 30th year of Meiji (1897).

PROJECT OF LAW FOR PROMOTING DEEP SEA FISHING.

Art. I.—A sum of not more than 150,000 yen annually shall be granted by the Treasury for the purpose of encouraging Deep Sea Fishing.

Art. II.—Only vessels borne on the Shipping Register and the actual property of Japanese subjects, or of Commercial Companies of which the members and shareholders are all Japanese sub-

jects, and only vessels engaged in fishing operations in accordance with the provisions of Imperial Ordinance, shall be qualified to receive bounties under this law.

Art. III.—The vessels referred to in the preceding Article may be either of wood or of iron, and their registered tonnage must be, in the case of steamers, at least 100 tons; and in the case of sailing vessels, at least 60 tons; they must be capable of complying with the harbour regulations issued by the Minister of State for Agriculture and Commerce, and at least four-fifths of their crews must consist of Japanese subjects.

Art. IV.—Persons desirous of receiving a bounty for Deep Sea Fishing, must obtain the preliminary approval of their vessel by the Minister of State for Agriculture and Commerce.

Art. V.—The Minister of State for Agriculture and Commerce, when he deems that persons applying for bounty under the provisions of the second Article are fully qualified, shall enact regulations determining the kind of fishing to be engaged in and the places for carrying it on, and may grant a bounty for a period of not more than five years according to the following scale:—

- a. Steamers—5 yen per ton annually. Provided that, when the registered tonnage exceeds 350 tons, the rate of bounty may be increased accordingly.
- b. Sailing vessels—5 yen per ton annually. Provided that, when the registered tonnage exceeds 200 tons, the rate of bounty may be increased accordingly.
- c. Crew—10 yen annually per man. Provided that this shall not apply to members of the crew over and above the number fixed by Imperial Ordinance.

Art. VI.—Should a vessel to which bounty has been granted, fail to engage in Deep Sea Fishing for at least 5 months in a year during the bounty period, the bounty shall be withheld for that year.

Art. VII.—The following vessels shall not be eligible for bounty:—

- a. Vessels of foreign build registered subsequently to the operation of this Law and more than 5 years old.
- b. Vessels 15 years old or upwards.

Art. VIII.—The Minister of State for Agriculture and Commerce shall be competent to cause investigation to be made of the Deep Sea Fishing carried on by persons who are in receipt of bounty, and to place students of Deep Sea Fishing on their vessels.

Art. IX.—It shall not be competent for owners of vessels in receipt of bounty, according to the provisions of Art. V., or for persons succeeding them in such ownership, to sell, exchange, transmit, or mortgage their vessels to foreigners within the bounty period, or during a period of three years after the conclusion of their Deep Sea Fishing operations. Provided that this Article shall not apply to vessels on account of which the bounty has been returned, or to vessels rendered unfit for navigation by natural calamity or some other unavoidable cause, or to vessels that have obtained permission of the Minister of State for Agriculture and Commerce.

Art. X.—To defray the cost of inspecting Deep Sea Fishing operations, or of maintaining students of Deep Sea Fishing, it shall be competent for the Minister of State for Agriculture and Commerce to disburse a sum of money not exceeding one-tenth of the amount mentioned in Art. I.

Art. XI.—Persons obtaining bounty for Deep Sea Fishing under fraudulent pretence, or violating the provisions of Art. IX, shall be liable to major confinement for a period of from 6 months to 3 years, and to a fine of from 100 yen to 500 yen, and shall further be required to return the bounty money received. Persons attempting, but not consummating, the above offences, shall be dealt with under the provisions of the Penal Code relating to non-consummated crimes.

Art. XII.—The provisions of the Criminal Code relating to repeated crimes shall not be applicable to offenders against this Law.

Art. XIII.—It shall be competent for the Minister of State for Agriculture and Commerce to suspend the bounty in the case of persons violating the provisions of this Law or of any Notifications based on it.

Art. XIV.—In the case of commercial companies the above punitive provisions shall be applicable to their responsible members and managers.

Art. XV.—This Law shall go into force from the first day of the fourth month of the thirty-first year of Meiji (April 1st 1898), and shall remain in operation for 15 years.

Art. XVI.—Regulations for the detailed operation of this Law shall be enacted by the Minister of State for Agriculture and Commerce.

LAW FOR THE INSPECTION OF SILKWORM EGGS.

Art. I.—The term "silkworm eggs" in this Law is used to mean eggs for reproduction and eggs for cocoons which have to be preserved beyond one year.

Art. II.—Eggs for breeding or reproduction should be stored in boxes specially constructed for the purpose.

Art. III.—Silkworm eggs are not allowed to be produced from the following cocoons:—

1. A cocoon containing more than one worm.
2. Thin or deformed cocoons.
3. Cocoons so feeble that the weight thereof in proportion to the normal standard weight of 100, does not exceed 80 per cent. in the case of Spring cocoons, and 60 per cent. in the case of Summer and Autumn cocoons.

Art. IV.—No eggs are allowed to be prepared except by the use of cocoons produced from original seed.

Art. V.—Producers of silkworm eggs shall, at two periods, viz., directly after the cocoons are formed and eggs hatched—have an inspection of the cocoons, moths, and eggs in the case of seed, and cocoons and eggs set aside for breeding purposes.

Art. VI.—Cocoons specified by Article III. shall be preserved until this examination.

The knots of the larvae and cocoons used for the production of worms, and moths adapted for the preparation of "rearing-eggs," shall be preserved for inspection, to be made when seed is produced therefrom.

Art. VII.—Silk-worm eggs not properly certified as to quality shall not be exposed for sale or used in localities where this Law is enforced.

Art. VIII.—A Local Governor may, by sanction of the Minister of Agriculture and Commerce, grant permission for the purchase or use of rearing-eggs produced in localities other than those where this Law is enforced, if he deems it necessary to do so for the benefit of the districts governed by this Law. Provided, however, that the eggs are first examined.

Art. IX.—Local Governors may, during the silk-rearing season, send inspectors to the producers of silk-worm eggs to report on the amount of worms reared, the condition of growth, and number of sick worms, if any.

Producers of silk-worm eggs can in no way refuse to undergo such inspection.

Art. X.—The Inspectors shall be furnished with licenses to prove their authority.

Art. XI.—Inspectors are not allowed to examine eggs produced by themselves or their relatives.

Art. XII.—The expenses incurred in the inspection of eggs shall be borne by the City or Prefecture. The Treasury, however, may grant aid to half the amount of such expenses.

In the case of Hokkaido and Okinawa prefecture, the expenses shall be borne by the Treasury.

Art. XIII.—The local Governor may not enforce this Law unless he first obtains the sanction of the Minister of Agriculture and Commerce.

Art. XIV.—Violators of Articles III., IV., V., VII., and the second clause of Article VIII., will involve liability to a fine of not less than 5 yen or more than 50 yen.

Art. XV.—Any person violating Article VI. will be liable to a fine of not less than 2 yen and not more than 20 yen.

Art. XVI.—Violators of the second clause of Article IX., will be liable to a police fine of not less than 50 yen and not more than 1.95 yen.

Art. XVII.—Rules relating to the production, as well as inspection, of silk-worm eggs, as specified in this Law, will not be applied to persons who are engaged in the production of seed for domestic use.

Art. XVIII.—This Law shall not be applicable to those who, with the sanction of the Minister of Agriculture and Commerce, or the local Governor, are engaged, for scientific purposes, in the production of silk-worm eggs. Neither are these provisions applicable to eggs thus produced, nor may such eggs be sold.

Art. XIX.—The methods of inspection and minor rules for the enforcement of this Law shall be determined by the Minister of Agriculture and Commerce.

APPENDIX.

Art. XX.—This Law will be enforced from the 1st of April in the 31st year of Meiji. The provisions of Art. II., however, shall not be applied for one year after the enforcement of the Law.

Art. XXI.—The Regulations for the inspection of silk-worm eggs, contained in Ordinance No. 9 of the Department of Agriculture and Commerce, issued in the 19th year of Meiji, shall be rescinded on and after the operation of this Law.

DISASTERS RELIEF FUND LAW.

Art. I.—All Cities and Prefectures shall establish Funds for relieving sufferers by disasters.

Art. II.—Relief-funds shall be paid out only when the whole or a part of a City or Prefecture has suffered from an extraordinary disaster.

The Relief-fund may be used, with the approval of the local assembly, when a number of people suffer from the same disaster, though the extent of the disaster be limited to a small portion of the *Fu* or *Ken*.

Art. III.—The Relief-fund shall be derived from taxes in the *Fu* or *Ken* (where the system of *Fu* and *Ken* has not yet been carried into effect, the local tax will take their place), and a subsidy from the Treasury.

Extraordinary receipts, donations, and the like, of money, grain and articles may be added to be fund.

Art. IV.—When a *Fu* or *Ken* deems it necessary to impose an additional tax to the direct national tax, it may do so to the extent of $\frac{1}{100}$ of the latter (excepting in cases prescribed in other laws).

Art. V.—The Treasury will contribute for ten years after this Law has been put into operation, 300,000 yen per year. It will be paid to a *Fu* or *Ken* in proportion to the money appropriated by the same to the Relief Fund per year.

Art. VI.—In case a *Fu* or *Ken* pays out over $\frac{1}{100}$ of the Fund in relieving sufferers, the Treasury will contribute $\frac{1}{2}$ of the excess.

Art. VII.—The Relief Fund of a *Fu* or *Ken* shall stand at over 500,000 yen: it should be as much as twenty times the average amount given by the Treasury per year, for ten years, from the 20th year of Meiji, according to the Famine Relief Law.

Art. VIII.—The objects for which the Relief Fund may be applied are as follows:—

1. Food.
2. Clothing.
3. Medical Aid.
4. Temporary Shelters.
5. Aids in re-starting sufferers in trade.
6. Advances towards paying taxes.

Art. IX.—Money for food shall be spent in preparing victuals for sufferers when necessary, or in lending or giving food to those not able to support themselves on account of the disaster.

Art. X.—Money for clothing shall be spent in giving clothes to poor people or in providing them with bed-clothes for a time, when not able to afford the expense themselves.

Art. XI.—Medical expenses shall be defrayed for affording treatment to sufferers, or for giving medicines and other necessary articles to those unable to pay for them themselves.

Art. XII.—Money for temporary shelters shall be used in building sheds for those who are not able to build new houses themselves, their former homes being destroyed or submerged in water, or in providing building materials.

Art. XIII.—Grants in aid for re-starting sufferers in trade shall be applied to the giving or lending of necessary materials and implements.

Art. XIV.—When it is more convenient, ready money may be given instead of food, medicines, drugs, materials, and implements.

Art. XV.—In the following instances grants-in-aid may be given.

1. When a land-tax-payer, having no income, can not pay the land-tax on account of disaster, unless he sells his land or dwelling.

2. When a national-tax-payer who has been granted relief in the payment of the tax on account of disaster, is not able to meet his obligation, having no other income, unless he uses his capital, he shall be freed from paying the business tax or any additional tax. Besides this, he may be excused from paying the direct *Fu* or *Ken* tax (where the *Fu-ken* system has not been carried into effect the local tax will take the place of the above), and the immediate *shi* or *cho*, or *sen* tax, by instruction from the Ministers of State of Home and Finance, after the proposal has passed the local assembly.

Art. XVI.—When a county, city, town, or village, or other public body, accumulates a fund for relieving sufferers, the Governor of a *Fu* or *Ken* may grant a sum from the Relief Fund, after he has obtained the consent of the local assembly, and the permission of both the Home Minister and the Finance Minister.

In the above case, the Governor shall appoint Commissioners to look after the funds of the body.

Art. XVII.—As to the methods of controlling, or paying out, the fund, or of restoring it to its original dimensions, the permission of the Ministers of State of Home Affairs and Finance must be sought after obtaining the consent of the local Government.

Art. XVIII.—The controlling officials of the Relief Fund, are not allowed to invest the Fund except in the following ways:—

1. The buying of National loan bonds as well as local loan bonds.
2. The buying of articles to be given or lent to sufferers.
3. The depositing of the Fund in the Financial Department.
4. Depositing the money in a bank temporarily or for a certain length of time; the sum deposited shall not exceed $\frac{1}{10}$ of the whole.
5. According to law or Imperial Ordinance, they may, in special cases, lend the money or appropriate it to other uses.

Art. XXI.—Expenses connected with the control of the Relief Fund may be paid out of the Fund itself, with the consent of the local assembly of the *Fu* or *Ken*; business expenses, or expenses for lands or houses required to store articles in connection with the disaster, must not be paid out of the Fund.

Art. XX.—The accounts of the Relief Fund may be investigated at any time by the Ministers of State for Home Affairs and Finance.

Art. XXI.—Estimates of the sums taken from or paid into the Relief Fund shall be reported to the Ministers of both Departments.

Art. XXII.—This Law is to be carried into effect for twenty years from April 1st of the 30th of *Meiji*.

Art. XXIII.—All surpluses in a *Fu* or *Ken* which have been accumulated in accordance with the Famine Relief Law, (31st Ordinance of the 13th year of *Meiji*), shall be appropriated to the Relief Fund.

Art. XXIV.—This law is not to be carried into effect in Okinawa Prefecture: a different arrangement will be made there by Imperial Ordinance.

Art. XXV.—The 31st Ordinance of the 13th year of *Meiji*, and the 33rd Law relative to the profitable uses of the Central Famine Relief Fund, will become null and void from the day on which this law is carried into effect.

YOKOHAMA CRICKET AND ATHLETIC CLUB.

A NEW PAVILION TO BE BUILT.

An extraordinary general meeting of the Yokohama Cricket and Athletic Club was held at Keil's Building on Friday evening to consider the question of building a new Pavilion, and adopting several alterations in the Rules. Some time elapsed before a quorum was formed, but eventually there were present, Mr. J. P. Mollison, President, in the Chair; Messrs. A. B. Walford, (Treasurer), C. M. Duff (Vice-President and Captain of Cricket), Chandler Gibbons, F. E. White, G. H. Bain, E. J. Libeaud, W. L. Merriman, K. F. Crawford, E. F. Kilby, E. B. S. Edwards, J. B. M. Barrett, R. C. K. Johnson, H. R. Mair, G. Allcock, H. E. Hayward, C. F. McWilliams, F. H. Abel, S. Kuhn, C. S. Moss, and F. Coghill Jackson (Secretary).

The CHAIRMAN, in opening the proceedings, said that he had hoped the importance of the subject would have attracted a larger attendance, but as a quorum had been formed at last, he would declare the meeting open. The Chairman then read Rules 19 and 20 under which extraordinary general meetings are called, and then the notice summoning the meeting. He next proceeded to state that on his arrival from England, just recently, he had received a report upon the state of the Pavilion, and as a result the Committee had deemed it necessary to engage the services of an expert to give an opinion upon the state of the building. They had accordingly called in Mr. Watt. He reported that to effect temporary repairs would cost \$100, while an expenditure of \$670 would be required to put the place in order to last two years. The Chairman read the report in detail, and then continued that it seemed a waste of money to expend \$670 on the present old building. The Committee thought that they would be able to tide over the present summer at an expenditure of \$100, and that the next thing to be done was to rebuild the Pavilion as soon as possible. This was the suggestion that they now presented to the meeting. Some \$1,250 had already been subscribed towards the cost of the new building and \$400 to \$500 could be raised in the next few weeks. He expected, if the scheme was approved, that a new Pavilion could be erected by this time next year. The present Pavilion was erected in 1884 and the upper portion formed part of an older building that had once stood on the site; that would give them an idea of the age of parts of the present building. The old pavilion had cost \$759, but since then large sums had been spent upon it, for instance \$600 in 1891, and other sums at subsequent times. After a few more remarks, the Chair-

Mr. BLAD asked the probable cost of a new Pavilion.

The Chairman.—To build a suitable building of the kind the Club now requires would cost \$3,000; it might be even more.

Mr. McWILLIAMS moved that the Committee be empowered to remove the present Pavilion at the close of the season and erect a new Pavilion in its stead.

Mr. MERRIMAN having seconded, the Chairman put the proposal to the meeting and it was carried unanimously.

The next business was the alteration of various rules, due notice of which had been posted in the Pavilion. The Committee proposed that the entrance of five dollars be raised to ten dollars, with a yearly subscription of \$12; while the wording of Rule 7 was also revised.

Rule 7 was, after formal proposal, altered to read:—"That non-resident Naval and Military officers and visitors be entitled to the privileges of the Club on payment of \$3 in advance, for six months, from 1st September to the 1st March; or from the 1st April to the 31st Aug."

Mr. MERRIMAN next proposed that the entrance fee be raised to \$20. He thought that as the old members had spent a lot of money on the ground that new members should contribute something, more than they did at present, towards this object.

Mr. WOLFORD seconded.

Mr. MAIR proposed a second amendment that the entrance fee be fixed at \$15—\$20 was too high, they had better split the difference.

Mr. KILBY was opposed to a higher entrance fee than \$10.

Mr. BAIN seconded Mr. Mair's amendment, and on its being put to the meeting it was carried.

The subscription to the Cricket Club will henceforth be \$12 per year, with an entrance fee of \$15. Tokyo residents will have to pay \$6 a year, and the full entrance fee.

This closed the business of the meeting.

SPECIAL TELEGRAMS.

THE POWERS AND GREECE.

Paris, March 16.

A Declaration agreed upon by the Powers was introduced into the Chamber of Deputies on March 15th, by M. Hanotaux, the French Minister for Foreign Affairs. The Declaration was to the following effect:—

- 1.—That autonomy should be established in Crete under Turkish suzerainty.
- 2.—That both Grecian and Turkish troops should be withdrawn from the Island, except the Turkish troops stationed at certain points occupied by the Powers.
- 3.—That to maintain order, the detachments of troops from the six Powers now in Crete should be reinforced by five or six hundred men each.
- 4.—The speedy enforcement of autonomous administration in the Island.
- 5.—That in case Greece refused to evacuate the Island, she should be immediately coerced by the Admirals of the Powers.
- 6.—That the blockade of the Island should be proclaimed and rigorously applied, and, if necessary, the Admirals should be authorized to declare and employ an effective blockade to certain ports of Greece.

The Chamber voted the adoption of the Declaration by a majority of 350 against 147.

THE BLOCKADE OF CRETE.

Paris, March 22.

At 8 a.m. on the 21st inst., the six Powers commenced a general blockade in Crete for all vessels flying the Greek flag, the limits of the blockade being 23 deg. 24 min. and 26 deg. 30 min. longitude, and 34 deg. 45 min. and 35 deg. 48 min. latitude. The vessels of those Powers and Neutral States will, however, be allowed to enter the blockaded Ports and

land their cargo there, provided it is not destined for the Greek forces or for the interior of the island. The anchorage may be visited by the vessels belonging to the international fleet.

LATEST TELEGRAMS.

(FROM "JUI SHIMPO.")

HOT-BLOODED GREECE.

London, March 18.

In addition to the Regiments under the command of the Prince Royal, all the Grecian troops have been marched towards the frontiers. At Athens war-fever runs high, and it is believed that the Government will not avoid the arbitrament of war.

WHAT FRANCE INTENDS.

The French Republic is preparing to despatch 600 marines to Crete.

THE BLOCKADE OF CRETE.

The Blockade has already begun at Crete.

In case Greece remains stubborn, the United Fleet will blockade all the ports of the Piræus? as well as the Gulf of Volo.

Grecian troops in Crete have occupied Sphakia and there await orders for future movements.

ARMED GREECE.

London, March 24.

During the absence of troops abroad or on the frontiers, all able-bodied Greek citizens have been called out to carry arms for the protection of the capital and the big cities.

THE ANGLO-AMERICAN ARBITRATION TREATY.

The new Senate of the United States has made further amendments in the arbitration treaty with Great Britain, thus making it ineffective.

(FROM "LE COURRIER D'HAIPHONG.")

THE CRISIS IN CRETE.

Paris, March 3.

The Turkish gendarmes in Canea, whose pay is now in arrear, have mutinied and fired upon their officers. The colonel was killed. Detachments of Italians and Germans intervened, firing in turn upon the mutineers, five of whom were killed.

March 4.

Four French cruisers have received orders to sail from Toulon for Crete. The Creek press is unanimous in advising a firm reply to the Collective Note of the Powers.

(FROM THE "JAPAN TIMES.")

WARLIKE PREPARATIONS.

London, March 19.

The greatest activity prevails in all arsenals. A number of steamers have been chartered by the British Government to take stores to Malta, and war stores are being constantly despatched to the Cape.

Six hundred of the Seaforth Highlanders have been ordered to proceed to Crete.

The Admirals of the allied squadrons in the Levant have proclaimed the autonomy of Crete.

OCCUPYING CRETE.

London, March 20th.

A Russian regiment has passed the Bosphorus on its way to Crete.

It has been decided that British troops are to occupy Candia, French troops Sitia, and Spinalonga, whilst the Russians will occupy Retimo, and the Germans Suda Bay and Canea.

THE DIAMOND JUBILEE DAY.

Her Majesty the Queen has appointed the 25th June as a day of thanksgiving for her record reign.

THE CRETAN IMBROGLIO.

London, March 22.

The Crown Prince's Regiment has left Athens for the frontier.

Six Turkish ironclads and two torpedo vessels have left Constantinople for the Dardanelles. The departure of these vessels has created general surprise, and it is doubted if they are seaworthy.

THE GERMAN NAVY.

Notwithstanding the strongest urging by the German Government, the Reichstag has rejected the votes for the new cruisers.

STRAITS' NEWS.

Colonel Arthur Alexander has been appointed Surveyor-General to the Straits Settlements.

(FROM JAPANESE PAPERS.)

KOREAN AFFAIRS.

Söul, March 21.

The Korean Government has resolved to repay *yen* 1,000,000 of the *yen* 3,000,000 borrowed from the Japanese Government.

An investigation committee has been appointed to draw up drafts of Laws and a Constitution, with European advisers.

The exploiting of the Sansui Gold Mine, in Hamgyong-do, on the Siberian border, has been prayed for through the Russian Minister. The petitioner is a certain Russian.

Mr. Kato, Japanese *Chargé d'Affaires* in Korea, had audience with the King of Korea this afternoon and presented his credentials.

Work on the railway between Söul and Chémulpo, that was conceded to Mr. Morse, an American citizen, commenced to-day.

SIR CLAUDE MACDONALD.

Söul, March 21.

Sir Claude MacDonald is due here the day after to-morrow to present his credentials to the King of Korea.

GREECE CALMING DOWN.

London, March 23.

Although the people of Greece are greatly excited and many newspapers still discuss the situation warmly in leading articles, it is now certain that if the Turkish troops evacuate Crete the Grecian troops will do the same.

NAVAL MANŒUVRES.

Saseho, March 25.

The men-of-war attached to this Admiralty will manœuvre here for six days from to-morrow.

TARGET PRACTICE.

Wakayama, March 25.

Target practice will commence at the forts in Kitan Straits from to-day, and continue for four days.

EPIDEMIC IN FORMOSA.

Bakan, March 25.

A strange epidemic prevails at Shoka, Formosa. Some score of natives die every day, and it is feared that the epidemic is a severe form of black-death.

FIRE.

Tottori, March 25.

Fire broke out at Goraiya-mura, Nishihaku-gun, Tottori Ken, last night, and 15 houses were destroyed.

BIG PAPER MILL.

Sendai, March 25.

Capitalists of Sendai are contemplating establishing a large Paper Manufacturing Company with a capital of *yen* 200,000.

CAUGHT IN THE ICE.

Nemuro, March 23.

The *Genbu Maru*, of the Nippon Yusen Kaisha, was caught by ice in Hanazaki Bay yesterday.

FATAL FIRE.

Yokkaichi, March 23.

Fire broke out in the house of Mr. Narikawa, controller of the Suma Shrine, at three o'clock this morning, and his two sons (one 13 years and the other 7 years), were burnt to death.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

FORTHCOMING EVENTS.

Pillsbury and Showalter have signed articles for a match of seven games up, and the victor of Hastings is also under an agreement to play Lasker as the winner of the Moscow match. This seems likely to produce brighter games than pitting Lasker against a sexagenarian who was world's champion before Lasker was born. Blackburne has said that when a chess player passes his fiftieth year he must make way for younger men, and Moscow proves the statement.—*China Mail*.

ENGLAND VERSUS AMERICA.

(S. F. Chronicle, 20th February.)

The international cable match which has been the chief subject of discussion in chess circles came to a close on Saturday night, resulting in a victory for the English players by one game.

Play which commenced on Friday morning promptly at schedule time, was carried on uninterruptedly throughout that day, and at the time of adjournment the odds were greatly in favour of the English team, McCutcheon having lost his game to Jacobs, and the critics concerning the games played by Helms, Burille and Teed. Showalter and Barry appeared to be winners, while all of the other games were so close that nothing but draws were anticipated. On the following morning the Americans, with a fixed resolution to either do or die, commenced their uphill task, and fought well and bravely. Their opponents contested every inch of the way, however, and would not permit the advantage they had gained at the outset to slip from their grasp. The English team, which was selected with some difficulty, and consisted of Messrs. Blackburne, Locock, A. Kins, Lawrence, Mills, Bellingham, Blake, Jackson, Cole and Jacobs, was not considered by Americans to be as strong a combination as that pitted against them on the occasion of the last match, and great confidence was everywhere expressed at the outset in the ability of the home team to carry off the Newnes trophy for a second time. Most of the Englishmen engaged were comparatively unknown as their reputations did not extend outside of London. Blackburne, perhaps, being the only man whose name is at all familiar in this country.

Below is the score of the contest:—

Table 1—Blackburne vs. Pillsbury; two knight-defence. Drawn.

Table 2—Showalter vs. Locock; Ruy Lopez. Showalter won.

Table 3—Atkins vs. Burrill; Vienna gambit. Atkins won.

Table 4—Barry vs. Lawrence; P to Q 4. Barry won.

Table 5—Mills vs. Hymes; French defence. Drawn.

Table 6—Hodges vs. Bellingham; Ruy Lopez. Drawn.

Table 7—Blake vs. Delmar; French defence. Delmar won.

Table 8—Helms vs. Jackson; Ruy Lopez. Jackson won.

Table 9—Cole vs. Teed; P to K 4. Cole won.

Table 10—McCutcheon vs. Jacobs; counter centre gambit. Jacobs won.

Total—Great Britain, 5½ games; United States 4½ games.

Great Britain played white on the odd-numbered tables and the Americans on the even-numbered boards.

CHAMPIONSHIP OF THE UNITED STATES.

Showalter and Pillsbury came to terms on the ult., and articles of agreement were duly signed for their contest, which commenced at the Hamilton Club Brooklyn, four days later. The first game was hotly contested, being conducted on extremely scientific lines and so faultlessly that the draw which resulted was the only outcome possible. Play in the second game commenced on the 15th and after forty-two moves had been made was adjourned until the following day when a draw was agreed to. The third game was played on Wednesday, 17 Feb., and resulted in a win for Pillsbury after forty moves had been made. The present score (20 Feb.) is:—Pillsbury, 1; Showalter, 0; drawn 2.

The match, which is for a total stake of \$2,000, is to be carried on under the following conditions: The winner must score seven victories before his opponent obtains six wins, draws not counting; or if the opponent secures six wins, the victor must score ten wins to secure the stakes. The play days will be Mondays, Wednesdays, and Fridays of each week.

Lasker, before leaving St. Petersburg, is reported to have played one game with the Russian champion, Tschigorin, and, playing black, to have won an Evans gambit after a good struggle.

LATEST COMMERCIAL.

IMPORTS.

Trade generally is quiet and unsatisfactory. Yarns—Singles have had a moderate turn, also 2/42, but "Gassed" are becoming entirely. Shirtings—Some holders have got "tired" and have sold a few thousand pieces at low figures. Fancies—T-reds still move and a few Italians have been sold, all else stagnant. Woollens—Flannel, Mousselines, Cloth and Blankets all seem dead for the time being.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds. 35 inches	\$2.40 to 2.75
Grey Shirtings—9 yds. 35 inches	2.75 to 3.25
T. Cloth—7 1/2 yds. 34 inches	1.60 to 1.90
Indigo Shirtings—12 yds. 44 inches	1.95 to 2.90
Prints—Assorted, 24 yds. 30 inches	2.00 to 3.75
Cotton—Italians and Sateens Black, 32 inches	0.16 to 0.22
Velvets—Black, 35 yds. 22 inches	7.75 to 9.90
Victoria Lawns, 12 yds. 42-3 inches	0.75 to 1.00
Turkey Reds—2.0 to 2.4 yds. 24/25 yards, 30 inches	1.50 to 1.70
Turkey Reds—2.8 to 3 yds. 24/25 yards, 30 inches	1.75 to 2.10
Turkey Reds—3.8 to 4 yds. 24/25 yards, 32 inches	2.40 to 2.70
Turkey Reds—4.8 to 5 yds. 24/25 yards, 32 inches	3.00 to 3.50

WOOLLENS.

	PER YARD.
Flannel	\$0.30 to 0.50
Italian Cloth, 30 yds. 32 inches hem	0.35 to 0.41
Italian Cloth, 30 yds. 32 inches	0.30 to 0.32
Medium	0.30 to 0.32
Common	0.25 to 0.27
Mousseline de laine—Crape, 21 yds. 31 inches	0.15 to 0.22
Cloth—Pilot, 51 yds 56 inches	0.35 to 0.50
Cloth—Presidents, 51 yds 56 inches	0.50 to 0.75
Cloth—Union, 51 yds 56 inches	0.30 to 0.35
Blankets—Scarlet and Green, 3 to 5 lb. per lb.	0.50 to 0.60

COTTON YARNS.

	PER POUND.
Nos. 16, 24, Singles	\$39.00 to 41.50
Nos. 28/32, Singles	41.00 to 43.00
Nos. 38/42, Singles	45.00 to 47.00
Nos. 32, Doubles	44.00 to 46.00
Nos. 42, Doubles	49.00 to 51.00

Nos. 280, Plain	75.00 to 77.00
Nos. 2100, Plain	99.00 to 100.00

Nos. 2/60, Gassed	75.00 to 80.00
Nos. 2/80, Gassed	86.00 to 95.00
Nos. 2/100, Gassed	116.00 to 127.00

RAW COTTON.

American Middling	\$23.00 to 23.50
Indian Broach	21.00 to 22.25
Chinese	21.00 to 21.50

METALS.

Prices unchanged and the trade is very slow. Importers want to establish a rise to compensate them for the low exchange at which they have now to work: but buyers won't assist them in that direction, if they can help it.

	PER POUND.
Flat Bars, 4 inch	\$3.70 to 3.80
Flat, 4 inch	3.90 to 4.00
Round and square up to 4 inch	3.70 to 4.00
Iron Plates, assorted	3.80 to 4.00
Sheet Iron	4.80 to 5.00
Galvanized Iron sheets	9.50 to 10.50
Wire Nails, assorted	5.50 to 6.50
Tin Plates, per box	5.50 to 6.00
Pig Iron, No. 3	1.80 to 1.85

KKROSENE.

Better feeling and dealers are operating now at fair prices. About 10,000 cases have been sold, at, or near, the following quotations.

American	\$2.08 to 2.10
Russian	2.05 to 2.10
Langkat	—

SUGAR.

Brown—Arrivals exceed sales; consequently China and Formosa sorts are 25 cents lower in price. The chief business has been in Manila sorts, which hold their own well. White—Good trade at late rates.

	PER POUND.
Brown Takao	\$3.60 to 3.65
Brown Manila	4.40 to 3.60
Brown Daitong	3.45 to 3.55
Brown Canton	3.40 to 4.25
White Java and Penang	6.80 to 7.00
White Italian	7.00 to 9.00

EXPORTS.

RAW SILK.

The "boom" has continued; prices have been forced up yet further, and a large business has been done at advancing rates. The market closes strong, with diminished stocks and unwilling sellers. Spring reelings should soon make their appearance.

QUOTATIONS.

Filatures—Extra 9/11, 10/12 den.	Nom. \$850 to 860
Filatures—Extra 13/15, 14/16 den.	840 to 850

WASTE SILK.

A sudden change came o'er the scene, one or two large buyers operating on a gigantic scale. Prices of favourite descriptions have accordingly advanced to the quotations given below. About one half the stock mentioned last week has been sold *sur le champ*. Probably fresh supplies will soon be brought down from the interior.

QUOTATIONS.

Noshi—Filature, Best	\$110 to 115
Noshi—Filature, Good	95 to 105
Noshi—Oshu, Best	105 to 110

"Disfigured For Life"

Is the despairing cry of thousands afflicted with
Unsightly skin diseases.
Do you realize what this disfiguration means to sensitive souls?
It means isolation, seclusion.
It is a bar to social and business success.
Do you wonder that despair seizes upon these sufferers when

Doctors fail,
Standard remedies fail,
And nostrums prove worse than useless?
Skin diseases are most obstinate to cure or even relieve.

It is easy to claim to cure them, but quite another thing to do so.

CUTICURA REMEDIES
Have earned the right to be called Skin Specifics—

Because for years they have met with most remarkable success.

There are cases that they cannot cure, but they are few indeed.

It is no long-drawn-out, expensive experiment.

25c. invested in a tablet of **CUTICURA SOAP**

Will prove most convincing.

In short,
CUTICURA WORKS WONDERS
And its cures are simply marvellous.

SPEDDY CURE TREATMENT.—Warm baths with CUTICURA SOAP, gentle applications of CUTICURA (ointment), followed by mild doses of CUTICURA RESOLVENT (the new blood purifier).

Sold throughout the world. British Depot: F. NEWBURY & SON, 1, King Edward St., London. E. C. POTTS DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U. S. A.

March 6th, 1897.

311.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. Cox, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas—and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1897.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 3RD, 1897.

SUMMARY OF NEWS.

THE Tonghaks have again risen in Korea.
THE *Yoshino* has been ordered home from Manila.
FOUR hundred Armenians have been massacred at Tokat, Asia Minor.
LORD SALISBURY has gone to the Riviera to recuperate after an attack of influenza.
THE Osaka Railway Company will amalgamate with the Nara Railway Company shortly.
REUTERS reports severe fighting in Canea this week, involving the death of 200 insurgents.
RUMOUR says that Mr. Makino, Vice-Minister of Education, will be appointed Minister to Italy.
MR. SONE, Japanese Minister to France, is stated to have left Paris on the 27th inst. for home.
THE railway line between Takasaki and Shimoda will be opened to traffic about the 5th of April.
His Majesty the Emperor, on receipt of reports from Captain Watanabe, a military chamberlain, regarding the condition of the garrisons at

Wei-hai-wei, and the troops in Korea, sent gifts of *yen* 700 to Wei-hai-wei, and *yen* 200 to the soldiers in Korea.

LIEUT.-GENERAL YAMAZAWA, Commandant of the Fourth Army Division, died this week, of consumption.

MR. MIDZUNO, President of the Formosa Administration Bureau, leaves Tokyo for the Island at the end of April.

VISCOUNT ENOMOTO and the principal officials in the Agricultural and Commercial Department, have resigned.

It is reported that the ice on the River Ishikari, Hokkaido, has melted and vessels are now plying on the stream.

RUSSIAN and Italian reinforcements have arrived at Crete, but Germany and Austria are seemingly not sending any.

AN Austrian cruiser has captured a Greek steamer and a sailing-ship carrying volunteers and munitions of war to Crete.

FIRE broke out at Koza-gun, Kanagawa Ken, at noon on Thursday, and about 50 houses, together will 60 sheds, were destroyed.

THE police have been busy in Yokohama this week, some fifteen thieves being arrested at various places in the town and its vicinity.

RUMOUR says that Mr. Tsutsumi, M.P., who seceded from the *Kokumin Kyokai* the other day, will be appointed Governor of Miyazaki Ken.

H.I.H. THE PRINCE IMPERIAL proceeded to the Palace on Saturday morning and had audience with the Emperor and Empress, remaining till noon.

BARON HAYASHI, new Minister to Russia, and Mr. Ochiai, of the Japanese Legation in Russia, had audience with the Emperor on Monday morning.

THE new buildings of the Kanagawa Ken Ordinary Middle School will be opened about the 15th of April. Accommodation is provided for 320 students.

MR. YANO FUMIO, the new Minister to China, is indisposed, and in consequence his departure will be postponed until the end of April or beginning of May.

THE usual Cabinet Council was held on Tuesday. Count Kabayama, Home Minister, who has been indisposed for some time, took part in the discussions.

SEVERAL diplomatic appointments have been made during the week, among them being the selection of Mr. Inagaki Manjiro as *Chargé d'Affaires* in Siam.

THE Ashio Copper Mine affair is attracting considerable attention owing to the violent actions of the farmers and others living in the devastated districts.

SOME capitalists of Mayebashi and Takasaki have applied to the Authorities for permission to construct a tramway between the two towns. The capital is *yen* 150,000.

THE Powers are disagreeing as to the mode of coercing Greece. Meanwhile, public demonstrations are taking place in Athens and elsewhere which threaten war against Turkey.

THE ironclad and a second class cruiser now in course of construction in England for the Japanese Navy are to be named the *Shikijima* and the *Takasago* respectively. The two second class cruisers now being constructed in

the United States, are to be called the *Kasagi* and the *Chitose*.

THE Chitose Bank, in Shizuoka Ken, has been declared bankrupt by order of the Local Court on the ground that the Directors engaged in business prohibited by the banking regulations.

THE Yokohama Japanese Joint-stock Auction Company holds a special meeting of shareholders on the 5th April when the present capital, *yen* 50,000, will be increased to *yen* 75,000, a new branch being opened in Tokyo.

THE annual general meeting of the Yokohama General Chamber of Commerce took place on Wednesday, when interesting speeches were delivered on the Silk Bounty Law, and the future prospects of Japan's silk trade.

COLONEL FUKUSHIMA, who returned to the capital a few days ago, after travelling over 43,000 miles in Southern Asia, is to deliver a report of his journey in the presence of H.I.H. Prince Komatsu at the General Staff Office.

BRITISH residents of Kobe have decided in public meeting to circulate two lists, one soliciting subscriptions for the Jubilee fête, the other for a permanent memorial that will take the form of rebuilding the International Hospital.

THE Yokohama Town Council sat on Tuesday evening. The subjects discussed related to some reforms in the Juzen Hospital; the estimates for drainage work on the River Ooka; the estimates of income and expenditure for the thirtieth fiscal year, etc.

THE Yokohama list of subscriptions towards the Indian Famine Relief Fund closes with a total contribution of \$16,512.52. More than half of this has been subscribed by Japanese sympathisers, and among them the temples of Buddhist sects are handsomely represented.

THE farmers in the districts affected by the poison from the Ashio copper mine have resolved to take the following steps:—To forward a petition to the Government to stop the working of the mine. If this is rejected by the Government and the farmers are unable to attain their object, they are to repair to Tokyo in a band to lay the actual circumstances before the Departments of Agriculture and Commerce, of Home Affairs, or the Imperial Household, and if they still fail to obtain relief, they are to lay down their lives as a passive demonstration.

No good news is reported this week regarding Imports. There were a few enquiries for Singles, in Yarns, but little business resulted. Doubles, both plain and gassed, are stagnant, buyers hoping that notwithstanding the low exchange prices will incline further towards their ideas. The metal trade remains very quiet, tentative enquiries not resulting in much business. Arrivals of brown sugar, as last week, exceeded sales, and prices again fell, buyers only offering \$3.50 for new Tukao, to arrive. White sugar is unchanged, with steady sales and a satisfactory outlook. Kerosene is stagnant, with nothing doing. Sellers refuse to meet buyers, and the latter are not willing to stump-up at figures that would compensate for the present low exchange. In raw silk, business has been active. Spring reelings are coming in and sellers are disposed to be current. A fair number of transactions may also be recorded in waste, though the cream of the stock is pretty well skimmed. Unless stocks of better quality come in from the country, there will soon be a scarcity of desirable fibre on the market. The tea trade is naturally suspended until the new crop leaf is available. Exchange closes steady but low.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Nippon Yusen Kaisha's application for a special subsidy, says the *Jiji Shimpō*, though approved by the Government and embodied in a Bill for presentation to the Diet, has failed to obtain the consent of the latter. The Bill was not debated: it was merely shelved. Considering the alacrity shown by the Houses in passing all other Government measures, that conduct was remarkable. Some critics allege that the Company's reason for seeking a special subsidy was because it desired to use its old ships and knew that they could never pass the examination required to qualify for State aid under the provisions of the Navigation Encouragement Law. But that is mere suspicion. The fact is that the Company hesitated to organise two important and costly services without some more definite assurance than a five-years' promise of aid. It is not to be expected, however, that the Nippon Yusen Kaisha will abandon the American and European services because its application for a special subsidy has been refused. The sum that it can obtain under the Law enacted in the 9th session of the Diet does not differ very largely from the sum specially applied for. It will continue the services, and renew its application next session. Meanwhile, there can be little doubt that the experts appointed by the Communications Department to examine vessels for bounty have defeated the object of the Law which they are appointed to apply. They allowed themselves to be influenced at the outset by an apprehension that only by applying tests of great severity could the number of eligible ships be kept within the limits of the Treasury's capacity, and the result has been that scarcely any ships have qualified. That certainly is not the intention of the Law. The regulations for examination are simply a transcript of Lloyd's Regulations, but the latter are applied with discrimination not exercised by Japanese surveyors. To cling obstinately to the letter of hard-and-fast rules is to ignore the fact that progress in ship-building is perpetual. What was deemed essential yesterday, may be superfluous to-day. Nor does it follow that because the provisions of the Regulations are not exactly complied with in one respect, the deficiency may not be remedied by some speciality of construction in another direction. The fact is that any ship may be disqualified if the examiners wish to disqualify it. The *Jiji* elaborates this point in considerable detail, the upshot of its comments being that the Japanese Board of Examiners is on the wrong tack, and that it must change its methods under pain of deliberately defeating the very end contemplated by the Navigation Encouragement Law, the promotion of maritime enterprise. On the other hand, the Nippon Yusen Kaisha will be well advised if it takes warning by the attitude of the Diet towards its application. A few years ago, the Diet, while fully recognising the necessity of expanding the empire's fleets, refused the required appropriations because it was dissatisfied with the administration of the Naval Department. It appears that the conduct of the House of Representatives in shelving the Subsidy Bill must be similarly interpreted. Outsiders cannot put their finger upon this particular defect or that special fault in the administrative methods of the great steamship company. But there is a general feeling of dissatisfaction in the air; a conviction that the abuses of favoritism, of superfluous employés, of loosely controlled expenditure, and of slack management are present in a greater or less degree. The behaviour of the company is judged to resemble that of an over-indulged son, who thinks that paternal pockets will always be open whatever invasions he makes upon them. Outwardly, indeed, the company looks well ordered and flourishing. But its case may be analogous with that of many a fine mansion fairly kept and comely to view in ordinary times, but found to be not without cobwebs in corners and lumber in cupboards when the grand cleaning-up takes place at the New Year. The Nippon Yusen Kaisha had

better set its house in order. It has lost caste in public sight, and must re-establish its credit before looking for large subsidies. (The article that we have here epitomised, is of great length in the original. It occupies several columns of the *Jiji Shimpō*. And the moderation of its tone and closeless of its technical reasoning indicate the hand of an expert.)

By way of sequel to the above, the same journal writes strongly on the necessity of providing a large shipbuilding dock for Japan. Considering the circumstances of the time, it is plain that peace can be preserved only by armed preparation, and considering the circumstances of Japan, it is evident that seven-tenths of such protection must be derived from the Navy and three-tenths, at most, from the Army. The latter, indeed, may be diminished, but there certainly is not the least reason for increasing it. Nothing, then, seems more necessary to the empire than a dock where large vessels could be built. At present the State possesses only one dock that can be considered even tolerably equipped for building purposes, that at Yokosuka. A few cruisers of inferior grade have been built there. At Kure and Sasebo, repairs alone can be executed. Turning to private docks, the only one of any consequence is at Nagasaki, owned by the Mitsubishi Firm. For the rest, none is capable of turning out anything better than a thousand-ton wooden vessel. There is talk of docks at Uraga and Moji, where vessels may be constructed to earn the bounties offered by the Navigation and Shipbuilding Encouragement Law, but these enterprises are not yet accomplished facts, nor does there appear to be any hope that private initiative can be confidently trusted in this matter. Nothing presses more urgently than the construction and equipment of a really capable dock. The *Meiji* Government has done a great deal, but in this important respect it must be said to have failed. The Yokosuka Dock was planned by Oguri Kozuke-no-suke, an official of the Bakufu Government, and its first superintendent was Kurimoto Joun. In fact, it was a Tokugawa enterprise. The Nagasaki Dock was built by a Dutchman and purchased from him by the Bakufu Administration, only to be sold to the Mitsubishi Firm by the *Meiji* Government. The docks at Kure and Sasebo are mere adjuncts of the naval stations there. They were not originally intended for independent purposes of ship-building. Everybody knows the story of Peter the Great who went to Amsterdam and worked with his own hands to learn ship-building. If the Sovereign of a country with a maritime sea-board of only the Baltic and the Black Sea attached so much importance to naval affairs, what is to be said of a country like Japan which, in respect of its ocean-girt condition, has been called the Great Britain of the Orient? That the empire stands in need of a large dockyard can not be questioned. The point is, how to provide funds for the purpose. That, too, seems very plain. Let the Government sell a portion of the State railways. In point of railway construction the *Meiji* statesmen have displayed energy, and their task may be said to be virtually completed. The natural order of things would be that they should now turn their attention to ship-building. The capitalists of Osaka and Tokyo would readily put up money to buy the lines. That the dock would be profitable admits of no doubt. All the large vessels navigating Far Eastern waters are now compelled to be content with temporary repairs in the Orient: they go home to get any important work done. If Japan had fine, well equipped docks, they would certainly come here. As a matter of theory it is not desirable that the State should put its hand to enterprises for the sake of pecuniary profit, but in this case private initiative is apparently not to be relied on. It is stated that, among the ships forming the naval increment on the new programme, two cruisers of 9,000 tons each, and an iron-clad of 15,000 tons, are to be built at Yokosuka. If that plan be carried out, and if the vessels prove as successful as the *Atsuta* and *Suma*, the com-

petence of Japanese naval architects will be established. Nothing remains, then, but to provide a big dockyard.

If the King of Korea ordered a pair of boots and socks from a Tokyo store, or the Emperor of China gave a commission for figured crapes to an Osaka house, the dealers of Tokyo and Osaka would conclude that Their Majesties showed discrimination and would feel duly grateful, but it is not probable that the Japanese Representatives in Seoul and Peking would present themselves at the Courts to which they are accredited in order to convey Japan's thanks for the favour bestowed on her. Such is the dictum of the *Osaka Asahi*, by way of preface to an article denouncing the unwisdom of allowing political considerations to influence the placing of orders for ships of war. It can not be pretended that the naval ship-builders of America have had experience comparable with that of British or French builders. In theory they are doubtless quite on a level with their European contemporaries, but their practice is new. In contrast with English experts they occupy the rank of children. Yet two cruisers of over 2,300 tons each have been ordered by Japan in America. There is no attempt to conceal the fact that the order was dictated by a desire to show Japan's goodwill towards the Great Republic. If that plea has any value, then whatever gain of American gratitude may be placed to Japan's account, there must be a corresponding loss of friendliness on the part of some other nation. For example, Italy may come forward and complain that while orders have been given to England, to France, to Germany, and to America, she has been altogether left out of the list of favours, though her building capabilities are established, and though one of her agents has long been in Japan looking for a commission. The fact is that these matters ought to be regulated by business principles and by business principles only. Three things have to be considered: first, the quality of the ships; secondly, the rapidity of their construction; and thirdly, their relative cost. In the first two respects there is not the least doubt that England stands at the head of all nations. That is universally acknowledged. Possibly her charges are a little higher than those of some other builders, but nothing could be more unwise than to attach paramount importance to questions of cost in such matters. Japan ought to give her orders to England from purely practical considerations, and without any regard to politics. She is understood to have already ordered 47,500 tons of shipping under her first programme of naval expansion, and to be about to order other 48,700 tons under her second. That represents an immense outlay, and no precautions are too great to guard against errors in making it. France stands next to England as a ship-builder, in the estimation of the world, but Japan's experience of French workmanship is not wholly satisfactory. Her naval officers have cause of complaint against the *Matsushima* and the *Itsukushima*. Then there is the loss of the *Unbebi*, a catastrophe due, apparently, to defective distribution of her weights: and there is the fact that the *Chishima* had to be strengthened before Japan could take delivery of her. These experiences do not warrant the placing of any further orders in France, and if that be true of France which ranks next to England, how much truer must it be of Germany and America? Japan is spending about a hundred million *yen* on the expansion of her Navy. The money is put up with difficulty by her forty millions of people, and it is the imperative duty of her officials to see that she gets good value for it. (The *Asahi* concludes with a lengthy criticism of the methods of inspection pursued in matters of public works by Japanese officials at present, contrasting them, to their great discredit, with the methods of feudal times when men were prepared to answer for their errors with their lives.)

The fact—repeatedly urged in these columns—that if Japan hopes to gain free access to foreign capital by the sale of her public securities

abroad, she must abandon her heroic methods of finance, and invest her bonds with the character of durable securities—this fact at length finds advocacy in a vernacular newspaper. The *Yomiuri* has a leading article on the subject. It maintains that the coinage reform will not open the desired route for the inflow of Occidental capital unless Japan alters to twenty or thirty years the five-year period at the close of which her loan bonds now become redeemable. Her credit is excellent, but foreign investors do not want securities offering no prospect of anything like permanency. They do not want to have their money thrown back upon their hands at the end of a brief interval. English 2½ per cent. consols are selling at £112 to £113, from which fact it might be inferred that Japanese 5 per cent. ought to fetch something like 200. But it is doubtful whether they will bring more than their face value. Yet even Egyptian 3½ per cent. find buyers at 102 to 109, and Turkish fours are sold in London at 101½ to 102½, according to latest quotations. Can there be any doubt, in the face of these figures, that Japanese 5 per cent. would sell readily at a good premium if the conditions were suitable for investment? The *Yomiuri* strongly urges the Treasury to issue 3½ or 4 per cent., running for 20 or 30 years unredeemed, and to convert the whole of the present 5 per cent. debt. To those who contend that such a step would be a departure from the hard-and-fast financial programme of Japan's national debts, the writer urges that no programme of the kind can be, at the same time, unalterable and intelligent. The changing times bring circumstances that alter cases. It is noticeable that the *Yomiuri* speaks of the influx of foreign capital as the flowing of kindly water over parched land. We are glad to see that Japan's admission to the comity of nations is fast dispelling the last of her prejudices.

The *Chu-o Shimbun* writes on the subject of the new currency system, its object being to show that the adoption of the gold standard does not by any means place a country beyond the sensible reach of variations in the relative values of the two precious metals. The arguments used by our contemporary to prove this may be found in any recent work on political economy. They admit of no question. A gold-using nation may expect to find that the course of its exchanges with other nations remains comparatively steady, but may not expect to find the prices of its commodities guaranteed against fluctuations any more than a silver-using country can expect anything of the kind. Nay more, statistics show that whereas the prices of commodities in gold-using countries have fallen 44 per cent. since the demonetization of silver commenced, the prices of commodities in silver-using countries have risen only 13 per cent. in the same period. Thus the advantage in point of steadiness of purchasing power is emphatically on the side of silver. The course of exchange is a small matter compared with the prices of all the products and manufactures of a nation.

The *Kokumin* thinks that the Foreign Office, the Head-Quarter staff, the Army Department, the Naval Department, and the Treasury, are the five national mechanisms possessing most influence on the foreign relations of the country. It rejoices, therefore, to see that owing to the intimacy between Count Okuma and Viscount Terashima, the bonds of union between the Foreign Office and the Army have been drawn very close. The same is true of the Foreign Office and the Navy, and in this latter context our contemporary goes on to say that the Japanese Navy is daily developing greater friendship for England and fuller appreciation of English naval methods. It speaks also of Colonel Fukushima's latest travels through Asia—travels extending over 43,000 miles—and says that the great feature of his journey was the extraordinary civility that he received everywhere at the hands of Englishmen, as compared with the cold reception given to him by Russians. In all places he was

warmly welcomed by the former, and he invariably found among Englishmen a sentiment of friendly appreciation of Japan. Colonel Fukushima, our contemporary concludes, has conceived a plan of foreign policy which will doubtless receive due attention from Count Okuma.

There is talk of increasing the garrison of Formosa, but that is not the way to pacify the island. The only permanently successful and intelligent method is to practically recognise the disposition and traditional customs of the people, says the *Tokyo Shimbun*. The Japanese are apt to forget how entirely incongruous are their own progressive tendencies and the ultra-conservative character of the Chinese. They think that Japanese ideas of administration should be suitable under any circumstances, and the result is that their attempts to govern a foreign people are conspicuously unsuccessful. What they have to do is to take British methods as an example. England's principle is to reduce her interference to a minimum in governing alien peoples. She grants them local autonomy, and leaves them to follow their own manners and customs without any limitations except those of public order and good morals. That should be Japan's rôle in Formosa.

Among the Bills submitted by the Government to the Diet during the session just closed, there was a project of law providing for the encouragement of the tea industry after the same methods as those adopted in the case of silk. A subsidy of some seventy thousand yen yearly was to be granted for promoting the industry and encouraging direct export. The *Fiji Shimpō* denounces the project in unmeasured terms, and points out that the petty devices of advertising, inspection, travelling agents, and so forth, on account of which the subsidy was to have been spent, could never have accomplished anything appreciable, the real reason of the competition which threatens Japanese tea being that better and cheaper methods of production and preparation are employed in India and Ceylon. As the Bill did not come up for discussion, and the subject has now passed out of the immediate range of practical politics, we need not follow the *Fiji Shimpō's* arguments any further.

TRADE WITH GOLD-USING COUNTRIES.

On the 2nd March, Count Matsukata, Minister of Finance, explained in the Lower House of the Diet that it was useless doubting the advantages that would accrue by the adoption of the gold standard, for foreign trade would develop tremendously. In fact, the increases shown in the past eight years, he said, beginning with the 21st year of *Meiji*, would soon be eclipsed. During that period exports to gold standard countries exceeded imports from them by 11,000,000 yen, while imports from silver using countries exceeded exports to them by 10,500,000 yen. Hence he was not uneasy on the score that Japan's gold would be absorbed by other countries. According to some folks it was due to the depreciation of silver that trade had so enormously developed, the fall in the value of the white metal encouraging increase of exports. Subsequent to the reform of the monetary system in India (the 26th year of *Meiji*) and the abolition of the Sherman Act in the United States of America, silver fell to 28 pence, its lowest price. Then in the 27th year of *Meiji* it rose to 30 pence or thereabouts. The foreign trade of the country has begun to take another turn, and exports to gold-countries have decreased, and imports from them increased, as is shown by the following figures:—

	Imports.	Exports.	Excess of Exports.
The 20th year...	29,704,155.000	37,568,631.000	7,770,000
The 21st "...	45,014,213.000	49,261,305.000	4,247,092
The 22nd "...	49,705,106.000	51,473,105.000	2,768,000
The 23rd "...	46,726,106.000	36,824,651.000 (minus)	9,901,455
The 24th "...	36,177,573.000	35,287,658.000	8,890,000
The 25th "...	38,923,584.000	65,047,988.000	26,124,404
The 26th "...	46,770,406.000	58,705,001.000	11,934,595
The 27th "...	76,114,874.000	78,272,930.000	2,158,056
The 28th "...	87,481,716.000	96,018,951.000	8,537,235
The 29th "...	109,167,191.000	71,319,828.000 (minus)	37,847,363

CONTROL OF AMULETS & ALMANACKS, AND THE RESTORATION OF STATE LANDS.

An explanation appended to the Bill for controlling Amulets and Almanacks says that a Notification was issued in 1882 to prevent the surreptitious and unlicensed manufacture of amulets and the distribution of the same. But the measure proved defective, so that it is now incompetent to restrain the forgery and distribution of these objects. As to almanacks, a Notification issued in 1870, and another in 1882, sanctioned the printing and distribution of either unabridged or abridged almanacks by the Jingū office at Ise, and interdicted such undertakings by others. But there being no law to enforce the provisions of these Notifications, the Government finds it impossible to interfere effectively, even when the injunction is violated. Thus the measures for the control of Amulets and Almanacks being defective, the Government deems it necessary to enact a law with reference to these matters.

Discrimination between State and private lands was effected by Notifications No. 143, issued in 1874, and No. 3, class B., and No. 11, class B., issued in the following year. But those enactments merely indicated points for guidance in carrying out measures considered necessary for reassessing the taxable value of land, and did not supply any sufficient means of dealing with complicated cases. The result is that steps taken for discriminating between State and private lands are liable to be defective, or unsuited to the circumstances of the case. In order to employ fair and appropriate measures, a standard must be fixed by law, and, at the same time, a limit must be set to the period of receiving petitions from the people. Otherwise the security and proper arrangement of State property are scarcely attainable.

MARKET RECORD OF WAR BONDS.

In a recent issue we stated that the Treasury had issued another special installment of War Bonds, to the amount of 400,000 yen. These Bonds are a portion of the total sum of 10 million yen, the issue of which was authorized by Imperial Ordinance on Oct. 3rd, 1895. There have now been 19 installments placed upon the market, aggregating 6,127,500 yen, so that the amount remaining to be issued is 3,872,500 yen. The *Shogyo Shimpō* gives a table interesting as showing the variation that has occurred in the demand for these securities since November, 1895:—

Dates of Issue.	Amount.	Price of issue per 100-yen Bond.
17th Oct. 1895	90,000.....	100.50
25th " "	150,000.....	100.20
30th " "	40,000.....	100.30
31st " "	30,000.....	do
8th Nov. "	400,000.....	do
14th " "	50,000.....	100.70
19th " "	262,500.....	101.10
28th " "	328,000.....	101.90
9th Dec. "	60,000.....	102.50
13th " "	250,000.....	102.50
25th " "	2,037,000.....	101.50
27th " "	350,000.....	101.40
2nd April, 1896	50,000.....	98.90
6th " "	30,000.....	do
29th June "	500,000.....	100.20
26th Sept. "	300,000.....	98.70
16th Dec. "	500,000.....	98.36
26th Feb. 1897	300,000.....	99.49
26th March "	400,000.....	99.10

The Railway Council met at the Communications Department on Monday afternoon. Charters were granted as follows:—Mobu Railway (between Iwabashi and Ashikaga); Shikoku Railway (between Tadotsu and Matsuyama). Temporary charters to the Bingo Railway (between Fukuyama and Fukuchū); Iga Railway (between Yamada and Toba); Seto Keihan Railway (between Nagoya and Seto); and Hokkaido Railway (between Dazaibu and Futsukaichi-yoshii).

POLITICAL NOTES.

It is alleged that His Majesty the Emperor has expressed satisfaction at the course adopted by the House of Representatives, in presenting an Address to the Throne urging the advisability of discontinuing the Imperial grant of 300,000 *yen* annually and the subscription of 10 per cent. of official salaries, by way of aid for warship building purposes. But whether the Emperor will adopt the suggestion does not appear to be clearly known. The impression is that His Majesty will continue the donation from the Privy Purse, but will remit the official subscription in the case of all salaries below 600 *yen* annually. There is no doubt that to be compelled to pay ten per cent. of their salaries for such an object is a very great hardship to the junior classes of Japanese officials. When a man is in receipt of a hundred, or a hundred and fifty *yen*, monthly, he does not find it so embarrassing to be deprived of a tenth of his income; but when he is struggling to make ends meet with a pittance of twenty or thirty *yen* a month, and a family to support, two or three *yen* more or less makes all the difference in the world to the equilibrium of his accounts. It was owing entirely to the ill-judged obstinacy of the House of Representatives in refusing to grant appropriations for naval expansion, that the Emperor instituted this system of donation and compulsory subscription, and an evident duty devolved upon the House to undo the mischievous consequences of its former intemperance. The sum annually accruing to the Treasury from the tax upon official salaries is 1,799,519 *yen*. Payment began in the fiscal year 1893-4, and was to continue for six years, four of which have passed.

Never having sympathised for an instant with the attempts of the House of Representatives to cut down the already-too-small salaries of officials, we find the above Address a very fit and proper document. But there is no concealing its incongruity from the point of view of the House itself. From 1891 to 1894, the cry perpetually on the lips of the Representatives was *seishi setsugen*, or reduction of official expenditures; and, session after session, violent conflict took place between the Cabinet and the Lower House, owing to the latter's persistent attempts to cut down official salaries, with which the Diet has no constitutional right to interfere. It was because the Government would not agree to accept the House's dictation in this matter that the latter declined to vote the naval appropriations. Finally the Emperor adopted the sagacious course of docking official salaries to the extent of 10 per cent. for six years, and appropriating the money to ship-building purposes. Now, after the lapse of 3 years, we have the House turning round, and petitioning His Majesty to relieve officials of this tax, and to impose it on the nation at large. In other words, we have the House declaring that official salaries are not too large at all. Times change, and so does the Japanese House of Representatives. In the case of the latter, we deem it a change for the better.

We have not translated the Address to the Throne. It is a hopeless task to render such documents into English that shall convey an adequate idea of their

extraordinarily reverential phraseology without suggesting fulsomeness that does not exist in the original. Here, however, is a tolerably literal translation of the portion that embodies the signatories' arguments:—"Since peace was restored to the Orient through the illustrious Power of Your most august and excellent Majesty, the prestige of the country has risen at home and abroad; the Imperial virtue has been felt by the millions; the fortunes of the nation have been daily promoted; the resources of the people have been monthly developed. Moreover, the military preparations for national defence and the Government's plans have at last reached the stage of practical inception. The two ships *Fuji* and *Yashima* will soon arrive in Japan. Gratitude for these gifts, bestowed upon us by Your Majesty's most gracious Edict, is graven upon the hearts of Your subjects, and will be transmitted to long generations, inspiring fervent appreciation. To be the continued recipients of such benevolent favours overwhelms Your Majesty's thankful servants with solicitude. With reverence we pray that Your illustrious and most gracious Majesty will consider our humble entreaty, and be pleased to order that the Imperial donation on account of ship-building shall cease, that the payments by civil and military officials may be remitted, and that the burden be borne by the nation at large."

The Emperor's reply to the House's Address is extremely brief:—"We approve the loyalty and sincerity of the House of Representatives' Address." His Majesty never wastes words, it must be confessed. No indication is given, it will be observed, as to result of the House's procedure.

Last evening several vernacular journals published an extra saying that it had been decided that Viscount Enomoto, Minister of State for Agriculture and Commerce, should leave the Cabinet, and that his portfolio should be temporarily assumed by Count Okuma, Minister of State for Foreign Affairs. The retirement of Viscount Enomoto has been on the *tapis* for some time. It will be remembered that he and Marquis Saigo were the only members of the Ito Ministry who remained in office after Count Matsukata became Premier. It is further rumoured that Baron Kuki is likely to become Minister of Education in the place of Marquis Hachisuka, and that Baron Yasuba Yasukazu will receive the portfolio of Colonization, its present holder, Viscount Takashima, confining himself to the control of the War Department.

CYCLING COMMENTS.

Cycling literature is becoming quite a feature of the time. Installments reach us from all quarters. The Dunlop Tyre Company appear to be particularly active, though we should imagine that the reputation of that most excellent article needs no proclamation. It appears to be a general complaint among manufacturers that the public are growing slow to purchase cycles. But surely the thing is easily understood. Invention treads so fast on the heels of invention that people naturally hesitate. When they have acquired the latest thing out, as they imagine, they may find themselves old-fashioned after a month's riding. Yet, after all, such an

apprehension should not deter ordinary folk. The bike, as it appears to-day, is good enough. Only the tyre stands in evident need of improvement. It is absurd that a rider should be reducible to incapacity by such a paltry incident as a nail on the road. Happily, nails on the road are rare things in Japan, but, *per contra*, the roads are distinctly bad. The newest idea is a tyre which, in its unblown form, consists of a flat ribbon of rubber. It has bevelled edges, so contrived that when they are brought together, the pressure of the air from within seals the junction hermetically. It is an old notion. Decades ago, youths studying the elements of hydrostatics learned about a precisely similar principle without which the services of hydraulic power could never have been utilized. The advantage of this tyre is that when a puncture occurs, the strip of rubber can be laid flat and the wound treated from the inside.

It would be worth while to collect votes in Japan as to the relative merits of the American and English wheels. In England or the States a valuable verdict on such a subject could hardly be obtained. English riders have not sufficient acquaintance with the American machine, or American riders with the English. But the communities in the East are cosmopolitan: they have left many of their prejudices at home, and could probably speak impartially about bikes at all events. We have tried to collect opinions on the matter, and the net result is distinctly in favour of the English machine. Of course our American readers will dismiss the verdict as partial. Perhaps it is. But a cyclist of many years' experience and much local reputation gave us, recently, this reason for his faith:—"The American machine is not sufficiently stiff in the frame. Its deflections—not strikingly perceptible to the eye but unquestionable for all that—its deflections from a bee-line of progress represent a large waste of power. The English machine, on the contrary, runs as straight as an arrow. Every pound of driving force that you put into it is worth sixteen ounces for propelling purposes. To a man that has ridden both machines long enough to become familiar with them, the difference is enormous. The English cycle seems to carry you along like a willing steed; the American has to be driven all the time. You may object that the English machine is the heavier. But what signifies 5 or 10 lbs. in the machine itself when the man that bestrides it scales a hundred and sixty or seventy? Try the two against a steep incline. You will never be in any doubt afterwards." That sounds convincing, but, on the other hand, there are two things to be said. One is that the American cycle costs less—considerably less, now-a-days—the other, it can be repaired by Japanese mechanists. Why the Japanese workmen finds a difficulty in mending English wheels, we have not been able to ascertain. But such seems to be the fact. "Wheel Talk" says, speaking of what the leading bicycle dealer in any town ought to be:—"The sundry and repair business is no small item in a well-equipped store." Is there a store in Yokohama where English bicycles can be repaired?

Another interesting question is the best angle for road riding. Assuredly it is an unsightly thing to see a man bending over his handles as if nothing in the world con-

cerned him except the grim business of driving the machine along. That such a posture is essential for speed must be accepted as proved, but the question is road riding, where there is no occasion to "scorch," and where the weather, the landscape, and conversation are as important objects as speed or distance. Under such circumstances a straight back seems to be plainly indicated, yet, here again, we shall quote a dictum recently delivered in our hearing by a local expert:—"To ride easily and without weariness the main point is to distribute the weight of the body skilfully over the bicycle. If you sit straight up, bringing your whole avoirdupois above the hind wheel, every obstacle that you pass over sends its full jar up your spine, and a dozen miles of even a medium road tell severely on you. The true method is to bend forward so that a third of your weight falls on the bar, a third on the saddle, and a third on the pedals. Ruts and holes don't shake you up or shake you off if you are fractionally distributed in that manner over the machine."

Another reason for the hesitation now shown by buyers is that a little waiting may mean a large reduction of price. Six months ago, it was hard to buy a bicycle for less than 175 or 200 *yen*. Now, a capital machine may be had for 115 *yen*. Perhaps stocks have accumulated inconveniently. Perhaps holders fear to see their goods discredited by some new device of tyre, chain, or brake. English manufacturers, however, do not seem to be in trepidation on this latter account, or English riders either. The great makers are so full of commissions that one has to wait months before being served. A well-known rider in Tokyo ordered a machine nine months ago from the most celebrated English firm and does not hope to have the cycle for three months longer.

The Government of the Argentine Republic, inspired by silly doubts as to the ability of a lady to steer a bicycle, has enacted a law forbidding any female to use the wheel in public.

Bicycles will soon be fitted with a "retroscope," which is a little instrument attached to the handle bar to enable the rider to see behind him.

A CHARITY BAZAAR IN TOKYO.

An advertisement will be found in its place in our columns with regard to the Taki-no-Kawa Orphanage. Reference was made by us to that institution, two or three years ago, but it may be well to remind our readers that it was founded by the sole efforts of Mr. Osuka, a young Japanese philanthropist, at the time of the terrible earthquake in Nagoya and Gifu Prefectures, and that by him also it is virtually maintained. Originally some thirty orphans were taken in—children whose parents had been killed by the earthquake—but the number has grown to more than fifty. They are instructed in various manual trades, and the objects offered for sale at the Bazaar in Ueno are their handiwork. It is a really worthy charity, and those who find benevolence an insufficient motive for a journey to the cherry park, will find a complementary attraction in the Fine Arts Exhibition, which was opened on the 1st instant.

IMPERIAL RESCRIPT.

The Emperor has delivered to the Minister President the following message in reply to the Address from the House of Representatives on the subject of contributions from the Privy Purse and the salaries of officials to the building of war-ships:—

We, deeming that the matter of the national defence ought not to be neglected for a day, caused certain contributions from the Privy Purse and from our civil and military officials to be made for the purpose of supplementing the cost of ship-building. Several years have since past, and the inception of Our purpose is in sight. We have now been addressed by the House of Representatives in the sense that the payment from the Privy Purse should cease, and that the contributions of civil and military officials should be foregone. We strongly approve the action of the House. We hereby limit, from the 30th fiscal year of *Meiji*, the contributions by officials whose salaries are small, and We remit all such contributions from the 31st year. We trust that the loyalty and fidelity of Our subjects will carry the national defences to full completion, thus securing permanent tranquillity and enhancing the prestige of Our empire.

It will be observed that the Emperor says nothing about ceasing the contribution from the Privy Purse. That is evidently to continue as before. Only two more payments have to be made, however, in order to complete the six-years' term fixed by the Imperial Rescript of February 10th, 1893. By "officials whose salaries are small" His Majesty is understood to indicate all those that receive 60 *yen* or less per month. The whole body of *Hannin* officials and probationers are thus exempted, and as these naturally constitute the great majority of the contributors, it is calculated that the sum (1,795,119 *yen*) hitherto received by the Treasury will be diminished to the extent of a million *yen*.

NOTES ON NEWS.

Viscount Aoki has been very unfortunate in the matter of trade-marks and patents jurisdiction. The question is altogether insignificant from a practical point of view, but it is precisely one of those problems that touch the sentiment of the Japanese people very closely. They cannot reconcile themselves to the notion that the privileges provided by a certain Japanese law should be extended to foreigners unless its penalties are enforceable by Japanese tribunals, and the incongruity derives added force from the fact that it constitutes a corollary to the general restoration of Japan's judicial autonomy. In other words, a Treaty by which Japan is to recover her judicial autonomy has been made the occasion for giving unpleasant emphasis to her present disability. *The Nichi Nichi Shimbun* insists that Count Okuma is responsible. It avers that the Ito Cabinet had instructed Viscount Aoki not to exchange the ratifications unless he could obtain some satisfactory settlement of the jurisdiction difficulty, but that Count Okuma reversed that instruction. We do not think that our contemporary is accurate. At all events, it would have been virtually impossible to refuse the exchange of ratifications.

There has not been, so far as we know, a single instance of a foreigner's infringing a Japanese patent or trade-mark during all the years that have elapsed since Japan possessed a Law of Patents and Trade Marks. Against such infringement there has hitherto been no kind of protection. Any foreigner might have snapped his fingers at the Japanese law: no punishment would have awaited him in a

Consular Court. Does it, then, fall within the bounds of reasonable probability that infringements will take place within the next two years? Why should they? There is nothing to be gained by infringing a Japanese patent or trade-mark. What the foreigner wants is to obtain protection for his own trade-marks and patents against Japanese infringements. In point of fact he does not obtain protection under the present Japanese Law, but that is another question. The contention is that since an occasion demanding his legal restraint or punishment is most unlikely to occur during the next two years, the Japanese people need not concern themselves at all about not having secured jurisdiction over him for that time.

A correspondent—whose address we have unfortunately mislaid and whom we are therefore obliged to answer in our columns instead of by letter—asks us whether a Japanese girl can be lawfully retained in a house of ill-fame on account of a debt contracted by her there. The answer is, certainly not. The laws of Japan do not invest a creditor with any power to restrain the personal liberty of a debtor. But it is often very difficult for an unfortunate girl to break the fetters fixed on her in such a place. She herself can not be held for the debt, but her family or relatives, who have accepted the position of sureties, become liable for it, and may be sold up if she declines to discharge it by body service. Rather than bring about a catastrophe of that kind, especially if—as is usually the case—the original sacrifice was made to give pecuniary relief to family or relatives, a girl will voluntarily remain in the house of bondage for any length of time, and the proprietors of the establishment often contrive that she shall never get out of debt at all.

TOKYO MUSICAL AND DRAMATIC SOCIETY.

The Tokyo Musical and Dramatic Society held a general meeting in the Imperial Hotel on the 26th instant, Mr. G. Lowther in the chair. The attendance was not large. It appears that the Society's prospects are not very bright at present. The building hitherto lent for performances, and fitted up at considerable expense, will not be available again until January next, for being the property of the Imperial Household Department, it can not be used for theatrical purposes until the expiration of the full period of mourning for the late Empress Dowager. No other suitable building is immediately procurable in Tokyo, and it was consequently decided at the meeting that subscriptions should not be collected from the members during the current year. The accounts show that a balance of some two hundred *yen* is in hand, about seven hundred having been spent on scenery and theatrical properties, and five hundred given in charity. It was announced that Her Imperial Highness Princess Komatsu had consented to be President of the Society. The meeting voted that the Committee should be re-elected, and that certain slight alterations should be made in the rules.

"ONLY TWO YEARS MORE."

For the sake of removing some obvious misunderstandings—a task not looking very hopeful by the light of experience—we invite attention to an extract from the *Japan Gazette's* leading columns. Speaking of the session of the Diet just closed, our contemporary says:—

The only other matter of moment was the passing of the Press Law. In many respects it is a great advancement on its predecessor, conferring privileges hitherto denied to journalists, but then it contains one clause which may give rise to much dispute. It is provided that no foreigner may become the editor, printer, or publisher of a newspaper. Most of the foreign-owned newspapers in Japan are in the hands of Englishmen, but the days have long since gone by when an English Minister in Japan deemed it a duty to protect his nationals by protest. Sir Ernest Satow was notified of the fact that the bill aimed at the extinction of many businesses furnishing a livelihood to several Englishmen, but he made no sign. Yet this bill is in direct contravention of the spirit if not of the letter of the new Treaty. That Treaty was so carelessly drafted that no one seems to know what it means. It provides for the renting of factories, but not for manufacturing enterprise; it says that foreigners may enter into partnership with Japanese but must not own land, yet the owning of land may be essential to the partnership; it does say that foreigners may own shares, though the Japanese law says they may not.

This paragraph abounds with blunders. In the first place, the impression conveyed is that the Diet has just passed a Bill providing, among other things, that no foreigner may edit or publish a journal in Japan. That is a misconception. The Press Regulations, enacted and promulgated in 1887, provide (Art VI.) that "no person except a Japanese male subject shall be entitled to publish or edit a newspaper in Japan." There is a material difference between enacting that "no foreigner may become an editor, etc." and enacting that "no person except a Japanese male subject shall be entitled to publish or edit, etc." The former is an explicit discrimination against foreigners. The latter is simply a limiting definition which need scarcely have been inserted except for the sake of accuracy in drafting, inasmuch as neither the penalties nor the privileges of the Regulations could have any application to foreigners under the system of extraterritorial jurisdiction.

In the second place, the Diet is not responsible for the limiting clause. It stands in the Regulations of 1887, and has not been touched by the Diet. The Bill passed by the Diet in the session just closed was a Bill to amend certain Articles having no connection whatever with the clause in question.

In the third place, to say that "the Bill aimed at the extinction of many businesses providing a livelihood to several Englishmen" is a pure invention. The Bill aimed at depriving the Administration of power to suspend or suppress a newspaper. It had not the most shadowy concern with the nationality of the publishers, editors, or printers of newspapers in Japan.

In the fourth place, to say that "Sir Ernest Satow was notified of the fact that the Bill aimed at the extinction of many businesses carried on by Englishmen in Japan," is an absurdity, since the Bill did not aim at anything of the kind. If any person in this community carried such an extremely silly story to the British Legation, he must have been longing ever since to hide the ridicule with which he covered himself, instead of proclaiming his vertigo in a newspaper.

In the fifth place, to say that, despite the receipt of the above notification, Sir Ernest Satow "made no sign," and to

conclude that "the days have long since gone by when an English Minister in Japan deemed it a duty to protect his nationals by protest," is a statement so ignorant as to be phenomenal. Even had the Bill contained any allusion, however remote, to the nationality of journalists in Japan, Sir Ernest Satow's title to protest would have been on a par with his right to object to the ceremonies performed at the Imperial Court of Japan on national holidays. At present, the Japanese Press Regulations affect Japanese subjects only. If Sir Ernest Satow protested because the Japanese Government excluded his nationals from the privilege granted by a Japanese law whose provisions they are not bound to obey, and whose penalties could not be enforced against them, his conduct would rank above all diplomatic vagaries on record. But if he made such a protest when the question of excluding this nationality or including that was not on the *tapis* at all, his sanity would be more than doubtful.

In the sixth place, to say that "the Bill is in direct contravention of the spirit, if not of the letter, of the new Treaty," is an airy romance. The Bill has no more to do with the new Treaty than a Manx cat's tail has to do with a solar eclipse. The Japanese Diet, legislating to-day for the control, or the benefit, of Japanese subjects, has no concern with a Treaty that does not come into force before July, 1899, at soonest. The Bill relates to Japanese newspapers only: English editors and English newspapers do not come into its horizon at all.

In the seventh place, to say that the Revised Treaty allows foreigners to own shares though the Japanese law forbids them to do so, can only be regarded as a deliberate attempt to deceive the public. For whatever restrictions the laws of Japan now impose on the ownership of shares by foreigners, are based solely on the limits prescribed by the present Treaties, and will cease to be binding when the new Treaties remove those limits. It would be equally rational to discover a contradiction in the fact that the Revised Treaties provide for unrestricted travel throughout Japan, whereas the police regulations now in force direct that any foreigner travelling beyond the limits without a passport shall be arrested. In truth, the whole paragraph is a tissue of misconceptions and absurdities.

MISCELLANEOUS TOPICS.

The process of baiting the *Japan Times* has commenced. Whether it will lead to retaliation in kind, remains to be seen. What interests us is the fact that the mud-throwing began in Yokohama.

In Singapore they have fallen into a flagrant error about the new currency system in Japan. They think that bimetalism, with a fixed ratio between the precious metals, is the plan, and that both gold and silver are to be legal tender to any amount. Errors circulate much more readily than truth does.

A betting problem that seems to us to indicate a marked degree of moral obliquity has come up for solution in Hongkong. A. being about to raffle a gun at \$2, proposes to B. that they shall take a ticket between them, tossing up to determine which shall pay the \$2. B. loses and pays the money. A., however, does not raffle the gun: he sells it. B.

demands the return of the \$2, but A. declines to pay back more than \$1. The question is called "a difficult one" by the *China Mail*. Where on earth is the difficulty? Is it conceivable that A.'s original proposition could have been made, or that B. would have entertained the idea of buying a ticket, had not a raffle been intended? A.'s retention of \$1 has not the shadow of justification.

Concerning the recent revision of the Press Regulations we find the following statements in a local English contemporary:—

It is true the clause (restricting the right of publication to Japanese subjects) is not new, but bearing in view the mixed relations that the revised treaties are supposed to bring into being, and ignoring the fact of foreigners shortly coming under Japanese jurisdiction, the retention of the clause when recently legislating on the subject, is little less than a national scandal.

We may suppose that this discrimination against foreigners is the outgrowth of a notification issued many years ago in an unguarded moment, by the late Sir Harry Parkes, to please the Japanese. —for strong men have their weaknesses and make mistakes like other persons,—making it penal for any British subject to publish a paper in the vernacular. But the Japanese Government, not content with that restriction, has improved upon it by taking upon itself to legislate as to deny the right of any foreigner to edit or print a newspaper even in his own language,—an altogether intolerable denial looked at from whatever point of view it may be.

So far as we can understand these criticisms—and they leave a great deal to be desired in point of intelligibility—the contention is that, when revising the Press Regulations, the clause limiting to Japanese subjects the right of publication should have been eliminated, and the fact that it was not eliminated is called "a national scandal." That is a very curious misapprehension. The privileges that foreigners may enjoy after the Revised Treaties go into operation, have nothing whatever to do with laws enacted by the Japanese Diet to-day for the control of Japanese subjects. Had the Diet rescinded the restriction in question, the result would have been that any foreigner would have become entitled to publish forthwith a Japanese newspaper in Japan without observing the provisions of the Japanese Press Regulations. Under such circumstances, the names of foreigners might be registered as editors or publishers of vernacular journals, which would thus cease to be amenable to Japanese laws. More than two years have still to elapse before the Revised Treaties go into force. Privileges conferred by them on foreigners can not possibly be claimed until that time has elapsed, and to call it "a national scandal" because the Japanese Diet does not legislate for the immediate enjoyment of those privileges is quite a comical display of blundering. If such writing be calculated to induce the Japanese to grant the desired privilege when the day arrives for considering the question, they must be a peculiar people.

It is, of course, entirely false to say that "the Japanese Government has taken upon itself so to legislate as to deny the right of any foreigner to edit or print a newspaper even in his own language." The Japanese Government has not legislated with reference to any such subject. The Press Regulations of 1887 have to do solely with the publication of Japanese newspapers—that is to say, newspapers printed in the Japanese language by Japanese. The question of newspapers published by foreigners in a foreign language is, we believe, now under consideration with a view to the approaching operation of the Revised Treaties. There

has been no legislation about it. We greatly doubt whether it crossed the mind of so much as one member of the Diet that the most intemperate agitator could be silly enough to accuse him of perpetrating "a national scandal" because he did not propose to rescind a restriction just as logical and necessary to-day as it was at the time of its enactment ten years ago, and having just as little connexion with foreigners now as it had then.

JAPAN'S INDEBTEDNESS.

Japan's national debts stand thus at present:—

	Yen.
Consolidated Bonds	272,061,700
War Bonds	120,724,000
Naval Bonds	15,026,000
Railway Bonds	6,000,000
Capitalized Pension Bonds	29,881,320
Old Bonds	5,486,368
Total	349,121,388

Adding to the above the Public Undertakings Loan of 135 million *yen*, of which the first installment was issued in the fiscal year 1886-7, and the last will be raised in this fiscal year, we have a total of 485,121,382 *yen*. It is not to be assumed, however, that the State will be liable for the whole of this sum at any given time. The process of redemption goes on continuously. Until 1899, however, the volume of debt will grow. Railway loans, loans to provide capital for agricultural and industrial banks, and so forth, will swell the total faster than annual redemptions reduce it, until it amounts to 499 million *yen* in 1899. Thenceforth, according to the present programme, it will diminish steadily. The Consolidated, Naval and Railway Bonds are to be paid off by 1926; the Old Bonds by 1921; the War Bonds by 1925; the Public Undertakings Bonds by 1933, and the Capitalized Pension Bonds by 1939.

DEBATE ON THE CORPORATIONS BILL.

We have reported in full the debate on the Bill for subsidizing the direct export of silk, the measure being of such a character that much interest attaches to the views enunciated in the Diet. A similar course will doubtless be found acceptable in the case of the Bill relating to Corporations of persons trading in principal staples of export. The text of the Bill being already in our readers' hands, we proceed at once to the debate.

Viscount Soga having explained some typographical errors in the amended Bill, as handed by the Special Committee to the members, said that the Bill had received very close attention at the hands of the Committee. With regard to the expression "principal staples of export," it was necessary to explain that in fixing the limits of that definition, the Government had chosen a monetary standard: all articles the annual export of which amounted to 100,000 *yen* and upwards, were to be regarded as "principal staples of export." It appeared that there were about 55 staples belonging to that category at present. The object of the Bill, as explained in the statement of reasons, was to correct defects in production and manufacture. Unfortunately, just as Japan's products were beginning to find large favour in Western markets, these defects had interfered to destroy the country's credit and prevent the development of its resources. The best remedy seemed to lie in a measure of the kind contemplated by the Bill. He then explained the amendments suggested by the Special Committee, the chief of which were that the inspecting and other officials of the corporations should not be honorary, as the system of unpaid officials, even

if practicable, was open to many objections; and that, instead of fixing by law the fines to be inflicted on a member failing to subscribe to the expenses of a Corporation, the Corporation should be left to determine his punishment. The Committee further recommended that the "District Courts" indicated in the Bill as the tribunals by which violations of a Corporation's rules were to be judged, should be changed to "Local Courts," and that a clause should be added providing that, although an article did not belong to the category of exports, it might be brought within the purview of the new Law should a Corporation deem such course advisable. In advising that addition, the Committee's reason had been that measures to prevent faults and abuses of production or manufacture ought not to be confined to articles of export. There was no rationale for such a limitation. Besides, it might at any moment happen that an article the demand for which had hitherto been purely domestic, should become an article of export, and there ought to be latitude for meeting such a contingency. The Government approved of the Committee's suggestion in this respect, and, indeed, in all respects.

Mr. Obata inquired whether this Bill had been submitted for consideration by the High Council of Agriculture and Commerce.

Viscount Soga replied that no questions had been asked by the Committee on that subject.

The Government Delegate said that the High Council had not been consulted. But the truth was that the measure embodied in the Bill had long been under consideration in business circles, and that the opinions of several associations of practical men had been obtained. There did not seem to be any reason for special reference to the High Council.

Mr. Obata did not doubt that the matter had been submitted to associations of practical men in the localities, but in view of the peculiar character of the proposed legislation, the limitations it imposed on individual freedom and the methods prescribed for enforcing its provisions, it seemed to be precisely a case for reference to the High Council. What was the reason that reference had not been made?

The Government Delegate replied that there was no special reason other than what he had already stated. The pros and cons of the matter had long been under public consideration, and further deliberation had appeared unnecessary. The Government considered that the problem had passed out of the field of academic debate, and entered that of practical politics. Experiments of the procedure contemplated in the Bill had already been made by merchants and manufacturers, and had been attended by results sufficiently successful to warrant the proposed legislation.

Mr. Kubota said that during the deliberations of the Budget Committee, he had urged the advisability of abolishing the High Council of Agriculture and Commerce, but his proposal had been traversed by Mr. Kaneko, the Vice-Minister of Agriculture and Commerce, who had insisted on the usefulness of the Council, especially in connection with the development of the country's foreign commerce. It would appear, however, from what had just been stated, that the Department of Agriculture and Commerce itself attached little practical importance to the existence of the Council, since it failed to ascertain its views on such an important matter as the Bill now before the House.

The Government Delegate answered that what he had intended to convey was that the necessity and advisability of this legislation having been simply and convincingly ascertained, no occasion had seemed to exist for further reference to the High Council. He could not think that any inference as to the usefulness or otherwise of the Council was fairly suggested.

Mr. Obata was entirely opposed to the Bill. In the first place, he could not but condemn the procedure of the Department of Agriculture and Commerce in failing to consult the High Council. Here was a measure of the gravest character, inasmuch as it concerned the liberty of action of traders. Such a measure, if any, ought to have been submitted to the High Council. But the Department, fixing its eyes merely on the minor fact that defects and abuses existed in manufacturing and production, gave little thought to the dangerous character of the steps by which it hoped to correct those faults. The development of production and manufacture depended primarily upon the ability and capital of the producers and manufacturers, and was not a matter to be dealt with by legislation. Individual enterprise, individual inventive faculty, individual industry, and individual resources were the great and sound factors of development. But this Bill proposed to roll all individuals into one, and to destroy the value of personal initiative and personal energy. That was

not the way to promote manufacturing development. Just as the wholesome influences of competition were beginning to produce an effect, the Government proposed to destroy them by forced combinations. Doubtless there were many defects and abuses of production and manufacture, but the only sound remedy was to be found in the losses and discredit that such faults involved for individual producers and manufacturers. In the field of export industry there were to be found many persons who brought to the aid of their enterprise great inventive skill, and who, by clever devices and dexterous use of capital, produced articles that found a ready sale abroad and contributed to raise the country's reputation in foreign markets. If these men were compelled to join a corporation and to submit their goods for periodical inspection, it was manifest that much of the incentive to independent exertion would be removed. Defects and abuses on the part of clumsy or dishonest manufacturers might, indeed, be corrected, but the great source of progressive strength would be paralysed.

Mr. Mayeda Masana thought that the opponents of the Bill expressed merely their individual views, but he ventured to come before the House, not with any statement of his own opinions, but as representing the opinions universally held by manufacturers and producers in Japan. He could assure the House that there was absolute unanimity among practical men as to the necessity for legislation of the kind now under debate. If examples were required, he might refer to the case of the cotton rugs manufactured at Sakai. The trade in these articles, which promised at one time to attain large dimensions, had been fatally checked by defects of manufacture. If one set of producers obtained to *yen* for their rugs, another set applied themselves to gain access to the market by underselling, and to do that were obliged to scamp the manufacturing processes. The former had then to choose between abandoning the field, or resorting to similar devices of cheap and bad production; and thus, by degrees, competition had been directed to debasing the quality of the article instead of improving it. A hundred cognate examples might be adduced. Take the case of porcelain manufacture in the Toki district of Gifu Prefecture. Six years ago, the quantity of porcelain produced had been 300,000 articles, the total selling price being 120,000 *yen*. At present the production was four times as large, and the earnings of the potters ought to have increased correspondingly. But owing to gradual deterioration in methods of production, they received now the same return as in 1890, when their output was four times smaller. Much the same was true about paper, fancy matting, lacquered goods, and many other staples. All were suffering from defects of manufacture, and the universal demand on every side was for combinations of the nature indicated in the Bill. It was easy to understand that great manufacturers with large capitals might dislike the idea of associating in business with men of comparatively insignificant resources, and that opposition to the Bill should come from that quarter seemed natural enough. But he spoke on behalf of the whole mass of producers and manufacturers when he declared this legislation to be essential to the development of the country's resources. During the past two or three years, in official and private circles alike there had been constant talk of developing the nation's resources, but when the question turned upon practical methods of effecting that great desideratum, it appeared that the loudest talkers were conspicuously wanting in any definite policy. He might be disposed to subserve his own opinion to that of others in other matters, but as to this Bill, he must maintain his views in the face of all opposition. Probably those hostile to the measure were under the impression that they had to do with an entirely novel kind of legislation. But although no law of the kind had actually existed in the Tokugawa Administration's statutes, the principle of the proposed legislation found expression in practice, and was embodied in laws rigorously applied in many of the fiefs. Among articles then subjected to control, he might mention the rice of Higo, the paper of Tosa, the indigo of Awa, the sugar of Satsuma, the cotton of Hiroshima, the porcelain and pottery of Bishu, Kishu and Bizen, and many other staples, all of which, owing to practical application of the guild, or corporation, system had attained wide credit and commanded high prices in the market. Since the abolition of feudalism, every one of these staples had so greatly deteriorated that scarcely anything of their old reputation remained. That was because the former system had been abolished, and no substitute for it had been provided. He begged the House to lay aside theory and view the matter from a practical standpoint, and he repeated his assurances that the

views expressed by him were not merely his own, but represented the universal attitude of producers and manufacturers throughout the realm. Finally, he reminded the House that this Bill had passed the Lower House last session, but had failed to become law owing to the rising of the Diet before there had been time for the Peers to discuss the project.

Mr. Ando, Government Delegate, desired to submit for the House's consideration one or two comments upon the statements made by Mr. Obata. That gentleman had very frankly admitted that many instances of rough and crude manufacture (*sosai ranzō*) existed, but had argued that the proposed corporations would check invention and new methods by bringing all manufacturers and producers within the pale of the same inspection and control. Undoubtedly there was much justice in Mr. Obata's remarks, but it seemed that some misunderstanding existed as to the sense in which the terms "rough make" and "rude manufacture" were employed. If there were fine articles, there must also be coarse. Producers and manufacturers had to adapt themselves to the needs of their various customers. The Bill did not aim at preventing rough and cheap manufacture. The object was to impose a check upon fraudulent and dishonest methods, devised for purposes of deception and calculated to destroy the credit of Japanese products. He might instance the case of lucifer matches. It did not matter that matches should be roughly made or that the boxes containing them should be inartistic. What mattered was that they should ignite when struck; that the heads should not drop off under the slightest friction; that the boxes should not lose their shape when used for striking purposes. Yet all these defects occurred in the matches exported from Japan during recent years to Hongkong, Shanghai, Singapore, China, and so forth. The Consuls reported that the articles were useless, and so greatly had they become discredited that the promising trade built up at the outset seemed in danger of complete collapse. The same was true of *habutaye*, which at one time appeared to have a fine prospect. The manufacturers had fallen into the evil habit of using starch to give weight to the stuff, and the consequence was that, when exported to a damp climate, the silk became spotted and could no longer be dyed. Quantities of it had been returned to Japan on that account, and could not be disposed of. Lacquered articles belonged to the same category. Instead of being quite impervious to damp and impermeable by water, they "peeled" and leaked after a little exposure or use, entirely owing to fraudulent methods of manufacture. Mr. Mayeda had referred to fancy matting. He might supplement the reference by explaining that this matting should be carefully woven of rush, and dyed tastefully. Of course there were degrees of excellence, but there should be no variation in the quality of the material. In practice, however, no sooner did the good article begin to find favour, and command remunerative prices abroad, than dishonest manufacturers set themselves to pull off the coverings of old *tatami* (room mats), dye them and export them as genuine *hana-nushiro*. Of these fraudulent articles, also, quantities had been returned to Japan, and the development of honest trade was checked owing to the effect produced upon the market by such disgraceful practices. Straw braid was in like case. Immoral manufacturers did not hesitate to put only 54 or 55 yards into a bundle marked "60 yards." This a trade which owed its growth to Japanese industry and ingenuity and to Japanese manual skill, was brought into discredit by the fraud of a few unpincipled dealers. Legislative steps must be taken to protect the country's commerce against such crippling influences. Mr. Obata had told them that one effect of the proposed law would be to fetter individual freedom, and to check inventions or specialities. But the House should note that the 4th article contained a provision empowering the Minister of State for Agriculture and Commerce to relieve any merchant or manufacturer from the necessity of joining an association, and in that discretionary power a complete safeguard would be found against the danger predicted by Mr. Obata. He assured the House that it was the intention of the Government to employ all possible circumspection in enforcing the Law, and that no cause for uneasiness existed.

Mr. Murata Tamotsu declared himself a supporter of the Bill, and said that he should be glad to meet any objections that members might have to urge.

The President said that no speakers on the opposite side having sent in their names, he would at once take the sense of the House as to the Second Reading.

The Reading was voted, and the Bill was passed as amended by the Special Committee, except

that the original words "District Courts" were restored in the 17th article.

The discussion in the House of Representatives was not so thorough, probably because the Bill, in almost the same form, had been passed by the House in the preceding session.

Mr. Ogawa, President of the Special Committee, announced that the Committee recommended the Bill as amended by the Upper House.

Mr. Kusakari recalled the fact that this same Bill had come before the House last session on the closing day of the session, and that the House having passed it, Mr. Kaneko, the Vice-Minister of Agriculture and Commerce, had girt up his loins and hastened with the Bill to the Upper House, only to find that the latter had risen. Now again the Bill came before them on the last day of the session—a most singular coincidence. He had opposed it on the previous occasion and he must oppose it again now. The Government told them that the proposed Law was earnestly desired by practical men and by society at large. It was the duty of the House to ascertain the truth of that assertion. What were the newspapers saying about the Bill; even the newspapers regarded as organs of the Cabinet? He had with him a copy of the well-known *Yomiuri Shimbun*, and he would venture to read them an extract from it. (Here the speaker read portions of an article from the *Yomiuri*, denouncing the measure as altogether pernicious). The *Yomiuri Shimbun* took a similar view, dubbing the Bill a "mad measure," and many other newspapers followed suit. In the House itself they had a well known business man, Mr. Hamaguchi, and he, too, shared the opinions of the press. It was difficult to perceive upon what grounds the Bill could be said to embody the wishes of society at large. If the Bill had been submitted to the High Council of Agriculture and Commerce, and to the Chambers of Commerce throughout the country, and had received their approval, there might be some grounds for describing it as a reflection of public wishes. But it had not been so submitted. In truth, the measure might be said to have emanated from a certain association of practical men headed by a member of the House of Peers, and certainly the views of that association could not properly be construed as the views of business people in general. He did not intend to discuss the Bill minutely. That duty he would leave to Mr. Hamaguchi, whose business knowledge specially qualified him to discharge it, and who would make his maiden speech in connection with it. But a word must be said about the undue interference with individual freedom that the proposed Law would effect. The third article invested four-fifths of the traders in any district with power to compel the remaining one-fifth to enter an association and to conform with its rules, however irksome. In every branch of business the small capitalists constituted the majority. It might very easily happen that in a district where 500 persons were engaged in the trade, 400 would not possess nearly so much capital in the aggregate as the remaining 100. Yet the latter were to be placed at the former's mercy. In the case of a joint stock company special provision was made against that kind of injustice, but the Bill now before them took no account of it. (The speaker elaborated this point at considerable length, and contended that the experience of foreign countries proved such legislation to be invariably injurious to the development of industry. He did not, however, adduce any actual instances.)

Mr. Obata Iwajiro supported the Bill. He contended that where there was question of a matter of such great national importance as the export trade, hypothetical inconvenience to individuals should not be suffered to obstruct the adoption of a generally useful measure. In his own prefecture of Fukuoka, the manufacture of *habutaye* and silk handkerchiefs had promised to become a most flourishing industry, but its growth had been disastrously checked by resort to dishonest devices for giving weight to the material, the sizing used for that purpose being fatal to the silk. Recognising this, the manufacturers of Fukuoka had formed just such a corporation as the Bill contemplated, and had succeeded in effectually checking the abuse. But their labour had been fruitless, for their goods, on reaching Yokohama, were there subjected to fraudulent weighing, and sent abroad only to augment the distrust of Japanese products that was growing in foreign markets. A friend of his who had travelled in Europe and America had brought back a firm conviction that unless some drastic measure were adopted, Japan's export trade would be ruined.

The closure was put and carried, but when the

House divided on the question of taking the Second Reading at once, the votes were found equal—87 "ayes" and 87 "noes." The President gave the casting vote in favour of deferring the Second Reading for a short time.

After a brief interval, the Reading was proceeded with. The House voted to dispense with the Third Reading, and passed the Bill as amended by the Peers.

THE EUROPEAN SITUATION.

The league of European Powers is the finest farce of its time. In union there is strength, says the old aphorism, but where the Sovereigns and statesmen of civilized Occidental Powers are concerned, the world must now say, in union there is impotence. At this distance from the scene of action conjectures are almost idle, but it will probably have occurred to many people that the refusal of the Powers to entertain Great Britain's proposal for collective pressure on Turkey and Greece, may be referred to Great Britain's previous refusal to entertain Germany's proposal for a blockade of Greece's ports. Another explanation, of course, suggests itself. It is that the Powers are willing enough to work with England so long as the brunt of enforcing their mandates devolves upon her, but that they draw back as soon as their own active services are likely to be requisitioned. Hitherto the operations, or contemplated operations, had been marine, but if it comes to compelling the mutual withdrawal of Turkish and Greek troops in Thessaly, a land campaign may have to be undertaken, and neither Germany, Austria, nor France is prepared to employ troops for that purpose, while Russia, though she may be found crushing Turkey to save Greece, and for other purposes, will not be found coercing Greece to save Turkey from the doom to which that effete State is rapidly staggering. Thus far, the sole achievement standing to the credit of the United Powers is the alleged slaughter of 200 Christians—a story which, we may note *en passant*, seems to us quite incredible, the accomplishment of such a result by ships' fire being extremely unlikely. As between the modern Greek and the Turk, there is very little to choose, but prejudice is strongly enlisted against the latter, and sentiment in favour of the former. If the Turks are left alone, they will not make two mouthfuls of Greece and her armies, but Russia can not suffer Greece to be annihilated, whereas the annihilation of Turkey would be very welcome to her. Meanwhile, Great Britain's proposal, the only practical method of averting a collision that may set all Europe by the ears, indicates her honest desire to preserve peace, and the refusal of the other Powers to endorse her proposal would suggest the opposite inference in their case, were it possible to suspect them of indifference to the terrible consequences of war in modern Europe.

CHARTERED BANK OF INDIA, AUSTRALIA & CHINA.

The Agent of the Chartered Bank of India, Australia, and China, writes us as follows:—"We have this morning (April 1st) received telegraphic advice from our head office that at the approaching meeting of shareholders of this Bank, the Directors will recommend a dividend for the past half-year at the rate of 6 per cent. per annum free of Income Tax, carrying £25,000 to the Reserve Fund, making it £375,000, and £13,000 forward."

KOREAN NEWS.

The Royal Telegraph Office in Chemulpo was opened for business on the 13th of March.

During its raids last year, the "Righteous Army" in Korea burned 4,379 houses in 14 districts.

Korea has sent a commissioner (Mr. Min Sangho) to the conference of the International Postal Union in Washington.

Mr. Morse having successfully organized an American company for the construction of the Söul-Chemulpo Railway, work is to be commenced at once on the line.

Mr. Ahrendet had a narrow escape while skating at Wonsan. He broke through the ice and was in deep water for 10 or 12 minutes before some Koreans rescued him.

The merchants of Söul are agitating for the restoration of the monopoly system, and also for the (at old fashion of collecting fees from petty dealers for the pockets of big firms.

Mrs. Waeber left Söul for home on March 19th. Her departure seems to be much regretted. During the life-time of the unfortunate Queen, Mrs. Waeber is said to have been an important factor in Korean politics.

An Whan, Assistant Chief of Police, finding that Mr. A. B. Stripling, Adviser of the Police Department, was irksomely zealous in the performance of his duties, wanted to batter his head with an ink-bottle. So says the *Independent*, but Mr. Stripling utterly denies the tale.

Söul appears to have a population of 219,815 living in 45,350 houses. It is curious how closely the custom of all nations conform with the rule of 5 inmates on the average to each dwelling. There are 115,447 males in the city and 104,368 females. The number of Buddhist temples is 36; of priests, 442; and of nuns, 204.

The Korean Council of State has appointed a Committee to revise the laws, rules, and regulations of the Government Departments. It is a large body, comprising all the Ministers, several Vice-Ministers and Chiefs of Bureau, the Chief of Police, the Governor of Söul, and Mr. McLeavy Brown, General Greathouse, and Dr. Jaisohn.

Prime Minister Kim Pyengsi, whose chief occupation before the King left the Russian Legation was the tendering of his resignation, has now resumed that pastime. The King, on his part, keeps up the game of refusing His Excellency's request. If any such record exists in any other country, we have never heard of it. Kim must have resigned a dozen times within the past six months. But Kim is an advocate of sound reform.

It appears that the Japanese Representative in Söul recently sent to the Korean Foreign Minister (Ye Wan-yong) copies of the Yamagata-Lobanow Protocol and the Komura-Waerber Memorandum. The Minister, in a despatch acknowledging receipt of the documents, says:—

I beg to express my sincere thanks for your dispatch and the information it conveys. I would observe, however, that as my Government has not joined in concluding these Agreements, its freedom of action as an independent Power, cannot be restricted by their provisions.

The Korean Department of Public Works has issued a postal guide. The *Independent* takes this extract from it, *inter alia*:—

There are 23 branch offices in the country beside

the head office in Söul. The letter-carriers leave the main office once every day for those branch offices; and the carriers return to Söul once daily from the different places. The city of Söul is divided into urban and suburban districts; in the former there are 16 letter-boxes and sub-stations, where stamps can be purchased; and in the latter there are 6 letter-boxes with a stamp station in each place. The mail is delivered four times a day in the city proper and twice in the suburbs, and the same number of times mail is collected from the boxes.

We noticed recently that the people of Asak, in Whanghai province, Korea, finding themselves compelled by the local officials to pay \$16.25 per *kel* and \$9 per house, by way of taxes, instead of the lawful amounts, \$6 and \$1.20, respectively, addressed a complaint to the *Independent* newspaper. It now appears that they also sent two deputies to lay their hardships before the Home Department in Söul. The Department ordered the Governor of the province to investigate the matter, but further instructed that the two complainants be arrested and punished severely. Considering that the unfortunate people had already failed to obtain redress from the Governor, and considering that the laws of Korea direct any one having a grievance to submit it to the Home Department, the latter's procedure is singular. As if to accentuate the oddity, we find the *Independent*, four days after its account of these facts, publishing a notification of the Department of Agriculture and Commerce, in which any one from whom illegal taxes have been collected is invited to report the fact to the police. Korean subjects must be puzzled how to proceed. But are the *Independent's* facts correct?

The Japanese Chamber of Commerce at Ninsen, Korea, has prepared a statement of its views regarding the encouragement and State aid that should be given to Japanese peddlers in that country, and this has been presented to the Minister President and the Foreign Minister respectively. It reads:—Not only have we sustained loss by reason of the disturbances caused by the Hair-cutting Decree and subsequently by the February Reforms, but we have suffered a decline of our former business prosperity. We think, that in order to extend our trade in such a troubled country as Korea, a solid union of travelling merchants should be organized, that they may be enabled to work harmoniously, and that trade may not be affected by political reforms so frequent in this country. The Keirin Shogyo Dan was formed for this purpose in April last year, but it suffers from lack of means, though the Chamber of Commerce has done its best to extend help. Again, we think such an undertaking is national in character and deserves State aid and protection. It is our desire that the Japanese Government should give suitable help and encouragement to travelling merchants in the interior of Korea, and so promote the success of the Keirin Shogyo Dan. On behalf of the Chamber of Commerce I present its views to Your Excellencies.—Nishiwaki Chotaro, President of the Chamber of Commerce.

About ten days ago some Japanese dealers were seriously abused by Koreans at Choseiho, Urusan. The real cause of the violence is thus stated by a correspondent of a Japanese paper. The Koreans of this locality were in the habit of buying the inferior flesh and bones of whales from Russian whale-boats that came to the harbour of Urusan, the best parts going straight to Nagasaki. Lately, Japanese began to buy up these less profitable portions of captured whales, and, in consequence, the Koreans of the locality began to detest the Japanese more and more. They waited for an opportunity to take revenge, and when, a few days ago, Hidaka Tomoshiro, a Japanese peddler, quarrelled with two or three Koreans on a trifling matter, dozens of Koreans

collected and attacked the peddlers. The Japanese defended themselves as best they could but were no match for the crowd. Messrs. Matsuda Goichi, Nagano Matsutaro and ten others were made prisoners, and brought into the presence of Inyei-kan, Chief of Urusan County, and the Captain of a certain Russian whale-boat. Just as the crowd was about to torture them, Messrs. Miyahara and Takahashi, of the Fusan Settlement Police, appeared, and after reproving the Chief of the County for his action, demanded the deliverance of their fellow-nationals. The Japanese Consul at Fusan is going to ask for reparation.

CHINESE ITEMS.

The Laon-kung-mow cotton mill was started with due ceremony on the 22nd of March. Its location is the Yangtsepoo Road, Shanghai, and it is one of the four cotton spinning and weaving manufactories established in Shanghai by foreign enterprise as a consequence of the Shimonoseki Treaty. The architect was Mr. J. Chambers, formerly in the service of the Japanese Railway Office. Mr. Dudgeon, in his speech at the opening of the mill, said that ten years had elapsed since he first interested himself in the establishment of a cotton mill in Shanghai, but that Chinese official obstruction had prevented the consummation of the project until now. The next question is, how much will Chinese obstruction interfere with the Shanghai mills.

His Excellency Hsü Ching-chêng, who has just been relieved of his post of Minister to Russia, Germany and Austria, is to be the President of the proposed Russo-Chinese Railways in the three eastern provinces of Manchuria. We do not fully understand the appointment, but it appears that Mr. Hsü is to reside in St. Petersburg, and that the Vice-President is to be a Russian. It was originally rumoured that ex-Taotai Shêng would combine the presidency of the Manchurian lines with his other railway functions, but that appears to have been an error.

Mr. Yang-Ju, the retiring Minister to Washington, Madrid and Lisbon, is to represent China at the Court of St. Petersburg.

It is stated that things are moving very pleasantly at the newly opened port of Shasi, and that foreigners, though not entirely exempt from annoyance, are treated much better than was previously the case.

A strange example of official methods in China is reported from Linchingchow in Shantung. A notorious bandit, whose capture had proved too difficult a task for the police, was finally induced to betray his accomplices and accept the post of chief of detectives. He succeeded fairly well in his incongruous office. But by-and-by the magistrate who had appointed him, was replaced, and the new dignitary, deeming it a scandal to have an ex-bandit at the head of the detectives, but fearing to apprehend him among his friends and relatives, persuaded him to visit a neighbouring district on pretended police duty, and there had him seized at a feast officially tendered. It is a tale hard to credit.

The charter of the 18th National Bank, Nagasaki, will expire on the 1st of July, when the bank will recommence business under the title of the 18th Joint-stock Bank, the capital being increased to yen 1,000,000.

FOREIGN JOURNALISTIC PRIVILEGES IN JAPAN.

THE sixth Article of the Japanese Press Regulations, promulgated in 1887, provides that "no person except a Japanese male subject, at least 20 years old, shall be permitted to become the publisher, editor, or printer of a newspaper." No change was made in that article on the occasion of the recent revision of the Regulations. It was not to be expected, indeed, that any change should be made. The Regulations refer to the publication of newspapers in the vernacular, and if it is considered necessary that such journals should be controlled by special rules in Japan, it follows at once that foreigners, not being amenable to those rules, can not be permitted to publish vernacular journals. British subjects, indeed, are forbidden by a British Ministerial Notification to engage in any such enterprise. But their case is exceptional. The general and self-evident principle is that all subjects or citizens of Occidental States, being exempted by Treaty from the operation of Japanese law, are necessarily precluded from enjoying a privilege which imposes a special necessity to observe that law. The question arises, however, will the same interdict hold good after the Revised Treaties go into operation and in the case of foreigners publishing journals in a foreign language. The main difficulty will then be removed, inasmuch as Japanese jurisdiction will extend to all foreigners within the realm of Japan. But it is possible that the problem of journalism may be separated from the general catalogue of privileges enjoyable by foreigners. Our readers are aware that the Anglo-Japanese Revised Treaty guarantees to British subjects in Japan equality with Japanese subjects in everything that pertains to full and perfect protection for person and property; in all matters connected with the administration of justice; in whatever relates to rights of residence and travel, the possession of goods and effects, or the succession to personal estate; in the payment of taxes; in everything connected with transit dues, warehousing, bounties, facilities, and drawbacks, and in many matters of maritime enterprise. But the Treaty contains nothing that can be construed as covering the pursuit of professional occupations, like medicine, the law, journalism, and so forth. It will be for the Japanese Government, alone or in consultation with the Governments of the Treaty Powers, to determine whether and under what conditions licence to carry on such professions shall be given to foreigners in Japan. We shall be surprised and disappointed if any illiberal spirit is displayed in dealing with this subject, but, at the same time, it would be manifestly insincere to ignore the fact that Japan's experience of local foreign journals has not been at

all calculated to inspire a desire for their continued existence. Undoubtedly a very marked improvement has taken place of late in the tone of the local foreign press, but the general record for the past thirty years has been emphatically repellant from a Japanese point of view; nor can any person pretend to imagine that, were the legislators of a European country invited to extend the special privilege of publication to a press which had shown itself so uniformly unfriendly to their national aspirations and reputation as has the press of Yokohama, Kobe and Nagasaki, they would entertain the proposal for a moment. The statement will probably elicit angry protests from several of our contemporaries—angriest from those whose intemperance and injustice have been most conspicuous—but it is a statement wholly beyond the range of honest contradiction. If the British Representative in Tokyo, or the British Foreign Secretary, approaches the Japanese Government with the object of securing legal recognition for the journalistic enterprise of his nationals in Japan, he may be met by the simple but highly embarrassing query, "Can it be sincerely maintained that the existence of the local foreign press in Japan has hitherto contributed to promote good relations between Occidentals and Japanese, or that its attitude towards the country has been such as to establish any claim upon Japan's liberality?" These are hard facts, but it is well to face them boldly and to recognise their significance. Japan's hands are not tied by universal usage in such a matter. All Western countries do not grant to foreigners the privilege of publishing journals within their borders. Japan may withhold the privilege and find precedents to warrant her. On the other hand, we are persuaded that the wisest course, in her own interests, will be to grant the privilege. She will not suffer by granting it. She must have recognised the justice of a plea very often advanced in these columns, that the apparently hostile writings of the local foreign press have been inspired, for the most part, not by real unfriendliness, but by a perfectly natural and respectable desire to retain the privilege of their own jurisdiction. We call that a perfectly natural and respectable desire. It is not merely the counterpart, in one respect, of Japan's desire to extend her jurisdiction over every person in her dominions. It is much more than that. It is an irrepressible expression of the attachment that every civilized people feels for its own laws and its own administrators of justice. In direct proportion to the difficulties that a nation has surmounted in elaborating good laws and organizing a good judiciary, is the value it sets upon those laws and that judiciary; and in direct proportion to the value it sets upon them, is its reluctance to exchange them for other laws or another judiciary. That is the consummation

against which so many of the foreign residents have struggled resolutely and almost fiercely, and if their struggles have been reflected sometimes intemperately, sometimes unjustly, and sometimes clumsily, in the columns of the local foreign press, not Japan but their own cause has chiefly suffered by its advocates' want of skill and self-restraint. Japan has not much to complain of. The case against her aspirations might have been made far stronger had its exponents confined themselves to provable facts and warrantable inferences. Their excesses have so injured their pleadings and discredited their contentions as to promote, rather than retard, her aims. And the important point is that with the removal of this question of jurisdiction from the field of practical politics, the main source of difference is also removed, and the bitterness of the conflict will gradually disappear. It must be anticipated that when the new Treaties go into operation, many real or imaginary causes of complaint will be found by foreigners. The passing of Occidentals under the jurisdiction of an Oriental country, is an event without precedent. There are innumerable difficulties to be overcome, above all the salient difficulty that the great majority of those passing under the jurisdiction will do it reluctantly and with a disposition to discover grounds of grievance. But there will be no deep-seated instinct of resistance and discontent such as the prospect awakened while there was still hope of averting it. People will bow to the inevitable, and local journalists will no longer be prompted to set themselves the objectless and invidious task of constantly discrediting the nation and impugning its title to respect or confidence. On the other hand, the sense of having journals of their own to express their opinions and, if necessary, ventilate their grievances, will serve as a kind of safety-valve to the foreign residents. It seems to us that by a liberal course in this matter, Japan stands to gain much more than she can lose.

YOKOHAMA CHAMBER OF COMMERCE & THE SILK QUESTION.

THE condition of sericulture in Japan occupied a leading place in the discussion of the Yokohama Chamber of Commerce at its last general meeting. There appears to be a general feeling that Japanese silk has reached a critical stage of its history. It is threatened, on the one hand, by keen competition from China, and on the other by that terrible disease *pebrine*, which seemed likely at one time to completely paralyse sericulture in France and Italy. Chinese silk would certainly be the finest in the world were the methods of its production and preparation regulated by modern scientific principles. But for many years they were so defective that the Japanese article ranked higher in Western markets. Ow-

ing, however, to the initiative of the resident foreign merchants, to whose intelligent and enterprising aid Japan and China owe virtually the whole development of their commerce with the outer world, filatures have been erected in Shanghai and at other places in China, with the result that Chinese silk has gained the place previously held by the Japanese product. At the same time, the inbreeding consequent upon the Japanese sericulturists' efforts to obtain a fine thread of brilliant white colour, has so weakened the race of worms that a disease said to present all the symptoms of *pebrine* has made its appearance among them. Considering that, under favourable circumstances, Japan's export of silk aggregates from 40 to 50 million *yen* annually, the importance of this question can scarcely be overrated. The season upon which we are now entering will probably confirm or dispel the apprehension suggested in the Report of the Chamber of Commerce.

The Japanese Government is endeavouring to avert the threatened disaster by instituting a system of silk-worm eggs inspection. A Bill embodying a project of law for that purpose was passed by the Diet in the session just closed, and a translation of it appeared in these columns on the 26th ultimo. It enacts that eggs for breeding or reproduction shall be stored in specially constructed boxes; that they shall not be produced from cocoons containing more than one worm, or cocoons that are thin, deformed, or defective in weight; and that arrangements shall be made for the inspection of the eggs by competent experts. Another provision is that eggs must not be prepared except by the use of cocoons produced from original seed. By "original seed" is meant, we presume, Japanese seed. If so, that veto would meet the point made by Mr. W. B. WALTER at the Chamber of Commerce's discussion, namely, that the importation of Chinese seed, which began about two years ago and seems likely to increase, must have an injurious effect upon Japanese sericulture, since it comes from a country where *pebrine* is prevalent, and where no examination takes place before the eggs are shipped. With such a danger in sight, we believe that the Japanese Government would be acting wisely did it forbid the importation of Chinese seed altogether. Japan has acted with the greatest unwisdom in the matter of silk worms' eggs. She ought never to have sent a single card to Italy or France. Her interest was diametrically opposed to the resuscitation of sericulture in those countries, and if she had not helped them with eggs in their time of stress, she would now share with China the command of European and American markets. But she allowed herself to be pushed to a suicidal policy by diplomatic pressure. Looking back a good many years, we can recall the an-

them as that were hurled at the heads of her officials by the local foreign press because they showed a disposition to "obstruct trade," interdicting the export of silkworms' eggs. Never did the Yokohama journals display greater ignorance of the true interests of the foreign community, and it is a source of satisfaction to us now to remember that we, too, were roundly abused for advocating that particular form of "obstruction." A mischief of another kind now threatens to come from China, who, while supplanting Japan's silk with her own improved product, is sending over seed that will ultimately blight the Japanese crop. It is in matters of that kind that a wise Government can advantageously interfere, rather than in providing bounties to force trade out of its sound channels. However, if the inspection provided by the new Law is efficiently carried out, the use of diseased seed may be prevented without recourse to the extreme measure of vetoing the import of Chinese eggs.

Both the Chairman of the Chamber and Mr. W. B. WALTER seemed to have overlooked the Law referred to above. Mr. W. B. WALTER said that the Japanese Authorities might be well advised if they organized a system of microscopic examination, and the Chairman, while noting that a department existed in Tokyo for examining seed, added that only about one-fourth of the seed in use was examined, so far as he knew. But the new Law applies to all seed. We can not find, by examining its provisions, that any eggs are exempted from compulsory inspection.

The Direct Export Encouragement Law has evidently produced a very bad impression on the foreign merchants in Yokohama, as indeed, was inevitable. If the Government aimed uniquely at improving the quality of Japanese silk, the proposed bounties should be given to the producer, not to the exporter. Of course, it is very well understood that a great part of the purpose of the Bill is to put an end to the present system of entrusting silk, before sale, to the foreign local merchant, who takes it into his godown and employs his own experts to inspect it there. Such a system presents many objectionable features from the Japanese point of view, and the fact that it owes its origin to the untrustworthiness of the native sericulturist or middle-man, enhances, rather than diminishes, its irksomeness. But there is this indisputable fact to be considered, namely, that not the slightest chance exists at present of getting foreign manufacturers to buy Japanese silk unless it has been previously inspected and passed by foreign experts. When the Government offers a bounty to direct exporters, it does not assist the Japanese merchant to find a route by which his silk may reach Western buyers without the intervention of foreign agents or foreign inspecting experts; it merely devotes some

hundreds of thousands of public money to transfer the place of inspection from Yokohama or Kobe to New York or Lyons. There are three Japanese firms now engaged in the business of direct export, and not one of them can get foreign manufacturers to buy a bale of silk until it has undergone foreign inspection. Will foreign manufacturers be more disposed to forego inspection because the Japanese exporter receives a bounty from the Government? The original idea was that they would. The original idea, so far as we can understand, was that since a bounty could not be obtained except by silk of very high quality, the fact that a bounty had been obtained would be in itself a guarantee of quality. In short, the Government proposed to put its *cachet* upon silk for direct export, hoping that, by such a method, foreign manufacturers might be disposed to accept Japanese inspection as conclusive, and thus the trustworthiness of the Japanese sericulturist and the competence of the Japanese inspecting expert would ultimately be established. Considered in that light, the Law will be seen to be, not a deliberate means of discriminating against the local foreign merchant, but a plan for raising the status of the Japanese silk grower and silk-inspector in Western markets. With such a motive the local foreign merchant himself will sympathise, but he can not be expected to forget that, in practice, the new Law discriminates most injuriously against him, since it offers a premium for his exclusion from the silk trade; nor can he be expected to appraise the projected programme by any standards except those of hard commonsense, which tells him that, whether the inspection on this side of the water be official or private, it will not satisfy foreign buyers so long as it is Japanese. The Government, we repeat, will simply find itself paying to have the foreign inspection done in New York or Lyons, instead of in Yokohama or Kobe, and if that be a proper object to compass by a large expenditure of public money, we are wholly unable to detect the propriety. Everything that really tends to promote the development of Japanese commerce has, at all times, the hearty support of intelligent foreigners, even though some local sacrifice be entailed. But this direct-export Law is a mistake, a most unquestionable mistake, and while we are very fully persuaded that the officials of the Department from which the Bill emanated do not entertain any shadow of desire to discriminate against the local foreign merchant, we can not acquit them of having framed a measure that will so discriminate, and that will not conduce in any degree to the improvement of Japanese sericulture or the establishment of Japanese credit. For the rest, although nobody wants to obtrude sentiment into a purely practical matter, we venture to suggest to Japanese legislators the patent fact that they are going to work in altogether the wrong way when they endeavour to win the confidence of manufacturing and commercial firms in Europe and America by harsh and unwholesome discrimination against the long-trusted and zealous agents of those firms in Yokohama and Kobe. The impression produced abroad by this Law will be of a nature to militate strongly against the very end that its framers have in view.

IMPERIAL DIET.

MONDAY, MARCH 22ND.

HOUSE OF REPRESENTATIVES.

The House met at 1.30 p.m., the Order of the Day being:—

- 1—Bill relating to the prevention of Sandstorms.
- 2—Bill for taking steps with regard to State Lands in Hokkaido, that remain unreclaimed.
- 3—Bill relating to the Fund for the relief of Sufferers from Natural Calamities.
- 4—Opium Bill.
- 5—Bill for registering as Hereditary Property of nobles the Shares of the 15th National Bank (Joint Stock Corporation).
- 6—Bill for establishing Corporations of Dealers in principal Staples of Export.
- 7—Bill relating to Amendment of the Law for preventing Collisions at Sea.
- 8—Bill for encouraging Navigation.

The Bills from the 9th to the 12th had reference to railways, and were the same as those on the previous Order.

- 13—Representation for a Treasury Grant toward the expenses for the preservation of the Temple of Itsukushima in Aki.
- 14—Bill for amending the Law of the Organization of Law Courts.
- 15—Bill for amending the Registration Law.
- 16—Representation relating to Expenses for maritime communications with remote Islands.

Mr. Hamada remarked that the Government had recently presented so many Bills that there was no time for the House to investigate them. He doubted whether it was not the intention of the Government to betray the House into reckless approval of all its Bills. Bills that had been investigated in the days of Count Ito's Cabinet were now again introduced. It looked like intentional procrastination on the part of the Government. The past was irremediable, but warning might be given to prevent such proceedings in the future.

The first Bill on the Order was passed in its original form.

Mr. Tanikawa reported that the Committee had decided to recommend the amendments of the Upper House in the Second Bill.

The Bill was passed without dissent.

Mr. Otake explained that the Bill standing third had an intimate relation with the Relief Fund Law, and that Funds formed under the provisions of that Law had now been nearly exhausted in consequence of the continuous occurrences of earthquakes and inundations. The Government had introduced the Bill under the pressure of necessity, but the Committee had proposed to amend a great part of it, and, at one time, even requested the Government to withdraw it. The Government was thus compelled to consent to the addition of a clause to Article VI., namely, the following:—

"In case a City or Prefecture has paid more than five-hundredths of the actual amount of the Standard Relief Fund for purposes of relief, at the beginning of the fiscal year, one-third of the excess so defrayed shall be supplied by the Treasury."

Mr. Kudo wanted to know the exact amount to be paid every year by Government in case of the enactment of the proposed law.

Mr. Komai, Government Delegate, replied that the average amount would be 300,000 yen.

Mr. Horiuchi observing that the Bill was intended to provide for the distribution of 300,000 yen every year among various Cities and Prefectures, in order that the former method of accumulating relief funds might be altered so as secure independence to each locality, declared that it seemed most improper that the Government should contemplate remaining indifferent to all calamities hereafter occurring. The former Relief Fund Law ought to be maintained.

The Bill was passed by sixty-six votes against forty-eight.

Mr. Goto, Government Delegate, having explained the reason for the introduction of the fourth Bill, Mr. Yoshimoto proposed that, as the session was drawing to a close, the Delegates should explain the Bills only when they were asked to do so.

The Bill was entrusted to a Special Committee nominated by the President.

Questioned by Mr. Kusakari as to whether

the 15th National Bank was to continue its operations, Mr. Kanmuchi, Government Delegate, replied that no definite answer could be given before May of this year.

The fifth Bill was handed to a Special Committee.

The sixth and seventh Bills were similarly treated without discussion.

Mr. Kudo said that the eighth Bill, being one of the most important presented to the House, the views of the Government must be ascertained.

Mr. Yoshimoto did not consider any explanation necessary.

The House had nothing to do but to reject the Bill.

Mr. Tokumasa complained bitterly of the absence of the Government Delegate, whose duty was to explain the Bills.

At this stage Viscount Nomura, Minister of Communications, appeared in the House. He stated that as the Law now in operation had proved useless to navigators and onerous to the State on account of the vagueness of its provisions. Some alteration was necessary. The Minister then expressed regret that there would not be sufficient time for investigating the measure, but he hoped that the House would approve the Bill.

A few questions were asked by Mr. Kudo and answered by the Delegate.

Questioned by Mr. Hatano as to what had become of the outlay approved in the ninth session for the encouragement of navigation, Mr. Sato replied that not a *sen* had been defrayed out of the sum of over 200,000 yen. The chief cause was absence of vessels qualified to receive bounties.

The Bill was submitted to a Special Committee of eighteen nominated by the President.

The President proposed that the Bills from the 9th to the 12th (inclusive) be taken together as a subject of debate. The House having consented to this proposal, the four Bills were treated in the same way as the above.

Mr. Tsunematsu enquired whether there was any prospect of success if the whole work of constructing railways be left to private companies in the present drowsy state of the financial community.

Mr. Suzuki, Government Delegate, replied that permission was never directly to be given to a private company for the construction of any railway. Its programme had first to be elaborated under a temporary charter, and the work was not entrusted to the company unless the Government was fully assured of its success.

Mr. Kodakagari thought that there would be considerable difficulty in building a railway between Hiroshima and Shimane through a mountainous region.

The Delegate replied that the investigations made by the Government had shown the work to be practicable.

The thirteenth Bill was thought by Mr. Kusakari as unnecessary to be discussed, inasmuch as it might have been included in the Bill passed by both Houses with regard to the preservation of old Temples and Shrines.

The Bill was rejected.

The fourteenth and fifteenth Bills on the Order were passed with slight amendments.

The introducer of the Representation standing sixteenth on the Order explained that while maritime service to foreign countries was warmly encouraged, communications with remote islands had been left in a state of utter neglect, to the no small inconvenience of the people.

The House was counted out at 5.20 p.m.

TUESDAY, MARCH 23RD.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1—Formosa Bank Bill.
- 2—Bill relating to State Forests.
- 3—Bill for Encouraging the Direct Export of Silk.
- 4—General Settled Account of Revenue and Expenditures for the 27th year of Meiji.
- 5—Settled Special Accounts of Revenue and Expenditures for the 27th year of Meiji.
- 6—Bill for granting permission to a Private Railway Com-

pany for the Construction of a Railway in the State Programme.

7—Railway Construction Law Amendment Bill.

8—Bill for Supplementing Law No. 15 of the 27th year of Meiji.

9—Representation for Aiding Navigation to remote Islands.

The President being absent, Mr. Shimada, Vice-President, occupied the chair, and reported that the Government had sent a reply to Questions put by Mr. Motoda with regard to the German-Japanese Treaty, and also to Questions put by Mr. Suzuki with respect to the drill of the Korean Troops.

Mr. Nakano, in the capacity of Chairman of Committee, reported that the Committee had decided to approve the first Bill, as sent down from the Upper House.

The Bill was carried to its Second Reading and passed, despite the opposition by Mr. Okada, who urged that the Bank should be required to pay taxes, not exceeding five per cent. of the face value of its note issues.

Mr. Kudo, Chairman of Committee, reported that the Bill standing second on the Order had been adopted by the Committee with slight changes.

Mr. Nakamura enquired why a limit of a hundred *cho* (250 acres) was fixed for a forest, as prescribed in Article IV., which provided that forests necessary for public welfare, forests covering an area of fifty *cho* and consisting of camphor and beech trees, and all other forests extending over an area of a hundred *cho*, must not be sold.

Mr. Kaneko, Government Delegate, replied that a camphor forest existed in Kiushu and that a beech forest might be expected to appear in future. The limit of a hundred *cho* had been established as the standard area of a forest capable of maintenance, from a financial point of view.

The Bill was carried to its Second Reading.

Mr. Nakamura remarked that should the Government desire to make the forests a source of revenue, it must adopt measures calculated to afford facilities to the people, whereas the provisions embodied in this Bill were too severe.

The Bill was passed with amendments.

Mr. Motoda moved that the Order of the Day be changed for the purpose of discussing Supplementary Budgets Nos. 4 and 6, in view of the approaching end of the session.

These two Budgets were immediately passed without dissent.

(The debate on the third Bill has already been reported, in these columns.)

The fourth and fifth Bills were passed as reported by the Committee.

The sixth and eighth Bills were also passed in their original form. The seventh Bill was withdrawn.

Mr. Haseba moved, as a point of urgency, that the Order of the Day be changed, for the purpose of discussing a Representation urging the abolition of contributions from official salaries to the naval ship-building fund. His motion having been approved, Mr. Haseba stated that the Representation had been discussed by the various political parties during the past three or four years. No understanding, however, had been arrived at, and the members of the *Kokumin Kyokai* had finally determined to present an Address to the Throne.

Mr. Motoda moved that an Address to the Throne on the same subject should be taken together for debate.

Mr. Haseba declared that he was resolved to oppose the Address to the bitter end.

Mr. Motoda advised him to have patience for a while until the discussion of the Address took place. He then went on to say that the Address was by no means a legislative measure, but had its origin in the celebrated Imperial Edict. If the House had no power of addressing the Throne, it was condemned to remain silent under existing circumstances. But it had such power, and could submit any question to the Throne without passing through administrative channels.

The Representation and the Address were handed to a Special Committee with instructions to report on them by the following morning.

Mr. Kusakari opposed the ninth Bill on the Order, arguing that if a subsidy was to be granted for voyages of the kind indicated, there

would be no limit to the demands on the public purse.

The Bill was rejected.

Mr. Motoda, again moved that the Order of the Day be changed for the purpose of discussing the Bill relating to Trade Marks, which had great interest for the merchants engaged in the export trade.

The Bill reads as follows:—

"The period allowed for official investigation of patents or designs which were publicly known, or have been in public use, prior to application for their registration; or trade-marks exactly the same as, or similar to, those of another, shall be two years from the registration of the same."

"With regard to patents, designs or trade-marks already registered, the period referred to above shall terminate on the 31st of December in the 30th year of *Meiji*."

Mr. Suzuki enquired whether the Government had granted patents to a foreign company, regarding it as a legal person.

The Delegate replied in the affirmative.

The Bill was passed as amended by the Committee.

Mr. Motoda reported that the Committee had passed Supplementary General Budgets No. 4 and 9 and Supplementary Special Budgets Nos. 5 and 7.

Upon the motion of Mr. Inouye, these four Budgets were immediately discussed and passed by the House without objection.

Mr. Hatano presented four Questions, viz.—
1. Was there a railway company in Formosa, for which a subsidy might be granted? 2. Was it impossible to undertake the work under Government supervision? 3. What instructions had been issued in connection with railway affairs in the Island? 4. What were the proposed accounts of receipts and expenditures?

In reply to these queries Mr. Nomura, Government Delegate, said that the Government had originally intended to undertake the work at its own expense. But subsequent investigation having shown that the enterprise would cost some five million *yen*, the Government had taken the opportunity of a private application to entrust the work to a company. The original intention of the General Administrative Office in Formosa had been to grant no subsidy, but seeing that the condition of the territory, as was doubtless well-known to the members, necessitated special assistance, the present Budget had been submitted to the House. The so-called instructions consisted of twenty-eight articles, which were read out by a Secretary.

The President announced the debate closed, and the House rose at 6.25 p.m.

WEDNESDAY, MARCH 24TH.

HOUSE OF PEERS.

The House met at 10.20 a.m., the Order of the Day being—

- 1—Supplementary General Budget No. 3 of Revenue and Expenditures for the 30th Fiscal Year of *Meiji*.
- 2—Supplementary Special Accounts Budget No. 3 of Revenue and Expenditures for the 30th Fiscal Year of *Meiji*.
- 3—Contracts to be made for liabilities devolving upon the Treasury in excess of Budgetary items.
- 4—Revised Supplementary General Budget No. 4 of Revenue and Expenditures for the 30th Fiscal Year of *Meiji*.
- 5—Bill relating to Expenditures in the Special Section of the Naval Department for the 20th year of *Meiji*.
- 6—Bill for improving the Divisions of Lands.
- 7—Bill for encouraging Deep-Sea Fishing.
- 8—Bill for amending the Local Government System for *Gun*.
- 9—Bill for rescinding certain provisions in the Registration Law.
- 10—Bill for altering the Boundaries between Chiba and Ibaraki Prefectures.

Referring to the first four items, Viscount Tani, in the capacity of Chairman of the Budget Committee, reported that Supplementary General Budget No. 3 and Supplementary Special Budget No. 2 had been passed as amended by the Lower House; that the third item which referred to expenses required for the construction of a harbour at Osaka, had also been approved by the Committee despite various arguments advanced against it; and that the fourth Budget, which embodied contracts relating to the engagement of foreigners in Formosa, was similarly recommended.

The first and second Budgets were passed by the House without dissent.

With regard to the third Budget, Mr. Nakamura, Government Delegate, explained that the problem of constructing a harbour in Osaka had been under consideration since the 5th or 6th year of *Meiji*. But information being required on various points, investigations had been undertaken, and completed, last year. Osaka being the centre of trade and industry, where all sorts of merchandise were accumulated and distributed, the necessity of building a harbour there had made itself keenly felt. The Budget was compiled in the sense of granting State aid to the extent of over six million *yen* for the construction of the harbour, the payments to be extended over a term of years.

Mr. Kubota, commenting upon the nature of the aid contemplated, enquired whether a grant of land was not contrary to the general principles of financial administration.

Mr. Matsuo, Government Delegate, replied that land could be granted by virtue of Imperial Ordinance.

Mr. Takei asked how long the proposed harbour could be kept in a serviceable state.

Mr. Furuichi, Government Delegate, answered that it would last for a hundred years if properly looked after.

Questioned by Viscount Tani as to what benefits could be secured to the Army by the construction of a port in Osaka, Major-General Kodama, Government Delegate, replied that it would afford considerable convenience with regard to the establishment of barracks, the supply of commodities, and the collection of troops from the east of Osaka. The greatest and most particular benefit, however, would be the facilities obtained for vessels to anchor near the shore and receive troops by direct embarkation.

Asked again whether the War Department would not object to opening Shimonoseki as it had previously objected, the Delegate answered that the Government's objection must not be attributed solely to the inconvenience of the place for the shipment of military stores, and that the War Department was not absolutely opposed to opening the port.

Viscount Tani further inquired whether similar facilities could be secured by constructing a pier at Kobe.

The Delegate answered in the affirmative, with this exception that Kobe was far inferior to Osaka in respect of barrack accommodation and means of transport.

Viscount Tani, said that the country was called on to spend an immense amount of money in consequence of the late war with China. The inundations which grew more serious year by year, and the Ashio Mine affair, which has caused serious embarrassment to the people of the neighbouring districts, were likely to necessitate a considerable outlay. Further, the problem of remitting taxes in localities devastated by the late inundations must not be excluded from the category of expenditures, and the new territory of Formosa would certainly absorb a great sum before becoming self-supporting. The State being required to meet so many calls, it would not be prudent to grant subsidies for harbour-building schemes. Each district ought to bear the expenses involved in promoting its own interests, though an exception might be made in the case of Hokkaido, which could in no way be reclaimed without special protection. Osaka, however, had a large and wealthy population, who were well able to undertake the enterprise of harbour-building without State aid. Even if the Treasury had sufficient resources, a subsidy of the kind would be unjustifiable. How could it be reasonable to contract a debt for the sake of extending assistance to a local enterprise? Surely the proposal to grant aid under such circumstances must conceal some singular motive. Further, in the matter of military facilities, Ujina might be superior to Osaka. The latter place would be a rendezvous for vessels, and it would be impossible to keep away foreign ships from the harbour except in case of war. In short, harbour-building in Osaka was a scheme extremely

detrimental to the country's interests, and ought to be "shown the door" at once.

Mr. Kojima strongly opposed the Viscount's arguments, and contended that his allusion to the Ashio Mine and other matters had no relation whatever to the subject under consideration. Osaka had been a commercial centre ever since the time of its improvement by the *Taiko*, and nobody in Japan doubted the importance of the city. The scheme of building a port there had been contemplated by the Government ever since the Restoration, and plans had actually been prepared by Mr. Watanabe Noboru when he was Governor of the city, but the investigations being then incomplete, the work has necessarily been postponed. Military considerations should be paramount in time of war, but to develop the wealth of the country must be the first object in days of peace. To that end facilities of communication were indispensable. The singular motives hinted at by Viscount Tani were not to be attributed for an instant to members of the Upper House; they stood above all such imputations.

Mr. Kubota urged the advisability of deferring the discussion of the problem for a year, on the ground that the investigations of the Government were imperfect and the proposed method of granting aid was unsatisfactory.

A close ballot was taken, with the following result:—

For the adoption of the Bill.....106

Against 55

Supplementary Special Budget No. 2 was explained by Mr. Kitagaki, Government Delegate. It embodied expenditures for the General Administrative Office in Formosa, and the amount was greater by 4,590,000 *yen* than that for last year.

The fifth, sixth, and seventh Bills were passed.

Upon the motion of Mr. Tomii, the Bill relating to the period of legal procedure in the matter of registering patents, designs, and trade-marks, was taken for discussion. Mr. Tomii called attention to the fact that even Japanese subjects in the interior failed to enjoy security for their trade-marks under the present regulations, and that the approaching operation of the Revised Treaties would doubtless entail considerable losses upon them if no alterations were made in the Regulations.

The Second Reading of the Bill was rejected.

Count Ogimachi explained, with reference to the eighth Bill on the Order, that it was intended to revise the system of "great land owners," and to provide for the appointment of, and to select Headmen of Rural Divisions (*Guncho*) by election.

The Bill was rejected.

At the request of the Government, the following Bills were taken for deliberation:—
1. Bill for encouraging the Direct Export of Silk.

The Bill was immediately passed.

2. Bill relating to the prevention of sandalips.

This Bill also was passed by a large majority. Other Bills for granting permission to Private Railway Companies to construct a railway between Tajimi and Gifu and elsewhere were all approved, but the Bill for altering the Local Government System for Cities and Prefectures was rejected.

The ninth Bill was also passed with slight amendments.

The tenth Bill had for its object a change of the boundary between Chiba and Ibaraki, as proposed by the Local Assemblies of those Prefectures, the change being suggested by the course of the River Tone.

After a few questions and answers between Viscount Tani and other members, the Bill was rejected by seventy votes against fifty-seven.

At this stage the Bill relating to the payment of tobacco tax in cash was introduced by the Government, and with the general approval of the House, was passed.

Viscount Tani moved that General Budget No. 4 and Special Budget No. 5, which covered a subsidy to a Railway Company in Formosa, should be taken for debate.

The Budgets were passed, and the House rose at 10.50 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 10.30 a.m., the Order of the Day being—

- 1.—Supplementary Special Accounts Budget of Revenue and Expenditures for the 30th Fiscal Year of Meiji. (Belonging to the Departments of Finance and of Colonization.)
- 2.—Budget relating to Liabilities devolving upon the Treasury in excess of the Estimates for the Colonial Department.
- 3.—Bill for constructing a railway in the Hokkaido Programme.
- 4.—Bill relating to Forests.
- 5.—Bill for granting a subsidy to the Japan Joint Stock Railway Company.
- 6.—Bill for registering as Hereditary Property of Nobles the Shares of the 15th National Bank.
- 7.—Bill for amending the Law for preventing Collisions at Sea.
- 8.—Opium Bill.
- 9.—Bill relating to the payment of Tobacco Tax in Cash.
- 10.—Bill relating to Public Thoroughfares.
- 11.—Bill relating to Amendment of the Regulations for granting Lands to Colonial Troops.
- 12.—Bill with regard to Family and Reward Pensions.

The proceedings commenced with a motion by Mr. Shuto, that the Order be changed for the purpose of discussing an Address to the Throne and a Representation urging that the contributions of 300,000 yen annually from the Privy Purse and ten per cent. of the salaries of officials, for the construction of war-vessels, be discontinued.

The motion having been approved, Mr. Motoda remarked that the payments in question were a sum of 300,000 yen granted annually by the Emperor, and a contribution by Government officials of one-tenth of their salaries. Not a man among the forty millions of the population failed to appreciate with profound gratitude the benevolent motive of the Emperor, but the House, representing those forty millions, was now invited to humbly submit that the time had come for ceasing the Imperial donation and the official subscription.

The Address was adopted.

The President announced that as the Address had been passed no necessity seemed to exist for discussing the Representation, and, the House having agreed, the Order of the Day was resumed. Referring to the first item, Mr. Hatano said that a railway ought to be constructed in Korea as a Government enterprise instead of leaving the work to a private company. The embarrassed state of the finances would not permit the Government to grant any considerable amount of yearly subsidy to a railway company, but the Government might itself undertake the work by raising a loan in the form of Formosa Railway Bonds, to which both Formosans and Japanese might be invited to subscribe. By this means the Government as well as the present promoters of the scheme would be enabled to escape the injurious imputations now circulated on this subject.

Mr. Kagami Kahei opposed the last speaker. He insisted that private enterprise would be more advantageous, since the work would be completed with greater promptitude, and the relations between Formosans and Japanese would be improved by the introduction of capital from Japan. He also remarked that no prospect of success could be anticipated in view of the present financial embarrassments of the Government, if the enterprise was to be left to its initiative, and that the investment of capital by Japanese in a territory like Formosa, ought rather to be encouraged than deterred.

Referring to the statement made by Count Matsukata, Minister President of State, to the effect that he would compile the Budget for the 31st year of Meiji in such a manner as to satisfy the House, Mr. Motoda declared that he was unable to feel assured on that point, and that the attendance of the Minister to give a further explanation was desirable.

Mr. Ishida advocated entrusting railway enterprise in Formosa to private individuals, with a subsidy of six per cent. interest per annum. The motion found no seconder and was abandoned.

Mr. Kudo said that Formosa had been acquired by Japan at the sacrifice of the lives of many of her people, and declared that no effort should be spared to secure the fruits of the sacrifice. Facilities of communication were among the most essential means of developing the island's

resources. He, therefore, strongly supported the railway scheme.

The first and second Budgets were then passed unanimously.

With regard to the questions presented by him to the Government, Mr. Tanaka Shozo stated that whereas former investigations into the Ashio Mine affair had shown that the area of injury covered four Prefectures and ten Rural Divisions, more recent scrutiny *in loco* has proved that the damages affected one City and four Prefectures, and that the population actually suffering numbered 43,700. The misery caused by the mine had now reached a climax. Yet the Government maintained an attitude of utter indifference, and neglected to give a prompt reply to his queries. Was it the Government's intention to resort to some deceitful artifice in this matter? The Department of Agriculture and Commerce had always been stigmatised by the House as a "Haunt of Goblins" or a "Den of Robbers." The insult had never been resented by the Department, which being apparently deficient in all sense of shame, might be regarded as morally dead. Under these circumstances, the degradation of the Minister or Vice-Minister would have no effect whatever in ameliorating the abuses. The best method of reforming the Department was to dismiss all its officials, from the Minister to the meanest employé, and "to enforce the process of disinfection."

The Bill relating to the prevention of epidemics was then passed without dissent, the Order having been changed for the purpose.

Mr. Tominaga remarked, with reference to the third item on the Order, that the enterprise contemplated by the Bill ought to be undertaken by the Government itself; inasmuch as circumstances would probably arise necessitating the State purchase of the railway if it were held by a private company.

Mr. Kusakari pointed out that the members of the Reform Party (*Kaishin-to*) being the principal projectors of the Hokkaido railway now in contemplation, there must be some covert reason for their action. They had proposed to undertake the work even without a Government subsidy. If there were a prospect of profit on that basis, there must be all the more reason for reserving the enterprise to the Government.

The Bill was carried to its Second Reading.

With reference to the words "some covert reason," employed by Mr. Kusakari, the Government Delegate stated that no grounds whatever existed for such an insinuation, and that all the Bills officially introduced ought to be discussed without party spirit.

The Bill was passed by a large majority.

At this stage the Secretary read a reply from the Government to queries presented by Mr. Tanaka with regard to the judicial detention of members of the Lower House and measures taken by the Minister of Justice, and also the withdrawal of Japanese residents in Korea. He further reported that Mr. Motoda had presented another question concerning the German-Japanese Treaty.

Commenting upon the fact that the fourth Bill on the Order was destined to increase the number of offenders against the forestry laws, Mr. Nakamura proposed that the discussion of the Bill should be adjourned till next session, at which time the two other correlated Bills might be taken together for decision.

The Bill was passed as amended by the Committee.

Some amendments made in the fifth Bill by the Upper House, having been rejected by the Lower, the President announced that a Conference of the Houses would be arranged.

Referring to the Bill standing sixth on the Order, Mr. Kusakari thought that a law ought not to be enacted until all the facts bearing upon it had been ascertained. Nevertheless, the Bill now before the House had been presented before it could be known whether the 15th National Bank would continue its operations. Should the Bill be passed, the shares of that Bank would be guaranteed against seizure for debt. The Bank itself

might escape distraint for liabilities to an unlimited amount. That such a Bill had been introduced by the Government was truly astonishing. The House of Peers had passed it merely to promote the interests of the nobles.

The Bill was passed by seventy-five votes against sixty-three.

The Bills from the 7th to the 12th on the Order were similarly treated with little discussion.

The House rose at 7.50 p.m.

LEGISLATION OF THE DIET IN ITS TENTH SESSION.

The following is a list of the measures debated and passed by both Houses of the Diet during the session just closed:—

Name of Measure.	Introduced By.
1. Supplementary General Budget for 1896-7	Government.
2. Supplementary Budget Special Revenue and Expenditure for 1896-7.	"
3. Budget relating to Liabilities devolving upon the Treasury over and above the Budgetary Items for 1896-7	"
4. General Budget for 1897-8	"
5. Budget of Special Revenue and Expenditure for 1897-8	"
6. Supplementary General Budget for 1897-8	"
7. Supplementary Budget of Special Revenue and Expenditure for 1897-8	"
8. Bill for deferring the Date of Operation of the Civil Code	"
9. Bill for increasing the Fixed Capitals of the Tokyo and Osaka Armies	"
10. Bill for increasing the Fixed and Working Capitals of the Senju Factory	"
11. Bill for amending the Date of paying interest on Railway, and Public Undertakings, Loan Bonds	"
12. Law relating to a Special System of Finance for the Governor-General's Office in Formosa	"
13. Law for amending Law No. 92 of 1896	"
14. Law relating to the Time for collecting the Land Tax in certain Districts of Kagoshima	"
15. Law for amending the Railway Construction Law	"
16. Law relating to Licence-fees for pursuing Game	"
17. Law for amending the Armies Finance Law	"
18. Law for amending the Press Regulations	"
19. Law for the Inspection of Silk-worm's Eggs	"
20. Law for granting permission to a private company to construct a Railway included in the Programme of State Lines	"
21. Law for the Conservation of Ancient Temples and Shrines	"
22. Law for the Inspection of Stud Horses	"
23. Law for amending Law No. 23 of 1895	"
24. Law of General Tariff	"
25. Law of Bonded Warehouses	"

It is worthy of note that among the 55 measures which passed successfully through the two Houses, only 3 were private Bills.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In our last Summary we gave an abstract of an article from the pen of Dr. Inouye Tetsujirō on "Japan's place among the Authors of Religious Reform." A second article on the same subject is now before us and merits brief notice. It is not to be expected, observes Dr. Inouye, that in the days in which we live the power wielded by religion in ancient times will ever be manifested. The mind of man is not so susceptible to religious impression as it was two thousand years ago. There will not be wanting, however, persons to deny this assertion, and to maintain that there are religions as powerful to-day as they ever were, only that in modern times religious zeal manifests itself in a different manner to that of which we read in sacred books. Whatever zeal is manifested is doubtless the result of influences proceeding from the teaching of each sect rather than from the intercourse of one sect with another. Not much in the way of religious reform is to be looked for as a result of the conferences of representatives of various sects.

As regards the prospects of religious reform in Japan, the first thing it is important to bear in mind is that reformed faiths are only forthcoming when religious corruption is very general. Thus it was in India in the days of Shaka-muni, and in Judea in the days of Christ. Although at the present time there is corruption in certain religious quarters, it cannot be said that religion generally is corrupt in Japan, much less that there is any wide-spread moral decay in society as a whole. But, nevertheless, there is no denying that the fact of there being such a large number of persons attached to no religion furnishes a strong reason for the appearance in our midst of some powerful religious movement, on the principle that what the world needs the world finds means of procuring. Japan has now reached a stage when, if ever, she would welcome a great religious reformer. Numerous as are the difficulties in the way, there is no warrant for saying that what took place in other countries in ancient times may not take place in Japan to-day.

A writer in the *Taiyō* dwells on "the attitude of Japanese Christians to foreigners." Not long since, says the contributor to the *Taiyō*, Japanese Christians astonished the world by their efforts to become independent. But recently an opposite tendency has been manifesting itself and we hear it said on every hand that in view of the mixed residence which in a few years will become an accomplished fact, it should be the

policy of Japanese Christians to be on as friendly terms as possible with foreigners, so that by combining their efforts with Occidentals they may succeed in overthrowing Buddhism, &c. This servility is enough to excite pity. What is at the bottom of this desire for foreign aid? A love of foreign money and a desire to push sectarian interests by that means. The experiment the Doshisha has tried is considered by many to have been a failure. Financially the result has not been satisfactory (*sono kekkwa saiseijō omoshirokaranu*). If an experiment that had so much in its favour proved unsuccessful, the idea of small bodies of Japanese Christians holding their own without foreign aid must be abandoned. Now what does all this talk about mixed residence amount to when analysed? The majority of the foreigners who will settle in the interior will be Christians in name only; and it is not to be supposed that they will give much pecuniary help to Japanese Christians. That Christians whose eyes have been opened to see that there are elements in Christian education opposed to State interests, should stoop to become dependent on foreign support is indeed a matter for surprise. We call upon all true-hearted men in the Christian Church to oppose and suppress this new movement.

* * *

Notice is taken in the pages of the magazine we have just quoted of the evangelistic activity among Japanese Christians, to which we referred in our last Summary. There is no doubt, says the *Taiyō*, that the last half of 1896 was marked by the development of evangelistic agencies to an extent not known for many years. The writer warns preachers against measuring success by the number of baptisms. The ceremony of baptism is not to be considered of equal importance with mental enlightenment and the cultivation of Christian feelings, especially the feeling of pity for the distressed. Evangelists should aim at teaching men "to die that they may live."

* * *

Writing in the *Fukui Shimpō* (Gospel News), Mr. Kataoka Kenkichi, a member of the House of Representatives, expresses the opinion that modern Protestant zeal falls far short of the religious fervour of the Roman Catholics in former days. Mr. Kataoka relates a case of constancy under persecution, of the truth of which he has no doubt, having heard the particulars from an official who was present when the incident took place. When a number of Roman Catholic Christians were arrested in Urakami (Hizen) many of them were sent to Kōriyama (Yamato), and there every effort was made to induce them to recant. Ordinary measures failing, it was decided to try what threats would do. A woman and her infant were informed that they would be left to starve in prison if the woman refused to renounce her religion. Her reply was that she was content to die rather than give up her belief. At the beginning of the *Meiji* era, some 60 Roman Catholic converts who had been arrested at Urakami were released at Kōchi. Before being allowed to return to their homes, they were taken to a Buddhist temple and every effort was made by the priests of the temple to persuade them to give up their Christianity, but without effect. The strength of their faith so surprised the priests that it is said that several of them decided then and there to become Christians. There was much to admire in these Roman Catholic converts, observes Mr. Kataoka. In outward demeanour they were quiet and undemonstrative, but deep down in their hearts there was religious fervour which no amount of persecution could quench. Combined with great humility there was great loftiness of sentiment—a pride in their belief, under the influence of which they refused to yield an inch to their would-be perverters. They were entirely without hypocrisy, and, though at times there was great mixing of the sexes, no impropriety was ever discovered. In intelligence and knowledge they occupied a low place in society, but in conduct their rank was high. To them I attribute my first leanings towards Christianity and my subsequent Christian

belief. They, too, were the origin of the Kōchi Christian Church. Mr. Kataoka next proceeds to discuss the present state of Protestant Churches, and after expressing regret that there should be manifested in various quarters so much worldliness, unbelief, and lack of zeal, he offers the following practical suggestions for what they are worth. (1) That an attempt should be made to make Christian "captives" of men of influence in the provinces, this being the surest way of making the power of the Christian religion felt among the masses. (2) That efforts be made to produce a superior class of Christian to those is usually found in existing churches. One hears a good deal about "the pastor's church," but it would be better for the cause generally if the pastor became less prominent and the Christian more so, and the term "the Church's pastor" came into vogue. If all the strength of a church is concentrated in the pastor, progress will be slow. (3) With the Buddhists the priest resides in or near his temple and is identified therewith. There are many advantages to be gained from this arrangement and I should like to see it adopted by Christians. (4) It is undesirable to organise a number of very small Churches. The concentration of strength in large bodies is a better plan. (5) My residence abroad convinced me that Japanese Christians are far behind Occidentals in the respect shown to ministers of religion. The emoluments of ministers, too, are not what the dignity of their office renders necessary.

* * *

It seems that a number of Japanese students connected with the Imperial University and Higher Schools have joined the World's Young Men's Christian Student Alliance (*Bankoku dōmei Kirisutokuyō Gakusei Seinen-Kai*). The *Fukui Shimpō* states that at first these students showed reluctance in joining, but they were induced to do so after hearing from Mr. Mott, the representative of the Alliance from America, the kind of declaration of faith necessary for joining.

* * *

The *Fukui Shimpō* draws attention to the various ways in which Baron Nishi Shū helped forward Christian work in the first two decades of the *Meiji* era. In a Magazine started by him, the 明六雜誌 *Meiriku Zasshi*, religious subjects were frequently discussed, and his essay entitled 百教一致 *Hyakkyō Itchi* (the union of a hundred religions) attracted a great deal of notice at the time of its publication. As the translator of Hoven's "Mental Philosophy," and Mill's "Utilitarianism," he did good work. It is pleasing to note, concludes the *Fukui Shimpō*, that a man whose whole life was devoted to scholarship, was honoured in his last moments with the title of Baron.

* * *

The same magazine, writing on the subject of the propagation of Christianity, recommends a more practical method of disseminating religious teaching than has hitherto been adopted. Mr. Katayama Sen has started in Misaki-chō, Kanda, it is stated, quite a new class of work. Instead of preaching in districts and places where the preacher is not known, Mr. Katayama makes a point of getting to know personally the inhabitants who live near him, to whom he gives religious publications and who are encouraged to inquire by letter or by personal interview the meaning of anything that may perplex them. Free reading-rooms are opened in the district and addresses of a practical kind are given. The more earnest enquirers are invited to reside for a while with the evangelist or with other devout Christians. Mr. Katayama is strongly in favour of introducing the Christian village settlement system here. Christianity in Japan needs to combine industrial teaching with its evangelistic efforts, according to this authority. If efforts were made to provide new occupations for the poor, the Christianisation of the masses would be greatly facilitated.

* * *

According to the *Kirisutokuyō Shimbun*, the Kumi-ai Churches need arousing, and with a

view to bring about the desired awakening, a giant meeting of the sect is to be held in Maiko (Baushū), commencing on March 24th and ending on April 3rd. The evangelistic efforts of the Kumi-ai Churches, it is stated in the organ we are quoting, are too scattered and a union which constitutes strength needs cementing. Efforts will be made at this meeting to render the churches attached to the sect more efficient evangelistic centres.

The *Koye* (Roman Catholic), announces the publication of a new work by the Rev. Father Vigroux entitled 哲學論綱 *Tetsugaku ronkō* (A Discussion of Important Philosophical Subjects). It may not be known to some of our readers that this author has published other books which are very favourably reviewed in some of the secular journals; namely, the 古事新論 *Koji Shinron*; the 愛國ノ真理 *Aikoku no Shinri*, and 事跡以前以後ノ歴史 *Jiseki isen igo no rekishi*. The first discusses ancient Customs from a modern standpoint; the second defines patriotism and distinguishes between true and false types—a very important subject in this country; the third deals with history before and after Christ, with special reference to its bearing on Christianity. The *Tetsugaku Ronkō* is designed to satisfy, in as far as they can be satisfied, the doubts of numerous Christian inquirers. The above works are said by reviewers to be written in a liberal spirit, and to be free from the narrow minded prejudices that disfigure many sectarian religious publications. The works are for sale at the 文海堂 Bunkaidō, Ginza, Sanchōme.

The Baptist Mission has been hitherto unnoticed by us for the simple reason that we have not been able to obtain information on the subject. As far as we are aware, there is no recognized Baptist organ published in the vernacular. We have now been furnished by a friend with a table of statistics prepared by the Rev. J. L. Dearing, and with a copy of a report of the Conference of Baptist Missionaries held in Kobe last April. We take this occasion to say that we never intentionally leave the work of any mission unnoticed in these summaries, but that it is not always easy to obtain statistics bearing on mission work, and that it would greatly facilitate our labour if members of the various missions would furnish us with trustworthy information from time to time. Communications addressed to the writer of the "Monthly Summary of the Religious Press," *Japan Mail* Office, will receive attention. The English, Canadian, and American Baptists have 19 married male agents and 21 unmarried female agents labouring in Japan. The places occupied by these agents, given in alphabetical order, are Chofu, Kobe, Nemuro, Osaka, Sendai, Tokyo, and Yokohama. There are 23 organized Churches, 3 of which are self-supporting, with a total membership of 1,739. There are 4 ordained native pastors, 44 undordained preachers, 28 other helpers, 28 Bible women, 15 theological students, and 2,847 children attending Sunday schools. The following educational establishments are attached to the Mission:—The "Sarah Curtis Home," Tokyo, Miss Kidder, Principal. The "Mary L. Colby Home," Yokohama, Miss Converse, Principal. The "Ella O. Patrick Home," Sendai, Miss Mead, Principal. The "Henrich Memorial Home," Chofu, Miss Blunt, Principal. The Yokohama Boys' Day School, Miss Converse, Principal. A Boys' School in Tokyo, a Boys' in Osaka School, and a Theological Seminary in Tokyo.

Among the articles published in the *Nihon Shūkyō* is one entitled, *Kiyoki to Kegare risetia Kwan* (離接觀) "Ideas concerning the propinquity of Things Sacred and Things Profane," by a writer signing himself Tōon, of which we give the gist. Though there is something diametrically opposite in what men have agreed to call sacred and that which they consider to be profane, in this country they are in a num-

ber of instances found side by side. The same thing has no doubt taken place in all countries and in all times. The Romans complained of the practice in words that have become proverbial, *Sacra profanis miscere*. The English word used as antithetical to sacred, profane, is derived from *profanus*, before the temple, i.e., without the temple; hence opposite to the temple considered as a sacred object, unholy, not sacred, common. Despite the fact that the feelings of the best people in all ages have been shocked by the propinquity of things sacred and things secular or profane, there has always existed a strong section of the public favourable to the close proximity of solemn ceremonies and worldly amusements. In the history of religion, the Japanese, like other nations, have to record a perpetual and varied violation of sacred things. I will now proceed to cite instances.

(1) The recent dispute of the Sōtō sect was concerning money more than anything else. In the pages of the *Bukkyō* the sect is rightly spoken of as the *Haikin* (拜金) Sōtōshū, the "money worshipping Sōtō sect." The same remark applies to the commotion in the Hongwanji Otani-ha. (2) But there are worse things than these. Many of our most sacred temples are surrounded by dens of iniquity. Close to the Ise Daijingu and to the Tōkyō Asakusa Kwan-on temples are numerous brothels. The Shimmei Shrine, in Shiba, is defiled by the proximity of Yōkyū-ten*, Meishuya [銘酒屋] † and *geisha* houses. The same may be said of numerous other sacred places. (3) A similar revolting mixture of things sacred and profane takes place in the case of the Buddhist priests who frequent brothels in such large numbers all over the land. It is reported that among the brothel-keepers of Gion (Kyōto), Buddhist priests are considered to be the best customers. There are those who, like Mr. Tokushi Goō, maintain that this state of things is the result of the espousal by leading Buddhists of what is called the *mu sen-akushugi*, "No virtue and no vice principle," which involves the utter destruction of ethical principles. In reference to this, there is room for great difference of opinion. It is plain that Mr. Takahashi's explanation of the phenomena in the religious world to which I have been calling attention, does not reach the real causes of the desecration complained of; for the same class of desecration prevails or has prevailed in countries where Buddhism has not been taught. Not only the ancient Romans, but the Jews and Christians testify that the same influences have been at work in their midst, "turning," in the words of Christ, "the temple of God into a den of thieves." (4) The respect for sacred things, the realization that there is something superior to all secular affairs in religion, seems to no longer exist in the minds of the mass of Buddhist priests. The remarks published in the *Dentō* (Buddhist organ), relating to the visit of Marquis Iō to Itakushima, are characterised by servility and ultra-worldliness which it would be difficult to match. Among other observations of the same character these words are seen, "The conversion of Marquis Iō to the Buddhist faith exceeds in merit the conversion of ten thousand ordinary persons." I see no sign of Marquis Iō's having joined the Buddhists, and the idea that were it to take place, his conversion would be a greater source of rejoicing than that of thousands of ordinary persons could only be entertained by thoroughly worldly-minded people. The condition of the priesthood in Japan at the present time resembles that of the Christian clergy in the dark ages, or that of the Indian priests prior to the birth of Shaka Muni. Is it that in religion as in other things familiarity breeds contempt? Does the mind grow so accustomed to sacred things that they lose their sacredness? We see more respect for Buddhism to-day among

* Ostensibly these places, called *yaba*, archery places, are established for the purpose of enabling people to practice shooting with arrows, but the women that keep them are seldom moral, and hence they have a bad name in Japan generally.

† Drinking booths, also used for the same purpose as the *yaba*.

devout laymen than among the priests. Buddhism has erred in aiming at an impossible standard of life, in suppressing desires, instead of teaching how they may be gratified in a virtuous and moderate manner. The priests have hitherto lived too secluded and impractical a life. They need to imbibe, not only the moral notions, but also much of the common sense of the ordinary citizen. Hitherto a priest's time has been divided as follows: In performing ceremonies, saying prayers and reading the Scriptures 経, in mixing with the world and learning its wisdom 智. This proportion might with advantage be reversed. It is an undoubted fact that men's minds cannot be exclusively concentrated on religious subjects. They demand relaxation. If this is not given, nature revolts and serious excesses of all kinds are the result. Moreover, much of the ceremony among Buddhists has become utterly meaning-less—a mere dead letter, which might be discontinued with profit.

It is stated in the *Nihon Shūkyō* that Mr. Fukuzawa, a short time ago, in an address delivered to the students of the Keiōgijuku prior to their starting for home, urged upon them the importance of endeavouring to break down the reign of superstition in country villages. According to Mr. Fukuzawa, who is certainly an authority on these matters, the belief in divination, in lucky and unlucky days, in favourable points of the compass for a house to face,* in being betwitched by foxes, in dreams and their interpretation, in the power of curses, whether delivered by the gods, by the spirits of the dead, or by living persons who have been offended, in the possibility of obtaining rain, of the cure of sick persons in answer to prayer, in the merits of fasting or abstaining from cooked food or salted things, is still very general, not only among the lower classes, but among persons whose station in life and education ought to render them proof against giving credence to such follies. The time, money and labour wasted over vagaries of this kind are very considerable. Many a high class person even consults a diviner before taking a journey or deciding on any important matter in order to be told which day of the week or month will be auspicious, and there have been cases of houses being pulled down and rebuilt solely on account of their facing an unlucky point of the compass. Mr. Fukuzawa impressed upon the students the importance of opening a raid on these superstitions, even though it involved giving offence to their own parents. But while ridiculing silly beliefs, Mr. Fukuzawa would not, he said, have the students interere with those religious notions on which the morality of the people rests. There are many ways of teaching and enforcing morality, but, taking things as we find them, there is no denying that with a large number of people their virtue is based on their religion and it is undesirable that this basis should be disturbed. It seems to me, continued the Mita Sage, that many of the upper classes in the provinces are in a bad way morally. They have given up the old religious beliefs as childish and have nothing to take their place. My advice to you, concluded Mr. Fukuzawa, is that you who have nibbled at civilization enough to know its sweetness should endeavour to carry enlightenment wherever you go, that in all matters of belief you should aim at straightening what is crooked and correcting what is wrong, but that, at the same time, you should set your faces against wholesale destruction.

The latest number of the *Shūkyō* to hand presents its readers with a very learned and varied programme. The subjects are of wide range. Mr. Izuka discusses, "The Great Blow dealt to Conservative Theology by the theory of Evolution;" Mr. T. Fujita, "The influence on the mind of Confucius of ancient Chinese thought;" Mr. Ōko Kaishi, "The Otani sect and its Reformers from a hystander's

* The North-Eastern direction is specially unlucky; hence called 鬼門 *Kimon*, Devil's gate.

point of view." Besides these, there are articles on Mr. Kitabatake Chikafusa's *Shintōron*; "The existence of God;" "Present Local Problems;" and two editorials, one entitled "The Future of Religion. Is religion altogether to disappear?" and the other, "Is the Bible to be used as a text-book?" In this article reference is made to inquiries lately made in America as to the use of the Bible as a text-book in the Universities of the United States. The questions sent to the Universities and a report of the answers are given, after which the following observations occur:—Seeing that America is a Christian country and that morality in the United States is founded on Christianity, the use of the Bible in various educational establishments in the past is no cause for astonishment, but we are of opinion that there are clear signs that in future the Bible will not be considered a suitable text-book for American Universities. (1) The Bible is no longer considered infallible and hence does not, in the minds of many people, occupy the position it used to do. (2) The study of comparative religion tends to lower the estimation in which the Bible is held, in that it reveals the existence of numerous other high-class sacred books. (3) In modern times the practice of using text-books for teaching ethics and religion in Universities is being discontinued. It is seen to be impossible to do justice to these subjects while confining lectures to the exposition of the meaning of a single text-book. In this respect religion and ethics differ from most other subjects taught. (4) Proof is worth more than argument. Already some American Universities no longer use the Bible as a text-book. Coming to the consideration of the subject in so far as it affects Japan, that Schools of Divinity, or what are designated mission schools, should make the Bible their chief text-book is of course proper, but attention needs to be called to the fact that schools professing to provide a general education employ the Bible as a text-book, sometimes to the almost total exclusion of other books. This practice is objectionable. There is no doubt that from whatever point of view regarded, the way that ethics and morals are taught in the elementary and middle schools of Japan is unsatisfactory. Too much attention is given to ethical theories and too little attention to the inculcation of practical morality. And the recent movement in favour of basing all moral teaching on nationalism, is as objectionable and one-sided as the foreign practice of making Christianity alone the basis of ethical teaching. The tendency of the method of instruction now so popular is to make Japanese think highly of their own countrymen and despise foreigners. To teach the duty of loyalty to a family and to one's country and not to follow this up by insisting on the duty to humanity as a whole, is surely to produce dangerous results. To hold up for admiration such men as Confucius and Kusunoki (Masashige), and to say nothing about the lives of Shaka and Christ is not the way to teach morality. The majority of the men to whom is entrusted the teaching of ethics in this country are permeated with a narrow-minded nationalism. There is great need of bringing to the notice of students the moral greatness of the heroes whose lives are recorded in the Bible and other sacred books.

A new religious organ has made its appearance in Formosa, whose object it is to furnish religious news and discuss subjects connected with Formosa. It bears the title of the *Shin Nihon Kyōhō*, the "Religious News of New Japan," Formosa being the new Japan. In the notice of it given in the *Nihon Shūkyō*, it is not stated whether the new publication is Christian or Buddhist. It is published at Taipei and sells at 6 sen per copy.

The *Bukkyō* states that since last year three religious organs have been discontinued, namely the *Sōtōkyōhō*, the *Nyōse* (both Zenashu organs), and the *Uchū Shinkyō*, a Jiyū Kirisuto Kyō organ.

A very useful reference book on Christian

Missions has been issued by the Kyōbunkwan, 4 Chome Ginza, Tokyo, which may be had for 15 sen. It is called the *Kirisutokyo Meikwan*. It furnishes statistics under the following headings:—(1) Addresses of workers; (2) Missionaries; (3) Churches; (4) Schools; (5) Associations; (6) Benevolent Societies; (7) Offices of Magazines and Christian book-shops; (8) Statistics on the number of Church members. The addresses of Missionaries, and many details respecting their work are furnished.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for February, showing the foreign trade of the Empire for the month:—

	1896. SILVER YEN.	1897. SILVER YEN.
Exports	10,061,211.000	11,568,703.320

NOTIFICATIONS OF THE FINANCE DEPARTMENT.

The Department of State for Finance issues the following two Notifications:—

The following issue of War Bonds was made on the 26th instant, namely Bonds of the total face value of 400,000 yen, at the rate of 99 to 100 yen per 100 yen Bond.

In accordance with Law No. 7, relating to the method of collecting fees for licenses to pursue game, it is hereby notified that the stamps accompanying applications shall be registration stamps.

THE INSURRECTION IN MANILA.

The telegram that we publish on Saturday, announces the end, it may be presumed, of the rebellion in the Philippines. Cavite, the stronghold of the insurgents has fallen, and it has been well understood that the fate of the insurrection depended upon that event. Spain has shown capacity and resolution in her treatment of a difficulty that must have taxed her resources severely, coming, as it did, when the Cuban trouble had already cost her exhaustive efforts. Indeed, Spain has surprised the world during the past two years. Her tenacity of purpose and elasticity of resource would have been admirable even if displayed on a much smaller scale, but when we find her supporting an army of something like a hundred and fifty thousand men in Cuba, and, at the same time, despatching a force of about twenty-five thousand to the Philippines, it is evident that the measure of her national vitality had not been rightly gauged by those that supposed her incapable of great achievements. Her plucky struggle against terrible difficulties has won universal admiration, and it is to be sincerely hoped that brighter days are now dawning for her. We are wholly at a loss to understand why the people of the United States should sympathise with the Cuban insurgents, for to suppose that there can be any room for intelligent hesitation between the alternatives of elevating such a people into an independent nation, and leaving them under the rule of Spain, seems quite extravagant.

GERMAN TOPICS.

A Berlin editor has been sentenced to two months' imprisonment for an article in which he declared that the Foreign Office inspired the paragraph stating that the Czar, while in Germany last year, was dissuaded from visiting Prince Bismarck by advice from the highest quarters.

News comes from Berlin of the death of Sewahadi, an East African merchant-prince, who formerly monopolized the business of supplying expeditions to the interior with Zanzibar carriers. He bequeathed to the German Government, for benevolent purposes, a large property at Bagamoyo.

The death of Baron von Elitz adds another to the roll of German pioneers who have fallen in their zeal to promote colonial interests. He occupied the post of Commissioner for the German territories east of Lake Nyassa, and by strenuous action against the Arabs, contributed in no small measure to the extinction of the slave-trade in his district.

A German court, says *The Electrical Review*, has decided electricity cannot be stolen. A man was arrested on the charge of having stolen several thousand amperes of current by tapping a light company's mains and using it to run a motor. The courts, on appeal, ruled that "only a movable material object" could be stolen, which electricity was not, and therefore the man was acquitted.

In a recent interview with Prince Bismarck, a Berlin correspondent took occasion to ask him for an opinion on Count Mouravieff, the newly-appointed Russian Minister of Foreign Affairs, who, according to rumour, has strong anti-German feeling. Prince Bismarck remarked:—"Well, he is a man in whose future I always had great hopes: If he turns out as I believe he will, he will be a success." In the course of further conversation, the Prince said that during Count Mouravieff's service in Berlin, the relations between the Count and himself were always most cordial and extended far beyond mere official intercourse. Prince Bismarck regarded

him as a personal friend. "He is a diplomat of the old school on whom one can depend," added the old statesman. The *Dresdener Nachrichten* is our authority for these statements.

The German press has much to say with regard to the parliamentary inquiry now proceeding in London, regarding South African affairs. The *Norddeutsche Allgemeine Zeitung*, of Berlin, thinks the inquiry will lead to no practical result. Mr. Rhodes' attacks upon Germany, the official organ says, are beneath contempt. The Berlin *Vossische Zeitung* says—"Mr. Chamberlain knows, at any rate, how to turn things to his own account. It appears the Transvaal Republic is always expected to give yet receives nothing in return, notwithstanding her peaceful attitude. It is a pity that the Boers did not hang the filibusters on the nearest tree. According to international law, they had a perfect right to do so. The emigration laws of which so much complaint is made, do not apply to Englishmen only, but to all foreigners. These laws may be inconvenient, but they were, in the Boer interest, manifestly necessary. It is time for the slow-going Boers to take a firm and united stand against British intrigues; and they need not wait for the end of the parliamentary inquiry, for it is nothing but a farce. Rhodes will, of course, return triumphant to South Africa." The *Hamburger Nachrichten* says—"It would be interesting to know what England would say if Dutchmen or any other nationals were to drive them out of a country colonized by them. The inquiry is an obvious farce. The alleged alliance between Germany and the Transvaal is a phantom of British imagination. Germany's only duty in the matter is to preserve the *status quo* in South Africa."

EXTENSIVE COAL ROBBERIES IN YOKOHAMA.

The police of Yokohama have just effected some important arrests in connection with the extensive thefts of coal that have been proceeding here for the space of some two years. During this time, something like 1,500 tons of Cardiff coal has been abstracted, the principal sufferers being Messrs. Jardine, Matheson & Co., who lost 900 tons from Nos. 261 and 262; while 738 tons were taken from Messrs. Langfeldt & Co.'s godowns, and 150 tons from the coal warehouses of Messrs. Isaac and Bro. For a long time the operations of this gang of coal-stealers were a puzzle that the police failed to unravel, but the other day a very big robbery of coal was effected from Messrs. Jardine, Matheson's coal-stores and the police managed to get upon the track of the men concerned, having found Cardiff coal answering to the missing mineral in the stores of some coal merchants named Hayase Matsujiro, Ishikawa, Nakamachi, Sanbome; Oshima Genzo, Hanazakicho Shichome; and Miyagawa Sakichi, Yoshihama-cho. All were arrested. They are now being examined in the District Court, Procurator Kitajima having charge of the case. Further arrests are pending.

ATTEMPTED BURGLARY AT WHALEY'S HOTEL.

A burglar who broke into Whaley's Hotel at 4 a.m. on Tuesday morning and attempted to steal the large musical-box that hangs upon the wall of the bar-room, got more than he had arranged for in the way of a reception. The man's movements awakened a dog, which started barking, and so aroused Mr. Whaley and Mr. Etzel. Both gentlemen at once descended to the bar-room, the latter giving chase to the burglar, who was effecting his exit with all haste. Mr. Etzel pulled out a revolver and discharging two shots, for the purpose of frightening the marauder, soon effected a capture, opposite the U.S. Consulate. The man gives his name as Yoneyama Konosuke, at No. 9, Ichome, Chitose-cho; he was formerly engaged as a boy at the Hotel. This is the second time the same man has broken into the hotel.

NEWS OF THE DAY.

On the 15th inst. about seventy labourers of the Sado Mine went on board the steamer *Pasama Maru* at Fushimi port and left for Shiribeshi Mine, Hokkaido.

H.E. Chang Yun-woon, the Special Ambassador who is to represent the Emperor of China on the occasion of the celebration of the Queen's Diamond Jubilee, will travel by the Canadian route, leaving Shanghai by the *Empress of China* next month.

The native Christians of Nagasaki, says the local journal, have contributed a fair-sized amount to the Indian Famine Relief fund and have forwarded the same to the Madras branch of the Y.M.C.A. through the Y.M.C.A. branch in Tokyo.

Mr. Jas. Troup, H.B.M.'s Consul at this port, left yesterday by rail for Kobe, to meet his wife, who is expected from home. During his absence, which will probably be for about a week, Mr. R. G. E. Foster will be in charge of the Consulate.

Mr. Shimamura Hisa, Consul-General at Hawaii, has been gazetted *Chargé d'Affaires* in Hawaii; Mr. Muroda Yoshibumi, Consul-General in Mexico, has been promoted *Chargé d'Affaires* in Mexico; and Mr. Inagaki Manjiro is appointed *Chargé d'Affaires* in Siam.

On Saturday morning Mr. Percy Mackenzie Skinner, Editor of the *Hingo News*, and barrister-at-law, of the Middle Temple, signed the roll of barristers and was admitted to practice at the bar of H.B.M. Court for Japan, by Mr. Justice Mowat. Mr. J. F. Lowder was Mr. Skinner's legal sponsor.

According to the *Ostasiatische Lloyd*, Baron von Gutschmid will not return to Japan, his place at Tokyo being taken by Baron von Waecker-Gotter, at present German Ambassador to Servia. Baron von Waecker-Gotter, says our contemporary, will arrive in Tokyo in May next to take up his new duties.

To run over a Captain in the Royal Navy is an expensive pastime, as the London General Omnibus Company have discovered to their cost. One of their busses ran over Captain Wrey, of H.M.S. *Sanspareil*, and the jury who heard his suit, awarded him £1,160 as compensation.

At the farewell dinner given by Japanese merchants and others of Kobe and Osaka in the Tokiwa at Suwayama, to Colonel Connelly, the U.S. Consul at Kobe, a set of three large *saké* cups, on a gold-lacquered stand and of ancient design, were presented to the Consul as a memento of the occasion.

Here is a neat retort by a young lady to a cabman, for the record of which we owe a debt to the London correspondent of the *Sheffield Telegraph*: "Cabby, I wish you would be more anæmic in your observations." The cabman was cowed by this unexpected retort. He had no idea what the word meant, but it was evidently something dreadful.

In the Supreme Court of Hongkong, about a week ago, five Chinamen were charged with larceny by means of menaces. Jewellery and ornaments valued at \$561 were stolen by the prisoners from a shop in Queen's Road Central. One prisoner was sentenced to eleven years' imprisonment with hard labour, and each of the other four to ten years' hard labour.

On the night of the 28th ult. a number of excited people belonging to districts affected by the copper outflows from the Ashio mines, attacked the house of Mr. Hayakawa, chief of the village, on the ground that he had received a bribe from the owner of the mine. Mr. Hayakawa fled, but his furniture was reduced to piecemeal before the intruders departed.

Several thieves and receivers of stolen goods were arrested by the Bluff police on Saturday. They were Kawai Kinesaku (34 years old), and Ito Chokichi (39 years old), thieves; and Kirigaya Hiroasaburo (32 years old), and his elder brother Kirigaya Sakujiro, receivers. All had been previously convicted several times, and

were liberated on the occasion of the amnesty declared in honour of the obsequies of the late Empress Dowager. Kawai and Ito committed depredations in more than ten places since their liberation, and stole sums of money and numerous articles of clothing, while the Kirigayas, whose brothers are well-to-do farmers, received stolen goods from them. The men were captured near Negishi, and sent to the Chiho Saibanaho.

Baron Hayashi, the new Minister to Russia, who came down to Yokohama on the 31st ult., went on to Hakone with his family. The Baron returns to Yokohama on the 4th instant to take the French steamer, *Ernest Simons*, for Europe.

Hayashi Tatsukichi, a native of Kagawa Ken, who came to Yokohama on the 25th ult. with the intention of joining a steamer, took lodgings at the Tashiroya, Minato-cho, Yokohama. Being unable to obtain employment, the man, driven to desperation, jumped into the harbour from the Hatoba about 7 o'clock on the 30th ult. He was seen and rescued by the Water-police.

We are used to "magnificent distances" in the Far East, yet it speaks volumes for the good-will prevailing between the foreign Settlements of Japan that a dozen young men should undertake a railway journey of 300 miles for the sake of providing an evening's amusement for their friends. The members of the Incogniti, who only arrived by the morning train on Saturday, left for Kobe by the midday train on Sunday. They had a deservedly warm send-off.

Notwithstanding wailings to the contrary, the condition of the agricultural labourer has improved so greatly in England that the military authorities are complaining that they cannot recruit him. The red-coat and 1s. 3d. a day will not tempt him to change his smock frock, and if he cannot become a policeman he gives the ploughshare and good wages the preference before the glory of Her Majesty's service.

"Sir—I wrote the day before yesterday to ask whether you still require the bicycle, but you have not answered. Please let me know." The following is the latest way of climbing round the above:—"Sir—Refer to the bicycle about the time of your necessity, I wrote you day before yesterday, but you did not give me an answer whether you continue the necessity of it or not. Please send a answer."

Okada Naka (aged 31), the wife of Okada Kunisaburo (aged 32), living at Chitose-cho, Yokohama, had been pawning lots of silk goods since January last. Her movements finally attracted the attention of the police and on Monday both parties were arrested. Kunisaburo during the police examination, confessed that he had broken into many houses in the town and stolen clothes, etc. Both were at once sent to the Yokohama Local Court for trial.

An extraordinary general meeting of members of the Yokohama Chess Club took place on Thursday evening, the President, Mr. J. T. Griffin, in the Chair. After a little discussion, it was decided that as the winter session of the Club has but another month to run, the proposed revisions in the rules, etc., be deferred until the Annual General Meeting in October, when they could be brought forward if the present proposers thought fit.

The resolution passed by British residents of Kobe on Tuesday evening last was the result of a compromise, says the *Kobe Chronicle*. There appeared to be a very general impression that the sum of fifteen hundred dollars would be found inadequate for festivities of the character desired, and Mr. Melhuish therefore amended his original resolution in the direction of giving the General Committee a free hand, but proposed instead that two lists should be sent round, by means of which British residents could indicate to what purpose their subscriptions should be devoted—whether to the festivities pure and simple, or to the proposed permanent memorial, or, if they so wished, to be divided between both. It was further decided that the permanent memorial should take the form, if possible, of rebuilding or reconstructing the International Hospital.

YOKOHAMA GENERAL CHAMBER
OF COMMERCE.

THE RAW SILK BOUNTY LAW.

FUTURE PROSPECTS OF SILK CULTURE IN JAPAN.

The annual general meeting of members of the Yokohama Chamber of Commerce was held on Wednesday afternoon. Mr. Jas. Walter presided, and there were present, Messrs. Jas. Dodds, E. Flint Kilby, J. A. Fraser, W. F. Mitchell, R. D. Robison, C. G. Buchanan Dunlop, W. B. Walter, H. Grauert, G. W. Bramhall, E. Rogers, J. P. Mollison, M. T. B. Macpherson, A. Woolley, V. R. Bowden, G. W. Middleton, W. Sutter, P. Holm, A. Naudin, H. J. Davidson, G. Reiffinger, and O. Keil (Secretary).

The notice convening the meeting having been read, the minutes of the last meeting were taken as read.

The CHAIRMAN—Gentlemen, the accounts are now before you. They have not been in your hands very long, but they are certainly very satisfactory. Quite a large increase in the membership of the Chamber has taken place during the year and having regard to the improved financial status of the Chamber I will throw out a suggestion to the incoming Committee to make more liberal arrangements with the Secretary with regard to salary and the renting of the rooms which we occupy. It will be seen that there is a fair balance in hand. The chief increase in members has taken place only in the present year; I think as many as thirteen new members have lately joined the Chamber.

On the motion of Mr. MITCHELL, seconded by Mr. ROBISON, the accounts were adopted.

The CHAIRMAN—The thanks of the Chamber are due to the auditors, Messrs. Pinckney and Wadman, who have kindly audited the accounts. The next business is the adoption of the report. It is rather a long document, but as it possesses points of unusual interest, and perhaps some members have not had an opportunity of glancing through it, with your permission I will read a portion of it.

REPORT.

In referring to the statistics accompanying this Report, it will be necessary only to deal with some of the main points as affecting the Trade of Japan and of Yokohama.

According to the Customs figures, the total foreign trade of Japan shows an increase of \$24,000,000, this being an increase of about \$42,000,000 in Imports and a decrease in Exports of \$18,000,000, as compared with the year 1895.

The Import trade for the first half of the year was satisfactory, and dealers appeared to be confident as regards Autumn prospects; but a combination of adverse circumstances set in about September, beginning with floods and inundations and ending in a serious contraction of credit amongst the Japanese Banks, and consequent general demoralization of business, with the result that the year closed amid gloom and depression. Godowns were loaded up with contract goods of which dealers could not be induced to take delivery; while their calm indifference to the question of interest and expenses attendant on carrying these stocks (under contract be it remembered for clearance in 60 days), was the most unpleasant feature in the situation. Never before, perhaps, was the utter disregard of the Japanese merchant generally to the obligations of a mercantile contract more clearly or more forcibly exemplified.

The interests of foreigners engaged in the Export trade of Raw Silk has been greatly menaced by a Bill that passed the Imperial Diet on the 24th March, 1897, granting bounties to the direct exporters of silk to Europe and America if Japanese, as discriminating against foreigners. This matter is referred to later on in this report and should certainly call for Diplomatic intervention.

Had a Bill, granting bounties to the producer, been passed with the object of stimulating him to giving greater attention to the improvement of an article that has brought the most wealth to the country, the foreigner would have nothing to complain of, any more than the alien resident in Germany can complain of the Government bounty granted to the farmer who grows beets for sugar, the growing of cereals being impossible except at a loss to him.

It is the discrimination against the foreigner at this early date, prior to the time when he comes under Japanese jurisdiction, that augurs so badly for his future welfare.

The Bill for the introduction of a Gold standard for Japan, which has passed both Houses, is a matter of much importance. Its final effect on the

trade of this country is at present impossible to foresee.

EXPORTS.

RAW SILK.—During 1896 there has been a heavy falling off in the export figures of this, the chief article of export, there being a diminution of 19,062 bales (19,624 piculs) in quantity, and of \$9,090,000 in value as compared with 1895.

The average value of the bale of silk for 1895 was \$847, whilst for 1896 it was only \$763, showing a depreciation of \$84 per bale.

The decrease in the export of raw silk to the United States is very marked, being no less than 14,736 bales, while exports to Europe have also fallen off to the extent of 4,326 bales.

The cause for this shrinkage in the trade to the United States was undoubtedly the financial crisis which lasted so long, owing to export of gold from that country to Europe, and the uncertainty existing in commercial centres as to what the fiscal policy of the country would be in the near future.

Importers of raw silk would not enter into fresh transactions until the last thread of silk had been paid for by their customers, the manufacturers, and the latter being saddled with goods made from the high-priced raw material of the previous year had equally to face the hard times and work off their stocks of manufactured silks as best they could in the face of falling prices of the raw material from all producing countries.

In Europe, the position was by no means so bad, the export from January to end of June showing an increase of over 1,200 bales as compared with the same period of 1895, whereas to America during the same time there was a decrease in the export of nearly 3,000 bales. This state of affairs did not last long, for the United States, which may be said to rule the market for Japan silks, being no longer a buyer, except for very limited quantities, European manufacturers took alarm, and for the latter half of the year there was a falling off in the export to Europe of 5,600 bales as compared with the same period of 1895.

Stocks left over on the 1st January, 1896, were heavy, being some 18,800 piculs, with prices standing at \$875/890 for best fine-sized Filatures suitable for Europe, whilst best Silks of similar quality but of coarse size for America, were quoted at \$850/860 per picul.

By the end of June, prices had receded to about \$720-730 for these same qualities. It is at this time in June that great interest is concentrated on the yield of the new silk crop.

From the time that the eggs of the silkworms were hatched, and throughout the period of rearing, the climatic influences were anything but favourable to this delicate insect, the prevailing weather being cold and excessively rainy.

Perhaps in no country in the world are the farmers so expert in coping with the vicissitudes of the climate as affecting the silkworm than in Japan, but before the silkworms had reached the stage of spinning, reports came in from many of the producing districts that the mortality was unusually great, the result being only half-spun cocoons, the worm dying before it had finished spinning and entered the chrysalis state.

At first these statements from the interior were not given great credence to, but before the season was far advanced those interested in the trade began to realize that the crop was a short one, variously estimated at 15 per cent. to 20 per cent., and the marked falling off in the colour of the silk and the similarity of the symptoms affecting the silkworm here with those of the disease known in France and Italy as "pébrine," which wrought such havoc in those countries in the early sixties, caused many in the trade to wonder if the disease really had taken hold of the silkworm in this country.

This question, of such vast importance to the commercial welfare of Japan, may or may not be definitely settled by the result of the coming crop of 1897, but under any circumstances it behoves all those interested in this trade to make every effort to stamp out the disease if it really does exist, and before it has taken any serious hold on the Japanese race of silkworms.

The trouble commenced in Italy under very much the same conditions as we now find in Japan. In Italy the cultivation was almost exclusively confined to the yellow race; the silkworm had reached perfection, its size, its cocoon, and production of thread being larger and heavier than anything heretofore reached. Then came the decline. In Japan, there were two races, the green and the white; the former no longer exists, the demand running upon silk of brilliant white colour, and it is to be feared that this last race has been inbred too long and is now feeling the strain of the work thrown upon it in giving us the largest export ever reached, as in 1895, of over 56,000 bales.

Japanese silkmen, in view of the short crop, have been most unwilling sellers, and buyers being only prepared to supply actual wants at the prices asked, the trade has dragged throughout the latter half of the year, which closes with a stock of over 18,000 piculs on hand.

SILK CONDITIONING HOUSE.—This was opened with some éclat last summer. The merchants concerned in the trade were invited to inspect the machinery, arrangements, etc., and to assist in the opening ceremony. The plant was found to be good; the officials and work-people competent. But this institution has not been of much practical use from the exporter's point of view. It is much too small, as would soon be discovered if, say, 1,000 bales consisting of quite 100 different parcels, were required to be "conditioned" for export by any one single steamer. Neither do the *saitori* favour the institution; they much prefer the old style of doing business, by which the silk is tested and inspected by the exporter in his own godown without any reference to the official establishment. The same applies to the preparatory tests for winding, sizing, etc. Doubtless some few experimental *essais* are made at the Conditioning House, but when it comes to real business the old methods prevail.

BOUNTY ON THE DIRECT EXPORT OF RAW SILK.—In the tenth session of the Imperial Diet, a Bill was rushed through, on the closing day (24th March, 1897), which provided that, for a period of 5 years, from 1st April, 1898, a bounty shall be paid by the Imperial Government on all Raw Silk exported from Japan direct; i.e., without the intervention of Foreign merchants at the Treaty ports. At first it was proposed to make the bounty range from \$50 to \$20 per picul, according to quality; but this portion of the measure was changed in Committee of the Lower House, and was replaced by a provision "that the amount of the subsidy, and the classification of the silk, shall be determined by Imperial Ordinance."

This law seems to be in direct opposition to the spirit of the Treaties and calculated to prejudice foreign exporters *vis-à-vis* their native competitors. It is a matter which calls for Diplomatic intervention; then, possibly the law may be suffered to fall into abeyance, even if it be not revoked in the next session of the Diet. It is manifest that, under the Revised Treaties, foreign merchants are to enjoy equal privileges with their native confrères. If this fact be strenuously brought home to the Imperial Ministers, they will probably have no difficulty in devising some less objectionable method of meeting "the imperative necessity to introduce improvements in Japanese sericulture." If this be their real object it could surely be better attained by giving a reward to the careful grower or producer, rather than by enacting a law which oppresses the foreign exporter who has for so many years built up the finest and most lucrative branch of Japan's export trade.

WASTE SILK.—The year 1896 commenced with a bad outlook, the stock on hand being about 14,000 piculs, held at the following quotations:—

Oshu Noshi	\$105 @ \$120
Joshu Noshi	60 @ 65
Filature Kibiso	85 @ 95

Demand remained fair up to the end of the season 1895/1896, without much variation in price, and at the end of June the stock was reduced to about 3,800 piculs.

Business at the commencement of the new season was troublesome by reason of the high prices demanded by holders. For this cause nothing much was done till towards the end of September when some transactions took place at somewhere near the old rates. In October and November buying increased, and the Japanese dealers tried to force prices up about 10 per cent. Buyers held off, and soon found that sellers in want of coin were ready to meet the market. Consequently, by the end of December, prices showed a notable reduction, and the following quotations were practicable.

Oshu Noshi	\$100 @ \$105
Joshu Noshi	55 @ 60
Filature Kibiso	75 @ 85

These dollar prices appear low, and, owing to a falling exchange, enable shippers to lay down the fibre in foreign marts on very advantageous terms.

Export for the year 1896 is as under:

Marseilles	17,950 piculs.
Switzerland	5,300 "
London	3,525 "
America	1,650 "
European ports	6,575 "

Total 35,000 piculs.

As to Nomenclature, the Export is divided as under:—

Noahi—Joshu	7,000
Oshu	3,500
Shinsbu	2,800
Filature	1,500
Hachioji	700
Tegara	700
Rereel	400
Sundries	250
Total	35,000
Kibiso—Filature	16,850
Rereel	9,000
Bushu	2,000
Joshu	1,600
Oshu and Shinsbu	1,000
Sundries	500
Noils	200
Neri	14,300
Agemai and Bichomai	1,250
Carded	750
Pierced	850
Sundries	600
	200

SILK HANDKERCHIEFS AND SILK PIECE GOODS.

As was anticipated in the autumn of 1895, the trade of 1896 has shown a large decrease when compared with the business of the previous year. The principal cause of this decline has been the unsettled state of affairs in the United States, which country still furnishes the largest market for these goods. The trade in fancy piece goods, such as *Kaiki* and *Brocades*, has been almost entirely ruined, owing to the inferior quality of the goods delivered during previous years, and there seems no likelihood of this branch of the business reviving in the future. A further reason for the decline from the business of 1895 is probably to be found in the fact that the trade of that year was largely in excess of actual requirements, especially with regard to European shipments; and the situation was rendered all the more difficult by large lots of goods being placed on the principal European markets from New York. Echizen is still the principal producing district for light weight *Habutai*, but these are now also made in numerous other places throughout the country. The quality of these other districts, however, is not as good and cannot be depended on to run so regular as the Echizen goods. In that province the weavers by long experience and training have succeeded in producing a good, regular cloth, suitable for foreign use; and, so far, they are doing well in keeping up the desired quality.

TEA.—The quality of the crop for 1896 was certainly better than usual, especially with regard to the make of the leaf.

During the early months of the season business in the home markets was very dull, and low prices were ruling both in the States and Canada; but when it became known that McKinley would be elected President, quite a "boom" sprung up, and a large and profitable business was done, and the result of the shipments on the whole was satisfactory to the exporters.

Prices paid to the Japanese were fully 15 per cent. less than in 1895. There is no doubt that the Japanese are at last beginning to realize the fact that more care is necessary in the preparation of the leaf, if their Teas are to enjoy the popularity they have had in past years.

The cost of Tea firing has advanced very materially, owing to the increased cost of Charcoal, Boxes, Labour, etc., prices for which have gone up in the last six months fully 10 per cent.

COPPER.—Export business during the year has kept on about the same level with regard to quantity as last year. The consumption in the country itself has increased somewhat, but this has been squared by an increased production.

Prices opened with \$22.75 per picul for Bessemer and *Furukawa Chodo*, and gradually rose to \$24.25 by the end of the year: at which time by far the greater part of the production of the next year was contracted for by exporters, so that but little remains available for 1897.

The principal destination of the metal exported was, as previously, England and the Continent.

Demand from India has been conspicuous by its absence, the situation there getting worse towards the end of the year in consequence of the famine and plague.

China has only taken comparatively small quantities in 1896.

FISH OIL.—The catch of fish which came to a close with the old year (1895) having turned out a complete failure, the new year (1896) opened with a very small stock of oil, amounting to only about 500 tons. This was sold to exporters in the course of the first 4 months of the year under review at steady prices, the figures obtained ranging from

\$5.05 to \$5.40 according to quality, after which a slight reaction took place in anticipation of a large spring catch. This, however, did not prove to be correct, only a moderate quantity of oil (about 3,000 tons, being produced, a part of this—perhaps 2 to 300 tons—was washed away by the tidal wave in the month of June, as were also thousands of fishermen, with their houses, nets, and other fishing implements. These circumstances all tended to make the market firm, and high prices were asked by holders; but from May till August very little was doing, exporters being unable to pay the advance required by sellers. From the end of August, however, to the beginning of December, a brisk business took place at gradually hardening figures, as much as \$5.70 having been paid for medium paper-filtered quality, and \$5.40/45 for ordinary.

By the middle of December a very good winter catch was reported, 4 to 5,000 tons of oil being expected to come on the market during the first 4 or 5 months of the ensuing year; and this naturally had the effect of weakening the market considerably. Quotations at the end of 1896 were about \$5 per picul for ordinary medium grade.

IMPORTS.

COTTON YARN.—The import of this staple shows a very marked excess as compared with the preceding years, figures for 1896 being 113,604 piculs against only 71,293 piculs in 1895. The chief expansion has been in Gassed and Fine Plain Yarns, the import of these having more than doubled, but 2/24s. and 2/32s. likewise show a substantial increase, and it is also worthy of notice that 16/24s. and 28/32s. have recovered a portion of the ground lost in recent years. In fact, 38/42s. alone exhibit a falling off.

GRAY SHIRTINGS also show a considerably increased import for 1896, the total figures, based on the old standard of 38½ yards per piece, being 804,900 pieces against 604,295 pieces in 1895.

Without going too closely into detail, it may be noted that the importations of 8½ lbs., and ordinary 9 lbs., as well as T. Cloths, have all declined by 20/2,500 pieces, and that the increase is entirely in long-length goods.

FANCY COTTONS AND WOOLLENS.—The year 1896 opened with small stocks generally, and deliveries for the first six months were good; but, during the latter half of the twelve months, the adverse circumstances already referred to curtailed the consumption to a great extent.

Prevailing tightness of money, and consequent high rate of interest, was an important factor in the restriction of business in these goods; and the curtailment of credit by Native Bankers, in the early autumn, caused deep trouble among the native dealers, bringing trade, for a time, to a standstill.

Even without these adverse influences, dealers appear to have greatly over-estimated the consumption, and the year closes with stocks of nearly all our staple Fancies sufficient for four to six months normal consumption. Under these unfavourable conditions, it is surprising to see how deliveries outstep, with the exception of Turkey Reds, the average of the deliveries of the past five years.

INDIGO BLUE CAMBRICS, SILKS, TWILLS, ETC.—Deliveries were far in excess of 1895.

PRINTS.—Although deliveries were more than double those for 1895, there remains a stock of 52,500 pieces: sufficient for a normal four months' supply.

COTTON ITALIANS AND SATINS.—Deliveries exceeded 1895 by 88 per cent.

TURKEY REDS.—Imports show a considerable falling off, being only 95,500 pcs., against 115,750 pcs. in 1895. Deliveries show a decrease of about 13 per cent., and the stock carried over is heavier than that for any of the preceding five years. It is evident that the native-dyed fabric unfavourably influences the trade in these goods.

BLACK VELVETS, FLANNELS, ITALIAN CLOTHS.—Deliveries greatly in excess of 1895, and yet stocks carried forward are abnormally heavy.

Black Velvets ... show eight months' supply.
Flannels " five " "
Italians " four " "
Mousselines " six " "
Victoria Lawns... " six " "

Therefore, stocks of these goods on 31st Dec., 1896, were exceptionally heavy.

BLANKETS.—Deliveries were less than in 1895; Stocks carried forward are not excessive. Direct import by the Japanese for Government use has swelled the Import figures during the past two years by over 100 per cent. Coloured striped Blankets and Rugs are now largely manufactured by Japanese.

SUGAR.—BROWN.—Import of all kinds for the year 1896 was 1,029,086 piculs against, in 1895, 903,600 piculs. Of the last year's receipts there were

Formosa	373,481 piculs.
Manila	423,583 "
China	232,022 "

The first arrival from Formosa was on the 9th March, when the market price for Takao was \$4.25. There was an advance in April to \$4.50, with a decline to \$4.25 to \$4.30 in June, and to \$3.75 to \$3.80 in July. In September the market recovered (\$4 to \$4.10), and in October it rose (\$4.70 to \$4.80), whilst in November it again declined to \$4.20, and in December reached \$3.85 to \$3.90.

After May, stocks became very heavy, and Formosa sugars were unsaleable until autumn, when low prices had to be accepted.

The receipts were larger in 1896 than for any year since 1885, owing to the whole stock of *Taiwanfoo* sugars being sent here instead of being taken in North China as usual.

The receipts from the Philippines have been much larger than heretofore, and prices have been well maintained, as the *Iloilo* descriptions find increased favour with Japanese consumers.

China sugars have sold currently on arrival and generally at low prices.

SUGAR.—WHITE REFINED.—Trade looks healthy. The statistics give an increased Import of 71,340 piculs, and prices have been higher than in 1895, the Customs declaration of value being yen 5,181,951 against yen 3,564,420, a substantial increment of yen 1,617,531.

Importations of "German Beet" have entered into large figures, viz: 116,465 piculs.

Japan appears capable of absorbing the increased all-round Import, consumption showing a steady advance.

METALS.—Speaking generally, the Metal Trade, though satisfactory as regards the quantities imported, has been conducted under difficulties during the whole twelve months. Prices at producing centres have been steadily rising, and the increase in freights has also enhanced the laid down cost; but the excessive imports have prevented any proportionate response in this market. Much trouble has been experienced with deliveries, dealers being unable to provide funds as fast as the goods arrived.

The Imperial Foundry has despatched a commission to the United States and Europe for the purchase of Plant, etc., but it is not likely that this project will interfere with the trade for some years to come.

PIG IRON shows a falling-off of nearly 4,500 tons against the preceding year. This was foreshadowed in last year's report, but signs are not wanting of a steady increase in the general demand, and the present decline must be considered only temporary. The trade has been confined entirely to English make; but towards the close of the year a cargo of Alabama Pig Iron was sold to arrive, and if the present depression continues in the United States further shipments will probably follow.

The imports of *Bar and Rod* Iron amounted to over 28,000 tons—an increase of nearly 15 per cent. The demand for industrial and building purposes has really been smaller than in the previous year, but the Government and Public Works have taken larger quantities.

PLATE AND SHEET IRON.—A large increase is again shown, 186,646 piculs against 126,644 piculs. Mild Steel plates for Ship, Bridge, and Boiler-building, etc., form one of the principal items. These were offered at very low rates during the first few months of the year, resulting in excessive imports, depressing prices to a very unprofitable figure.

GALVANIZED IRON.—The trade has more than regained its former importance, the increase on last year being nearly 70 per cent. Large quantities have been used in Formosa for Government Buildings; and also in the erection of cheap sheds for Factories, which take the place of more substantial buildings in the West.

WIRE NAILS.—The imports of Wire Nails from America, alluded to in the last report, have continued. They have been forced upon the market at prices far below those quoted by German makers; and although for some reason the quantities offered at these low rates have not been large, yet they have been sufficient to make the trade a very poor one for all concerned. The increase in the imports must be ascribed entirely to these American Nails. Should the competition continue, it seems likely that German makers will have to surrender this market.

HOOP IRON AND TIN PLATES.—The imports have decreased nearly 30 per cent. One reason for the decline in Hoop Iron may be found in the fact that Indian Cotton is now baled with hoops suitable for this market, the size being changed to suit the demand.

KEROSENE OIL.—Imports in 1896 have exceeded those of 1895 by upwards of 300,000 cases. But

deliveries were not so good; and this may be accounted for by "tight money" which has troubled the native dealer since October.

American oil shows an increased import of nearly 500,000 cases, while Russian has fallen away to the extent of more than 120,000 cases.

Prices for both kinds ruled more steady during 1896 and were generally higher than in 1895—until November and December. During those months prices fell so that American was worth 28 cents, per case less, and Russian 35 cents, per case less, than they were in the corresponding months of 1895.

Taking Deliveries as a basis, it appears that the consumption of both classes of Oil has fallen off—American showing a larger diminution than Russian.

The value of Oil consumed during 1896 is estimated as under:—

American.....	1,266,273 cases	\$2,791,900
Russian	1,004,598 cases	2,193,800
Langkat	6,070 cases	13,100
	2,276,941 cases	\$4,998,800

The importation of Langkat Oil has fallen off entirely.

GOLD STANDARD.—During this month (March 1897), a Bill has been introduced to the Diet by the Finance Minister (and subsequently passed in both Houses), which will place the currency of this Empire on a Gold basis. The change will become operative on the 1st October this year.

The basis of the New Currency is to be gold coin of the value of £1.0 5½ British Sterling per to yen, or say 25.03d. to the yen. This is calculated to do away with the extreme fluctuations in Exchange, which has been such a disturbing factor in mercantile transactions here of late years.

IMPORT DUTY.—Under the Revised Treaties (which are intended to come into force July, 1899), a largely increased scale of duties has been arranged; but by separate protocols the new Tariff may come into force at six months' notice, a contingency which is now getting very close, as the Treaty with Austro-Hungary (which is practically the last on the list), is expected to be ratified in the course of a few weeks, when it is presumed notice of the new Tariff will be issued.

PATENT REGULATIONS AND TRADE MARK REGISTRATION.—This is granted to foreigners under the Revised Treaty, but, by the insertion of a clause in the German ratification, German subjects are to have the right of this protection immediately. Subjects of other Treaty Powers get the benefit of this under the "favoured nation clause," and can at once claim protection for their Patent inventions and processes, as well as register their Trade Marks. Applications have already been made by many firms; both on their own account, and as Agents for parties in Europe and the United States.

RAILWAYS.—These are being pushed forward throughout the Empire, as will be seen from the following statistics; attention being particularly directed to the mileage now under construction.

Mileage opened during 1896—Government lines	38 miles.
Private lines	116 "
Mileage in operation 31st Dec., 1896—Government lines	632 "
Private lines	1,643 "
Mileage now under Construction—Government lines	840 "
Private lines	1,300 "

The transit facilities will be practically doubled when the lines now building are complete.

HATOKA.—The allotted space for Iron has proved a great boon to Importers, and there is no doubt that, with certain other conveniences now being provided, there will be much less cause of complaint in future.

YOKOHAMA DOCK CO.—One of the dry docks is now reported as being complete and will be ready for opening when a good approach is secured thereto. Dredging operations on a suitable channel, from deep water to the Dock sill, are now in progress. The work on the two remaining docks is also being pushed on actively.

The ANNUAL ACCOUNTS are submitted herewith. These show a slight increase in the balance of funds on hand as compared with the previous year, viz:—\$453.36 against \$266.64 on December 31st, 1895. Thanks are due to Messrs. H. Pinckney and H. P. Wadman for auditing these accounts.

MEMBERSHIP.—During the year 1896 the Chamber lost through death and cessation of business, three members; but in the latter half of the year six firms joined, bringing the number of members on December 31st up to 64. Since then eleven more firms have joined, so that at date the number of members stands at 75.

JAMES WALTER, Chairman.

The CHAIRMAN.—With regard to the bounty on direct export of raw silk, in the first proposition that was brought before the Diet, there were certain restrictions, I believe, with regard to sizing, and only very high qualities of silk could be passed, but that was finally not agreed to, and the Committee of the Lower House have decided that the amount of subsidy and the classification of the silk shall be determined by Imperial Ordinance. That is a very serious matter. If the original intention of allowing bounty only for silk of very high quality had been adhered to, we might not have felt it very much, but now we are in the dark as to what the Imperial Ordinance will be, whether all silk will receive it or not. That will be for the new Committee to take up. A matter of interest also is yarns. The direct export of yarns by Japanese is now very marked, the amount being no less than 46,000 bales exported last year against a total import of 86,000 bales. The direct trade by Japanese too, shows a very large increase, the total being, imports \$53,000,000; exports \$29,000,000—a total of \$82,500,000 carried on by Japanese entirely. Of this, 27,340,000 is in and out of Yokohama, and 39,453,000 in and out of Kobe and Osaka. In the last report some mention was made of the new Committee taking up the matter of the increase of wages in Japan, but it came to the knowledge of the Committee that a report is being prepared by one of the British Consular officials, which will very shortly be published, and will deal with the matter in a much more thorough way than the Chamber could possibly have done. While on that subject, I may mention there was a very interesting report taken from the New York Journal of Commerce regarding Japan, written by Mr. Robert P. Porter, and as it bears upon this question, perhaps you will allow me to read it.

The Chairman read the article, and remarked that there was a great deal of truth in the statement, that although wages in Japan were low, the number of people employed was proportionately large.

Mr. J. A. FRASER.—I hope there is very little doubt that some of the members present will have some remarks to offer on the very interesting and detailed report that you have just read, and also on the equally interesting and very voluminous tables appended, which, fortunately for yourself and for us, you have not been called upon to read, but the value of which we recognise, and for the compilation of which we are indebted to our energetic Secretary, Mr. Keil. But there is a matter alluded to more than once in this report which I think deserves still further mention, as it seems a matter fraught with great danger to all interested or engaged in the silk business in Japan. I refer, of course, to the bill for the encouragement of the direct export of raw silk, which was passed by the Diet in the closing days of its recent session. If this measure had been intended simply to provide as you, yourself, remarked, a bounty for the grower or the producer of silk in this country, thereby encouraging him to increased care in the preparation of silk, and to continued efforts towards the steady improvement and amelioration of the silk industry in this country, no possible exception could be taken to the measure. It would undoubtedly have been felt to be a wise measure, and I am quite sure no protest would have been sounded at all by any foreigners engaged in the silk trade here. But as the object of the measure is neither more nor less than to pay a subsidy, or bounty, to the direct shipper of silk among Japanese, at least of certain descriptions of silk, and would thereby directly benefit a few Japanese firms and companies at the expense of the whole of the trade, and especially to the detriment of all foreigners engaged in the business here, then I think the measure ceases to possess any claim to merit at all on our part, and can only be classed as legislation of an unwise, retrograde, and mischievous character; and it seems to me that in the form in which the Bill has passed the House, it is much more dangerous in its character because of the excision of the second article of the Bill, as it is now left to the Cabinet to determine not only the amount of the subsidy but also the standard of quality for which the bounty shall be paid; and there is nothing whatever, so far as I can see, to prevent that standard being reduced or lowered to the level of the bulk of the good flatures now produced in Japan, and this would virtually mean the extinction of the trade of foreigners engaged in the business, because it would be impossible for them to compete with their Japanese rivals, who would receive a bounty of \$20 to \$50, perhaps more. There is little doubt that in the revised treaties, that presumably are to come into force in July 1899, that the provisions of this measure should not be withheld in their application from foreigners, because it is expressly stated, in Articles VII. and VIII. of the British Treaty,

that in the matter of bounties, drawbacks, and so forth, aliens shall stand on an equal footing with Japanese. But that is not a matter that materially concerns us. What we are more interested in, in enquiring, is what relation does the Bill bear to the existing treaties. For supposing that the measure is to take effect in April of next year, then, although the period from that date to the coming into force of the Treaties in July, 1899, is comparatively a short one, still there is no question that in that period of a year or fifteen months incalculable injury and loss might be inflicted on all engaged in the silk business here, and to those to whose efforts in the past Japan owes the development and extension of the trade until it has reached the proportions disclosed by the figures published by this Chamber in recent years. It seems to me that, of course, in the matter of existing treaties, it might be very difficult, if not impossible, for any one of us to lay his finger upon any clause and say this Bill is a violation of that; but it is entirely at variance with the spirit and intention of the Treaty under which no undue, or excessive, or embarrassing restrictions of trade were to be placed, and no treatment accorded to the subjects or citizens of any one Power to the detriment of others. It seems to me, then, that it is very incumbent upon those mainly interested in this business to bestir themselves in the matter, and by representations in the proper quarter to avert, if possible, the danger with which they are threatened, and I would suggest to the incoming Committee that they address themselves firmly to this matter, and by bringing it to the notice of the foreign Representatives in Tokyo, endeavour to obtain an assurance that the measure shall not be submitted for Imperial sanction, or that the Bill should be allowed to remain in abeyance.—(Applause.)

Mr. W. B. WALTER.—I support the desire expressed that the incoming Committee should take up the question of the bounty which it is proposed to give to the direct exporters of silk in Japan. It is a bill that will not in any way benefit the producers of silk. It does not give a bounty to the producers, but merely to the direct exporters, who may not have produced a bale of silk. Therefore it is not of the slightest benefit to the trade as a whole. It is not by such means that the trade has grown since 1869, from 13,000 or 15,000 bales, to the 50,000 bales we now export. The first flit that was given to the trade was in 1860, when the then firm of Gutschow and Company started a small silk-reeling flature, in the Hachioji district, about 30 miles from Yokohama, but within the treaty limits, in such a way that the production of silk in the district was very materially improved; and about 1872, the present President of the First National Bank, Mr. Shibusawa Eiichi, established at Tomioka, the first flature on a large scale, which became the school for the whole of Japan. Girls were sent from every district, and owing to the skilful teaching of Mr. Brunat, who was the foreign teacher, an immense improvement took place in the quality of the silk produced. The girls went back to their own districts, and thus not only was the quality of the silk improved, but the work of the flature has led to the growth of the silk in districts where it had never been found. That was an immense benefit to the production of silk. But I venture to say that the proposed bounty has been drawn up by officials having no direct knowledge of the requirements of the trade, and that it will be rather an injury than a benefit to the silk industry of Japan, not only to foreigners but to the general body of Japanese engaged in the trade. You have referred to the fact of the danger of the disease—pebrine—affecting silkworms. I do not know that up to the present time that it has been proved that there is pebrine in Japan, but owing to the introduction during the last year or two of a certain quantity of China seed, the importation of which is apparently increasing, there is a great danger that pebrine will very soon be established in Japan. There is no examination in China of the eggs before they are shipped, nor here before they are delivered to the farmers, and there is no question that this China seed, coming from a country where pebrine is prevalent, will have an injurious effect upon Japan, unless, as is done in Europe, the seed is subjected to a microscopical examination before use. Something of the sort might well be done by the Japanese Government; otherwise there is a serious danger that the disease will be established in this country. On page 8 of the Report, in reference to copper, Chodo is mentioned; Chodo is now very little produced. It is mostly ingot copper—Sado—that comes from the Furukawa mines. I notice that during the last session of the Diet, an important measure has been brought forward, and, I believe, passed. You

will remember that many years ago this Chamber strongly advocated—I believe it was in Sir Harry Parkes' time—that not only public bonded warehouses, but private bonded warehouses, should be permitted. I am happy to see that a Bill was introduced into the Diet, and apparently passed, which allows of the establishment of private bonded warehouses in Japan. I think this may prove of considerable benefit to the country. I now propose that the Report be accepted and passed.

The CHAIRMAN, alluding to the disease in silkworms—pebrine—said that his attention had first been drawn to the matter by the British Consular Report for last year, and he had since learnt indirectly, that it had been cognizant to the Department of Agriculture and Commerce, that the disease existed here to a slight extent. He understood that the disease was known to have existed in this country for about five years, but only to a slight extent. A department existed in Tokyo for examining seed, and quite a quantity of seed was examined yearly. He believed the authorities intended to adopt universally the Pasteur system of examination.

Mr. W. B. WALTER asked whether they were to understand that the Japanese Government was examining all kinds of seed, because the examination of only a part would not prevent the introduction of pebrine. It was necessary to examine all if they wished to prevent the introduction of the disease.

The CHAIRMAN believed that only one-fourth of the seed was examined.

Mr. GRAUBART having seconded Mr. W. B. Walter's motion, the Chairman's report was adopted.

At the request of the Chairman, Messrs. E. Flint Kilby and M. T. B. Macpherson acted as scrutineers in the election of a Committee by ballot.

The CHAIRMAN asked the members not to consider him as a candidate in the election.

The Committee elected was as follows:—Messrs. J. A. Fraser, J. P. Mollison, M. T. B. Macpherson, E. Flint Kilby, W. B. Walter, R. D. Robinson, P. Holm, W. F. Mitchell, and G. W. Middleton.

Votes of thanks to the Chair, etc., brought a very interesting meeting to a close.

STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1896.

RECEIPTS.	
To Balance from 1895	\$ 866.84
Members' Subscriptions	61 @ \$35 ... \$2,135.00
	6 @ \$10 ... 70.00
Circulars sold:—

CORRESPONDENCE.

KOBE WATERWORKS LOAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the quotation from the *Kobe Chronicle* in your issue of this morning, it is true that I have since discovered that the Japanese prospectus states that the interest is to be paid in June and December, but there is still no information on the more important point as to when, and from what date, the first interest is to be paid. The *Kobe Chronicle* says, presumably the first payment "will be made in December next;" if so, it will be in direct contravention of the promise to pay half-yearly in June and December. In the prospectus and form of application it is stated that the price offered must not be below par, but "presumably" (to quote the *Kobe Chronicle*) offers may be made at a higher price, and it is hoped they may be; yet strange to say, it is further provided that the subscriptions may be paid in ten installments of ten yen each, so that the price is

immutably fixed at par, and it might just as well have been stated that no offers will be received either above or below the face value. A more lame and impotent attempt to place a loan before the public it is difficult to imagine. As for the allegation that a letter addressed to an old Yokohama resident at his office in Yokohama, or even Yokohama alone, is not sufficient to find him, is ridiculous.

I am, Sir, yours obediently,

Yokohama, March 29th, 1897.

A.

INCOGNITI ENTERTAINMENT.

"A NIGHT OF HEALTHFUL MIRTH AND YOUTHFUL JOLLITY."

The entertainment given at the Public Hall on Saturday evening by the Incogniti Amateur Variety Company was a complete success. Several of the merry band of amateurs who comprise the troupe appeared within the same walls a year or so ago and their performance then delighted everyone that had the opportunity of seeing and hearing them. But whatever may have been the merits of the previous entertainment they have been completely eclipsed—singing, dancing, acting, conjuring, mimicry, costumes, stage effects, all were improved upon, and the crowded house—packed beyond the doors—testified approval unstintingly. The happy spontaneity characterising the laughter that rang almost continuously through the house spoke volumes, demonstrating more fully, perhaps, than any other outward and visible sign the completeness of the pleasure enjoyed.

The programme was an ornate specimen of the printer's art but it had "to pale its ineffectual fires" before the glories of the "drop-scene." This production could alone have emanated from the fertile brains that range under the banner of the "K.R. and A.C." Its airy references to trade returns and sport; its outrageous puns and broad-drawn satire; its local allusions and intertext sarcasms, were each and all redolent of the southern city that stands so near to the entrance to the Inland Sea. We give below the full programme—with the encores that various singers kindly contributed—and so will make but general reference to the more striking items. Middle Jane Cakebread, a pretty creature radiant in white satin and diamonds, gave a saucy ring to Letty Lind's "Tom-tit" song, and was even more arch in "Di-di." Prof. Masculine Kook's vanishing lady act was most expert and brought up vivid recollections of happy hours spent in the dear old Egyptian Hall in London town. Miss Ju-ku, the possessor of a charming falsetto voice, in response to an encore to "Johnny Jones," gave "Sweet Tillie Taylor" a *la Madame Fardyne*, and the chorus, to the astonishment of many was taken up by a sweet little cherub who sat aloft, inside one of the roof ventilators, but whose features bore a striking resemblance to M-k B g-g-y. The mimicry of both performers was inimitable, and the audience was so enraptured that Miss Ju-ku returned again and gave her world-renowned "Georgie." In the succeeding number, Mr. Milwaukee sang the self-apparent merits of "Glorious Beer;" then, after effecting a lightning change into a pretty costume of the time when Charles the Second was King, he responded to the encore with the dainty old English song—set to a quaint, old world tune—"Gentle maiden, tell me why." In the opinion of many this was the most pleasing performance of the evening. The Sister Bobbles, in fetching dresses of black, with white puff-balls plentifully sprinkled over their ample figures, brought the first part to a close with a capital dance. The plantation scene which opened the second part was well put on, and the songs and dances in the turn were more than usually pleasing. Next followed one of the popular "Gaiety Girl" duets by Dr. and Miss Brietley, that had to be repeated. After a capital yawning song by the Great Vancel, that evoked an encore, Madam Adele D'Eggs entered in a gown of atrocious, unnameable blue, and sang with tremendous effect "Our happy little home." Loud and long rang out the applause as she concluded; then transforming herself into a funeral "mute" the performer gave an undertaker's jovial song. An Adelphi drama, compressed into the space of ten minutes, was the next item, causing peals of uproarious laughter. Marguerite Stoppington and Evangelina Snooks opened Part III. with a "revised" version of New York's classic duet, "You shan't play in our yard," the costumes of the bedraggled gutter-snipes adding greatly to the fun. Mr. Fitz Andstarrs stormed the house in the next number with "Ye Olde Brigade"—a most wondrous medley of words jumbled up with a curious mixture of melodies. He was recalled and sang a song, the chorus of which ran

Time is money, yes, money it is time,
And don't you be forgetting it;
Try and get as much money as you can,
But don't get "time" for getting it.

This was one of the few choruses that the house took up with warmth, in accordance with the invitation on the programme. Mona, Majestic next gave a very clever performance with handkerchiefs, coins, and cards that was above the average of professional entertainers. Then the event of the evening was announced. "The Grand Ballet." This was capitally put on and splendidly executed, bringing a thoroughly happy evening to a close.

A line should be given to Professor Herbert, who presided at the piano throughout the evening. A clever pianist and born accompanist, he contributed in a superlative degree to make the performance the success it undoubtedly was. Mr. A. C. Read was Chairman and filled the position most genially. Before closing we would like to warn our generous entertainers of Saturday evening that there is always a possibility of satiety dulling the edge of even the keenest appetite when the bill-of-fare is overloaded. Although no one would have liked a single item presented last evening to have been omitted, still it would have been better if the programme had been compressed within closer limits. Half past twelve had struck ere the cheering was raised for the "Kobe boys," the "Yokohama ladies," and everyone who had taken part in the show. But all the same, the Incogniti have our hearty thanks for a very pleasant three hours of mirth. For, as *Sam Slick* says somewhere, "We need all the counter-weights we can muster to balance the sad realities of life."

PROGRAMME.

- 1.—Overture..... "Qui Vive."
Brothers Elbmig.
- ".....Some Popular Airs.
Professor Herbert.
- 2.—Song..... "Tom-tit."
Encore..... "Di Di."
Madie, Jane Cakebread.
- 3.—Amateur Wonderland..... Prof. Masculine Kook.
- 4.—Song..... "Brown of Colorado."
Herr Dye.
- 5.—Song..... "Johnny Jones."
Encores..... "Sweet Tillie Taylor."
"Georgie."
Miss Ju-ku.
- 6.—Song..... "Glorious Beer."
Encore..... "Gentle Maiden, tell me why."
Mr. Milwaukee.
- 7.—The Sisters Bobbles..... Sisters Gertie, Cissie, Daisy, and Folly.
- 8.—Plantation Song and Dances..... The Troupe.
- 9.—Duet..... "Fatherly Advice".....
Encore.....
Dr. and Miss Brietley.
- 10.—Song..... "Sleepy."
Encore... "As long as the world goes round."
The Great Vancel.
- 11.—Song..... "Our happy little home."
Encore..... "Another little job."
Madam Adele D'Eggs.
- 12.—Adelphi Drama... "The Rosebud of Stinging Nettle-farm"... Troupe.
- 13.—Duet..... "You shan't play in our yard."
Marguerite Stoppington and Evangelina Snooks.
- 14.—Song..... "Ye olde Brigade."
Encore..... "Time is Money."
Mr. Fitz Andstarrs.
- 15.—Legerdmain.....
Mons. Majestic.
- 16.—Grand Ballet..... Troupe.
Premier Dancers, Madames Topsy Turvey and Timberloes.

PHILADELPHIA GOSNIP.

(FROM OUR OWN CORRESPONDENT.)

Philadelphia, March 1st.

Philadelphia is the hot-bed of Cuban agitation in the States. Many Cubans are resident in the city, and they possess a vigorous organization. Plans are hatched here which give no end of trouble to the government.

Republicans are generally rejoicing that the present Administration goes out in three days from this, but none will rejoice more than Republicans resident in foreign lands. Pennsylvanians always go to Washington in large numbers for the Inauguration of the President; and this is besides so overwhelmingly a Republican State that

the new President will have a kindly desire to regard Pennsylvania's wishes in the matter of diplomatic appointments.

We have had a series of great fires recently, and millions of dollars' worth of property have been burned. One serious fire, destroying pretty nearly a block of buildings right in the heart of the town, almost involved John Wanamaker's great establishment. John Wanamaker, by the way, is doing a successful business at his new New York branch, having brought out the A. T. Stewart stores. For a wonder, New York people are not resenting the introduction of Philadelphia business ideas. Philadelphia has a reputation for being very slow indeed, but in some matters she often comes out ahead of more speedy folk.

Business is exceedingly quiet. The promised "boom" consequent upon a change of Administration, has not yet struck us. Some factories did restart, but they slowed down very quickly, and "money is very tight." The stores are full of "bargains." About the only business which seems to be thriving is bicycle-making. The wheels have been cut and cut again, until now a really good one can be bought for anywhere from \$37 to \$50. Bicycles are multiplying by the thousand, and of course every maker's wheel is the best.

In the world of books things move along quite vigorously. Retail stores have pretty nearly fixed their prices at twenty five per cent. discount on publishers list prices, adding the cost of mailing. These are the usual prices for current literature. Now and then a book is published for which a firm makes a bid and then "cuts" the trade. Last year there appeared in England and the United States over ten thousand new books! One wonders whether they all find readers. Among recent noteworthy books, Dr. Martin's "A Cycle of Cathay" is one of the most widely read. "In Bamboo Land," by Katharine S. Baxter, had a good sale on account of its multitudinous reproductions of Japanese photographs. Chevallion's little book, "In India," has been unusually well received. Nansen has just issued his "Farthest North." It is a beautiful book. The craze for Scottish stories has nearly died down, though it was galvanized into life while Ian Maclaren was with us. He took back to England "a pot of money," as the result of his lecture tour.

In the religious world a great stir has been made by Dr. Lyman Abbott's lectures on the "Bible as Literature." These were given in Plymouth Church, Brooklyn, Henry Ward Beecher's old field. Dr. Abbott made some rather startling statements—though not so awfully silly as some of the newspapers reported—and has set the religious world by the ears. He is now discussing in the *Outlook*, of which he is editor-in-chief, the present-day theory of Christian evolution.

The Baptists have cause for rejoicing in that a great gift in assured them. Taking their missionary Societies' debts of last May, adding accumulated indebtedness of the past few months, and yet further the added debt likely to result from an effort to get rid of all this debt, the foreign and home mission societies find that they estimate their total indebtedness at \$486,000. Mr. John D. Rockefeller has offered \$250,000 of that amount if the rest is raised. There is no question but that it will be forthcoming. Five-eighths of the entire sum goes to the American Baptist Mission Union.

SPECIAL TELEGRAMS.

[From the Captain-General's Secretary, to the Spanish Minister, Tokyo.]

THE PHILIPPINE REBELLION.

Manila, March 25, 7.41 p.m.
Imus has been captured by our forces. The national flag floats from the church tower at Cavite. The town of old Cavite is in flames. This victory is of the greatest importance.

KOBE AND THE JUBILEE: A SENSIBLE PROJECT.

Kobe, March 30, 8.30 p.m.
At a meeting of British residents held to-day in accordance with a notice issued by John Carey Hall, Esq., Her Britannic Majesty's Consul at this port, to reconsider the previous resolution regarding the manner of celebrating the Queen's Diamond Jubilee at Kobe, it was decided, on a vote of 51 to 5, to circulate two lists, one soliciting subscriptions for the fête, the other for a permanent memorial that will take the form of rebuilding the hospital.

LATEST TELEGRAMS.

(FROM THE "JAPAN TIMES.")

SERIOUS FIGHTING IN CRETE.

London, March 29.

Severe fighting has taken place in the vicinity of Canea. The Cretan insurgents captured a fort, and pursued and severely punished the Turkish garrison, notwithstanding the shelling from the warships in the harbour, whose guns killed over two hundred insurgents.

DANGER OF HOSTILITIES IN THESSALY.

In view of the danger of the outbreak of hostilities in Thessaly, where Turkish and Greek troops are face to face, Great Britain has proposed to the Powers that collective pressure should be brought to bear to induce the mutual withdrawal of the Turkish and Greek troops to a certain distance from each other.

THE POWERS DISAGREE.

London, March 30.

The Powers have refused to entertain the proposal of Great Britain that collective pressure should be made to induce the Turkish and Greek troops on the frontiers of Thessaly to withdraw to a certain distance from each other.

LATEST ARMENIAN ATROCITIES.

According to the latest advices, the number of Armenians who were murdered in the recent massacres at Tokat, Asia Minor, was four hundred, not one hundred as at first reported.

POPULAR DEMONSTRATIONS AT ATHENS.

The Duke of Sparta, eldest son of the King of Greece, has started for Volo. A great popular demonstration was held in Athens on the eve of his departure, and there was a dramatic scene at the Palace, where a deputation presented a resolution declaring that the nation was ready to sacrifice both blood and money to accomplish the task it has entered upon.

LORD SALISBURY CONFERS WITH M. HANOTAUX.

Lord Salisbury, on his way to the Riviera, had an interview of two hours' duration at Paris with M. Hanotaux, French Minister for Foreign Affairs.

CRITICAL SITUATION AT CONSTANTINOPLE.

The situation is again serious at Constantinople, where the Greeks are arming in fear of a massacre.

FURTHER TROOPS FOR CRETE.

London, March 31.

The Admirals of the allied squadrons in Cretan waters have requested the Powers to send, at once, an extra battalion of troops each for the further protection of the occupied towns in Crete.

THE DUKE OF SPARTA AND THE POPULACE.

The Duke of Sparta has arrived at Larissa, where he received a rapturous welcome from the troops and the people.

SEVERE FIGHTING IN CRETE.

London, April 1.

The Cretan insurgents have captured Fort Spinalonga after forty-eight hours' fighting, and have sunk a Turkish schooner laden with munitions of war. The insurgents also attacked Fort Izzedin, which dominates Suda Bay, but were bombarded

by the allied fleets, from which a mixed force was sent to occupy the position.

THE DUKE OF SPARTA ASSUMES COMMAND.

London, April 1.

The Duke of Sparta has assumed command of the Greek troops on the Thessalian frontier.

BRITISH TROOPS FOR CRETE.

The 2nd Battalion Royal Welsh Fusiliers has been ordered to proceed to Crete.

(FROM "JUI SHIMPO.")

DISAGREEMENT AMONG THE POWERS.

London, March 25.

Germany has refused to dispatch troops to Crete, and has announced that unless the United Powers blockade Greece completely she will withdraw from the alliance.

Later.

According to a statement appearing in the *Daily Chronicle*, London, England will not take part in the complete blockade of Greece.

(FROM TONKIN PAPERS.)

H.M. THE QUEEN IN FRANCE.

Paris, March 10.

The Queen of England has left for Nice.

Paris, March 12.

President Faure paid a visit of salutation to Queen Victoria, who received him in her carriage at Noisy station. The interview, which lasted ten minutes, was very cordial.

DEATH OF A FRENCH ADMIRAL.

Admiral Vallon is dead.

MADAGASCAR'S QUEEN EXILED.

The Queen of Madagascar has been exiled to Réunion.

A native Governor-General has been appointed at Tananarivo.

FRANCE AND GREECE.

Paris, March 13.

The Municipal Council of Paris has passed a vote of sympathy with Greece.

ILLNESS OF GENERAL POLAVIEJA.

General Polavieja is ill and will shortly leave Manila.

RESIGNATION OF THE GERMAN NAVAL MINISTER.

Paris, March 14.

The Budget Commission of the Reichstag having refused the credit asked for the construction of two cruisers, the Minister of Marine tendered his resignation.

(FROM JAPANESE PAPERS.)

RUSSIAN TROOPS.

Nagasaki, March 31st.

The *Odessa*, a Russian Volunteer Fleet steamer, with 611 troops from the Maritime Provinces of Siberia on board, touched here to-day on her way to Europe.

FIRST TRIPS TO VLADIVOSTOCK.

Hakodate, March 31st.

The *Aikoku Maru*, a mail steamer on the Hakodate-Vladivostock line, is to leave here to-morrow for the Siberian port, this being the first voyage on the line this year.

Nagasaki, April 1.

The departure of the steamer *Sundai Maru*, of the Nippon Yusen Kaisha, that was to leave this for Vladivostock to-day, has been postponed.

THE 82ND NATIONAL BANK.

Hoki, March 31.

The local branch of the 82nd National Bank stopped business to-day.

KOBE WATER-WORKS LOAN.

Kobe, April 1.

The total sum offered for Kobe Water-works Bonds, is estimated to reach over yen 970,000.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 297.

Correct answers from J.W.E., W.H.S., I dont, W.D.C., and Omicron.

PROBLEM No. 301.

By P. G. L. F.

White to play and mate in three moves.

PROBLEM No. 302.

By H. D'O. BERNARD.

White to play and mate in two moves.

Steinitz says that, for the purpose of developing and increasing strength in practical play, the study of problems is extremely useful. It is more especially the faculty of precision which is thus exercised, and in a game over the board there may be many ways in which the winning process may be effected. Yet, in actual play, the greatest exactitude of calculation is often required in order to make sure of the line of action that will lead to

victory, and the study of compositions in which the utmost power of the forces has to be employed in the fewest possible moves is splendid preparatory training.

GAME No. 685.

SCOTCH GAMBIT.

- | WHITE. | BLACK. |
|-------------------|------------------|
| G. A. Hooper. | E. M. Jackson. |
| (No 14 London). | (St. George's). |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—P to Q 4 | 3—P takes P |
| 4—Kt takes P | 4—B to B 4 |
| 5—B to K 3 | 5—Q to B 3 |
| 6—P to Q B 3 | 6—K Kt to K 2 |
| 7—Q to Q 2 | 7—B takes Kt (a) |
| 8—P takes B | 8—P to Q 4 |
| 9—Kt to B 3 (b) | 9—P takes P |
| 10—P to Q 5 | 10—Kt to K 4 |
| 11—Kt to Kt 5 | 11—K to Q 2 (c) |
| 12—R to B sq. (d) | 12—R to Q sq. |
| 13—B to Kt 5 | 13—P to R 6 (e) |
| 14—Q takes P | 14—Kt takes P |
| 15—B takes Q | 15—Kt takes Q |
| 16—B takes R | 16—Kt takes B |
| 17—R to Q sq. ch. | 17—K to B 3 |
| 18—Kt to Q 4 ch. | 18—K to Kt 3 |
| 19—R takes Kt | |

And White won.

- (a) We believe that the attack which Black obtains if he plays P to Q 4 at this point is fully worth the Q B P which Black sacrifices in this variation.
- (b) This is a very harassing move and very difficult to meet. P takes P, as played by Black leads at once to a very bad game. B to K 3 is the only defence.
- (c) Mr. Jackson, seeing his game collapse, must have played this move for the sake of fun. Black, by his previous move of Kt to K 4, aggravated his difficulties, as the queen has no square to go to. Thus, if Black castles now, B to Kt 3 apparently wins a piece. We would rather have selected this move as being a better way to lose, errily than K to Q 3. Supposing Castles to—B to Kt 3, Q to Q Kt 3; 13—R takes Kt. 14—K to K sq. Black perhaps would get some fun, etc. In this variation P to K 6 is also to be considered.
- (d) This is absolutely fatal. Afterwards there is no defence.
- (e) If queen moves 14—R takes P (ch), followed by 15—R takes Kt (ch).

The "Birmingham Weekly Mercury" points out that in experimenting at Moscow with an exploded variation of the Giuoco Piano, Steinitz was both inconsistent and consistent. He was inconsistent, because the teaching of his life has been that, while the sacrifice of material for speculative advantage may sometimes create a brilliant game, the larger average of success will be with the sound and careful player who clings to every Pawn, and who fears to embark unless he can see the other shore. He was consistent, also, because in all the important matches of his later years he has cast to the winds the principles by steadfast adherence to which other chess-players have risen from mediocrity to high reputation; and masters like Tarrasch and Lasker, who have been Steinitz's close followers, and who began where he left off, have obtained world-wide fame.

MATCH—JANOWSKI V. SCHLECHTER.

The following is the seventh game of the recent match between Janowski and Schlechter at Vienna. The final score having been three each, and two draws; the match was abandoned as drawn.

GAME No. 686.

FOUR KNIGHTS' GAME.

- | WHITE. | BLACK. |
|----------------------|--------------------|
| D. Janowski. | C. Schlechter. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—Kt to B 3 | 3—Kt to B 3 |
| 4—P to Q R 3 (a) | 4—P to Q 3 |
| 5—P to Q 4 | 5—P takes P |

| 39—K to B 4 | 39—Kt takes P |
| 40—Q to R 8 | 40—R to B 8 ch. |
| 41—K to K 3 | 41—Kt to Kt 5 |
| 42—K to K 2 | 42—R to B 5 |
| 43—Q to R 6 | 43—R to K 5 ch. |
| 44—K to B 3 | 44—B to B 3 |
| 45—K to B 2 | 45—R to Q R 4 |
| 46—Q to Kt 5 ch. | 46—K to R 3 |
| 47—P to Kt 4 | 47—R to R 7 ch. |
| 48—K to Kt 3 | 48—R takes P |
| 49—Q to B 5 ch. | 49—K to K 2 |
| 50—Q to Kt 5 ch. | 50—P to B 3 |
| 51—Q to Kt 7 ch. | 51—K to K 3 |
| 52—Q to Kt 8 ch. | 52—K to K 4 |
| 53—Q to Q 8 | 53—R to R ch. |
| 54—K to R 8 | 54—R to K B 6 |
| 55—Q to K R 8 | 55—P to B 5 |
| 56—P to Kt 5 | 56—P to Q 2 (n) |

Resigns.

- (a) To avoid 4..... B to Q Kt 5—the usual variation, both bishops to Q Kt 5, leading to drawn positions. But then why start the Four Knights Game?
- (b) If 11—R to K 3, then 12—Kt to Kt 5, and White could not capture the R P because of 13..... R takes P; 13—R takes R, B takes Kt, ch, etc.
- (c) To prevent K takes P as pointed out.
- (d) Still retaining 14..... R takes P.
- (e) 16—P to B 3, dislodging the knight, would have been better.
- (f) A brilliant combination prepared by Black with the advance of theawns.
- (g) White was evidently unconscious of his opponent's intention, else he might have retied B to K sq.

Position after White's 17th move.

BLACK.

WHITE.

- (h) If 18—R takes Q then 18..... P takes B; 19—P to R 3, Kt to B 7, ch; 20—R takes Kt (best), P takes R and Black has two rooks for the queen.
- (i) 20—Kt to Q sq sq prevents Kt to B 7, ch.
- (j) Forced a win because of 21..... P to O B 3, and B to Q 4.
- (k) If 25—Q to R 4 then 25..... P to Q B 3; 26—Kt takes R P, B takes P, threatening to win the queen with B to Kt 6.
- (l) To prevent B to Kt 4, ch.
- (m) If 36—P takes Kt then P to Kt 7 wins.
- (n) A remarkably fine game on the part of Schlechter. Not much of the "Drawing master" in this game.

LASKER.

In an interesting letter which Lasker wrote about the middle of December, and which the "Westminster Budget" published in extenso, he said that he had found the "Moscowese" to be both kind and hospitable; and that, in spite of the ungenial climate, he had felt quite at home. Professor Bogajeff, the first mathematician in the University of Moscow, and an ardent chess-player, is interested in a mathematical subject that has been occupying Lasker's attention. As president of the Mathematical Society he invited the chess champion to attend the opening meeting. The invitation was accepted, and was followed by a request that Lasker would deliver a lecture. The request was complied with, and the lecture is to be published in the Moscow Academy reports.

The rumours as to a Lasker-Tschigorin match were premature. But Lasker intended to go from Moscow to St. Petersburg, and thought it not improbable that the idea of a match might then be entertained. He hoped to be in London in the course of the present month, and to give a series of lectures, designed for "more advanced players," about the "classical" style in chess. He will then show his recognition of the fact that his "overworked machine" is in need of repair by placing himself in the care of a doctor.

YOKOHAMA CHESS CLUB.

The adjourned Extraordinary Meeting was held on Thursday: a quorum being at last obtained. Only two of the five members who signed the requisition, were present; and no revolutionary measures were proposed. After much discussion, the President summed up the debate; and pro-

posed that the present Officers be left undisturbed until the Annual Meeting in October. This was seconded by Captain Ekstrand; and carried unanimously by a show of hands.

Arcona (18), German cruiser, Captain Becker, 18th March.—Nagasaki, 16th March.

Bobrel (5), Russian gunboat, Commander M. Molas, 20th February.—Nagasaki, 16th February.

LATEST COMMERCIAL.

IMPORTS.

No good news in this market. Yarn—There are still enquires for singles but not much doing. Doubles (both plain and gassed) are stagnant and buyers hope that prices will drop in their favour notwithstanding the present low basis of exchange.

COTTON PICK GOODS.

	PER PIECE.
Grey Shirts—8 1/2 yds, 39 inches	\$2.40 to 2.75
Grey Shirts—6 1/2 yds, 45 inches	2.75 to 3.25
Indigo Shirts—12 yds, 44 inches	1.80 to 1.90
Indigo Shirts—12 yds, 44 inches	1.95 to 2.00
Prints—Assorted, 22 yds, 30 inches	2.00 to 2.75
	PER YARD.
Cotton—Italiana and Saltona Black, 32 inches	0.16 to 0.22

Victoria Lanes, 12 yards, 42-3 inches	0.75 to 1.00
Turkey Red—2.0 to 2.4 yds, 24/25 yards	1.50 to 1.70
Turkey Red—2.8 to 3 yds, 24/25 yards	1.75 to 2.10
Turkey Red—3.8 to 4 yds, 24/25 yards	2.40 to 2.70
Turkey Red—4.8 to 5 yds, 24/25 yards	3.00 to 3.30

WOOLLENS.

	PER YARD.
Flannel—	\$0.30 to 0.50
Italian Cloth, 30 yards, 32 inches heat	0.35 to 0.41
Italian Cloth, 30 yards, 32 inches	0.30 to 0.34
Medium	0.25 to 0.31
Italian Cloth, 30 yards, 32 inches	0.25 to 0.31
Monsieur de Laine—Crape, 21 yards, 51 inches	0.15 to 0.27
Cloths—Pilots, 51 @ 56 inches	0.35 to 0.50

Cloths—Presidents, 51 @ 56 inches	0.60 to 0.75
Cloths—Union, 51 @ 56 inches	0.30 to 0.85
Blankets—Scarlet and Green, 3 to 5 yds, per lb	0.40 to 0.60

COTTON YARNS.

	PER POUND.
Nos. 16/24, Singles	\$30.00 to 41.50
Nos. 18/24, Singles	41.00 to 43.00
Nos. 38/42, Singles	45.00 to 47.00
Nos. 32, Doubles	44.00 to 46.00
Nos. 42, Doubles	49.00 to 51.00
Nos. 2/60, Plain	61.00 to 62.00
Nos. 2/80, Plain	75.00 to 77.00
Nos. 2/100, Plain	99.00 to 100.00
Nos. 2/60, Gassed	72.00 to 80.00
Nos. 2/80, Gassed	86.00 to 95.00
Nos. 2/100, Gassed	116.00 to 127.00

RAW COTTON.

	PER POUND.
American Middling	\$23.00 to 23.50
Indian Broach	23.00 to 23.25
Chinese	21.00 to 21.50

MARKETS.

Trade remains very slow: Enquirers offer very low prices, which do not result in much business.

	PER POUND.
Flat Bars, 1 inch	\$3.70 to 3.80
Flat bars, 1 inch	3.90 to 4.00
Round and square up to 1 inch	3.70 to 4.00
Iron Plates, assorted	3.80 to 4.00
Sheet Iron	4.80 to 5.00
Galvanized Iron sheets	9.50 to 10.50
Wire Nails, assorted	3.50 to 6.50
Pin Plates, per box	3.50 to 6.00
Pig Iron, No. 3	1.80 to 1.85

KEROSENE.

Stagnant, and nothing done. Buyers will not pay up to compensate for the present low exchange, and sellers refuse to go on at former prices.

	PER POUND.
American	\$2.08 to 2.10
Russian	2.03 to 2.10
Langkat	2.03 to 2.10

SUGAR.

Brown—Again a repetition of last week. Arrivals exceed sales and prices are down again. Buyers only offer \$3.50 for New Takao "to arrive;" "spot" offerings at auction did not average much more than this figure. White—Unchanged and steady, with a satisfactory outlook.

	PER POUND.
Brown Takao	\$3.45 to 3.55
Brown Manila	4.30 to 4.90
Brown Daitong	3.30 to 3.40
Brown Canton	3.10 to 4.20
White Java and Penang	6.80 to 7.00
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

Market has been active and at one time prices were yet higher. Now they have receded a bit to those of a week ago. Spring reeling is coming in now, and sellers appear disposed to be current with them.

QUOTATIONS.

Filatures—Extra 9/11, 10/12 den.	Nom, \$850 to 860
Filatures—Extra 13/15, 14/16 den.	840 to 850
Filatures—No. 1, 10/13 deniers	830 to 840
Filatures—No. 1, 13/15, 14/16 den.	820 to 830
Filatures—No. 14, 10/14 deniers	810 to 820
Filatures—No. 14, 13/16, 14/17 den.	800 to 810

Kakedas—No. 2	710 to 720
Kakedas—No. 2	690 to 700

WASTE SILK.

Fair business and strong market. The cream of the stock has been pretty well skimmed-off by now, and unless there are some stocks of good quality to come from the interior, there will soon be a scarcity here of desirable fibre.

QUOTATIONS.

Noahi—Filature, Best	\$110 to 115
Noahi—Filature, Good	95 to 105
Noahi—Oshu, Best	105 to 110

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

In a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing operations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COVER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 21st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 10TH, 1897.

SUMMARY OF NEWS.

MR. SATO CHO, the Governor of Tochigi Ken, sent in his resignation on the 4th inst.

YOKOHAMA's death-rate during 1896, among the resident foreign population, was below 10 per mille.

MR. INAGAKI MANJIRO, the new *Chargé d'Affaires* in Siam, will leave Japan on the 13th inst. for his new post.

BARON HAYASHI, the new Minister to Russia, left Yokohama on the 4th inst. by the French steamer *Salasie*.

THE section between Sakura and Choshi, on the Sobu Railway, will be ready for traffic at the end of this month.

A P. & O. STEAMER will act as convoy to the King of Siam's yacht, when His Majesty travels to England this summer.

THE University Boat Race was rowed on Saturday, April 3rd, and was won by Oxford by two lengths. The victors led all the way.

A TELEGRAM from the United States reports that the Republic will despatch a war-vessel to Hawaii in regard to the Japanese emigration affair.

RUMOUR says that the Japanese authorities are now making investigations with a view to laying a cable between Vladivostok and Hakodate.

THE trouble that has arisen owing to the Hawaiian Government refusing to allow some 600 Japanese emigrants to land from the

Shinshu Maru, has grown acute. The vessel is returning to Japan with most of her passengers.

THE Dowager Tzarina of Russia has gone to Copenhagen to join a family council to discuss the best course for the King of Greece to pursue.

It is reported that Mr. Oishi Masami will be appointed Vice-Minister of the Department of Agriculture and Commerce, should he accept the offer.

T.I.M. THE Emperor and Empress will leave the Capital on the 15th instant for Kyoto to attend the special service for the late Empress Dowager.

Many changes are gazetted this week in the *personnel* of Local Governors and other high officials, the new men belonging mostly to the *Shimpo-to*.

THE Japanese Admiralty will establish coal stores at Chujo Bay, Loochoo, and Kelung, Formosa, under the direct control of the Sasebo Port Admiralty.

THE revised Treaties between France and Japan, and Portugal and Japan, have been submitted to the Privy Council, and will be officially sanctioned at an early date.

THE expenses for installing new telephone wires this year are estimated at over yen 2,000,000, the localities selected being Nagoya, Sakai, Kumana and two other places.

THE rowing season was formally opened on Saturday last with a procession of boats and some scratch races among the members of the Yokohama Amateur Rowing Club.

THE Embassies at Constantinople have agreed on the principles of the autonomy to be granted to Crete, and have cabled particulars of the same to their respective governments.

THE committee now inquiring into the Ashio Copper Mine affair will finish its investigations at the end of this, or early next, month, and then the report will be submitted to the Cabinet.

THE weather during the past week has been very changeable, rain and high winds predominating. Temperature throughout the Empire is below the normal for the time of year.

THE extension of the blockade to the Greek coast will probably require an increase of the squadrons in the Levant, but the Powers decide nothing without laborious negotiations.

THE new tariff bill passed the United States House of Representatives on March 31st without any amendments being made to the schedules affecting Japanese silks, carpets, and matting.

DURING the week, meetings of persons interested in the Yokohama General Cemetery, and the Yokohama Fire Brigade, have been held. In both cases the accounts were passed and the old Committees re-elected.

THE Japanese men-of-war *Chobin* and *Asama*, which were purchased abroad about thirty years ago, were sold by auction at Yokosuka on the 31st ult. The *Chobin Kan* fetched yen 3,750, and the *Asama Kan* yen 10,680.

IN reference to the Hawaiian emigration affair, intercourse between the Admiralty and the Foreign Office is said to be very brisk at present. Marquis Saigo, Minister of the Navy, is reported to have telegraphed to the Yokosuka

Port Admiralty on Friday, and it is supposed that the telegram related to the dispatch of a man-of-war to Hawaii.

As an adjunct to the Higher Commercial School, Tokyo, the Authorities propose opening a Foreign Language School, at which the English, German, French, Spanish, Chinese and Korean language will be taught.

THE Japanese battle-ship *Fuji*, built in England, will leave London at the end of this month, arriving about the end of June or early in July. Another Japanese battle-ship, the *Yashima*, will leave London at the end of June.

THE sitting of the Railway Council concluded on Monday and in acknowledgment of its labours, Viscount Nomura, Minister of Communications, entertained the members at his official residence on the evening of the 6th inst.

ON account of an increase of license fees, about 3,000 wheel barrow coolies rose in a mob at Shanghai on April 4th. They were successfully dispersed, but Marines landed in order to protect the Settlement in case of emergency.

COUNT MATSUKATA, the Premier, held an official *conversations* at his residence on the evening of the 7th inst., to which the members of the Upper and Lower Houses, and high officials of various departments, were invited.

IN the event of the Railway Bureau being divided into two sections, a Political and Business Bureaux, Mr. Den, Chief of the Correspondence Bureau in the Communications Department, will be appointed to the Business Bureau.

OVER \$17,000 has been contributed to the Indian Famine Fund by Tokyo, Yokohama, and other large centres, of which \$170,000 was given by Japanese. The subscriptions from Buddhist priests and temples make a good showing.

ON the evening of the 8th inst. Count Matsukata, the Premier, in the capacity of President of the Codes Investigation Commission, convened a meeting of the committee at his official residence and held a conference as to future proceedings.

MR. TAKETOMI TOKITOSHI, a member of the *Shimpo-to*, has been appointed President of the Commercial and Industrial Bureau in the Department of Agriculture and Commerce. Mr. Ando Taro, the former President of the Bureau, is relieved of the post at his own request.

BUSINESS in imports remains discouragingly dull and depressed, tightness of money being the immediate and principal cause for this state of affairs. Stocks are still accumulating in the godowns, and goods which have long since arrived to order, are only being taken up in the smallest quantities to meet immediate requirements. Nor does there appear any prospect of matters improving for some time to come—not indeed until credit has returned and the congestion in stocks has been gradually worked off. In such necessary articles as Kerosene and Sugar some little business has been transacted, but all imports from Europe are stagnant. The export market has shown more life and several transactions have taken place in silk, both raw and waste, and holders are firm in their demands, being hopeful of a greater demand from consumers, and news from home appears to justify such a hope. The tea market is, of course, awaiting the first arrivals of the new crop, which are expected to be several days earlier than last year owing to the mild weather experienced during the winter months.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The long distance that separates Yokohama and Tokyo is well illustrated by the absolute insensibility of the newspapers of the latter place to the storm that agitated the journalists of the former during the past week. The leading dailies of the capital appear to have virtually overlooked the fact that Yokohama has been exciting itself about the eventuality of its journals' being legislated out of existence. The *Nichi Nichi Shimbun*, indeed, translates and reproduces our article on the subject, but makes no comments of its own, and its silence is imitated by all its contemporaries. There is complete indifference, moreover, about the charge preferred against the Japanese Government, the charge of having elaborated a deep and sinister plot to drive foreigners out of the country so soon as their submission to native jurisdiction renders them vulnerable to such schemes. The vernacular press treats the accusation with contemptuous silence, which, after all, is the most becoming attitude. As to the direct-export problem, that too has been dropped from the sphere of criticism. It was condemned on account of its illiberal discrimination when the Bill was still in the hands of the Diet, but since denunciation can not accomplish anything now, the Tokyo editors employ their pens on other topics.

The most prominent political party in the empire so far as professions of progressive aims are concerned—writes the *Nichi Nichi Shimbun*—is the *Shimpo-to*. Its avowed platform is responsible cabinets, and its declared enemy, clan government. When, therefore, its leader, Count Okuma, accepted a portfolio last year, the public watched earnestly to see whether he could command the support of the *Shimpo-to* in office as he had done out of office; for if his party clung to him, it might fairly be concluded that the era of parliamentary cabinets was about to be inaugurated. The *Shimpo-to* did remain firm in its allegiance to the Count, but as for the great reform, the unique aim of that Party, it has dropped out of sight. Seated safely in the Administration, Count Okuma seems to find clan connexion very convenient, and the *Shimpo-to* shows no impatience to achieve its long proclaimed purpose. On the contrary, another ambition has replaced the old aim, the ambition of gaining access to the sweets of office. Only let its prominent members secure a sufficient number of the plums of officialdom, and the great Party is content to postpone, *sine die*, the alleged object of its confederation. To see a policy that has been so long and so loudly vaunted as the essential outcome of constitutional institutions and the prime desideratum of the epoch—to see such a policy sacrificed on the altar of personal ambition; to see the men that until recently declared themselves the champions of a high principle and the propagandists of a pure political creed—to see such men abandon all their professed faiths and become engrossed in the hunt for office, is a poor spectacle. But the situation looks even blacker when we remember what kind of system is now in danger of being established by the *Shimpo-to*'s procedure. It is the spoils system. It is the system under which every political change of Cabinet is accompanied by an extensive change of administrative officials also. The most civilized nations seek earnestly to avert the advent of such a system. In Great Britain, the circle affected by a change of Ministry is so limited that it does not include even Vice-Ministers. But the *Shimpo-to* wants to have Vice-Ministers, Chiefs of Bureaux Secretaries, and Governors driven out of office, in order that its partisans may step into their places. The process is called ingrafting popular talent upon the official stem. No such euphemism was recognised by the *Shimpo-to* politicians when they were in opposition. They cried out loudly because a *Jiyu-to* leader entered the Cabinet and two or three *Jiyu-to* partisans were appointed to be Governors or heads of bureau. Circumstances, in the estimation of the *Shimpo-to*, are obviously

stronger than principles, and lofty reforms do not weigh against rank and emolument. A party whose acts conform so little with its professions, is to be pitied.

No exact information has yet been received with regard to the tariff projects of the new American Cabinet, but from brief telegrams it would seem that the intention is to penalize Japanese silk stuffs. *Habutae*, which now finds admission to the markets of the United States on payment of an import duty of 45 per cent. *ad valorem*, will henceforth have to pay from 70 to 100 per cent., and silk handkerchiefs are to be similarly taxed. Such at any rate, is understood to be the scheme of a tariff project submitted by the Cabinet to Congress. Of course, says the *Jiji Shimpō*, from which we are quoting, the fact that the McKinley Administration has come into office on a protection platform is well understood, as is also the fact that the cheapness, lightness, and general quality of Japanese silk fabrics make them formidable competitors of American manufactures. The fixing of its customs tariff is a matter within the sole competence of a country. Foreign States have no right to meddle with such affairs. If America thinks that her interests will be served by imposing a heavy tax upon Japanese products so as to foster her own domestic industries, she is quite justified in taking that step. But purely abstract considerations cease to be conclusive when a friendly nation finds itself singled out for unfriendly discrimination. It does not appear that the silk fabrics of France are to be so heavily penalized as those of Japan. The maximum import duty in their case is said to be 70 per cent. *ad valorem*. Thus the situation resolves itself into this, that Japanese manufactures are to be ostracised altogether from American markets. The Japanese can not endure such treatment tamely. Their feelings towards the United States have always been of the most cordial nature. The fact that America buys from them much more than she sells to them, has long attracted their attention, and that they would gladly do something to redress the balance must be well known to the people of the United States. There is a good prospect that the hope may be realized. Imports of cotton, kerosene, and machinery from America have largely increased in recent years, and the development of Japanese railways and other industries is likely to create a large demand for American rails, plant, and so forth. Moreover, it was with the object of evincing her desire to become a purchaser from the United States that Japan recently ordered two cruisers there. But should Congress pass this Bill, practically closing American markets to Japanese silk fabrics, there will be nothing left for Japan except to retaliate by ceasing all purchases from the United States. It is unfortunate that such methods should be obtruded into international relations, and still more unfortunate that anything should occur to disturb the exceptionally amicable sentiment entertained by this country for the United States. But Japan must protect herself. The loss to her manufacturers will be immense if the projected duties be imposed, for they are, in effect, prohibitive duties, and, on the other hand, the silk weaving industry is one from which invested capital can not be extricated without great difficulty and heavy sacrifices should necessity arise for its diversion into other channels of employment.

The Tokyo *Asahi* also writes on the subject of the Navy, but its article does not amount to more than a general statement that sufficient attention is not paid by the public at large and by officials to the internal condition of the Naval Department and of the Navy itself. Outside the ranks of naval experts, or of persons directly connected with the service, very few have any comprehension of what is meant by the combative and non-combative efficiency in the Navy, and unfortunately no tendency exists to correct that ignorance.

These desponding remarks are qualified by the same journal in a subsequent article, the object of which is to allay the alarm of Japanese

manufacturers. Second thoughts induce the *Jiji* to hope that the obnoxious Tariff Bill may be nothing more than an unavoidable concession by the McKinley Cabinet to the pledges that formed the basis of its political platform. It came into office on a wave of protection, and it has now no choice but to make some display of consistency. Congress, however, is not likely to pass the Bill,* and even if it does, the American people will not allow such an injustice to be done. Many American merchants are engaged in the trade with Japan, and their voices will be loudly heard if this country is to be legislated out of the United States markets. Further, it does not follow that the contemplated increase of duties will fatally handicap Japanese manufactures. In such cases, the profits of a protective tariff are divided very unequally between the domestic manufacturer and the domestic consumer. The latter does not get his goods at appreciably lower rates because competition has been eliminated. On the contrary, he has to pay as much as ever, if not more, for them. Thus, after all, Japanese silk stuffs may still find buyers in the States, especially as the producing capacity of the American factories is not sufficient to meet the demand. Japan can always hope to supply the deficiency. Her weavers must not lose heart, but must rather recognise in the occasion a fresh incentive to the exercise of ingenuity and industry.

Maritime policy, says the *Osaka Asahi*, has for its object the rule of the ocean, and for its instruments, ships of war, merchantmen and fishing boats. England calls herself the sovereign of the seas. After she conquered Spain in the days of Elizabeth, her navy grew rapidly. From Cromwell's time, when she mastered the Dutch, her commercial marine developed largely. In Pitt's days, she struck down Napoleon on shore with her right hand, and with her left obtained the mastery of the ocean, thus acquiring the proud title that she now enjoys. In previous ages, Spain, Portugal, Holland, each in turn had held the sceptre of the seas, but none could boast a reign of more than a century's duration. Each was deposed owing to unskilled policy and defective endurance. France is England's rival to-day. But France has no consistency. At one moment she is as hot as fire for naval development; at another, as cold as ice. Germany and Russia toil laboriously and persistently towards the same goal, but geographical conditions are against them. Japan is endowed by nature with all the requisites for such efforts. Three thousand years ago her so-called divine rulers are said to have scoured the seas between her shores and the mainland of Asia. The history of those ages is obscure, but there are trustworthy evidences that maritime enterprise prevailed. From the days of the Empress Jingū to mediæval times, the subjugation and control of Korea constitute proofs of Japan's sea power. But in the Kamakura era and thenceforth to the endless battles of the Hojo, Nobunaga, and the *Taiko*, a species of hydrophobia (*kyōsui-byō*) seems to have invaded the hearts of officials. None the less, private folk fitted out vessels on their own account, and ranged the seas as corsairs, carrying terror to all the peoples of the neighbouring continent. Date Masamune's ambassador crossed the sea to Mexico and thence made his way to Rome, and the picture presented by Yamada Nagamasa to the shrine of Asama shows that, in his epoch, the Japanese possessed large, three masted, sea going ships. But when the Tokugawa came into power, they devoted their energies wholly to domestic administration, and not only neglected maritime affairs, but interdicted the building of any ship of more than a thousand *koku* burden. That was the prime cause of Japan's falling behind the rest of the world in the race of material civilization. It is true that the Tokugawa, in the closing days of their rule, made some small atonement for their huge blunder. They established the Yokosuka docks and employed Katsu and Enomoto to organize some semblance of a navy. Coming to the Meiji Government, however,

* This prediction has already been falsified.

what has been its maritime policy? Nothing worthy to be called a policy. It took over the beginnings made by the Tokugawa and supplemented them sufficiently to preserve them from ruin, drafting into the Navy whatever of *personnel* seemed unfit for the army, and engaging for naval purposes men like Enomoto and the other conquered followers of the Tokugawa. In the time of the elder Saigo, when an expedition to Korea was on the tapis, how did the Government propose to send troops thither? Saigo foresaw that the issue of the expedition must be war with Russia. How would that have been carried on? At a later date, when a paltry force of one brigade had to be sent to Formosa, the feat could not be achieved without the aid of foreign vessels, and Japan's unpreparedness at sea paralyzed her in the face of the protests that her action evoked from foreign Powers. That is the naval side of the question. Turning to the commercial marine, the story is equally discouraging. The *Ansei* Treaty allowed foreign ships to invade the realm of the coastwise trade. Then followed a large measure of State aid to the Mitsubishi Company, and then the difficult elimination of one foreign competitor from the Yokohama-Kobe service. Not even in domestic waters was any marked progress made, and not until the year before last, the year following the war with China, did the Authorities direct serious attention to the question of the mercantile marine. And what was the really potent factor of victory in that war? Was it not the establishment of the country's naval supremacy, and the consequent opening of a free route for her troops overseas? In the event of future complications, everything will similarly depend upon the mastery of the seas of China and Japan. If Japan can secure that mastery, she will be supreme not only at sea but also on shore, for Western Powers can not then undertake anything against China without Japan's consent. From that point of view, the imperative necessity of raising Japan's navy to such a strength that it shall be able to cope with any force, whether of one or several States, brought against it, is universally admitted. On the other hand, the development of the mercantile marine is scarcely less important. For that purpose, two methods present themselves: protection by law, and protection by subsidy. The former is no longer possible; the latter is practised by all States. Scarcely any of the companies whose steamers ply in Japanese waters are without public aid, and the Navigation Encouragement Law framed by the Government the year before last, was an evidence of Japan's adherence to the universal system. The measure was most praiseworthy. It is true that such a system leads to abuses, as, for example, when the monopoly established by the Mitsubishi under State protection had to be broken by the establishment of the Kyodo Unyu Kaisha. But, on the whole, no other course is available. The *Asahi* then proceeds to advocate the granting of special subsidies for the American, European, and Yangtze services, and recommends that State aid now extended to railways should be transferred to maritime development.

The 8th of May is a day of great importance to Japan, says the *Yomiuri Shimbun*, for by that date the people of Formosa must decide whether they will leave the island, or, remaining, become Japanese subjects under whatever restrictions the Japanese Government may see fit to impose. The 5th article of the Shimonoseki Treaty allowed an interval of two years during which the Chinese in Formosa must choose between the above alternatives. It is possible, of course, that many have made the choice, and have either disposed of their goods and chattels and transferred themselves to China, or have resolved to live as Japanese subjects. But there are certainly a great number who have not solved the problem, and whose cases will have to be dealt with at the last moment. It does not appear that the Government has made any adequate provisions in view of that contingency. Even the census of Formosa has not been completed, and until it is completed the registration of Formosans as Japanese will

scarcely be possible. Then again, it does not follow that the mere fact of failing to leave the island or to move into the Settlements constitutes a title to be enrolled as a Japanese subject. Japan will have to make the selection. Have any principles of selection been decided upon? And what course is to be adopted with regard to persons who are not admitted as Japanese subjects? Are they to be put on board ship and carried over sea, or are they to be driven into the Settlements? In either case large preparations are required, but there is no evidence that any preparations have been made.

The *Mainichi Shimbun* writes in very strong terms about the hasty and reckless legislation of the Diet during the session just closed. So far as important *post bellum* measures are concerned, the nation has to thank the two Houses for the alacrity displayed in disposing of business, but a very different sentiment is evoked by their singularly perfunctory attitude towards many other Bills of vital consequence to the country's material interests. The only conclusion possible is that the members blindly subscribed to official direction, or allowed themselves to be swayed by some influence little creditable to their integrity. After a lengthy criticism on these lines, the *Mainichi* concludes that leading merchants and manufacturers must besir themselves to return to parliament representatives more competent to discuss matters bearing upon industry or commerce.

Now that the Diet has been prorogued and men have ceased to speculate about its attitude towards this question or that, the problem of the hour is the Cabinet's treatment of the politicians to whose support it owes its remarkable parliamentary successes, successes wholly unexpected by the public when the session opened. To reward these allies by bestowing on them some of the sweets of office would be a natural course, and its advocates, with the verbal adroitness so often displayed by politicians in this country, have devised a euphemism to facilitate the procedure: they call it *jinsai* to *yo*, or the utilization of popular talent. The term has become quite fashionable. It furnishes a theme to the *Nippon* and is discussed by that journal with all its wonted directness. Indeed, the *Nippon* goes so far as to say that if the Cabinet does not resort to that expedient, it must resign itself to be regarded as a clan organization, despite the party elements that enter into its composition. Further, in selecting men of talent to recruit the ranks of officialdom, the Ministry must not attempt to procure neutrals: it must make its choice boldly from among the parties that have supported it. No other method of consolidating its power is available, nor in any other way can the foundations of Party Cabinets be surely laid.

DEPARTMENT OF AGRICULTURE AND COMMERCE.

Commenting upon the necessity of reforming the Department of Agriculture and Commerce, the *Hochi* says that no Department is so indispensable for fostering the spirit of productive industry and for the consolidation of the country's commerce. Yet it has been in a state of apathy for many years past, and the public have even doubted the necessity for its maintenance. The notorious Ashio mine affair having recently sprung into prominence, the Government seem to have determined to introduce radical reforms in the Department by the appointment of Count Okuma as its head. The following points may be recommended for consideration:—promptitude in management. This is true of all Government departments but especially with regard to the Department of Agriculture and Commerce. The Department, however, has long been characterized by procrastination and want of activity in all its transactions, as is shown by the fact that some applications forwarded thither had been kept for many years without any decision being arrived

at, to the serious inconvenience of the people. These applications, it seems, had been passed from Bureau to Bureau and from Section to Section, only to be eventually lost in the pigeon holes of official procrastination. The abuses have now reached a climax, and reforms are absolutely essential for the Department, which has to deal with practical people, whose motto is, "Time is money." To effect these reforms, a proper division of the Department into Bureaux and Sections, and the selection of suitable functionaries must first be taken into consideration. The Department is not an actual agent of merchants, farmers, or artisans, just as its Minister is not an engineer. But it formerly involved itself in excessive interference, due to utter disregard of its position as the supreme factor in industry and commerce. Discretion in little things may be a virtue, but general judgment and scrutiny are necessary for such a Department, so far as its legitimate business is concerned. To carry out the duties of the Department, therefore, a system of general observation must be instituted. The copper-poisoning affair is really nothing more than the outcome of the Department's bungling in the observance of general duties. The Department persuaded the people of the mining district to enter into a conciliatory contract with the proprietor of the mine, in order to relieve the suffering and distress. Such a course of policy, however, ought not to have been pursued by it. The injury from the copper poison was not a question of private concern, but one of public interest. Measures, therefore, ought to have been taken on the basis of public right and benefit. No private arrangement should deal with public injury. The Department having taken up an attitude of private interference was the principal cause of the evil which is so prominent at present. Bungling might also be noticed in many other transactions. Reform has thus become a question of paramount importance. All this general criticism sounds very rapid.

WEAVING IN JAPAN.

Statistics of the Weaving Industry of Japan for the 29th year of *Meiji*, (1896) are given by the *Asahi* as follows:—The total number of weaving establishments was 660,408; the looms, 949,123; the weavers, 57,850 men and 985,016 women, or a total of 1,042,866. The value of the products was as follows:—Silk textiles, 46,471,401 *yen*; silk and cotton mixtures, 10,381,272 *yen*; cotton fabrics, 37,083,757 *yen*; hemp manufactures, 2,031,467; others, 329,338; making a total of 96,187,235 *yen*. The order in which the prefectures stand with respect to the number of weaving establishments that they contain is as follows:—Aichi (42,032); Kumamoto; Saitama; Kagoshima; Ehime; Shimane; Yamaguchi; Oita; Nagano; and Niigata. The same order does not hold with regard to the number of looms, however. In that respect the prefectures stand:—Aichi (80,104 looms); Saitama; Kumamoto; Ehime; Kyoto; Osaka; Shimane; Kagoshima; Niigata and Yamaguchi. We learn, also, that the silk and silk-and-cotton fabrics manufactured in Kyoto are valued at 15,885,830 *yen* annually, but that Aichi prefecture is the largest producer of cotton goods, namely, 5,832,295 *yen*, annually; and that in the matter of hemp manufactures Shiga prefecture heads the list, with a yearly production of 510,229 *yen*.

A serious collision occurred in Plymouth Sound on 24th Feb. The new sloop *Algerine*, which was recently commissioned for service on the China Station, and was to have left next day, was preparing to fill up with coal when the Government tug *Trusty*, with a lighter in tow, in attempting to get alongside, fouled the sloop's afterport and propeller. The collision did considerable damage, but the injuries were fortunately above the water-line. The *Algerine* was placed in dry dock, in order that the full extent of the damage might be ascertained. Her departure for the China Station will consequently be delayed.

THE NEWSPAPER QUESTION.

We are charged with inconsistency because, in publishing the *Japan Mail* without Japanese permission and without lodging security, we violate certain provisions of the Japanese Press Regulations, while, at the same time, maintaining that the provision which restricts the right of publication to Japanese subjects "must be regarded as inviolable." We have never maintained anything of the kind. Nothing is easier than to convict a writer of inconsistency if inconsistent statements be falsely attributed to him. What we have said is that whether foreigners have or have not a Conventional right to publish Japanese newspapers in Japan, they certainly would acquire such a right if the Japanese Government deliberately conferred it on them by law. A Japanese law is not competent to deprive a foreigner of any privilege that he possesses by treaty or convention, but it is perfectly competent to confer on him a privilege that he has not acquired by treaty or convention. On the other hand, it is practically incompetent to make the enjoyment of a privilege conditional, because the Japanese Authorities have no power to enforce conditions by penalties against foreigners. Applying these plain principles to the case in point, we find that if the privilege of publishing Japanese newspapers were explicitly extended to foreigners by the Japanese Press Law, they would be undoubtedly at liberty to exercise the privilege, but could not be compelled to observe any of the conditions attaching to its exercise in the case of a Japanese subject. Can anything be plainer than that? And is it not equally plain that to accuse the Japanese of "nationally scandalous" conduct because they have not amended their Press Law so as to extend its privileges to the foreigner before they are able to compel his observance of its conditions, is a gross absurdity?

As to our violating the provisions of the Japanese Press Law, the answer is that we have nothing to do with them. So long as a British subject remains outside Japanese jurisdiction, he is entitled to carry on in Japan any business or occupation permitted by the Treaty and not forbidden by the laws of his own country. When he passes under Japanese jurisdiction, the definition will be that he may carry on any business or occupation not forbidden by the laws of Japan, and that he may claim all the privileges of those laws in so far as the Revised Treaty secures their enjoyment to him. The present Treaty contains nothing that can be construed as conferring a title to publish newspapers in Japan. But the title may be said to have been established by prescription in the case of Treaty subjects or citizens generally, and by construction in the case of British subjects in particular. The former proposition is self-evident; the latter follows from the consideration that when Her Britannic Majesty's Minister, at the instance of the Japanese Government, issued a Notification forbidding British subjects to publish newspapers in the Japanese language, he recognised by implication their title to publish in their own language. In exercising that title, each national has to conform only with such provisions of law as his own Consular Authorities are competent to enforce. Special provisions of Japanese law, enact-

ed with reference to vernacular newspapers circulating among Japanese subjects, do not fall within that category.

It may appear to follow that a provision of Japanese law restricting to Japanese subjects the right to publish Japanese newspapers, can have no binding value for foreigners under present circumstances, since their Consuls are incompetent to enforce it against them. That is a difficult question, and one that need not be discussed here, for it has no bearing whatever on our main proposition, namely, that a privilege explicitly extended to foreigners by Japanese law becomes enjoyable by them without involving observance of the conditions attaching to it in the case of Japanese subjects, and that, consequently, if Japanese legislators set any store by those conditions, they can not at present extend the privilege unconditionally to foreigners.

We are further charged with being "a fraud" because we professed difficulty in comprehending a proposition of which the following definition is furnished in proof of lucidity:—

What we pointed out as a scandal, was the fact that when foreigners come under Japanese jurisdiction,—an event which is anticipated to happen in a little more than two years' time—that the retention of the clause denying the right of any foreigner to edit or publish a newspaper,—nothing is mentioned in it that the Japanese language only is meant,—that considering the regulations were before the Diet for revision, such an illiberal limitation should have been expunged, and we repeat that it is a scandal in face of the fact, that the treaties were negotiated on a basis of equality, equal rights being supposed to be enjoyable by both parties to the agreement.

Well, now, in all frankness, can any of our readers understand the meaning of that labyrinthine paragraph? It is beyond us.

The *Japan Gazette* says:—

The clause in the Press Regulations declaring that no one but a Japanese may edit a newspaper is clearly aimed at the extinction of foreign journals. That at least is the light in which it is viewed by the Japanese papers, which presumably ought to be cognizant of the national feeling on the point.

We should be glad to know when such an opinion is ventilated by the Japanese press. Nothing of the kind has been disclosed by our own examination of vernacular newspapers.

The *Kobe Chronicle*, alluding to some recent comments of ours on the probable attitude of the Japanese Government towards the foreign local press, says that we "evidently intended to include it (the *Chronicle*) among the journals which have shown themselves uniformly unfriendly to Japanese aspirations and reputation." Nothing could have been farther from our intention. On the contrary, we have always admired the spirit of fairness and justice that pervades the writings of the *Chronicle*, and have observed that while staunchly asserting the rights of foreigners, it has studiously refrained from any display of prejudice or contempt towards the Japanese or their doings. A journal conducted on such lines is incomparably more serviceable to the interests of its nationals than a score of newspapers that devote themselves uniquely to the task of discrediting the nation, for a protest from the *Chronicle*, when occasion offers, is certain to receive consideration, whereas protests from the anti-Japanese section are regarded simply as fresh evidences of hostile bias. We may, perhaps, be allowed to add that the tone of all the *Kobe* journals at present is such as to exclude them from the scope of the comments to which the *Chronicle* has taken exception,

and if the sentiment of the community may be inferred from the writings of its press, *Kobe* is to be congratulated.

On the Japanese side, the main source of mischief is the chauvinist *Nippon*. That the *Nippon* is anti-foreign cannot be doubted by any reader of its columns, and that its frequent animadversions upon Western methods and Western motives must educate mischievously prejudiced sentiments among a section—how large or how small we cannot tell—of its nationals, is unfortunately beyond question. It is perfectly natural to find the *Nippon* attacking the *Kobe Chronicle* because the latter has urged the foreign Chambers of Commerce to protest against the Law for encouraging the direct export of silk. That such a measure constitutes unfair discrimination against the foreign local merchant, is a point of which we do not expect the *Nippon* to take any critical notice. Indeed, that is probably one of the Bill's recommendations in the eyes of the *Tokyo* journal. But it is by no means a recommendation in the eyes of other Japanese journals, and we are persuaded that no reader of the Japanese press can withhold from it the credit of generally displaying towards foreigners a temperate and amicable mood; more temperate and more amicable, on the whole, than the mood displayed by the press of the average Occidental nation towards other Occidental peoples. We are aware, of course, that such praise is not absolute: the Japanese press has not been entirely free, in the past, to play the rôle so congenial to many Western newspapers, the rôle of embittering international feeling. But even without bringing upon itself official censure or administrative restraint, a Japanese journal could always have adopted an anti-foreign attitude, and could have pushed it to considerable lengths, as the *Nippon* has done. The marked absence of any such general attitude is well worthy of applause, and must certainly be admitted to possess some significance. Englishmen have a right to be honestly proud of the calm, judicial and strictly impersonal tone almost invariably adopted by their leading journals, and we have sometimes ventured to be sanguine that Japanese journalists were treading in the same path. But confidence would still be premature.

The first notice taken by the vernacular press of the newspaper question that has been troubling Yokohama journalists, appeared in the columns of the *Fiji Shimo* on the 6th instant. After observing that the Press Regulations limit to Japanese subjects the privilege of engaging in newspaper enterprise, and that, as the Revised Treaties do not contain any provision on the subject, it will be for the Japanese Government to determine whether the privilege shall be extended to foreigners, the *Fiji* goes on to say:—"From the point of view of advantage or disadvantage, we see no reason to withhold the privilege. It is true that the foreign local press Yokohama has often abused the Japanese, and has written in a manner calculated to excite ill-feeling. But, after all, no permanent harm has been done to the country's reputation or prestige. It has been a matter of empty words only. Hitherto, those journals have enjoyed the license of the extraterritorial system, and have doubtless taken advantage of it. But when they come under Japanese jurisdiction, they will probably

change their tone. If they do not, if they still continue to ventilate injurious slanders, there will be means of dealing with them. No occasion for disquiet exists. To interdict their publication would not close their mouths. If there was cause of complaint against Japan or reason to be dissatisfied with her procedure, journals published abroad would be persuaded to take up the matter. Speech can not be bridled. The best plan is to boldly allow them to have their say. Let us have freedom of speech at home, and a policy of liberal intercourse, abroad. Let foreigners come, as many as please. Let them engage in trade and manufacture. No petty exception need be made in the matter of newspapers. Moreover, foreigners and Japanese do not regard things from the same stand-point. The criticisms of the former may have their uses for the latter. It can not be entirely profitless to know what the foreigners living in the country think and feel. Besides, these local foreign journals do not command a large circle of readers—only the open-port communities and a very few persons abroad. They are not competitors of Japanese newspapers and have no great influence. Even though their publication were prohibited to foreigners, the prohibition could be evaded by using Japanese names. To interdict them would be merely to show narrow mindedness; to permit them would display magnanimity. Doubtless the Government also holds the same view, as may be inferred from the language of a Government Delegate who told the Special Committee that the clause relating to the Imperial House was inserted, partly, for the restraint of foreigners publishing journals in Japan. Thus the foreign local journalists may be re-assured."

The reference at the end of the above editorial is to the 32nd Article of the amended Press Regulations, where penalties are enacted against the publication of matter calculated to impair the dignity of the Imperial House, to subvert the Administrative system, or to disturb the Constitution. Many members of the two Houses of the Diet were opposed to the insertion of such an article, on the ground that it implied a danger chimerical in their opinion, namely, the danger of a Japanese subject's writing anything disrespectful to the Sovereign. We gather from what the *Fiji Shimpō* says that when the above objection was raised by the Special Committee appointed to examine and report upon the Bill, one of the Government Delegates pointed out that the control of foreigners conducting journals in Japan must also be provided for; and, of course, the inference is plain, namely, that the Government does not contemplate the suspension of such journals.

The *Fiji Shimpō*, as translated above, is the only Japanese journal, within our knowledge, that has commented on this subject. We should like to know the *Japan Gazette's* authority for asserting that the Japanese newspapers regard the 6th Article of the Press Regulations as "aimed at the extinction of foreign journals."

The Japanese training-vessel *Hiyei*, with a number of cadets, will shortly proceed to Vancouver, Seattle, and San Francisco. On her return she will call at Hawaii.

POLITICAL ITEMS.

It appears that the long-current rumours about the admission of "men of talent" in other words, party politicians—into the ranks of the Administration, is about to be verified by events. The *Chuo Shimbun*—not altogether a trustworthy authority in such matters—says that, at a special meeting of the Cabinet on the 3rd instant, it was decided to give appointments to twenty members of the *Shimpo-to*, ten being taken into the Central Government, and ten into the Local. Among the former are to be two Ministers Plenipotentiary, two Vice-Ministers of State, and three heads of bureaux; and the latter are all to be governors of prefectures. For governors the same journal designates Messrs. Ohigashi Gitetsu, Haseba Junko, Kudo Kokan, Kikuchi Kuro, Kashima Hidemaro, Hatano Denzaburo, Suto Rikuzo, Tamura Sei and Shimada Takayuki. Confirmation of these statements is furnished by the *Yomiuri*, where we read that Mr. Koizuka Ryo is to be Head of the Bureau of Agriculture, and that Mr. Taketomi Tokitoshi was appointed Head of the Bureau of Commerce and Industry on the 3rd instant. These two bureaux are in the Department of Agriculture and Commerce.

It is confidently affirmed that Viscount Aoki has been recalled, and that his successor at the Court of Berlin will be Viscount Okabe, formerly Japanese Representative in London.

The Authorities have finally decided to raise a body of local troops in Formosa. One brigade is expected to be the size of the force. The officers are to be Japanese at first, but doubtless Formosans will be raised to that grade in the course of time.

Japanese bank notes are at a discount in Formosa. Thus while a hundred *yen* of Japanese silver exchanges for 104 Formosa dollars—presumably Mexican—a hundred *yen* in notes exchanges for only 102.50. The Bank of Japan, says the *Shogyo Shimpō*, has determined to correct this anomaly, and has forwarded instructions in that sense to its Manager in Formosa, Mr. Nakayama Shonosuke.

The Tokyo *Asahi* gives the following list of ships lately ordered by Japan:—

A line-of-battle ship, the *Shiki-chima*—15,037 tons; speed 18 knots. To be finished by May 4th, 1899. Builders, the Thames Iron-Works.

A second-class cruiser, the *Kasagi*—4,784 tons; speed, 20 knots. To be finished by December 31st, 1898. Builders, Camp's Iron Works, Philadelphia.

A second-class cruiser, the *Chitose*—4,760 tons; speed, 20 knots. To be finished by December 31st, 1898. Builders, the Union Iron Works, San Francisco.

A second-class cruiser, the *Takasago*—4,350 tons; speed, 22 knots. To be finished in June, 1897. Builders, Lord Armstrong and Company.

In addition to the above the following are in course of construction:—

Two torpedo-catchers—250 tons each; speed, 30 knots. To be finished in April, 1898. Builders, Messrs. Thornycroft & Co.

Two torpedo-catchers—250 tons each; speed, 30 knots. To be finished in August, 1898. Builders, the Yarrow Company.

According to the *Fiji Shimpō*, the Government's intention was to prolong the Diet's session in order to give time for the passing of the Bill granting a special subsidy to the Nippon Yusen Kaisha on account of its American and European lines. But

that course was opposed by Messrs. Hatoyama, Shimada Saburo, Inouye Kakugoro, Taguchi, and Nakano, who told the Ministers of State, in the latter's waiting room, that if the session were prolonged and the Bill brought up for debate, a hostile vote was inevitable. So the measure was suffered to lapse for the moment.

NOTES ON NEWS.

The area of land under rice cultivation last year, according to statistics compiled by the Department of Agriculture and Commerce, was 2,786,982 *cho* (6,967,455 acres), and the rice produced was 36,199,771 *koku*. Compared with the returns for 1895, these figures show an increase of 7,700 *cho* (19,250 acres) in area, but a decrease of 3,720,000 *koku* in quantity, the diminution being 9.3 per cent. Compared, again, with the average figures for the preceding ten years, there was an increase of 34,000 *cho* (85,000 acres) and a decrease of 3,480,000 *koku*, or 8.8 per cent. In short, the rice harvest last year was the worst since 1889. Of course the evil record is to be attributed to the inundations that ravaged nearly the whole country, with the exception of Kiushu.

Statistics published by the same Department with reference to the barley crop of last year are also unfavourable. The area under cultivation showed a small decrease—7,000 *cho* (17,500 acres), or $\frac{1}{2}$ per cent.—whereas the diminution of produce amounted to 2,430,000 *koku*, or 11.3 per cent., compared with 1895. On the other hand, the crop was exceptionally abundant in 1884 and 1885, so that a comparison with either of those years is misleading. Taking the returns for the past 10 years, it appears that the area under cultivation in 1896 was 35,000 (87,500 acres), or 2 per cent., and the production, 228,000 *koku*, or 1.3 per cent., above the average. The total area devoted to barley in 1896 was 1,764,690 *cho* (4,411,725 acres), and the produce, 17,325,377 *koku*.

The Railway Council, at its last meeting, granted charters for the building of the following lines:—

The Ishinomaki Railway from Ishinomaki to Kajiyazama.

The Tosa Railway from Enakuchi to Susaki.

The Bantan Railway from Wadayama to Tsuiyama.

The Nampo Railway from Nagasaki to Take-no-uchi.

Temporary charters were granted to the following:—The Kabama Railway; the Nippo; the Keihoku; the Etsu-u; the Yamato; the Tsurugaoka; the Kawachi; the U-etsu; the Kwan-sei; the Funakawa; the Bisan; the Toyokawa; the Ensan; the Hamamatsu; the Awa; the Koku (extension); the Nippon (extension); the Sobu (extension); and the Riku-u. The number of applications rejected was 140.

We read in the *Shogyo Shimpō* that the Government has been making investigations as to the quantity of gold and silver coins in circulation in pre-*Meiji* days. These researches show that from 1601 to 1695 inclusive, an interval of 95 years—the value of the gold coins circulating was 150 million *yen*, and the value of the silver coins, the same, making a total of 300 millions. Explanatory details are not given. The meaning can scarcely be that these figures represent the total

amount of coins struck during the period indicated. From 1695 to 1710—an interval of 16 years—the figures were:—gold 100 millions, silver 40 millions. From 1710 to 1715, gold 70 millions and silver 30 millions. From 1716 to 1736, gold 90 millions, and silver, 40 millions. From 1736 to 1818—a period of 83 years—gold, 100 millions, silver, 60 millions. From 1818 to 1832, gold, 100 millions, and silver 60 millions. From 1832 to 1854, gold, 100 millions, and silver, 40 millions. From 1854 to 1870, gold, 150 millions, and silver 80 millions. From 1870 to 1875, gold, 200 millions, and silver, 90 millions; and from 1875 to 1879, gold 140 millions, and silver, 80 millions. If we are to understand from these figures that hard money to the value of 229 million *yen* was circulating in Japan in 1879, the question arises, what has become of it.

It has been decided that the Emperor and Empress will leave Tokyo on the 16th instant, pass the night at Nagoya, and reach Kyoto on the 17th.

The long talked-of official appointments—or, a part of them, at any rate—are gazetted. They involve the nomination of nine members of the *Shimpo-to* to local governorships; one to be Head of a Bureau, namely:—

- Mr. Takata Sanae (member for the 2nd District of Saltama) to be Head of the Bureau of Commerce in the Department of Foreign Affairs.
- Mr. Kashiwada Moribumi (member for the 4th District of Kagoshima), to be Governor of Chiba Prefecture.
- Mr. Goto Kwanichi (member for the 1st District of Fukuoka), to be Governor of Nagano Prefecture.
- Mr. Nakamura Hikoji (member for the 5th District of Fukuoka), to be Governor of Shimane Prefecture.
- Mr. Tamura Masa (member for the 5th District of Kumamoto), to be Governor of Saitama Prefecture.
- Mr. Yumoto Yoshinori (member for the 4th District of Saitama) to be Governor of Gifu Prefecture.
- Mr. Kikuchi Kuro (member for the 3rd District of Aomori), to be Governor of Yamagata Prefecture.
- Mr. Hadano Denzaburo (member for the 5th District of Niigata), to be Governor of Fukui.
- Mr. Ishida Kwan-no-suke (member for the 4th District of Hyogo), to be Governor of Toyama Prefecture.
- Mr. Muro Kojiro (member for the 8th District of Niigata), to be Governor of Ehime Prefecture.

Among the above ten gentlemen, only four can be said to have distinguished themselves in the Diet, namely, Messrs. Takata Sanae, Kashiwada Moribumi, Hadano Denzaburo, and Ishida Kwan-no-suke. It is evident that the appointment of nine party politicians to be Governors of Prefecture must have a considerable effect on the fortunes of the party to which they belong. Next year the general elections take place, and in the interval between the present time and August, 1898, the Prefectures now placed under the control of *Shimpo-to* leaders may be expected to receive some indirect education.

Other changes, gazetted simultaneously with the above and more or less connected with them, are:—

- Mr. Fujii Saburo (Chief of the Commercial Bureau in the Foreign Department), to be a Minister President.
- Baron Senge Takatomi (Governor of Saitama), to be Governor of Shizuoka.
- Mr. Oita Heina (Governor of Hiroshima), to be Governor of Shiga.

- Mr. Asada Tokunori (Governor of Niigata), to be Governor of Hiroshima.
- Mr. Katsumata Nen (Governor of Miyagi), to be Governor of Niigata.
- Mr. Komatsubara Etaro (Governor of Shizuoka), to be Governor of Nagasaki.
- Mr. Kabayama Sukeo (Governor of Gifu), to be Governor of Miyagi.
- Mr. Omori Shochi (Governor of Nagasaki), to be Governor of Hyogo.
- Mr. Takasaki Shinsho (Governor of Nagano), to be Governor of Okayama.
- Mr. Egi Chiynki (Governor of Ibaraki), to be Governor of Tochigi.
- Mr. Furusho Yoshikado (Chief of Formosan Civil Government Bureau), to be Governor of Gumma.
- Mr. Anraku Kanemichi (Governor of Yamaguchi), to be Governor of Fukushima.
- Mr. Akiyama Tokyo (Governor of Fukushima), to be Governor of Yamaguchi.
- Mr. Takenouchi Koezudi (Governor of Miyagi), to be Governor of Saga.
- Mr. Sugimoto Shigetaro (Governor of Niigata), to be Governor of Oita.
- Mr. Suehito Naikata (Police Inspector), to be Governor of Kochi.
- Mr. Kobota Kwanichi to be Governor of Wakayama Prefecture.

The following are placed upon the Retired List:—

- Mr. Su Kohiei, Governor of Hyogo.
- Mr. Ishizaka Shoko, Governor of Gumma.
- Mr. Abe Ko, Governor of Chiba.
- Mr. Sato Yo, Governor of Tochigi.
- Mr. Koteda Yasusada Governor of Shiga.
- Mr. Kinoshita Shunichi, Governor of Yamagata.
- Mr. Sokabe Michio, Governor of Shimane.
- Mr. Arakawa Kuniz, Governor of Fukui.
- Mr. Ando Kensuke, Governor of Toyama.
- Mr. Kono Chiuzo, Governor of Okayama.
- Mr. Komaki Shogyo, Governor of Ehime.
- Mr. Ishida Kichiro, Governor of Kochi.
- Mr. Hirayama Yasuhiko, Governor of Oita.
- Mr. Oki Moribumi, Governor of Wakayama.
- Mr. Oyama Tsunamasa, Governor of Saga.

Our Yokohama readers will greatly regret to see the name of the popular and competent ex-Governor of Kanagawa in the last of the above categories.

In his match with Peall, spot-barred, John Roberts made a break of 414 in twenty minutes, which means that he averaged more than one stroke every three seconds. Players of ordinary strength who take twenty minutes to get through a game of 100, will appreciate this wonderful performance.

A small potsherd has been found at Athens bearing the name of Themistocles. Antiquarians conjecture that it was used by Themistocles to cast his vote when the ostracism of Aristides took place.

Sir William Vernon Harcourt's method of cross-examining Mr. Cecil Rhodes has evidently revolted the feelings of many Englishmen. The apparent object of the inquisition is to betray Mr. Rhodes into some contradiction of his statements in chief, or to elicit from him some damning admission. In short, the impression conveyed by a perusal of the cross-examination is that Sir William regards Mr. Rhodes as an utterly untrustworthy and evil person, who is to be subjected to the kind of *procès verbal* that a suspect has to endure at the hands of a magistrate in France.

The old dispute about the authorship of "Rule Britannia" has been renewed in England, and once again the balance of testimony is in favour of Thomson against Mallet. The two poets, working together, produced a mask called "Alfred," in 1740, which was represented before the Prince and Princess of Wales at Clifden. It contained six lyrics, the last of which was "Rule Britannia." Thomson died in 1748, and although Mallet re-issued "Alfred" in 1751, he never claimed the

great ode, but in an advertisement prefixed to the work, used language indicating pretty clearly that Thomson was the author.

What the *Saturday Review* has to say about the Japanese Budget for 1897-8 is in that journal's usual caustic and highly exaggerated tone, but contains many elements of truth, and is, at all events, interesting:—

It looks as though Japan does not quite realize the consequences of all this increase of expenditure. It is very well to make preparations for war, but it must be borne in mind that these preparations mean increased taxation all round. The ordinary expenses of the service departments must grow year by year as they grew in 1896 as compared with 1895. The better half of the indemnity is going to provide more ships and more soldiers, both of them costly. When the scheme has been completed at the end of seven years from its inauguration, there will naturally be still more taxation to maintain it. The public debt is also growing, and this year nearly 60,000,000 *yen* is to be added to it. The land is already taxed heavily—to the extent of 40 per cent. of the whole ordinary revenue; and the additional 16,280,000 *yen* in this year's account will make a difference to the poor agriculturist as well as to the dweller in towns. The country is richer than it was five years ago, undoubtedly; but relatively to this enormous demand upon it, it is miserably poor. The wonderful commercial activity of which we heard recently has been very largely speculative, and the inevitable depression has come already. There was a balance of imports over exports last year of 45,000,000 *yen*. And this is the country which proposes to keep itself out of debt by borrowing!

It was not expected, of course, that the war with China would have a sobering effect on the minds of our friends the Japanese. But the degree of delirium brought about by their very creditable achievements in that war threatens to injure them at home and abroad. If they go on much longer as they have gone on hitherto they must inevitably come a cropper. Their exports have fallen away and their imports last year went up in a most amazing manner. Just now they are in a state approaching collapse. They have been purchasing wildly of all commodities up to 5,000 ton steamers, and have been inaugurating moneymaking schemes of the most hare-brained character, seemingly without any regard for the prospects of profit. In all things imitators, they have put their money into banks, railways and ships; and having whipped the Chinese in one way, they naturally fancy they can whip Europe in another. At the end of 1894 they possessed 727 banks. In June last they had 1,107. They had formed railway companies and constructed railway lines everywhere in the land, and some genius has recently been advocating a line, to be built with Japanese capital, from Shanghai to Paris. As for ships, has not the Nippon Yusen Kaisha instituted regular sailings to England, India, Australia, and the Pacific slope of America? To be sure this Company pays—for the first year ending 30 September last its dividend was at the rate of 12 per cent. But we note that the report speaks dolefully about the prospects of the new lines; and we should like to know how the concern would stand were it not for the handsome subsidies it receives from the Government. Also, what the Japanese taxpayer would have to say about it all if he but possessed the priceless gift of free speech.

It appears that some of the Kobe ladies find the hills too stiff to be negotiated by bicycle, unaided, and that they occasionally enlist the services of a coolie with a rope. The *Kobe Chronicle* says that a marplot has been lurking round with the intention of photographing a lady in tow, in order to send the picture home as an illustration of lady cycling in the Far East. Is there not something of the same kind in Yokohama? We have heard whispers of coolies with forked poles that fit behind the saddles of bikes, and breast them up Yato-zaka gallantly. Why not, indeed?

The disastrous consequences predicted for Japanese silver mines owing to the adoption of the gold standard are said to be showing themselves in fact. Annually the output of these mines aggregates from 5½ to 6 million *yen*. The mines are Sado, Ikuno, Innai, Ani, Kozaka, Karuizawa, Handa, Hosokura, Omori, Kamioka, Himi, and Ponshi-karibetsu; those of Ani, Karuizawa, Innai, Himi, and Ponshi-karibetsu being the best. Formerly, the silver produced used to sell for 14.2 or 14.3 *sen* per *monme*, but since the adoption of the gold standard the price has fallen to about 13 *sen*, which means a loss of something like 1½ million *yen*. So, at any rate, says the *Chuo Shimbum*, but we fail to see how a fall of 8½ per cent. in price can amount to 1½ millions out of a total production of 6 millions. Accord-

ing to every-day arithmetic, the loss is half a million, approximately. Be that as it may, the same journal goes on to say that since it costs 12 *sen* to obtain one *momme* of silver from the most productive of the Japanese mines, the rest can no longer be worked at a profit, and the owners of Ani and Karuizawa have decided to close them. On the other hand, Japan's production of gold amounts to only six or seven hundred thousand *yen* annually, so that the gain on that side does not nearly balance the loss on the other.

JAPANESE IMMIGRANTS IN HAWAII.

A certain amount of excitement has been caused in Japan by the news that the privilege of landing in Hawaii was refused to a number of Japanese immigrants under the laws of the little republic. But, on the whole, the incident seems to have created a much greater commotion in Hawaii itself, the Authorities there having considered it necessary to adopt special police precautions against the contingency of violent resistance on the part of the Japanese. Of that, however, no symptom developed itself. The Japanese are the quietest people in the world up to a certain point, above all when the law, or any semblance of the law, is in question. The disappointed immigrants made no attempt whatever to demonstrate their sense of injustice, but entrusted the protection of their interests confidently to their Consul and to the judicial tribunals. Our readers are probably familiar with the facts. The *Shinshu Maru* carried 665 Japanese labourers to Hawaii. She was kept in quarantine for a considerable time, and steps were then taken to examine the immigrants one by one, with the result that only 75 out of the total number were declared to possess the necessary qualifications. It is difficult to ascertain clearly what qualifications were absent. So far as we can see, an alien can not land in Hawaii for the purpose of engaging in agricultural pursuits unless he has obtained previous sanction from the Board of Immigration or is possessed of a sum of fifty dollars. The Board meets quarterly, and applications for foreign labour are then submitted to it. It was claimed that no such application had been made in the case of these particular Japanese. But it was also claimed that many who were able to show fifty dollars had received the money temporarily in order to pass muster. The latter objection was, of course, denied by the immigrants, and Consul-General Shimamura naturally protested that the *provenance* of the money had no concern for the official examiners, their legal competence being limited to ascertaining whether or no the prescribed sum was in the possession of each immigrant. We now know that the law courts have borne out the position assumed by the Hawaiian Government.

It is suggested that the action of the Dole Administration in this matter has for its motive a quarrel with Japan, which shall force the United States to interfere by annexing Hawaii. That inference is deduced from the alleged facts that the present Government in Honolulu is unpopular with natives and foreigners alike, and that unless annexation can be contrived, the ex-Queen may succeed in recovering her

sovereignty. Not inconsistent with such a theory were the somewhat factitious precautions, police and military, adopted by the Hawaiian Administration on the occasion above described, and the rumours of a Japanese *émeute*, as well as of the imminent advent of Japanese warships, circulated by the Honolulu newspapers. But we find difficulty in entertaining any such view. It is conceivable, of course, that if the present Government in Hawaii be so unpopular as to fear serious apprehension of danger from within, it may find itself forced to fall back upon the annexation alternative. But tangible evidences of such a state of affairs are not apparent, and, on the other hand, the interests of the Hawaiians do not make for annexation. They certainly favoured that step when it promised distinct gain in the matter of sugar taxation or sugar bounties, but annexation has no longer any fiscal advantages to offer, whereas, on the other hand, it would involve the observance of the United States' laws concerning immigrant aliens, and would thus deprive Hawaii of the supply of cheap labour without which its main source of income, sugar planting, would become impossible.

The simple explanation of the incident appears to be that immigration from Japan has assumed proportions which the Hawaiians find alarming. There are already from thirty to forty thousand Japanese in the islands, and it is conceivable enough that the continued growth of such a large colony should suggest disquieting contingencies. Of course, from an academic point of view, these racial discriminations are altogether to be condemned, but the Japanese people, having a similar trouble of their own at home—the question of Chinese immigration—can not be insensible to the embarrassments that confront Australia, Canada, Hawaii, and the United States. One of the most stupendous problems looming on the horizon is the question of the coloured man in the United States. It is a problem that may supply materials for an appalling chapter of history, and with such an example in view statesmen elsewhere are justified in adopting timely measures of prevention. The cosmic balance of the entire universe is as admirable as the moral balance of this particular world's progress is defective. The disappearance of distinctions that forbid absolute freedom of international intercourse has been far outstripped by the development of mechanical genius. Facilities of communication have brought into close contact peoples widely divided from each other in standards of living, and more than one Western nation finds that it has opened wide its doors without being at all prepared to disperse indiscriminate hospitality to every one knocking at them.

The Supreme Court of Hawaii on the 17th ult. unanimously decided that the decision of the Collector General of Customs in refusing to permit some 598 Japanese immigrants to land at Honolulu, was final and conclusive, and could not be interfered with by the Judiciary, and the question is now relegated to the realm of diplomacy. On the same day that the decision was given by the Supreme Court, a mass meeting of Japanese was held. The Honolulu *Daily Advertiser* says of this meeting:—

Long before the hour, hundreds of little brown men flocked to the building and crowded it from mauka to makai walls. A sprinkling of white citizens were present and found places where they could. Interpreter Doyle fixed himself comfort-

ably in a window so as to be easy of exit, and a reporter for the *Advertiser* sat with him for the same purpose. One young man in addressing the audience said:—

"This is the first time we have been treated with the ignominy that characterizes the treatment today. I am perfectly willing to give up my life for those people over in the quarantine station and if it is necessary, I am ready at any moment. (A drink of water was then taken and the harangue continued). When a man comes here he comes under the treaty and with the same rights as every one else. We have brought the country to what it is, we own it and we have a right here. If we commit an offense in our own country, we get justice but here we are left to the decision of the collector of the port. These people here say they are going to send the Japanese at the station back to Japan. Are we going to let them go or not? We must stick to one another and help one another out in this grave matter and we will.

Several speakers followed and eventually the following resolutions were proposed and carried:—

"Whereas, we cannot find right reason for the action of the Government of Hawaii in refusing to permit the immigrants from the *Shinshu Maru* to land here, and

"Whereas, according to the decision of the Supreme Court, the Japanese citizens of Hawaii are denied the protection of the law in their individual rights, and

"Whereas, this action of the Government of the Republic of Hawaii is in contravention of the 'most favoured nation clause' in its treaty with Japan, and

"Whereas, we consider that this action establishes a precedent for all future cases; then, be it Resolved, that the residents in Honolulu communicate through their Consul with the Government of Japan, stating the facts of the case and abide by the decision of the officials in Tokyo."

SALE OF WORKS OF ART IN TOKYO.

From time to time the Tokyo dealers in objects of art combine to hold a sale at some well-known restaurant or public building. The tea-house Nakamura-ro, near Ryogoku Bridge, is a favorite place for such enterprises, the suite of spacious rooms in the lower and upper storeys offering exceptional facilities for the hanging of pictures and the disposition of other treasures. A sale has just taken place there. A great number of articles were shown, the large majority of them being pictures by old masters, or reputed old masters. Gems were few and far between; so few as to add new emphasis to the fact that Japan has been well-nigh depleted of the numerous treasures formerly so inviting to the collector. To people who, having resided in Tokyo for five-and-twenty years, can look back to the days when every bric-à-brac store in Nakadori repaid a visit; when pictures by celebrities of the *Shijo* and *Ukiyo* schools seemed common affairs, and when one regarded chromoxylographs with such indifference that even the trouble of distinguishing their painters appeared misspent—to such people the present state of things is difficult to realize. The sale at the Nakamura-ro on the 3rd, 4th, and 5th must have been a rude shock to them. Probably from three to four hundred pictures were shown, and among the whole not a dozen merited a second look. Before each picture lay a little box with a slot in the lid, and into that receptacle the purchaser was expected to thrust a paper stating his name and the price he was willing to pay. Such is the regular method of bidding at these bric-à-brac sales. The figures realized for anything that possessed "points" were startling. Two six-leaved screens attributed to Hokusai carried off the palm. The subjects represented were scenes on the Tamagawa; figures of men and women in the foreground with sketchy

landscapes for back-ground. If Hokusai painted such pictures, his right hand must have temporarily lost its cunning. Two years ago, they were offered to a foreign dilettante for 500 *yen*, but he refused them as of more than doubtful origin and unpleasant even if genuine. For these same screens a tender of 6,500 *yen* found its way into the box on the 5th, and, the owner declining to sell at that price, it was raised, still unsuccessfully, to ten thousand. Kikuchi Yosai commanded the next highest figures. In the alcove of the most northerly room upstairs were hung two pictures of his; one representing the dispersal of the Mongolian invaders in a gale off the coast of Kiushu, (a subject known as *Mōko raishū*); the other, a number of figures in a building—we could not identify the subject. These drawings were undoubtedly genuine. They displayed all Yosai's fine qualities of delicacy, softness, firmness, and wealth of suggestion, and the vivid action of the figures derived mysterious interest from the peculiar atmosphere that Yosai's characteristic treatment of values produces. The former sold for 1,651 *yen*; the latter, for *yen* 810. A very much smaller but, in our opinion, far more attractive specimen of Yosai's work, a heron in snow, found a purchaser at 350 *yen*. Much attention was also attracted by three other pictures and a pair of small screens attributed to Hokusai. The screens, though undoubtedly genuine, had the fault of incongruity, the pictures used to decorate them not having been painted for such a purpose. Still they were thoroughly typical of Hokusai's genius, and their sale for 400 *yen* contrasted curiously with the fact that the larger pair, with the painting of which Hokusai had nothing to do, unless we are much mistaken, could not be bought for ten thousand *yen*. Such are the vagaries of collectors, however. A delightful composition representing shell-gathering (*shio-ha*), well drawn but difficult to accept as Hokusai's work, fetched 225 *yen*; a pair of his paintings, certainly genuine, representing fishermen, were bid up to 400 *yen*; and a female figure of considerable merit, also from his brush, was sold for 88 *yen*. It is interesting to note how much of his reputation Hokusai owes to foreign estimation. With his own countrymen his works never found favour in pre-*Meiji* days, his style being considered coarse and his mannerisms repellant. But his genius took foreign critics at once by storm, and gradually the Japanese have developed a mania for his drawings almost as feverish as that of the Parisians themselves. Still the prices offered or paid for his pictures at the recent sale exceeded anything previously conceived in Japan, and are difficult to reconcile with standards set by calm judgment. The most insignificant of Hokusai's pictures, however, is incomparably superior to a wretched daub in oils by Shima Kokan, which some infatuated amateur acquired for 250 *yen*. The picture had only one saving point, that it illustrated the earliest efforts of Japanese artists to imitate the Dutch style, but to have a history and be a rarity are unfailing recommendations in Japanese eyes. That Shima Kokan should find eager buyers is inexplicable from an artistic point of view, but the Japanese themselves would have said the same of Hokusai twenty years ago. Another evidence that they have put on foreign spectacles was furnished by a little painting from the brush of Miyagawa Choshun,

one of the *Ukiyo-e* masters. The subject, a quaint conception, was the god of Hades holding a fan on which was depicted a scene from gay life in Tokyo. No Japanese would have paid 5 *yen* for the picture in the old days, but it sold for 230 *yen* on Monday.

RAILWAYS.

Notwithstanding the competition of omnibuses, cabs, trams, and steamboats, the railway traffic of London—or, to speak more correctly, Greater London—would appear to be continually increasing. There is a steady growth of the population of Greater London—the “monstrous wen” of the old essayist of Restoration times. London is still the financial and commercial centre of the World. The number of passengers passing over the Metropolitan and the Metropolitan District Railways increased from 80,001,578 in 1876, to 121,163,703 in 1886, and to 131,131,035 in 1896. The railway traffic of Greater London is continually growing, but it should also be remembered, of course, that the Metropolitan and Metropolitan District lines have not by any means stood still; on the contrary, sundry extensions have been opened from time to time. All these extensions, of course, had some effect upon the traffic of the two undertakings; but still, the fact remains that from one cause or another, their passenger returns are steadily expanding. It has incidentally been helped on by the excellent arrangements made for establishing communication with the Great Eastern, the Great Northern, and the Great Western systems. The capital of the two Companies is £19,675,000, or *yen* 196,750,000, approximately; the miles in work, 85; the gross receipts £1,227,390; the train mileage 3,359,000; the rolling stock, engines 131, carriages 731; wagons 212.

We take the above from *Engineering* and “Whittaker's Almanack” for 1897, and our purpose in making the extracts is to show to what a height the passenger traffic may be developed on a well managed railway. It appears that the two lines in question carry 359,264 passengers, and earn over thirty-three thousand *yen*, daily, on the average. Or, making a closer calculation, each line carries 11,975 passengers per hour—on the supposition that there are 15 working hours in the day—and the gross daily takings per mile of railway are over 395 *yen*.

The figures for the London roads demonstrate the advisability of a line through Tokyo. As to the idea of a large central station, however, expert opinion seems to be against it. The wiser plan is considered to be the building of fairly large stations at either end of the city, and suitable stations at short intervals. Thus, all the trains from the north and north-west would run through to the southern station, and all trains from the south, to the northern station. Naturally a local service should also be organized.

Referring, now, to the Report of the Imperial Japanese Railway Bureau for the year ending March 31st, 1895, we find that the paid-up capital of the State and Private lines is a hundred million *yen*; the mileage in operation, 2,102 miles; the gross receipts are 14,530,528 *yen*; the passengers carried, 35,769,489; the goods,

4,271,435 tons; the train mileage, 11,963,064 miles; the rolling stock, engines 415; carriages, 1,657, and wagons 6,152. It appears, therefore, that the gross earnings on the Japanese lines are 14½ per cent. of the paid up capital, whereas the gross earnings on the two great London lines are only 6½ per cent. of the capital. The average daily receipts over all the Japanese roads is forty thousand *yen*, approximately; but the average per mile is less than 20 *yen*, or about one-nineteenth of the average on the two London lines.

KOREAN ITEMS.

The Chinese Consul-General in Sōul is said to be pressing upon the Korean Government a claim for 300,000 Tls., being the principal and interest of two loans made to that Government some years ago; one of 200,000 Tls. by the China Merchants S.N. Company; and the other of 20,000 Tls. by the Chinese Telegraphic Administration.

Korea's long-entertained project of stationing a Representative in Europe is to be accomplished at last. Min Yung-hwan, who goes to England as special ambassador to attend the Diamond-Jubilee celebrations, is subsequently to make his head-quarters in St. Petersburg, thence paying periodical visits to London, Berlin, Paris, Vienna and Rome.

Regulations have been issued by the Department of Public Works in Sōul for the management of the new telegraph service. There are 8 first-class and 19 second-class offices throughout the country.

Min Yung-hwan is to be accompanied to Europe by Mr. von Routenfelt, of the Imperial Customs Service.

Sir Claude MacDonald arrived in Sōul on the 24th of March. To present his credentials as British Representative. He was received in audience by the King on the 26th of the same month.

The Korean Council of State has appropriated another sum of \$50,000 to meet the expenses of the late Queen's funeral. The amount defrayed by the impoverished little kingdom for the purposes of Her Majesty's obsequies are altogether unreasonable.

The first sod of the Sōul-Chemulpo Railway was turned on the 22nd of March. The Governor of Chemulpo was present on the occasion.

THE INSURRECTION IN THE PHILIPPINES.

It seems to be fortunately fated that on the heels of rumours of Spanish reverses, carried to Japan in Hongkong journals, explicit contradictions should come flying across the wires. That is what happened recently. On the very day following the publication in Yokohama of a *Hongkong Telegraph* canard to the effect that the Spanish troops were in evil case, the Captain-General announced by wire to Tokyo the taking of Imus and Cavite; and now, when extracts from the *China Mail* told us, forty-eight hours ago, that the insurgents were more than holding their own, another official telegram tells of the fall of Noveleta, Cante-viejo and Buicayan. The fact is, that, in the matter of trustworthy news, Tokyo is much nearer to Manila than Hongkong is, and the reports contained in the journals of the latter place are neither correct nor timely.

CHINESE ITEMS.

Possibly our readers have not understood that the special ambassador whom China sends to attend the Diamond Jubilee, is the same Chang Yin-huan who came to Japan in the spring of 1895 as peace envoy, but had to return *re infecta* on account of his defective credentials.

The *North China Daily News* appears to endorse a silly idea ventilated originally by a newspaper in Japan, to the effect that an alliance would be comparatively easy to arrange between England and Japan if British subjects could own land in Japan and build factories on it. What length of land tenure, we wonder, is considered sufficiently permanent to justify the building of a factory. Would a hundred years do? Or a hundred and fifty? Or two hundred? Considering that if the present law of Japan remains in force when the revised Treaties go into operation, British subjects will be competent to lease land for one or two centuries, if they please, we fail to see what practical obstacle to the erection of factories need be anticipated.

There is great distress in the eastern part of Szechuan province, and some suffering is reported from the city of Chungking also. The people are said to be in a famishing condition. Has a year ever passed over China without bringing such calamities to some part of her huge realm?

"J.S.", in an interesting description of the Ichang Gorges says:—

As an amateur I have often smiled at the peculiar paintings of old Chinese artists, depicting grotesque hills, overhanging rocks, mountains of all conceivable forms and colours, temples, and marvellous rocks, with houses perched on their tops or nestling in crevices in the sides, with rushing and swirling streams. Sometimes the picture gives an aged philosopher, lost in solemn contemplation of the eccentric scenery, or engaged in writing poems to the celestial gods. All these peculiarities are in existence at the present moment among the Ichang Gorges. With the exception of the poetic sage, I have seen them all myself and hasten to apologise to the artists in question for daring to doubt the correctness of their interesting pictures.

Every one acquainted with the class of picture known in Japan as the *bunjin-gwa*—which, in fact, is an imitation of the Chinese style—must have experienced the same incredulity as "J. S." But in Japan, also, there is a place where nature's freaks amply establish the fidelity of the *bunjin-gwa*. It is the celebrated Myogi.

The Huangpu, Shanghai's water-way to the Yangtze, is said to be rapidly becoming a shallow canal, and the leading Settlement in the Far East is confronted by the contingency of falling into the list of inland marts. It appears that Mr. de Rijke—whose name the *N.-C. Daily News* spells Rijke—foretold that result twenty years ago, and our contemporary recommends that he be invited from Tokyo to help in averting the catastrophe.

From regulations issued by the Bureau of Mines with regard to the opening of mines in Hunan province, we learn that the Government reserves to itself absolute possession of all deposits of saltpetre, sulphur, antimony, bismuth, nickel and gold. One would have expected to find silver included in the category, but it is not. To the Governor of the province is entrusted the power of determining when a mine may be properly required to pay duty on its output, that obligation being dispensed with until the de-

mand for the ore has been developed to a paying point. It must be confessed that the profits derived from official or semi-official mines appear at the end of a very long vista, for provision is made that any surplus remaining after such mines have paid duty, interest on capital and working expenses, is liable to calls on account of local charities, the officers and staff of receiving and transporting depôts, the gentry in charge of various branch offices, the excisemen of the preventive service, the owners of land who have sold property to the mines, or whose estates lie within a certain distance of the shafts, and the officers and men of the military posts in the vicinity.

It is alleged that an Imperial Edict has been issued in Peking, decreeing that the products of the Shanghai cotton mills are to pay the ordinary import duty, free from any further inland taxation, as in the case of similar imported goods. We do not think the rumour credible.

Shanghai is to have a ship-building and dock-yard. Land for the purpose has been purchased by a Chinese syndicate, the machinery and plant has been ordered from England, and it is expected that the establishment will be ready to build and repair ships by the close of the year.

An association calling itself the "fountain-of-wealth syndicate" (*Li-yuan*), has been formed for the purpose of developing the natural resources of Chihli, and ultimately of the four other provinces lying north of the Yellow River, namely, Shantung, Shansi and Shensi and Honan. The chief promoter is Mr. Yao, and his declared idea is to freely introduce machinery and methods from the west, so as to bring under profitable cultivation the large area—two-thirds of the whole province—in Chihli now lying barren. The Viceroy Wang and the Tsungli Yamen are said to have sanctioned the scheme, despite the avowed intention of using foreign appliances and modes.

The International Cotton Mill at Pootung was opened on the 31st of March. It contains 40,000 spindles, and weaving will ultimately be added to spinning.

At a meeting of British residents held in Shanghai on the 31st of March, it was decided that the Diamond Jubilee should be duly celebrated, but the form of the celebration was not settled. The Rev. H. C. Hodges proposed the erection of a church and institute for the use of seamen, and Mr. V. Drummond proposed a hospital, but the meeting ultimately voted to leave the consideration of these schemes, and any others that might be suggested, to a Committee, with instructions to report to a subsequent meeting.

The Shanghai Chamber of Commerce has decided to accept an offer made by Mr. de Rijke, that he should visit Shanghai and survey and report on the Bars and the Whangpoo River, in consideration of a fee of ten thousand dollars silver.

It appears that Kiaochow, in South Shantung, which was confidently said to have been lent to Russia, is to be the future great naval station of China. The Viceroy of Chihli has sent Taotai Wang Jên-pao to inspect the place, and two German officers are to assist.

A foreigner has at length succeeded in entering Changsha, the last city in China that held out against such an intrusion. The feat was achieved by Mr. E. Wolf, a

German subject, and it demanded no small exercise of pluck and persistence.

An American engineer, Captain Rich, is engaged performing the preliminary survey of the new railroad from Peking to Hankow.

JAPANESE SILVER ABROAD.

The *Fiji Shimpō* gives the following particulars with regard to the Japanese silver coins now in circulation in the various parts of the Orient:—Of all the currency in Singapore and its neighbouring territories, nine parts out of ten are Japanese silver coins. The total amount of such coins can not be less than from sixteen to twenty million *yen*. If the sums circulating in Siam, Annam, Burmah, Sumatra, and Borneo be added, the whole will probably aggregate some fifty million *yen*. Should these coins become exchangeable for gold at a profit of from four to five per cent, they will inevitably gravitate to Japan, and produce troublesome results.

In Tientsin, Mexican dollars have hitherto been circulated to the exclusion of Japanese silver, but no insignificant amount of silver *yen* were transported thither for business purposes by traders from the Liaotung Peninsula, where the coins were distributed at the time of the war with China. But as the Japanese *yen* and the Mexican dollar are now accepted at par throughout the Liaotung Peninsula, merchants engaged in the purchase of Liaotung productions have proceeded to Tientsin to obtain Japanese silver. The latter, therefore, may reasonably be anticipated to come back from the Peninsula before any great length of time.

The currency of Shanghai consists of *taels* and Mexican dollars. The Japanese silver *yen* is valued at the same rate with the Mexican dollar. But in spite of that uniformity of value, the Customs Authorities will not receive Japanese coins in payment of duties, so that the *yen* has lost credit among mercantile classes. Subsidiary Japanese coins of five, ten, and twenty *sen* may be seen in the hands of the Chinese, but the silver *yen* is virtually excluded from circulation. The converse is the case at Chefoo. Japanese silver having acquired extraordinary credit among the inhabitants of Liaotung ever since the War with China, the amount in circulation has suddenly increased, the payments of such coins made last year for wild cocoon silk and food stuffs of daily use exceeded 400,000 *yen*. A similar phenomenon is observable in Wei-hai-wei. Of the foreign silver coins exported by a certain Chinese agency in that territory, the sum of 195,000 *yen* is said to have been Japanese silver. In general transactions in the country, the Japanese silver *yen* is also used.

PROGRESS OF YOKOHAMA DOCKS.

The cofferdam surrounding the new graving dock of the Yokohama Dock Co., at Sakuragicho, was cut through on Thursday morning, the 8th inst., and water was admitted into the caisson of the dock during flood tide. After the caisson had been filled the gate was floated into position and powerful steam pumps set to work to force out the water again, which was effected in two and a half hours. A few unimportant leaks were found in the masonry and in the gate bolsters, but on the whole the work reflects much credit on the constructors. Dredging operations are being actively proceeded with to clear away the cofferdam and prepare the channel to the dock, which, it is expected, will be opened at an early date. The first vessel to be taken in will be the steamer *Saiko Maru*.

Mr. Yano, the new Minister to China, who has been staying in the country for the benefit of his health, returned to the capital on Tuesday. There being some important matters for investigation, his departure will be postponed until next month.

FAR EASTERN FANTASIES ON THE WESTERN STAGE.

FOR more than two centuries the Far East has been the chosen field of Western writers whose invention has soared above the limits of prosaic possibility. As the world was made smaller through the explorations of mediæval adventurers, and its outlying fringes grew to be more accurately known, the strongholds of romance were gradually reduced, until China and Japan, intrenched in the mystery of their stubborn seclusion, became the last refuge of fantastic imagination. Poets and authors whose ideas flowed in abnormal channels, and whose creations could not be harmonized with their surrounding social conditions, revelled in the license afforded by these remote and unfamiliar lands. No conception could be too wild, no device too daring, to be planted in the soil and flourish in the atmosphere of traditional enchantment. Through many generations China was the favourite resort of the knight-errants of fiction, only the most dauntless spirits presuming to invade the deeper solitude of Japan. To the vivid intellect of SWIFT, however, the unknown was always a stimulus, and in selecting a point of departure from the shore of fact to the broad ocean of fable, he brought his immortal traveller to Nagasaki—or, as he phonetically spelled it, Nangasaki—before sending him on the entrancing voyages which to many of his followers are more real than half the records of sober history. When seeking for a locality in which to build a supposititious fabric of Government, SWIFT again found no place more convenient than Japan, as the reader of his political essays will remember. But until recent years, few writers wandered so far abroad, and the productions of those who made China their literary terminus were chiefly of a light and sportive character, often extravagant to the verge of the miraculous, and not infrequently grotesque, though rarely coarse or unwholesome in flavour. Voltaire, it is true, founded a tragedy upon a Chinese legend, in which the fair *Clairon* rose to renown, and the play was in due course transferred to London, where the pilfering fingers of the “adapters” were as nimble in the seventeenth century as they are to-day. The artistic sense of Paris doubtless accepted the work of the classic dramatist on its merits; but the humourists of Covent Garden gallery must have found it difficult to reconcile tragic emotion with the pig-tails and conical hats of quaint Cathay. As a rule, the pieces offered upon the stage were of a kind that called for rich scenic display, and in which no exaggeration of caprice could be condemned as unnatural or improbable. To what glowing flights the highest poetic faculty could be inspired by a purely Oriental theme, COLERIDGE

showed in his lay of *Kublai Khan*. But the resources of true poetry were not so often invoked as those of sprightly fancy; and the literature associated with the East was more commonly marked by ingenuity of design and dexterity of construction than by loftier or more enduring qualities.

Noted masters of fiction in our own time have dealt with China mainly in a jesting vein, after the manner of Captain MARRYAT, CHARLES LAMB, and DICKENS, the latter's translation of the old-fashioned willow-pattern plate being one of the gems of his frolicsome youth. But the writers of plays have had more serious and practical cause to congratulate themselves upon the wide range of productiveness which the Middle Kingdom opened to their talents. In the theatre, China has rarely failed. It has not, of course, been the real China, nor has any adherence to truthfulness of portrayal been deemed essential. Not only has there been no attempt to delineate the Mongol nature, but the types presented have generally shown little affinity with nature of any kind. The comic opera of which AUBER composed the music, “*Le Cheval de Bronze*” is a fair specimen of the Chinese drama as conceived and approved by Europeans; and the extent to which it is destitute of local colouring and feeling may be judged from the circumstance that the same piece has been made to do duty for Japan as well as for the older Asiatic empire. During his brief dictatorship of the Alhambra, HOWARD PAUL laid predatory hands on the pretty trifle, re-named it “*Nanko*” and submitted it to the patrons of Leicester Square as a veracious picture of life and character in the Land of Sunrise, with embellishments suggested by the assumed proficiency of all Oriental races in magical arts. The *dramatis personæ* were clothed in Japanese attire,—except when, in compliance with Alhambraic requirements, they were not clothed at all,—and many of the scenes were faithfully copied from genuine photographs; but further than this there was nothing to identify the play with Japan, any more than with the domains of the Queen of MADAGASCAR, or a section of the planet Venus. It was, however, quite as true to Japan as the original French concoction had been to China, and no impertinent inquiries were raised to unsettle the public faith or impair the managerial prestige.

Within the last score of years Japan has taken popular precedence over her venerable neighbour as a vehicle for glittering combinations of theatrical light and colour. The country has been so much talked about that its name alone serves as an excellent advertisement for any “show” to which it is applied. But until the season just past, no improvement upon the conventional order of things had been undertaken. The Japanese play was precisely what the Chinese had been

—a succession of gay tableaux steeped in floods of lime-light and vivified by throngs of symmetrical young women interspersed with an occasional young man, all tastefully grouped and more or less deftly trained in the violent athletic exercise which passes for dancing on the stage. The effect to the eye was often delightful: to the other senses it was apt to be wearying. A few scraps of desultory dialogue were thrown in, to satisfy the supposed requirements of coherence and continuity, but no embodiment of Japanese ideas, and no indication of the national characteristics, could be anywhere detected. Persons who believe that this country offers charming opportunities to dramatists who will look below the surface for them, have long protested against the persistent adherence to meaningless and empty forms. There was a moment, some fifteen years ago, when a very high hope seemed likely to be realized. It was when W. S. GILBERT first announced that he was preparing a libretto with a Japanese story, for music to be written by ARTHUR SULLIVAN. No one doubted that if the author of the series of exquisite comedies, of which “*Pygmalion*” was the pioneer, had chosen to study his theme with genuine artistic purpose, he could have produced a work not less worthy of his genius than the Grecian masterpiece. His friends thought they had grounds for believing that he would aim at a higher standard than that of the “*Pinafore*” and “*Patience*” frivolities. Many who were present at a memorable discussion in the house of the painter GEORGE BOUGHTON, when the subject was the Japanese drama and the participants were ROBERT BROWNING, WILLIAM BLACK, IRVING and BOOTH, the actors, with BANCROFT and his wife (dainty MARIE WILTON), OSCAR WILDE, just beginning to run his erratic course, LABOUCHERE, SALA, YATES and a dozen other men of letters and artists; and when GILBERT and SULLIVAN sought to sustain their burden in the argument by appeals to a Japanese lady in the company, many were then strengthened in their conviction that the clever collaborators meditated a change of method for their own and the general good. But “*The Mikado*” soon followed, and the flattering expectation was overthrown. The new piece proved merely a repetition of the preceding drolleries, full of “exquisite fooling” and abounding with cheerful if not startlingly original melodies, but containing no suggestions of the country or people supposed to serve as models, except such as were extracted from the wardrobe, the paint-pot, or the property-room. For the next dozen years, Japan continued to be caricatured, or at best dimly and crudely outlined, until a step in the right direction was taken by the authors of “*The Geisha*,” in which pleasant operetta traces were visible of an honest, if not a very far-reaching, endeavour to depict

certain social peculiarities of Dai Nippon. It was rather a mixed mosaic, foreign figures being as prominent in the action as natives, if not more so; but the incidents were prettily arranged, and provoked no criticism on the score of untruthfulness to nature. It was a good beginning, and as such deserved the cordial welcome it received.

Now the news comes from Europe that **MASCAGNI**, the latest idol of the Italian lyric stage, is engaged upon a libretto of singular grace and beauty, prepared at his request by the poet Illica, and giving for the first time,—at least the first for theatrical purposes,—a glimpse of the tender sentiment that dwells in the domestic life of the Japanese; a quality hidden from the careless and unobservant, but open as day to those whose perception is quickened by kindly sympathy. An outline of the plot has been published, not very exact or definite, but clear enough to indicate that the author has taken more than common pains to study the nature of the people from whom his characters are drawn, and to acquaint himself with their social history and usages. The subject he has chosen would have slight claim to novelty if conventionally dealt with, but may be made strikingly effective by the observance of Japanese conditions. The heroine is a young girl of humble station, whose rustic life is of an idyllic simplicity. She is called *Iris*,—not a common name in this country, though a daughter is sometimes known as Ayame. Her home is with her father, an aged blind man, who has striven to keep his child entirely apart from the world and its vanities. She is a stranger to all emotion but that of devoted attachment to her sole companion and protector, and her days pass uneventfully in the performance of her filial duties, and in dreams of the happiness which she is taught to look forward to as the reward of innocence and piety on earth. Ignorant of all evil, she has scarcely reached womanhood when she is abducted by a vicious nobleman, and conveyed, insensible, to a house of public resort in the capital—in Tokyo, we are told, though the action seem more consistent with the early Yedo period, when, as the "Sendai Sodo" and similar records inform us, the passions of dissolute young daimios were under no restraint. On regaining consciousness, the victim finds herself in what is to her a scene of such surpassing brilliancy and splendor that she believes she has passed through the gates of death into the paradise of her father's visions. The hours glide happily by, no whisper of the actual situation being suffered to disturb the illusion into which she has fallen. In the conviction that she has entered the land of spirits, she fancies herself endowed with immortal powers, and endeavours to gratify her artistic instinct by producing pictures and music, only to discover that her skill with

brush and *bachi* is no greater than before her translation to the higher sphere. While brooding over this disappointment, she hears the voice of her blind parent, who has been groping through the gay quarter of the city in search of his lost treasure. Transported with joy, she rushes to greet him, but the old man, mistaking her expressions of rapture at their reunion in a place which she extols as the abode of eternal bliss, repels and discards the child, leaving her to the fate which he imagines she has willingly accepted. After this climax the leading figures of the drama are no more seen. In the closing act, a party of vagrant chiffoniers, seeking for spoil at early dawn in an unawakened thoroughfare, find jewels unexpectedly scattered in the mire; and presently, at a little distance, they come upon the body of *Iris*, who, having learned the fatal truth too late, has escaped from her gilded prison, to wander, an outcast, through the agony of the night, and die in despair, alone.

If the promise of the fragmentary sketch is borne out in the completed work, Signor **ILLICA** may count upon the approval not only of his countrymen but of the whole world of letters. His picture of the guileless girl whose gentle aspiration is to follow through life, at her father's side, the path of goodness and duty which leads to a better world, is charmingly conceived; and the device which exhibits her as incapable of realizing the evil of her entourage, and as clinging to the innocent belief that the radiance and lustre which thrill her simple soul are gifts of the divinity she has worshipped, seems a genuine poetic inspiration. So far as the story is revealed, it is well fitted to this country. Though unquestionably the author's own invention, it sounds truly like a tale of old Japan. It may be somewhat above the ordinary plane of Japanese ideals, but most works of high romantic purpose similarly transcend the limitations of every-day existence. What the composer will do with it,—to what extent he can command his art in the interpretation of so delicate and spiritual a theme, is a question which musicians must hesitate to answer. For **MASCAGNI** has by no means justified the over-zealous rhapsodies of his juvenile admirers, or established his title to anything more than a subordinate rank in his order. It is now pretty generally conceded that his one flaring success was artificial and shallow. To unreflecting listeners, the "Cavalleria Rusticana" seemed to combine the gift of freshness and spontaneity with the solid merit of scientific strength; but closer observers were not slow to detect that its novelties were contrary to the laws of composition, and its learning was trustworthy only when the source could be too easily traced. **MASCAGNI** is young, and may yet make his mark upon the future; but the artistic symmetry of the forthcoming production

would surely have been better preserved had **ILLICA**'S book been confided to the honoured master—**VERDI**—whose age shows no abatement of the fire and energy which inspired his earliest achievements, and who with advancing years has added to his natural endowments a wealth of erudition which no Italian of his generation has equalled and few in any period have surpassed.

THE GERMAN-JAPANESE TREATY.

(QUESTIONS PROFOUNDED BY MR. MOTODA, ETC.)

The following question and answer refer to a subject that has provoked much needless discussion:—

On the 17th of February Count Okuma declared in the House that, although protection for patents, trade marks, &c., as provided in Article XVII. of the German-Japanese Treaty, had been extended to German subjects from the present time, without waiting for the operation of the revised treaties, in accordance with arrangements concluded by the Commissioners of the two countries, Japan was not invested with judicial competence to punish infractions of the conditions attaching to the enjoyment of the privilege. Article 4 provides, however, that if the subjects of either of the contracting parties observe the provisions of the other's laws for the protection of inventions, specimens (including those for practical use), designs, trade marks, manufactures, companies' names, and so forth, they shall receive the protection afforded by those laws. Nevertheless, no special stipulations have been made with regard to enforcing such observance. It is accordingly obvious that the provisions concerning the protection to be afforded by mutual consent to the subjects of each of the contracting parties in the dominions of the other, were meant to indicate that Japanese subjects were to submit to the judicial authority of Germany in German territory, and German subjects to the judicial authority of Japan in Japanese territory. Even in the absence of any provision whatever with regard to judicial authority, there can be no doubt that law suits occurring within the dominions of one of the contracting parties were to be tried by the courts of that party, while those occurring in the dominions of the other should be adjudicated by its Courts. I am at a loss to understand how Count Okuma, while plainly recognising the want of judicial competence on the part of the German Consul in Japan to try suits relating to trade-marks, &c., at the same time declares Japan to be destitute of that competence. Is not that an erroneous statement of the Count's as Minister of Foreign Affairs? If not, does the Government consider that Japan is without the necessary judicial competence?

The loss or maintenance of judicial power has a close relation to the extension or curtailment of the national rights. If the Government really recognises its lack of judicial power, as Count Okuma confesses, then the provisions of the agreement with Germany are not only extremely disadvantageous to Japan, but also concede most valuable rights to Germany. Moreover, it follows that Japan must extend similar privileges to each of the most favoured nations while being herself deprived of judicial power and having her sovereign rights impaired. How can the Government have persuaded itself to leave without reproof until to-day its representative, Viscount Aoki Syūzo, who has been betrayed into such extraordinary bungling?

REPLY OF THE GOVERNMENT.

With regard to the question, it is admitted that, in Article XVII. of the new German-Japanese Treaty, and in the first part of Clause I. of the protocol, it is stipulated that the high contracting parties will afford to each other's subjects in their respective dominions protection similar to that afforded to native subjects, provided that the persons enjoying such protection shall observe the provisions of law respecting

the protection of inventions, specimens designs, trade marks, and so forth. It is certain, therefore, that German subjects desiring to receive protection for their inventions, must, in conformity with all the provisions of Japanese law, submit to the investigation of the Patent Bureau of Japan. But as to judicial competence in civil and criminal cases involving German subjects, in connexion with matters specified in the above Article, nothing has been provided in the Treaty or in the protocol. To enjoy the privileges guaranteed by a country's law and to submit to the judicial authority of that country, are two different things. Germany has power to exercise judicial authority in Japan under the present treaties; and as it is plainly stated in correspondence appended to the new Treaty, that the judicial authority in question shall not only be enjoyed but never relinquished by Germany, until the period of the enforcement of the new Treaty, an express provision being specially made to that effect in the same, no distinct provision was inserted in the protocol in the sense that civil or criminal cases against German subjects with regard to matters enumerated in Article XVII. of the Treaty should be adjudicated by Japanese courts simultaneously with the operation of that article. Consequently, the language of the Treaty precludes Japan from asserting the possession of judicial authority with respect to the various matters under notice, until the period when the new Treaties shall go into force. As to the second question, no reply is deemed necessary.

Count OKUMA SHIGENOBU,
March 23rd. Minister of Foreign Affairs.

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

Modern writers of prose, says the *Kokobungaku*, may be divided into two classes. (1) Those who aim above all other things to be understood by a wide circle of readers, and hence use simple language, and (2) those who affect a polished and ornate style of writing, who place a higher value on rounded sentences than on lucidity of meaning. The latter are in the majority. When reading the first class of prose, one feels as though perusing a shopkeeper's journal; when reading the second, as though one were looking at a beautiful peony. Modern literature, then, is either popular, or learned, in style. But among the writers that affect the learned style there are three distinct sections: (1) There is the language of political writers, represented by such men as Rokudō (the *nom de plume* of the editor of the *Nichi Nichi Shimbun*, Mr. Asahina), and Katsunan (Mr. Kuga, editor of the *Nippon*). (2) There is the language of men of science and learning which conforms as far as possible to foreign idioms. (3) There is the purely literary style of writers well versed in ancient Japanese literature, represented by such men as Ogai (Mori) and Shōyō (Taubouchi). What is required is to blend the various styles into a method of writing that shall answer all purposes. There are six writers quite competent to accomplish this task, namely, Ogai, Shōyō, Sonken; (Dr. Inouye Tetsujirō); Katsunan, Setsurei (Mi-yake); and Shinsen (Shiga).

Dr. Inouye Tetsujirō has contributed to the pages of the *Teikoku-bungaku* a long essay on "New Style Verses," of which he may be said to have been the chief originator. We give in as short a space as possible the views of this learned writer on the new departure in verse writing. To the Chinese style of verses Dr. Inouye objects on the ground that it is borrowed, and is at the best but a poor imitation of an original which by no means commends itself to the judgment and taste of educated literary men in modern days. The *Yamato-uta*, on the other hand, whether in form or in the class of thought that they are capable of expressing, are not suitable to the age in which we live. Modern composers of *waka* spend all their energy in trying to put into words thoughts of the ancients. Their poems

are essentially retrospective in character, and hence are entirely out of harmony with the spirit of modern times. The necessity for a new class of poetry being thus urgent, I published, in 1882, a collection of verses, and in the preface to the work I took occasion to predict that the form of the verses would be pronounced vulgar and inferior by critics, but that, since all true poetry is spontaneous and unlaboured, and often lives despite its novelty of form, if the thoughts expressed were poetical and made clear to readers by means of the new style of writing, the venture I had made would gradually meet with approval and result in the rise of a new school of writers. This forecast has been more than justified. The composers of new style verses have gone on increasing, and the virulent attacks made on what the literary conservatives, the slaves of tradition, regard as an unwarranted innovation, have only tended to increase the public interest in the new movement, which has made such progress that now it is no longer in danger of being crushed by its foes. In consequence of the stir that the advocates of the new style of verses have made in the world, our banner has been borne aloft by persons whose notions on the real nature of the poetry we wish to see written are of the crudest and vaguest description, and who have prefixed the title "New Style Verses" to a large amount of literary rubbish. That being the case, I feel it incumbent on me to define what special characteristics verses should bear to merit the title chosen by me to describe the new class of poetry published in my *新体詩抄 Shintaishishō*. The essential qualities of the new style of verses I take to be the following:—

(1) Freedom as to form. They may take any form the writer chooses to give them. (2) Freedom as to subject, length, and scope. The want of this freedom is one of the great causes of the poverty of thought in the *Waka*. (3) Freedom as to the choice of language. Our native verses have to be written in archaic Japanese without any admixture of Chinese or modern colloquial. To confine oneself to this language now, renders it impossible to express modern ideas and describe the many interesting phenomena of the age in which we live. In ancient times, mental science had not been developed to any extent, hence the terms used in archaic verse to describe states of thought and feeling lack the precision, expressiveness, and general lucidity which ought to characterise the language of modern poetry. But when I say there should be freedom in the choice of words, I do not mean that resort should be had to low colloquial. It is customary with a certain class of writers to despise all colloquial as inferior. That is a mistake. There is no inferiority about high-class colloquial, and it is often found to be far more expressive than any of the so-called classical forms of speech. It is most desirable that verses should be written in language generally understood. Thus will they reach the hearts of a wide circle of readers. Hitherto, it has been the boast of verse writers that they have written for the select few. Their own obscurity to the masses they have attributed to lack of education on the part of readers, and have congratulated themselves on the fact that they occupy a platform unapproached by the vulgar crowd. But the time is past for that exclusiveness. Poetry, if it is to exercise an elevating influence, must be adapted to the understanding of ordinary men and women of the world. The language permissible in the *yamato-uta* is not adapted to the expression of the deepest and strongest emotions. It is, on the whole, more suited to be an organ of women's thoughts and feelings than men's. The reasons given above are sufficient to justify the advocates of the new style of verse continuing in their efforts to save Japanese poetry from the fate of so many of our ancient arts and accomplishments—neglect and lasting oblivion.

But, as I said before, the new enterprise is in danger of being wrecked by those that pretend to be its best friends. Many of the verses called "New Style Verses" are unworthy of the name. They show signs of being nothing

more than an attempt to pass off old goods under a new name. One would think that the failure of writers all the world over to imitate the writings of the ancients should convince Japanese of the futility of the attempt. Poetical writers in the Middle Ages tried again and again to imitate Horace, Ovid, and Virgil, but always failed. The same thing has been going on in India and China, with similar results. For the new style of verses to live and make their mark as literature, it is essential that they should not consist of mere empty language, but be laden with nineteenth-century thought. To the criticism of 101 literary organs who undertake to pronounce an opinion on the "New Style Verses" I have for some time past turned a deaf ear. For the most part it consists of the flippant utterances of writers incompetent to pronounce an opinion on the question at issue. There is nothing to be apprehended from this class of opposition. Its existence is a proof of the strength of the new movement.

Thus far Dr. Inouye. The general opinion of literary men in Japan seems to be that the new style of verses have not yet shown signs of any right to a permanent place in Japanese literature. We ourselves have read a fair number of them. It has always seemed to us that with a few exceptions, as regards the thoughts expressed, they differ little from the ordinary run of Japanese poems. In order to give readers some idea of their form we subscribe a few taken from the *Teikoku Bungaku*:—

HOPE.

Oki no shiwo kaze fuki arete
Shiranami itaku hoyuru toki,
Yūsuki nami ni shizumu toki,
Kurayami yomo wo osou toki,
Sora no anata ni waga fune wo
Michibiku koshi no hikari ari.

The meaning of which is, "When far out at sea the wind rages and the white waves roar; when the evening moon sinks beneath the waves and darkness reigns everywhere, yonder appears, to guide my ship, the light of a star."

THE WONDERS OF NATURE.

Ah! uruwashiki ame tsuchi so
Takumi wo ikani tadaye mashi.
Tsuki hi magurite, toki yu kite,
Kayuru iku sono keshi kiao ya!

But we are not at all sure that the above would pass muster with Dr. Inouye. The question pertinent to ask is, have modern Japanese any thoughts that can be better expressed by resorting to a new style of poetry than by employing ordinary prose? The existence of purely poetical ideas of a high order in the minds of modern Japanese scholars is a subject that Dr. Inouye does not discuss, but on this the whole *raison d'être* of the "New Style Verses" ought to rest.

The *Teikoku Bungaku* urges the importance of starting a new theatrical literary organ. In these days, says this magazine, not only the serious occupations of life, but its various amusements are reported and discussed by special organs. For people interested in wrestling there is the *Sumō Shimpō*; for lovers of that popular style of oratory practised by the *hanashika* there is the *百花園 Hyakkayen*; for antiquarians the *骨董雜誌 Kōtō Zasshi*; but for lovers of the stage the only literary source of information is the *Kabuki Shimpō*, which, notwithstanding the fact that it is one of the oldest magazines in Japan, is very badly edited. Mr. Taubouchi observes of this organ that both as to contents and style it is an extremely poor affair. The information that it supplies consists for the most part of trifling details concerning the lives of famous actors, or scraps of conversation from the theatre dressing-rooms. A new theatrical organ has made its appearance, the *Shibagura*, but despite the many promises with which its prospectus was rendered attractive, it has failed to meet the expectations of the public. Hence there is great need of a new magazine to discuss the many questions connected with histrionic art in the country, to

supply foreign news bearing on the stage, to encourage the publication of new plays, and to furnish a connected and scholarly history of stage acting in Japan.

* * *
As stated in a former Summary, Mr. Matsumoto Matataro is engaged in the study of experimental mental philosophy (*Yikken-Shinrigaku*) in America. A letter from this gentleman is published in the *Tetsugaku Zasshi*. The experiments he is to watch are of ten different kinds, as follow:—(1) Investigations in reaction-time and attention. (2) On monocular accommodation-time. (3) On the relation of reaction-time to variations in intensity and pitch of stimulus. (4) Experiments on the musical sensitiveness of school-children. (5) On mean values for direct measurements. (6) Researches on the mental and physical development of school-children. (7) Experiments on the highest audible tone. (8) Tests of mental ability as exhibited in fencing. (9) Measurements in illusions and hallucinations in normal life. (10) Studies of fatigue.

* * *
In an Appendix to the *Tetsugaku Zasshi* appears a translation of a work of Karl Robert Edward von Hartmann's, entitled in Japanese *Shūkyō-tetsugaku*, by Mr. Anezaki Masaharu; and the continuation of the publication of a Philosophical Dictionary, alphabetically arranged, which has reached the end of the letter B, a work very much needed, there being nothing of the kind in the language, Mr. Ariga's small and imperfect Dictionary, published some fifteen years ago, excepted.

* * *
One of the staff of the *Yoroku Chōhō* and Mr. Fukuzawa have been holding a discussion on the subject of modern Japanese fiction. On being asked by the *Yoroku Chōhō*'s reviewer whether to a man of his practical turn of mind the publication of so many novels did not appear to be a great evil, Mr. Fukuzawa replied, no. On the contrary he was one of those who objected to interfering with such things. By some people gambling is represented to be an unmitigated evil, observes Mr. Fukuzawa, but such people ignore the fact that gambling in this country has proved to be a magnificent mathematical training for hundreds of business men. It is said that a large majority of the men who show great proficiency in quick calculations today acquired the art when engaged in gambling transactions. To this the *Chōhō* interviewer replied that surely it would never do to maintain that all things were to be allowed to flourish side by side indiscriminately in the world. Some things must be considered profitable and others the reverse. To this Mr. Fukuzawa rejoined that for the most part things right themselves. As regards fiction, it was a case of demand and supply. As long as writers found a ready sale for a certain class of works, it was in vain that private individuals protested against the publication of such books on the ground of unsuitability. Neither writers nor readers would take the slightest notice of unasked-for advice. Doubtless though much of the fiction published is low class, it is popular throughout the country. The way to alter this state of things is to take steps to raise the standard of the mass of readers. The place from which to begin is the family hearth. The relation of men to their wives is not what it ought to be. If more united, sharing ideas alike, living on terms of social and intellectual equality, instead of living, as they now do for the most part, entirely separate lives, the pursuits of the one evoking no interest in those of the other, they would find so much to entertain them at home and would be so permeated with healthy and virtuous sentiments that any outside influences, such as those exercised by novels, would not do them permanent harm. As individuals we have no right whatever to interfere with the free growth of any class of literature for which there may be a demand, but what we can and ought to do is to push forward the development of those numerous influences which possess the power to neutralise the possible evil effects of certain kinds of writing. The

only effective manner of killing the wild growth is to stock your ground with valuable plants that will absorb the nourishment on which the wild growth depends.

* * *
On being asked whether he himself read novels with any pleasure, Mr. Fukuzawa made the following remarks on literature generally. I read many years ago the works of Bakin and Tamenaga, but they made no special impression on my mind. Takitei Rijō's 八笑人 *Hasshōjin* I enjoyed immensely. There is no doubt that the author was a man of rare talent. Being told that the Hongwanji 御文章 *Gobunshō* was remarkable for its correct use of the *Kana* and altogether a very well-written book, I was induced to read it and it has been one of my favourite books ever since. Speaking of fiction generally, it seems to me that the great difference between modern and ancient writers is this. In former days men wrote in order to use faculties for the exercise of which there was no suitable sphere in ordinary life. Now-a-days men write for money. In old feudal days there were numbers of active minds that turned to literature or to religion in order to give vent to the thoughts burning within them. I remember when I was a child of about ten my father saying to my mother that, as I seemed fairly intelligent, it would be well to let me join the priesthood and endeavour to rise to the rank of a great abbot. The power of literature at times is something astonishing. Rai San'yō, who seems to have been a man of no special force of character, and by no means noted for his virtue, did not sit down to write the *Gwaishi* with any thought of bringing about a revolution, and yet it is an undoubted fact that this was the effect that the work produced. San'yō was endowed with talents for which he found no scope in Bakufu officialdom, or even in the 幕閣 *Seidō*, the Daigakkō of those days. Hence he turned to literature and succeeded to an extent that it is given to few men to reach. Talking of revolutions, Japan seems destined to witness a series of these phenomena. The abolition of feudalism was succeeded by constitutional government, and in the wake of this a race of men calling themselves Dukes, Marquises, Counts, Viscounts, and Barons have made their appearance. One of the inevitable conditions of changes that have been effected with undue haste is a tendency to revert to the old state of things. There are many signs of retrogression to be seen in our midst. When this backward movement has reached its limits, as surely it will, if not in my life time, certainly in the lifetime of younger men, then the nation must be prepared for another rapid stride forward.

* * *
In the pages of the *Taiyō* Mr. Onishi continues to discuss Japanese proverbs. The essay is too long to be dealt with in a satisfactory manner in this summary. We must content ourselves with noticing the different classes of proverbs as enumerated by Mr. Onishi. One of the essentials of proverbs, says this writer, seems to be *shortness*, though there are proverbs, like the one beginning *Ochikō de ochinu wa hatachi bōsu*, which are very long. (1) The first characteristic of proverbs is that they should please the ear. Hence in many countries poetical rules are observed in their construction. In Japan many of our verses consist of a measure containing five syllables followed by one containing seven, or of a measure of seven syllables followed by one of five. Many proverbs observe one of these rules. As instances of the second kind we have *Kokoro no oni ga, mi wo semeru* and *me mo kuchi hodo ni, mono wo iu*. Proverbs that repeat the same words, or words similar in sound, where euphony and contrast of situation are combined, belong to the same class. Such are 無勢 = 無勢 *Tasei ni bu-sei* and 短氣 = 損氣 *Tanki wa sonki*. (2) The mass of proverbs deal with concrete rather than abstract notions and have a tendency to fix things in a more hard and fast manner than

facts warrant. They exaggerate in order to render objects and situations vivid, much in the same way as poetry does. *Hitte no uwasa mo shichi-jū go nichi*; *Asukari mono wa hambun no nushi*; *San (三) nin yoreba monju no chiye*, and *Yōjin wa okubō ni seyo* (Consider caution to be cowardice) are all instances of hyperbole. They frequently depart from the truth in order to render an idea or an opinion more striking. Thus *Kyōdai wa tanin no hajimari* (Brotherhood is the first step to estrangement), *Iwanna wa iu ni masaru*, are only true to a very limited extent. (3) There are a large number of proverbs that consist of happily chosen antitheses, a marshalling of facts or ideas that resemble each other, notwithstanding the circumstance that they are connected with widely different situations. *Uma ni wa notte miyo, hito ni wa tote miyo*; *Tabi wa michisure, yo wa nasake*; *Hana wa sakura, hito wa bushi*, are examples of this class. (4) A large class of proverbs aim at embodying a truth in well-chosen metaphors, which are popular for the simple reason that their meaning is implied or somewhat obscurely hinted at rather than clearly stated. Such are *Kani kōni nisele ana wo horu* (A crab adapts the size of its hole to that of its back: big men have big ideas); and *Akinai wa ushi no yodare* (Trade, to be successful must be as persistent as the saliva of an ox). (5) Then there are a large number of proverbs that convey the idea of incompatibility or unsuitability by naming two things, or two ideas, diametrically opposed to each other; like *Chōchin ni tsurigane* and *fuyu no yuki uri*. Coming to the subjects covered by the proverbial sayings current in modern Japanese, Mr. Onishi rightly observes that there are few topics connected with Japanese life, customs, and institutions that may not be studied by means of proverbs. Such a proverb as *naku ko to chitō ni wa katarenai* (A crying child and a provincial ruler are alike uncontrollable, cannot be got over, are not amenable to reason), shows what class of rulers governed Japan in ancient times. The saying, *onna ni iye nashi*, speaks volumes on the thralldom of the weaker sex; while proverbs like, *oite wa ko ni shitagaye*, give us a better insight into the Japanese family system than the perusal of pages of ordinary history. To sum up:—Such subjects as the relations of the sexes, the position of woman, the relations of parents to children and *vice versa* may all be studied to advantage in the light of well worn maxims. In Europe proverbs dealing with the relations of man and wife are numerous. The contrary is the case in Japan.

* * *
There is perhaps no principle that figures more prominently in Japanese proverbs as a whole than self-interest. Such proverbs abound, as *Kudasaru mono wa natsu mo kosode* (a gift never comes amiss, even though it be a wadded garment in summer, like the Western maxim, do not look a gift-horse in the mouth); and *Koronde mo tada wa okinu*. How Japanese proverbs compare with those of Western nations Mr. Onishi is not able to say. He is as yet without a good collection and is therefore not in a position to treat the subject in a thorough manner. It is to be hoped that this deficiency will be soon supplied. Trench estimated that the Spanish language has some 30,000 proverbs and that the German has no less than 10,000. Perhaps no one living is in a position to say whether Japanese proverbs exceed or fall short of these figures.

* * *
The *Waseda Bungaku* comments on the numerous changes that the language of every day life has undergone within the last few years. That applies to both the spoken and written language. The tendency to use Chinese terms in preference to *Yamato kotoba* is stronger now than it has ever been. As a result of the abolition of feudalism and the gradual effacement of the class distinctions which it involved, the words used to serve as personal pronouns like *sōkomo*, *kiden*, *midomo*, *sessha* are now seldom

* In order not to occupy too much space we have not translated most of the proverbs. By any one moderately acquainted with Japanese they will, we think, be easily understood.

heard, *kimi* and *boku* in most circles having taken their place. Similar changes have taken place in the case of numerous other terms. Only to cite a few, instead of *tnaka* we have *chihō* (地方), instead of *hyakushō*, *jitsugyō*, instead of *shoset*, *seinen* (青年). In many cases the trend of public opinion has been clearly marked by the terms that have come into fashion. The term *minken jiyū* was replaced by 國權 *Kokuse* and this again by 國粹 *Kokusui* and by *Nihonkwa* (化), the antithetical term to which is 歐化 *Okwa*. The writer gives numerous other examples and concludes with the observation that in former days linguistic usage took its rise from the brothel or the theatre, but that in modern days the terms most in use may be traced to literary sources.

The *Shigaku Zasshi* informs us that a new magazine has appeared called the *Akebono* (Morning Twilight). Its object is stated to be the cultivation of a patriotic spirit by means of the publication of historical details. It purposes devoting special attention to the events that occurred prior and subsequent to the opening of the Meiji era. In the opinion of the new historical organ all existing histories of the Tokugawa age are very imperfect. To this observation the *Shigaku Zasshi* replies that the same may be said of records dealing with earlier periods. As regards the history of the Meiji era a magazine exists whose chief object is the publication of the necessary materials for the compilation of an exhaustive work on the subject. It bears the name of the 維新史料 *Ishin Shiryō* (Material bearing on the History of the Revolution): Then a society called the 史談會 *Shidankai* and a government office have both been established for the purpose of collecting and classifying historical matter. Hence, concludes the *Shigaku Zasshi*, as a collector of material, there was no call for the publication of the *Akebono*, but in that it purposes to popularise the dry records of the past and thus secure for them a wider circle of readers, we cannot but hail its publication with delight.

In the columns of *The Times* not long ago appeared an interesting series of articles comparing the leading characteristics of Northerners and Southerners in England. We now find in the pages of the *Nihon-jin* an article from the pen of the editor of the *Nihon Shimbun*, Mr. Kuga Minoru, instituting a similar comparison between the men of Oshū and the men of Kyūshū. The results of the inquiry briefly stated are as follow:—(1) In making the acquaintance of strangers the Oshū men are more amicably inclined than the Kyūshū. The former on first acquaintance treat people as friends, the latter exercise great caution in dealing with strangers. (2) The people of Oshū are of a compassionate nature, viewing with concern even the distress of a wayside traveller. The Kyūshū folks are not so constituted. They constantly show indifference even to the misfortunes of relatives and friends. (3) An Oshū man cannot persuade himself that it is right to work for the downfall of another in order to advance his own interests. A Kyūshū man, on the contrary, where his own advancement is concerned, has no scruples about the claims of others. (4) Oshū people if they once fail, grow discouraged and have no inclination to renew the contest. But the Kyūshū folks are stimulated by defeat and put forth all their strength only when the obstacles to be overcome are formidable. (5) An Oshū man cannot keep a secret. His tendency is to reveal all that is in his mind. A Kyūshū man prefers to keep his thoughts to himself. Unless on special occasions he objects to give his opinion, and to have to give a plain answer to a plain question is most distasteful to him. (6) The Oshū people make little distinction between their own things and those of their neighbours. They borrow and lend with equal readiness. The Kyūshū object alike to lending and borrowing. (7) Oshū men are unsophisticated and simple in their tastes and are not attracted or pleased by the display of rank or worldly in-

fluence, and hold the flatterer in great contempt: Kyūshū men are the reverse. They court the favour, and endeavour to avoid the displeasure of the great, and do their best to choose their friends from the ranks of the powerful. Commenting on these alleged traits, Mr. Kuga says, speaking generally, that the Oshū man expects life to go on evenly, and regards peacefulness as a state seldom interrupted. Hence when calamity overtakes him, he is flurried and his discomposure often leads him to make himself a laughing stock. The Kyūshū man regards the world as a battlefield and is ever preparing himself for the conflict. The former holds that an upright life is better worth living than a life of worldly success and fame. The latter worships success beyond all other things. Regarded from a political standpoint, in Oshū the dominant feeling is a love of liberty, in Kyūshū a readiness to resort, and to submit, to despotism. Oshū is the America, and Kyūshū the Russia of Japan. The subjection of Oshū men to Kyūshū men has its origin in deep-seated mental tendencies.

The *Kōkōbungaku* gives a short account of a Mr. Noguchi Yonejiro, who has lately been the subject of much comment in America. Mr. Noguchi aspires to be an English poet. How near he is to attaining his object our readers will be able to judge from the specimens given below. Mr. Noguchi went to America in 1883 and, it would seem, has been studying there ever since. The poems he has published have, we are informed by the *Kōkōbungaku*, been noticed by no less than 30 American newspapers and have been referred to by literary men of eminence. "Who is Yone Noguchi?" asks an American newspaper. "He is the newest Californian poet, and he has stirred up the Eastern critics. A lad of twenty, slender and active, with jet hair and olive skin, resembling more the Tuscan type than the Japanese; a face delicately moulded, aquiline nose, eyes full of expression, and thin, mobile lips—such is Yone Noguchi, the writer of strange phrases, expressing weird thoughts, whose work has recently drawn the attention of literary critics to California."

The following is a specimen of the new bard's productions which the *Kōkōbungaku* in all seriousness submits to the admiring perusal of youthful readers.

THE MIDNIGHT WINDS.

At the midnight—my own darkness alone; none but God and myself!
A conscious slumber muffled the universe,
Palpating on the lonely bed like a chilly sea in the misty dawn.
Be hunting (Oh) by the black boneless winds:
With the sewed eyes and the wild, weird, full-opened soul,
I'm reviewing the sheeted memories of past under an inky light:
Until—alas, the strange giant of winds inclosed about my breathless cabin:—
God made a night, a midnight for me alone!
Oh, our matchless God! If the wizard rout
Flit in through the broken window for a lady-moon welcomed!
Ever a gentle violet upturns her eye:
Ever a radiant rose polish her thorns against.
I have such of none, but a withered, colorless soul!
The *Kōkōbungaku* considers it a matter for rejoicing that the name of Yone Noguchi is known throughout the length and breadth of America. The San Francisco *Examiner* showed the poetry to a Japanese female friend residing in one of the Eastern states, who is represented as exclaiming "Oh, it is so character! The crickets, the willows, all are of my home. Ah, he has the great elemental to develop. I wish he would come East to have advantage." This, too, is quoted by the enterprising *Kōkōbungaku*, which is determined that Japanese readers shall be duly impressed with the admiration in which their poetical confrère is held in Western lands.

A recent number of the *Kōkōbungaku* asks "Should Normal Schools be abolished?" The writer contends that the fact that young men are educated at Normal Schools at Government expense and that any breach of the regulations

of the schools is liable to entail on the transgressors serious pecuniary consequences, renders the graduates of such schools utterly spiritless and characterless, the effect of which is seen in the elementary schools of which these graduates subsequently take charge. It is well known to the teachers at Middle Schools that there is a state of mind peculiar to the boys who come from elementary schools, known as *shōgakkō konjō*. In the opinion of the magazine we are quoting this state of mind is imparted to the pupils by the teachers. One of the chief objects of education is the development of individual power and talent, and nothing could be more undesirable than the reduction of all students to one level. The imparting of knowledge on various subjects in a mechanical fashion constitutes the less important half of the training that schoolmasters need to receive. They may be well versed in knowledge, but this will not suffice to render them efficient teachers. They must have character. The writer concludes by suggesting that the normal schools be abolished and that such graduates of the Middle Schools as may like to follow the profession, should be installed as elementary school teachers.

NEWS OF THE DAY.

During March last altogether 31,770 cases of matches were exported from Kobe, representing an increase of 10,170 cases as compared with the figures for the previous month.

Dr. Gelpke, a private practitioner in Pecalan-gan, Java, has discovered that tropical abscess of the liver is due to a peculiar worm (*echino-coccus*), and is closely studying its peculiarities.

Up to the end of last month, applications filed in the Patents Bureau by British and German subjects, and American citizens, for registration of trade marks, numbered 1,300. Of this number 400 were registered, about ten rejected, and the rest are not yet dealt with.

Present tea prospects in Shidzuoka and Aichi, says the *Hogo News*, are very favourable, and if no severe frost intervenes the crop should be well in excess of last year, notwithstanding that many growers tore up their plants last autumn to utilise the ground for other purposes.

According to the *Courrier de Saigon* the exportation of rice from Saigon during 1897 promises to be very heavy. On the 14th March there were seventeen steamers in the river loading with rice either for Europe or ports in the Far East and the rice cleaning mills are working day and night in order to meet the numerous demands made upon them during his quarter.

The applications for Kobe Waterworks Bonds closed on the 31st ult. The amount applied for at Kobe only up that date was 923,350 yen; so it is estimated that when the total returns come in from the agents for the loan in Osaka, Tokyo, Yokohama, and other places, the number of applications will materially exceed the amount required,—namely, 970,000 yen. The result, says the *Kobe Chronicle*, may be taken as showing faith in the future of Kobe both among foreigners and Japanese.

The little Japanese spaniel which the Princess of Wales is represented as holding in her arms in the well-known portrait painted by Mr. Luke Fildes for *The Graphic*, is dead. The manner of his death was very sudden, "Facey" being apparently in perfect health when put to bed at night. In the morning it was found that he had died quietly and painlessly. A post-mortem examination revealed the fact that acute pneumonia was the cause. Lady Rothschild gave "Facey" to the Princess.

There is some very tall talk in the Russian journal *Spies*, inspired by General Komaroff. It declares, says an exchange, that the whole East, including Persia, China, and even India, belongs, by the will of Providence, to the Russian people. But in order that the Providential designs may be realised, Russia must take care

to be strong in the West. This means, it is explained, that the Bosphorus and the Dardanelles "must by all means come into our possession for the sake of securing peace in the South, and for the sake of our whole development—even existence."

The official trial trip of the steamer *Kasuga Maru*, built in the yard of the Osaka Ship-building Company, was made on the afternoon of the 1st inst. with satisfactory results, says the *Kobe Chronicle*. The owner of the steamer is Mr. Kishimoto Gohei, residing at Horiye, Osaka. The steamer was commenced in June last year. She is built of wood, 382½ tons gross (531 tons register), 180 feet long, 19 feet deep, 22 feet beam, and an engine of 315 horsepower. Her speed is 10 knots an hour. She is to run between Korea, China and Hongkong, via the ports of Kiushiu and Tokyo.

At a reception given by Mr. and Mrs. Mactavish at Kobe on Saturday afternoon, the fair hostess was the surprised recipient of a handsome silver bowl which had been subscribed for by the children of Kobe, to whom she has ever been the best of friends and entertainers. The *Kobe Herald* says that little Miss Cynthia Pakenhams made the presentation, and did it very prettily. The bowl bears the following inscription:—"Mrs. Mactavish, with love from the children of Kobe, March, 1897." Mrs. Mactavish appeared to be quite affected by the incident and could say little, but the deeper emotions are not always expressed in words.

Permission has been granted to private Railway Companies to construct the following lines:—

- 1.—A railway between Ota in Gifu Prefecture and Toyama in Toyama Prefecture, *via* Tokuyama.
- 2.—Between Toyama and Naoyetsu in Niigata Prefecture.
- 3.—Between Shibata and Nakuho-nai.
- 4.—Between Kurosawajiri in Iwate and Yokote in Akita.
- 5.—Between Kunikane and Tanikawa in Hiogo Ken.
- 6.—Between Hiroshima and Hiroshima Ken and Hamada in Shimane Ken.
- 7.—Between Oita and Miyasaki.
- 8.—Between Kurume and Yamaka.

On Sunday night the offices of Messrs Mendelson Bros. No. 258, were entered by a thief and a tin cash box was broken open, and a cheque for \$145.25 and \$25 in cash abstracted. The police were notified and a detective officer was instructed to make an investigation into the matter. It was soon discovered that a cheque for the same amount as that stolen had been cashed at a Chinese exchange shop at No. 70 by a young Japanese, who, it was discovered, was an employé of Messrs. Mendelson Bros., named Shibata Kanekichi. The police were soon on his track and the young man was arrested on the afternoon of the 5th, with all the stolen money in his possession. Shibata, together with his father, had been for some time in the employ of the firm and lived on the premises. The young man had recently fallen into dissipated habits. He is now undergoing examination.

Mr. J. H. Longford, sitting as a Master in Lunacy, held an inquiry at the British Consulate, Nagasaki, on April 2nd, to ascertain whether Arthur Norman of the *Rising Sun*, was a lunatic or not. The witnesses examined were Dr. Maurice Eden Paul, under whose care the alleged lunatic is now detained for treatment at H.B.M.'s Consulate; Mr. J. F. Stone, and Mr. C. M. Birnie. Dr. Paul gave evidence as to the mental and physical condition of his patient, who he had no hesitation in affirming was a hopeless lunatic. He strongly recommended his immediate removal to Hongkong or other convenient place where there is proper asylum for the treatment of the insane, and read affidavits of three other practitioners who had seen the patient separately and had concurred in the witness' views in regard to the case. Mr. Stone, upon whose petition the proceedings were instituted, testified to having been a friend of Mr. Norman's for the past 20 years. He considered him now perfectly insane and incapable of managing

himself or his affairs, and he gave lengthy evidence as to Mr. Norman's property and business matters. Mr. Birnie's evidence also was to the effect that Mr. Norman is a hopeless lunatic. The proceedings were then adjourned.

The Shanghai morning journal announces the death, at 0.30 p.m. on April 2nd, of Mr. W. H. Short, manager of the extensive business of Hall & Holtz, Ltd. Mr. Short, who was very much and deservedly liked by all who knew him as a man of wide sympathies and great kindness of heart, was born in 1843, and went to China originally in 1856, his first residence being in Foochow. Two years later he visited Shanghai and went on to Tientsin. There he remained until 1860, when he returned to Shanghai and joined the firm of Hall & Holtz, with which he has been ever since connected. His health broke down some three or four years ago, and he came over to Japan in the hope of restoration. But the hope was never realised. On Wednesday, March 31st, he was attacked by internal hæmorrhage, and soon became unconscious, remaining so until the end came. Mr. Short was never married.

On the evening of the 4th instant Mr. H. I. Choze, agent of the P. & O. S. N. Co. at Kobe, had a rather unpleasant experience with his cook. It appears from the report given by Kobe exchanges that dinner being rather late in making its appearance, Mr. Choze went into the kitchen to ascertain what was the cause of the delay, and in an altercation which followed, told the cook that he could leave his employ. The cook then seized a carving knife and rushed at his employer, who, however, managed to seize his assailant's wrist. Mr. Davies, the Chaplain, who was stopping with Mr. Choze, and had followed him to the kitchen, then came to his assistance, and his aid was most fortunate, as some of the other servants present joined the cook in his attack upon Mr. Choze. He was rather severely handled, while Mr. Davies was bitten on the hand. Eventually the assistance of the police was obtained and the cook and house-boy were locked up. They are to be prosecuted.

The custom of remitting advances to the producers of tea sent to Yokohama for sale, has for a long time past been carried out on a very uncertain basis, and has led to serious losses both to consignors and consignees. In some cases advances were made at the rate of ten or twenty per cent. less than the value of the tea forwarded; in others the full value of the tea at current quotations was remitted, and if the market was depressed and a fall in prices took place the consignees suffered heavy loss, besides having trouble with the banks in Yokohama which discounted their bills. Moreover, the consignors never regarded the advances made as full payment for their goods, while the consignees were disposed to consider transactions as completed with the payment of the advances. Tea merchants in Yokohama therefore, came to the following decision at a conference held with the 35th and 100th National Banks, the Keageya Bank, and their agencies, with regard to the forthcoming tea season:—

- 1.—Notice shall be given to the consignors in each district that the amount of advances to be made on the security of goods shall be determined within 20 per cent. discount on the actual value thereof.
- 2.—No goods valued at less than the amount remitted shall be accepted.
- 3.—The consignors shall in future notify the consignees as to whether or not the goods are above the amount of the remittance made, within a specified period.
- 4.—This provision, however, does not apply to goods the arrival of which is unavoidably delayed.
- 5.—Any invoice of goods upon which an advance is to be made must contain a precise statement in red ink of the amount to be remitted.
- 6.—The boxes of tea on which remittances are required must be marked on the cover, bottom, and sides, with the trade-mark or seal of the consignor.
- 7.—Goods for which the amount of remittance is not mentioned in the invoice, or which do not bear any mark, may be treated as goods liable to no remittance.

The above provisions will be enforced from the opening of the tea season this year.

NATIONAL TAXATION LAW.

We hereby give sanction to the National Taxation Law, approved by the Imperial Diet, and cause the same to be promulgated.

(His Majesty's Sign-manual and Seal.)
The 26th day of the 3rd month of the 30th year of Meiji.

Count MATSUKATA MASAYOSHI,
Minister President of State and Minister of Finance.

LAW No. 21.

REGULATIONS FOR THE COLLECTION OF NATIONAL TAXES.

SECTION I.—GENERAL RULES.

Art. I.—The collection of national taxes shall be conducted in accordance with this Law, except in cases defined by Customs Law and other separate enactments.

Art. II.—National taxes shall be collected before all other public impositions and liabilities of any kind.

Art. III.—If any person who has a claim on the property of a tax-payer in consequence of the same being mortgaged or pledged, can prove by a legal document that he had acquired the right over the property one year previous to the due time of collection of national taxes, payment of the taxes in question shall not be enforced in precedence of such right, provided the exemption be limited to the value of the goods mortgaged.

Art. IV.—In case any person has been legally dealt with on account of non-payment of a national tax or other public imposition, or in case he has been subjected to compulsory executive process, or has been legally declared bankrupt in consequence of his liabilities to others, such amount of national taxes for which his obligation had already been determined may be levied even though the period of collection has not arrived.

The provision is also applicable in the case of the dissolution of a company liable to taxation.

When national taxes are to be levied on a person having been legally dealt with in consequence of non-payment of other impositions, the national taxes in question shall not be collected in advance.

SECTION II.—COLLECTION.

Art. V.—The Cities, Towns, and Districts shall each be under obligation to collect the land taxes within their limits, and also the national taxes prescribed by Imperial Ordinance, and transmit the same to the Treasury.

The expenses incurred in the collection of land taxes shall be borne by the respective Cities, Towns, and Districts; but in the case of other national taxes, four per cent of the amount collected shall be paid in to the City, Town, or District.

Art. VI.—In the collection of national taxes, notice must be given to all persons paying taxes by a Revenue Officer, or by a City, Town, or District, as to the amount, date, and place of collection.

Art. VII.—In case any person upon whom the tax was levied had been involved in any extraordinary calamity, the investigation of which would require a number of days, the collection of taxes may be deferred *ad interim*.

Art. VIII.—In case the taxes which had been collected in City, Town, or District, should be lost through unavoidable accident or calamity, application may be forwarded, upon attestation of the facts, for permission to be relieved of the responsibility of transmitting the taxes to the Minister of Finance.

When such application is received, the Minister of Finance may, after investigation of the facts, grant permission for the remission of taxes.

SECTION III.—THE EXECUTIVE PROCESS AGAINST NON-PAYMENT OF TAXES.

Art. IX.—In case any person fails to pay the tax even at the expiration of the period of collection, a Revenue Officer may demand payment within the fixed period of time, provided that in such cases the fees be imposed according to the provisions of Imperial Ordinance.

Art. X.—In case any person whose taxes are in arrear fails to pay, even on receiving an official demand, he shall be liable to the distraint of his property for the taxes as well as the fees demanded, within the specified period.

Art. XI.—In case a Revenue Officer seizes property for the non-payment of a tax, he must produce a certificate to show that he has received orders to that effect.

Art. XII.—In case the property to be seized is appraised at an amount hardly sufficient to cover the expenses for enforcing the executive process against non-payment, and also to pay the liabilities set apart in accordance with Art. III., and in case there is no prospect of obtaining any surplus, the enforcement of such process shall be suspended.

Art. XIII.—In case it is found that some of the goods which a Revenue Officer attempted to distrain were already under mortgage, the goods in question must be delivered to the Revenue Officer by the mortgagee, without regard to the time at which the right over the goods was established.

Art. XIV.—If, in the case of distraint of property by a Revenue Officer, a third person claims the right of ownership of goods, he must apply to the Revenue Officer, with proofs of the fact, five days previous to the actual sale of the goods in question.

Art. XV.—In case any person attempts to avoid distraint of his property by cession or otherwise when final steps are to be taken for it, and the cessionary knowingly receives such goods, the Government may claim the withdrawal of such proceedings.

Art. XVI.—The following goods shall not be distrained:—

1. Clothing, bedding, furniture, and kitchen utensils, which are absolutely indispensable to the person who has failed to pay the tax, and his family.
2. Food and fuel that may last for one month for the man failing to pay the tax and his family residing with him.
3. Personal and other seals essential to one's occupation.
4. Materials, stone tablets, and burial grounds that may be considered as necessary for religious service or worship.
5. Lincal tables, diaries, and other records necessary to the household.
6. Uniform clothes, religious costumes, or ecclesiastical robes, necessary for the discharge of duty.
7. Decorations and other honorary badges.
8. Books and utensils indispensable for purposes of study.
9. Inventions or literary works not yet made public.

Art. XVII.—The following goods may be exempted from distraint upon presentation of other articles sufficient in value to pay for the taxes in arrear and also the costs incurred in taking steps for non-payment:—

1. Agricultural implements, seeds, manure, cattle, horses, and fodder, all indispensable to husbandry.
2. Tools, implements, and materials necessary to the occupation or profession of the party.

Art. XVIII.—The power of seizure shall extend to the natural and legal fruits emanating from the goods seized.

Art. XIX.—The enforcement of steps taken for non-payment of taxes shall not be interfered with by any legal seizure by a Court of law.

Art. XX.—In case a Revenue Officer seizes upon the property of a person who has failed to pay the tax, he may cause the latter's dwelling, godown, or boxes, to be examined, or any closed doors or trunks to be opened, or personally open the same. This provision is also applicable to a third person who holds the property of the person who failed to pay the tax, and refuses to deliver it.

Similar steps may be taken by a Revenue Officer when there is reason to suspect that the goods of the person whose taxes remain unpaid, are concealed within the dwellings, godowns, or trunks of the third person.

The examination, however, of the dwellings, godowns, or trunks, in accordance with the two preceding clauses, shall only be effected between sunrise and sunset.

Art. XXI.—In case of steps being taken by the Revenue Officer in accordance with the preceding articles, the defaulting person shall require the presence of the third person specified above or of a member of his family or an employé; and in case any of these persons happens to be absent or refuses to be present, then more than two persons above the age of twenty, or public officers of a City, Town, or District, or Headman of Urban Division or village, or his subordinates, or police officers in the case of places where Local Government Systems for Cities, Towns, and Districts, are not enforced, shall be required to be present as witnesses.

Art. XXII.—In case any currency, gold or silver bullion, or any appreciable bonds are distrained, the same shall be duly sealed by the Revenue Officer and placed under the charge of the Headman of a City, Town, or District, or of the *Kuchō* or *Kochō* in places where Local Government Systems for Cities, Towns, and Districts are not in operation.

In case articles not enumerated in the foregoing clause are seized upon, the same shall be duly sealed and taken charge of by the Revenue Officer; but if immovable property, or unportable articles are distrained, the same may be entrusted,

with special orders, to the care of the person from whom the taxes are in arrear, or of a third person.

Art. XXIII.—If anything involving the liability of others is seized, notice must be given to the debtor by the Revenue Officer.

The debtor, upon the receipt of the foregoing notice, shall be held under obligation to pay to the Revenue Officer such portions of his liabilities as will cover the taxes in arrear, and also the expense incurred in taking steps against failure. Any payments made to the creditor before such obligation is discharged shall be of no effect whatever.

Art. XXIV.—Moveable and immovable property that is seized shall be sold by public auction provided that the process of sale be determined by Imperial Ordinance.

If there are no buyers, or if the price offered does not reach the amount appraised, then the Government may purchase the goods at the appraised price.

Art. XXV.—In the case of goods the appraised value of which is not sufficient to defray the expenses of a public auction, the same may be sold by private contract.

Art. XXVI.—Persons who have failed to pay their taxes, or officers concerned in the collection of taxes of the district where the sale of property takes place, or other public functionaries or employés, are not allowed to buy, either directly or indirectly, goods distrained and sold by public auction.

Art. XXVII.—The cost of measures taken for non-payment of taxes shall consist of fees for demand, seizure, protection, transportation, and public sale of property, and also the expenses incurred in correspondence and law suits.

Even in the case of measures for non-payment having been suspended, the expenses incurred in connection therewith shall be collected.

Such costs shall have precedence of the national tax and of the rights of creditors specified in Article III.

Art. XXVIII.—The proceeds realized by the sale of property, and also all money seized, shall be appropriated to defray the tax and the expenses of the measures taken. Should there be any surplus, the same shall be delivered to the person from whom collected.

If the goods sold are under mortgage, the proceeds of the sale thereof shall first be appropriated to defray the tax and the expenses of measures taken, and the balance paid to the creditor to the amount sufficient to liquidate the liability, and if there should still be any surplus, the same shall be returned to the person proceeded against.

Nevertheless, in the case of goods under mortgage, as specified in Article III., the proceeds of the sale thereof shall first be appropriated to pay the expenses for measures taken, and then to defray the amount of liabilities to the creditor, and finally the tax, and if there is still any surplus the same shall be returned to the person defaulting.

Art. XXIX.—In case steps are to be taken against a company for non-payment of tax, and in case the property of such company is found insufficient to cover the amount of tax, and also the expenses incurred in taking steps, further measures may be adopted against the members having unlimited liability.

Art. XXX.—All documents relating to the measures to be taken against non-payment of tax shall be transmitted to the dwelling place or office of the person to whom they are addressed.

If the person addressed refuses to receive the documents at his dwelling or office, or if such dwelling or office is not clearly known, the purport of the notice shall be advertised, and after five days from the issue of such advertisement the documents referred to shall be regarded as transmitted.

Art. XXXI.—The obligation of paying taxes on the part of persons who have failed to pay the direct national tax shall cease with the measures taken against their failure. This provision is also applicable to cases when measures taken against failure are suspended.

As regards the direct national tax, however, if the tax and also expenses for measures against failure have not been completely defrayed, even after steps have been taken for the purpose, the deficiency shall be collected at convenient times within one year after the period when payment was due. Similar steps will be taken when measures against failure are suspended.

SECTION IV.—PENAL RULES.

Art. XXXII.—In case any person failing to pay the tax, or any one who holds the property of such person, conceals or abstracts or makes a fraudulent entry, he shall be condemned to major imprisonment for a term of not less than one month and not more than two years.

This provision also applies to persons who take charge of property seized, but who knowingly conceals, abstracts, consumes, or destroys the same.

Any person who knowingly assists in the pro-

ceedings specified in the two preceding clauses, or consents to a fraudulent contract, shall undergo the above punishment mitigated in one degree.

If special provisions in the Penal Code refer to the foregoing clauses, the present Article shall not be applied.

SECTION V.—APPENDIX.

Art. XXXIII.—This Law shall be enforced from July 1st of the 30th of *Meiji*.

It shall not be put in operation in Okinawa prefecture, Ogasawara, and Izu Island under the jurisdiction of Tokyo *Fu*.

The public corporations against which the provisions in this Law bearing upon the Cities, Towns, and Districts, in the case of localities where Local Government Systems, for Cities, Towns, and Districts, are not enforced, shall be determined by Imperial Ordinance.

Corporations of dealers in marine products in Hokkaido shall be dealt with by this Law in the same way as a City, Town, or District.

Art. XXXIV.—Law No. 9 of the 22nd year of *Meiji*, embodying Regulations for the collection of national taxes, Law No. 32 of the same year, providing for measures to be taken against taxes in arrear, and Law No. 4 of the 23rd year of *Meiji*, shall be rescinded from the day of the enforcement of this Law.

JAPAN INDUSTRIAL BANK.

The statutes of the Japan Industrial Bank, founded as a joint stock corporation, have received the sanction of the Minister of Finance. They are as follow:—

SECTION I.—GENERAL RULES.

Art. I.—This Bank has been established in accordance with the Japan Industrial Bank Regulations promulgated by Law No. 82 of the 29th year of *Meiji*, and is to be named the Industrial Bank (Joint Stock Corporation).

Art. II.—The object of the Bank shall be to issue loans in the form of capital with a view to secure the improvement and development of agriculture and commerce.

Art. III.—The head office of the Bank shall be in Tokyo.

The Bank shall, according to the amount of its transactions, establish branches or agencies in each of the cities and prefectures.

Art. IV.—The period of operation or maintenance of the Bank shall be one hundred years from the date of its charter.

SECTION II.—CAPITAL AND STOCK.

Art. V.—The capital of the Bank shall be ten million *yen*, consisting of fifty thousand shares of two hundred *yen* each. On the demand of a shareholder, the amount of five, ten, fifty, or a hundred shares may be taken together to constitute a single bond.

Art. VI.—The first installment of the subscription to capital shall be one-fourth of the whole amount, namely, 2,500,000 *yen* (fifty *yen* for each share), to be paid immediately on the charter being obtained.

The period, as well as the method of the second payment, shall be determined by the Superintendent-General of the Bank to suit the convenience of the institution. The amount of payment, however, shall not be less than twenty *yen* and not more than fifty *yen* per share.

When the period of payment is fixed, as prescribed by the foregoing clause, the Superintendent-General of the Bank shall demand payment according to the provisions of the Commercial Code, and at the same time shall advertise the fact in the *Official Gazette* and other newspapers.

Art. VII.—In case a shareholder fails to pay his subscription, steps shall be taken in accordance with the provisions of the Commercial Code. Seven per cent. interest, however, shall be collected on all payments in arrear, and the fees leviable for failure to pay shall be collected to an amount not exceeding three per cent. of the payment in arrears, according to the decision of the Superintendent-General of the Bank.

Art. VIII.—In case the shares of the Bank are transferred, a bond bearing the seal of the persons concerned, must be presented to the Bank, together with the shares in question. The Bank shall then require both parties concerned to endorse the shares with their signatures and seals; and the same, being attested by the seals of the Superintendent-General and the principal Manager of the Bank, shall be returned after being duly entered in the account-books.

Art. IX.—In case any person who has acquired shares in the Bank through bequest or will, claims alteration of title, upon presentation of formal proofs thereof, the Bank shall alter the

title in accordance with the provisions of the foregoing Article.

Art. X.—In case the share certificates of the Bank are destroyed or lost through calamity, the shareholder may claim delivery of new certificates, provided that he presents a report of the fact, in which the exact circumstances of the loss, the amount and number of the shares, must be mentioned and attested by more than two sureties satisfactory to the Bank.

In case such claims are made, with satisfactory proofs relating thereto, the Bank shall deliver new share certificates. But if the proofs in question are not satisfactory, steps will be taken in accordance with the general provisions relating to the loss of certificates.

Art. XI.—In case share certificates of the Bank are lost or stolen, the shareholder may claim the delivery of new shares by forwarding to the bank a report of the fact, in which the amount and number of scrip are precisely stated. In such cases the Bank shall immediately advertise the fact in the *Official Gazette* and other newspapers at the expense of the claimant, and new scrip will be delivered after one month from such advertisement, provided that more than two satisfactory sureties are obtained to bear the responsibility.

If the claimant has found the scrip within the period specified, he shall immediately report the fact to the Bank, and the Bank in turn shall advertise it according to the foregoing provisions.

Art. XII.—In case any person presents a statement contradictory to the report of loss or theft, the new scrip shall not be delivered until after judgment is given by a Court of Law having jurisdiction.

Art. XIII.—In case the scrip is disfigured or damaged, the shareholder may claim the delivery of new shares by presenting to the Bank a written statement of the fact, together with the scrip in question. If the certificates so presented are considered genuine after a suitable investigation, new ones shall be issued by the Bank.

But if it is impossible to recognise them as genuine, steps will be taken according to the provisions relating to the loss of scrip.

Art. XIV.—The Bank shall receive a fee of five *sen* for each copy of share certificates in the case of alteration of title, and twenty-five *sen* in the case of delivery of new scrip.

Art. XV.—The Bank shall suspend the transfer of its stock within one month prior to its general meeting of shareholders. In that case, however, the fact shall be advertised in the *Official Gazette* and other newspapers.

SECTION III.—PRINCIPAL OFFICERS.

Art. XVI.—The functionaries of the Bank shall consist of one Superintendent-General, one Vice-Superintendent, from three to five Managers, and three Inspectors.

The number of Managers shall be determined by the general meeting of shareholders.

The Superintendent-General and Vice-Superintendent shall remain in office for five years, and shall be appointed by the Government from among holders of more than one hundred shares.

The managers shall also continue in office for five years, and shall be appointed by the Government from among candidates elected at the general meeting of shareholders, holding more than fifty shares each.

The period of Inspectors' office shall be three years, and they shall be chosen at the general meeting of shareholders, from among the owners of more than thirty shares.

The offices of Superintendent-General, Vice-Superintendent, Managers, and Inspectors shall be limited exclusively to persons who, for six months previously to their appointment or election, have continuously held the number of shares prescribed in this Article.

In case any vacancy occurs in the position of Manager or Inspector, a special meeting of shareholders shall immediately be held with a view to fill the position by election. The officers so elected are to remain on duty for the period remaining of their predecessors' term. But if the officers in actual service do not fall under the minimum number prescribed by these statutes, the election for the vacancy may be postponed until the next general meeting of shareholders.

Art. XVII.—The Superintendent-General and Vice-Superintendent shall each deposit one hundred shares, and the Managers fifty shares each, in the Bank during the period that they remain in office. The shares so deposited shall be duly sealed and taken charge of by the Bank, and a deposit note delivered to them containing a statement prohibiting such shares from being appropriated to any other purpose.

The shares referred to in the foregoing clause shall not be restored to their owner until after the reports of the accounts for the period have been

completed and passed by a general meeting of shareholders, even in the event of the owner's having resigned.

Art. XVIII.—The functions and powers of the Superintendent-General are as follow:—

1. The Superintendent-General represents the Bank in all its transactions.
2. The Superintendent-General shall adjust all matters relating to the promotion, appointment, and dismissal of all persons employed in the Bank.
3. Shall sign and seal the shares, industrial loan bonds, and all other documents bearing upon the rights and obligations of the Bank.
4. Presides over all affairs of the Bank, according to the Japan Industrial Bank Regulations, and other Laws, Ordinances, and provisions, and the decisions of the general meetings of shareholders.
5. Convenes the general meetings of shareholders and has the right to be the Chairman of such meetings.
6. Establishes the rules for loans, for the appraisalment of goods for securities, for industrial loan bonds, and other private provisions of the Bank.

Art. XIX.—The Vice-Superintendent and Manager shall assist the Superintendent-General in the management of affairs, and under the directions of the latter shall be Head of the various Sections of the Bank. The functions thus to be discharged by them shall be determined by the Superintendent-General of the Bank.

Art. XX.—The functions and powers of Inspectors are as follow:—

1. They have to see that the Superintendent, Vice-Superintendent and Managers, carry out their duties compatibly with the Laws, Ordinances, Statutes of the Bank, and the decisions of general meetings of Shareholders.
2. To notify the Superintendent of the convocation of general meetings of shareholders when it is deemed necessary or advantageous for the Bank to do so.
3. To affix their seals to the industrial loan bonds so as to certify their notice; and to be present on occasions when lots are drawn for them or when they are redeemed.
4. All other functions and powers to be exercised as prescribed by the Commercial Code.

Art. XXI.—The salaries of the Superintendent, Vice-Superintendent, Managers, and Inspectors shall be determined by the general meeting of shareholders.

Art. XXII.—The principal officers as well as the employés of the Bank are not allowed to contract loans in the Bank under any circumstances whatever.

SECTION IV.—THE GENERAL MEETING OF SHAREHOLDERS.

Art. XXIII.—The general meeting of shareholders shall be classified as Ordinary and Special, and shall be held at the direction of the Superintendent.

Art. XXIV.—The ordinary general meetings of shareholders shall be held in February and August every year. The date and place of such meetings, as well as the subjects of discussion shall be notified to each shareholder by the Superintendent, at least fourteen days prior to the meeting.

Art. XXV.—At the ordinary general meeting of shareholders, the debates shall chiefly deal with the report and accounts for the preceding term, and the distribution of dividends.

Art. XXVI.—Special general meetings of shareholders shall be held exclusively on the following occasions, the date and place of meeting being determined by the President; notice will be issued to each shareholder together with the subjects of debate, at least fourteen days prior to the meeting:—

1. When the Superintendent deems it necessary to hold a meeting.
2. When the Inspectors convene the meeting, stating the subject of deliberation.
3. When a meeting is called, and the object stated, by shareholders whose stocks constitute more than one-fifth of the whole amount of shares.

When the Superintendent has received an application from an Inspector or from shareholders, for a special general meeting, he must take steps to convocate it within ten days.

Art. XXVII.—As regards the power of decision on the part of shareholders, one vote only shall be allowed for each ten shares. Holders of more than eleven shares, however, shall have the privilege of one extra vote for every fifty shares above that number.

Art. XXVIII.—Proxies at the general meeting of shareholders must be representatives legally qualified, or shareholders having the power of vote. The principal functionaries and employés of the Bank shall not be allowed to be representatives under any circumstances whatever.

Art. XXIX.—No proxy is allowed to represent

more than five members, nor is it permitted to them to represent more than two-tenths of the whole amount of shares. Proxies that desire to exercise the right of vote at the general meeting of shareholders must be furnished with a letter of authorization.

Art. XXX.—The representatives of shareholders who desire to exercise the right of vote at the general meeting of shareholders must be furnished with a letter of authorization.

Art. XXXI.—The shareholders are required to sign their names in the attendance-book with their seals attached thereto on the day of meeting, before the meeting actually takes place; and their representatives must state the fact on record as such, with their signatures and seals affixed.

Art. XXXII.—The debates at the general meetings shall be conducted by shareholders (including proxies) representing more than one-fifth of the whole stock, the decision being given by more than half the number of votes. Decisions, however, for altering the statutes of the Bank or effecting voluntary dissolution, shall be in accordance with the provisions of the Commercial Code.

The Chairman shall, besides his own right of decision, have a casting vote when the votes of the two opposite parties are of equal number.

Art. XXXIII.—In case the number of shareholders falls short of a quorum at a general meeting, the proceedings shall be conducted in accordance with the methods prescribed by Article CLII. of the Commercial Code.

Art. XXXIV.—Subjects of deliberation that come under the notice of a general meeting of shareholders shall be recorded in the Debate-Book, and attested by the seals and signatures of the Superintendent, Vice-Superintendent, Managers, and Inspectors.

The Attendance-Book shall be appended to the Debate-Book, after it is duly signed and sealed by the Superintendent, Vice-Superintendent, Managers, and Inspectors.

SECTION V.—BUSINESS.

Art. XXXV.—The following business shall be conducted by the Bank:—

1. To issue loans on the security of immovable property, according to a scheme of redemption by yearly installments within a period of fifty years.
2. To issue loans on the security of immovable property, according to the method of periodical redemption within a period of five years.
3. To issue loans without security to Cities, Prefectures, Rural Divisions, Towns, Districts, and other public communities organized by law.
4. To accept in charge industrial and agricultural loan bonds.
5. To take on deposit gold and silver bullion, and appreciable bonds.

Art. XXXVI.—The Bank shall, under no circumstances, issue loans beyond the scope prescribed in Article I. of the Japanese Industrial Bank Law. The following immovable property, however, may be taken as security for loans:—

1. Lands that fall within the category of Article IV. of the Land Tax Regulations as provided by Notification No. 7 of the 17th year of *Meiji*.
2. Buildings and lands appropriated to the use of schools, temples, and shrines, hospitals, theatres, and other public institutions.
3. House lots excluded from use for agricultural and industrial purposes.
4. Mineral and stone mines, swamps, and mineral springs.
5. Lands under two different jurisdictions.
6. Immovable property owned by several persons conjointly. This provision, however, does not apply to cases where the whole number of owners, by unanimous consent, offer the entire right of ownership as security.

Art. XXXVII.—In case loans are issued by the Bank on the security of immovable property, contracts may be concluded for loans after the value of such property is appraised and the object of the loan investigated. The security for such loans shall necessarily be the registered bonds.

In case of the appraisalment of property by the Bank, stipulations shall be made that the expenses necessary for that purpose are to be borne by the applicant, whether the contracts are satisfactorily concluded or not.

Art. XXXVIII.—The amount of money to be appropriated for the redemption of former liabilities in cases prescribed by the note on Article XVI. of the Japan Industrial Bank Law, shall not be delivered to the debtor, but shall be used to liquidate his liabilities.

Art. XXXIX.—The insurance of buildings taken as security shall be contracted with Insurance Companies recognised by the Bank as trustworthy, and the premiums for the policy shall be defrayed through the Bank, the contracts for

insurance being continued during the period that the loans remain unpaid.

If the contracts for insurance are discontinued within the period of the loan, the Bank may claim the redemption of the whole amount of the loan even prior to the fixed term of payment.

Art. XL.—In case the debtor has changed the actual condition of properties given as security, or the title thereto, without the consent of the Bank, the Bank may claim the redemption of the whole amount of the loan even before the period of payment has arrived.

Art. XLI.—No loans exceeding five per cent. of the whole amount of capital shall be issued to the same debtor, except in the case of *Fu, Ken, Gun, Shi, Cho, Son*, and other public communities organised by law.

Art. XLII.—The rates of interest on loans issued by the Bank shall be determined by reference to the maximum percentage sanctioned by the Minister of Finance, according to the period during which the loan is issued and the nature of the enterprise to be undertaken.

Art. XLIII.—In case the debtor fails to pay the loan or interest at the contracted period, (or at the period specified by the Bank in case a claim is made for redemption prior to the fixed term), interest for such delay shall be collected at the rate of seven per cent. a year on the amount in arrear for the number of days calculated from the day immediately following the fixed term, to the day of actual payment, and moreover, another sum equal to that of interest shall be imposed for failure of contract.

In case the failure should be due to natural calamities or other unavoidable circumstances, the money to be paid for failure, as prescribed in the foregoing clause, shall not be collected.

Art. XLIV.—In case the whole or part of any loans issued on the yearly installment system is paid prior to the fixed term, the Bank shall receive fees to be determined by the Superintendent at a rate not exceeding two per cent. of the amount so paid. This provision, however, is not applicable in cases where payment is demanded prior to the fixed term in consequence of natural calamities or unavoidable circumstances, or in accordance with Articles XXVII. of the Japan Industrial Bank Law.

Art. XLV.—In case the debtor is found to have appropriated the amount of loans to purposes other than those mentioned in the contract, and in case the Bank deems such purposes unprofitable, a demand for the total redemption of the loan may be made, and if the appropriation of the funds in question is known to be beyond the scope of Article II., liquidation of the loan shall immediately be claimed.

Art. XLVI.—In case the Bank accepts the loan bonds to be issued by the Agricultural and Industrial Banks, its officers shall be despatched to investigate the actual condition of affairs as well as the properties of those Banks.

The agricultural and industrial loan bonds accepted by the Bank shall not exceed one-third of the total amount of the issue.

Art. XLVII.—In case the Bank holds any surplus in respect of its transactions, the same shall be appropriated to the temporary purchase of various national and local loan bonds, or deposited in the Bank of Japan.

SECTION VI.—INDUSTRIAL LOAN BONDS.

Art. XLVIII.—The industrial loan bonds to be issued by the Bank shall be unregistered bonds of the face value of one hundred yen, with coupons thereto. These bonds, however, may be registered on the demand of subscribers or of their holders.

Art. XLIX.—The issue of industrial loan bonds shall be limited to ten times the amount of the capital paid up. Nor shall the actual amount of issued exceed the total amount of loans issue in terms of yearly installments and the value of the agricultural and industrial loan bonds actually taken into the Bank.

This provision does not apply to the issue of loans at low rates of interest with a view to placing the same as temporary liabilities of the Bank.

The agricultural and industrial loan bonds in the foregoing clause shall be calculated at the value they held at the time when they were received.

Art. L.—Interest on the industrial loan bonds shall be paid in two sums in the month fixed at the time of issue, for the former six months, in exchange for the coupons.

Interest shall be calculated from the latter half of the month when the principal payment is made before the 15th, and from the following month when such payment is completed after the 15th, whereas at the time of the payment of the principal the interest shall be counted until the month immediately preceding such payment, including the months past.

Art. LI.—As regards the redemption of in-

dustrial loan bonds, a period of from one to five years shall be fixed for the retention of loans.

The period of redemption shall be fixed within fifty years after the expiration of the term of retention, and the bonds shall be liquidated more than twice a year according to the amount of redemption of loans issued in terms of yearly installments and of the agricultural and industrial loan bonds taken.

Art. LII.—In case of the issue or liquidation of industrial loan bonds, all particulars necessary for that purpose shall previously be advertised in the *Official Gazette* and other newspapers.

Art. LIII.—In case application is made for altering registered into unregistered bonds, or vice-versa, a fee of twenty yen shall be imposed for each bond.

The alteration of titles of registered bonds shall be liable, to a fee of five yen for each bond.

SECTION VII.—ACCOUNTS AND REPORTS.

Art. VII.—The fiscal terms of the Bank's operation shall be from January to June and from July to December in each year; and at the end of each fiscal year all the accounts shall be settled, and a statement of accounts of industrial bonds, invoices of properties, a table showing the comparative amount of the Bank's liabilities and loans issued, reports of transactions, and drafts for dividends shall be prepared for presentation to the ordinary general meeting of shareholders.

The invoices of properties and the table shall show the comparative amount of liabilities and loans referred to, and shall be advertised in the *Official Gazette* and other newspapers.

Art. I.V.—In the settlement of accounts, the expenses for the conduct of business, interest, extra payments, and losses shall be deducted from the profits, and the remainder, if any, shall be regarded as net profit.

Loans and other assets for which there is no prospect of recovery shall be calculated under the category of losses, and movable and immovable properties the value of which had fallen, shall be appraised at the current prices.

Art. LVI.—The net profits shall be distributed at the following rates:—

1. More than eight per cent. of the profits to be appropriated to the reserve fund for the supply of losses.
2. More than two per cent. to be set apart for the average amount of dividends.
3. The amount that remains after the subtraction of the above two items shall be appropriated to first dividends at the rate of five per cent. of the capital paid up.
4. Of the remainder that may be obtained after deducting the amounts mentioned in the foregoing three clauses, less than ten per cent. of the profit shall be subtracted for rewards to principal officers, and the rest, if any, shall be distributed among the shareholders as a second dividend, or carried forward to the subsequent fiscal year.

Art. LVII.—The reserve fund set apart to make up losses may be appropriated to supply the deficiency caused in the amount of capital in consequence of losses sustained.

The reserve for the average dividend can be appropriated to supply the deficiency when the dividend does not reach the rate specified in the third clause of the preceding Article.

Art. LVIII.—The dividends shall be paid after the settlement of accounts in each term.

The date of such payment shall be previously notified to each shareholder.

SECTION VIII.—MISCELLANEOUS RULES.

Art. LIX.—The business hours of the Bank shall be from 9 a.m. to 3 p.m. every.

The hours may be increased according to the condition of business.

No business shall be conducted on great national holidays, festivals, and Sundays.

Temporary holidays may also be taken when the same are advertised in the *Official Gazette* and other newspapers.

Art. LX.—The Bank's seal shall be as follows:—(The seal is omitted).

Art. LXI.—Any alteration of these statutes can only be made by decision of the general meeting of shareholders with the sanction of the Minister of Finance.

APPENDIX.

Art. LXII.—The first Managers and Inspectors of the Bank shall be appointed by the Government from among the shareholders.

Art. LXIII.—The first Superintendent, and Vice-Superintendent shall remain in office only for a period of three years.

Art. LXIV.—With regard to the period of holding shares to qualify for the first Superintendent, Vice-Superintendent, Managers, and Inspectors of the Bank, the fifth clause of Article XVI shall not be applied.

YOKOHAMA GENERAL CEMETERY.

The annual meeting of those interested in the Yokohama General Cemetery was held on Monday afternoon in Keil's Building. Mr. N. W. McIvor, U. S. Consul-General, was in the chair, and among those present were Messrs. J. A. Fraser, H. Grauert, N. F. Smith, Geo. Allcock, W. B. Walter, J. McLean, J. Dodds, C. D. Moss, J. Wäkin, and B. Gillett, Hon. Secretary and Treasurer.

Upon the motion of Mr. ALLCOCK the minutes of the last meeting were taken as read.

The CHAIRMAN then called upon the Hon. Secretary to read the report of the Committee and accounts for the past year, which were read as follows:—

REPORT.

The Yokohama General Cemetery Committee beg to place before the community, the Annual Report of the Cemetery, together with the Treasurer's statement of Account made up to 31st December, 1896.

The interments in the Cemetery during 1896 have numbered 62, and have been made up from

	1895.	1894.	1893.	1891.
Visitors	13	against 11	12	10
Seamen serving on board	1	1	1	1
Ships temporarily lying in the Harbour	16	14	13	11
Unclassifiable interments	4	1	1	1
Bona-fide residents of Yokohama	28	30	16	28
Making a total of ...	62	against 59	45	55

Of the several nationalities comprised in the 62 interments in 1896, there have been:—

	30	British	against 13	in 1895.
13 American	8	10	11	
6 French	6	10	11	
3 German	3	1	11	
1 Russian	3	1	11	
1 Portuguese	1	1	11	
3 Swiss	2	1	11	
3 Indians	5	1	11	
1 Swede	0	1	11	
1 Mexican	1	1	11	
0 Dutch	2	1	11	
0 Spanish	1	1	11	

Total ... 62 ... against 53 in 1895.

Of the 21 interments from bona-fide residents of the Yokohama community in 1896, 1 has been of a child under a year old; 2 have been of persons under the age of 20 years; 11 have been of persons between the ages 20 and 50 years, and 7 have been of persons over the age of 50; a total of 21 made up from the following nationalities, viz:—

	7	British ...	against 6	in 1895
American ...	5	1	5	
French ...	2	1	3	
German ...	1	1	1	
Swiss ...	3	1	2	
Portuguese ...	1	1	1	
Indian ...	1	1	1	
Turkish ...	1	1	0	
Dutch ...	0	1	1	
Persian ...	0	1	1	

Total ... 31 ... against 23 in 1895

The Kanagawa Kencho authorities estimate that on the 31st December, 1896, there was a resident foreign population in Yokohama (exclusive of Chinese) of about 2,100. Of these, 1,833 persons had been duly registered at their respective Consulates, and the remaining 267 consisted either of persons who had neglected to so register themselves, or of subjects of countries having no treaty right with Japan.

Taking the above-named figures as a basis, i.e., 2,100 as representing the number of foreign residents, and 21 interments in the Cemetery as representing the number of deaths, we arrive at a death rate of 10 per mille, in 1896, as against 11 per mille in 1895.

The Treasurer's Statement of Account, annexed to this Report, shows that on the 31st December, 1896, there existed a credit balance of \$7,342.32. Of this amount, \$7,000 is placed on fixed deposit with the Hongkong and Shanghai Bank, producing interest at the rate of four per cent. per annum.

With regard to the several separate items which appear in the Treasurer's Statement of Account, they speak for themselves, and call for no special observation on the part of the Committee.

The present members of the Committee, consisting of Messrs. James Dodds, J. A. Fraser, H. Grauert, Rev. E. C. Irvine, N. F. Smith and B. Gillett beg to tender their resignations.

IN ACCOUNT WITH B. GILLETT, Hon. TREASURER, FOR THE YEAR ENDING 31ST DECEMBER, 1896.

Dr.

To M. Jarman, for Salary, 12 months ... \$ 125 75
To Labour account, 12 months ... 299.15 \$ 424.90

By Balance brought down	\$7,314.32

Yokohama, January 1st, 1897.
B. GILLET, Hon. Treasurer.
I have examined this account, with the vouchers
relating thereto, and found the same correct.

H. W. BELL.
The CHAIRMAN said the management of the
institution was practically a charity. The Com-
mittee had attended to their work in a most suc-
cessful manner and he hoped the very satisfactory
report would be passed, with the exception of one
clause, namely that referring to the retire-
ment of the present members of the Committee.

Mr. ALLCOCK proposed that the report and ac-
counts as presented be passed, that a vote of
thanks be given to the present Committee, and that
they be re-elected.

Mr. WILKIN seconded and the motion was
carried unanimously.

Mr. GILLET thanked the meeting on behalf of
the Committee and promised the continuance of
their attention to the institution.

A general discussion then arose as to the dispo-
sition of the Cemetery's capital fund, in view of the
approaching enforcement of the new treaties, and
Mr. Dodds informed the meeting that the Com-
mittee had the matter under their consideration.

A vote of thanks to the Chairman, proposed by
Mr. GILLET, and to Mr. Keil for the use of the
room for the meeting, proposed by Mr. FRASER,
which were unanimously passed, brought the pro-
ceedings to a close.

YOKOHAMA FIRE BRIGADE.

The annual meeting of the subscribers to the
Yokohama Fire Brigade was held on the afternoon
of the 7th instant in the Committee Room at the
Central Station. There were present Mr. Jas.
Dodds, in the chair, and Messrs. J. Walter, W.
B. Walter, J. P. Mollison, C. K. M. Martin, H.
Baehr and J. D. Hutchison, Hon. Secretary and
Treasurer.

The CHAIRMAN said that the report, which was
before the meeting, was so full and complete that
he did not think any remarks were necessary. He
would, from the chair, propose that the report and
accounts presented be adopted. He might remark
however that the Hon. Treasurer had drawn his
attention to the falling off in the subscriptions from
the Insurance Offices. This was accounted for to a
great extent by the accumulative policy fees not
having been yet paid in, and probably there was
no actual falling off in the subscriptions.

The adoption of the report and accounts was
then put to the meeting and carried unanimously.
They were as follows:—

REPORT.

REMARKS ON ACCOUNTS.

The Insurance Offices have contributed for the
year \$2,955.00 and the Policy fees paid in to the
H. & S. Bank amount to \$2,331.00 for the same
period. These figures compared with 1895 show a
total falling off of \$421.70 in income, \$296.70 of
which is accounted for in the amount of Policy
fees paid in, \$100.00 reduction made in the sub-
scription by one of the Insurance Offices and
\$25.00 short owing to the closing of one of the con-
tributing Agencies at this Port.

Disbursements for the period amount to
\$4,953.93, covering merely the usual Wages and
other expenditures necessary for the proper work-
ing of the Brigade.

WATCHMEN AND PATROL.

The usual look-out at the Bell Tower and the
Patrol during the Winter months have been well
kept up.

FIRES, ETC.

The reports and full particulars given below
show that the Brigade attended 23 Calls during the
year. The water supply from the Water-works
main was fairly well kept up in the Settlement,
but on several occasions the steamers working
from the Brigade's Fire Wells have been of valu-
able assistance in throwing streams on the upper
portions of buildings which the hydrants were
unable to reach. The Bluff Brigade as usual has
been entirely dependent on the deep wells in
private compounds for water to feed the small
hand engines.

Superintendent Morgan's Report is as follows,
viz:—

Yokohama Fire Brigade,
Yokohama, January 1st, 1897.

To the Fire Brigade Committee,
Gentlemen,—I have the honour to present the following
report of the work of the Yokohama Fire Brigade during
the year 1896.

The number of calls for Fires, or supposed Fires, have
amounted during the year to 23. Of these in the Settle-
ment 6 ended in total destruction, 3 were slight, 1 no
damage, 2 chimney alarms, 1 chimney on fire, and 1
proved to be a false alarm.

On Bluff—4 ended in total destruction, and 1 was slight.
In Native Town—4 ended in total destruction, with loss
of 15 houses.

The causes as reported, were as follows, viz:—

SETTLEMENT.	
Unknown	3
Doubtful	2
Explosion of lamp	2
Chimney alarm	2
Mosquito curtain in contact with lamp	1
Wax boiling over (damage slight, No. 42)	1
Lamp upset	1
Chimney on fire	1
False alarm	1

BLUFF.	
Unknown	3
Doubtful	1
Negligence of carpenters	1
	19

NATIVE TOWN.	
Unknown	4
	23

The figures above only refer to calls which involved
turning out of the Fireman, Fire Brigade, Hose Reels,
&c., belonging to the Yokohama Fire Brigade.

I beg to place on record that we have on several occa-
sions received valuable assistance from men-of-war in port.
Also that the Fire Brigade have worked most amicably
with the Police and Waterworks authorities.

I think it but right to mention Mr. T. Ueki, Inspector-
in-charge of Settlement Police Station, for his urbanity at
all times, and his endeavours to have his force work in
unity with ours. And I would also mention that great
credit is due to Mr. S. Ikariyama, Inspector-in-charge of
Bluff Police Station, and his men for the valuable assist-
ance at all times rendered at fires on the Bluff during
the year.

I have the honour to be, Your obedient servant,
N. MORGIN.

Superintendent, Yokohama Fire Brigade.

LIST OF FIRES, ETC., DURING THE PAST YEAR.

IN THE SETTLEMENT.

23rd January, No. 77 (Main St.), Store and
Auction Room destroyed. Damage estimated at
\$12,000.

30th January, No. 54, Two-storied Office des-
troyed. Damage estimated at \$5,000.

15th February, No. 88, Chimney alarm.

2nd March, No. 81, Two-storied Dwelling des-
troyed. Damage estimated at \$3,000.

26th March, No. 58, Chimney on fire. Damage
estimated at \$300.

29th March, No. 5, Chimney alarm.

2nd June, No. 157, Slight.

16th June, No. 42, Whaley's Hotel, damage
slight.

14th July, Nos. 145-146 (Chinese), Several
Dwellings and Stores destroyed. Damage esti-
mated at \$11,000.

1st August, No. 167, Slight.

30th November, No. 16, Photo. Studio, Two-
storied building destroyed. Damage estimated
at \$11,000.

1st December, No. 130, Two-storied Godown
with contents destroyed. Damage estimated at
\$3,000.

10th December, No. 93, Office; damage very
slight.

FIRES ON BLUFF.

4th January, No. 6, Coach-house destroyed.
Damage estimated at \$1,000.

8th February, No. 221, 222, and 224, 7 houses
totally destroyed. Damage estimated at \$35,000.

16th February, 2,063 (Native Bluff), 1 Dwelling-
house destroyed. Damage estimated at \$6,000.

8th April, No. 243, Two-storied Dwelling des-
troyed. Damage estimated at \$10,000.

8th July, No. 38, Kitchen, damage slight.

FIRES IN JAPANESE TOWN.

15th February, Motomachi Nichome, 2 houses
destroyed.

23rd March, Aioicho Nichome, 2 total, 2 part
destroyed.

2nd June, Aioicho Nichome, 1 house destroyed.

21st December, Onoyecho Gochome; about 12
houses destroyed.

ENGINES, ETC., AVAILABLE AT FIRES.

"Relief" steamer, Shand and Mason, 350 gal-
lons per minute.

"Victoria" steamer, Shand and Mason, 400
gallons per minute, worked by the Brigade; station-
ed at the Brigade Station.

6 Hose Reels.

6 Stand Pipes.

19 Lengths Leather Hose.

60 Lengths Canvas Hose, together 79 lengths,
complete with couplings, 3,750 feet now in use.

2,900 feet new spare Hose. All 2½ inch.

1 Police Ladder, Fire Escape and combined
Ambulance from Merryweather and Sons, London.

3 Ladder Trucks, each with 6 lengths scaling
ladders, 10 fire hooks, axes, 1 steel grappling-iron,
with 100 ft. of rope, and an ambulance.

3 Small French Manual Engines, each 17 gal-
lons, 6 men.

1 Small American Manual, 44 gallons per min.,
10 men.

1 Shand and Mason's Large Manual, 134 gal-
lons per min., 30 men, with 10 lengths 2½ in.
canvas hose, 500 feet, stationed on the Bluff in the
U.S. Naval Hospital's compound.

1 Small Shand and Mason's Manual, and 1
French small Manual Engine, each 17 gallons per
min., 6 men, with about 500 ft. Hose.

6 Extinctors, Dicks' Patent, on Cart.

COMMITTEE.

The present Committee, consisting of Messrs.
James Dodds, J. D. Hutchison, C. K. Marshall
Martin, J. P. Mollison, W. J. S. Shand, James
Walter, and W. B. Walter, beg respectfully to
tender their resignation.

Yokohama, 31st March, 1897.

THE YOKOHAMA FIRE BRIGADE, IN ACCOUNT

CURRENT WITH THE HON. SECRETARY

AND TREASURER.

count for year ...

Yokohama, 29th March, 1897.

J. D. HUTCHISON,
Hon. Sec. and Treasurer.

Examined and compared with the vouchers and found correct

W. J. S. SHAND,
Auditor.

The CHAIRMAN said the only other business be-
fore the meeting was the election of officers.

Mr. BAHR proposed that the present Committee
be re-elected, and the motion was carried, the Chair-
man stating that he would be going home on leave

shortly, but the Committee had power to fill the vacancy.

A vote of thanks to the Chairman and to the Hon. Secretary and Treasurer brought the proceedings to a close.

SPECIAL TELEGRAMS.

From His Excellency the Capt.-General to His Excellency the Spanish Minister in Tokyo.

FURTHER SPANISH VICTORIES.

Manila, 3rd April, 1897, 5 p.m.

Our troops have captured Noveleta, Cante-viejo and Buiacayan.

Manila, 7 April, 1897, 3.06 p.m.

San Francisco de Malaban (Cavite), the centre of the civil element of the rebellion, was taken yesterday. A large number of the enemy fell, 400 dead being found in the streets of the town itself. On our side 120 men were wounded. Thirty rebel prisoners were captured, and several Royalists held by the insurgents were rescued. The moral effect is very great. As a consequence of this brilliant victory, many of the insurgents and their families are surrendering to the Authorities.

THE UNITED STATES TARIFF BILL.

New York, April 1.

The new tariff bill passed the United States House of Representatives on March 31st without any amendments being made to the schedules affecting Japanese silks, carpets, and matting. The House has adopted an amendment to make the new tariff retroactive from April 1st, but it is most probable that the amendment will be rejected in the Senate.

COOLIE RIOTS IN SHANGHAI.

Shanghai, April 5.

On account of an increase of license fees, about 3,000 wheel-barrow coolies rose in a mob this morning. They were successfully dispersed, but Marines have been landed in order to protect the Settlement in case of emergency.

THE NEW U.S. MINISTER TO JAPAN.

Washington, April 7.

Mr. Alfred E. Buck, a prominent Republican from the State of Georgia, and personal friend of the President, has been nominated U.S. Minister to Japan, and it is expected the Senate will confirm the nomination soon.

THE CRISIS IN GREECE.

Athens, April 7.

The six Great Powers have agreed to maintain the integrity of Turkey and to prevent the annexation of Crete to Greece. The island is still occupied by the Greek army, and under peaceful blockade by forces of the Powers. As to the blockade of Greece, some disagreement exists among the Powers here. Great excitement prevails and war between Greece and Turkey appears imminent. But as the war would involve, as its consequence, most serious complications of the Eastern question, the Powers are making great efforts to prevent a collision.

LATEST TELEGRAMS.

(FROM THE "JAPAN TIMES.")

CRETE.

London, April 2.

France is sending six hundred marines to Crete.

London, April 3.

Great Britain, in response to the request of the Admirals of the allied fleets, will

send a mountain battery of artillery with 180 gunners to Crete.

The extension of the blockade to the Greek coast will probably require an increase of the squadrons in the Levant, but the Powers decide nothing without laborious negotiations. Hence the constant delays and changes of purpose.

Russia agrees to send more troops, whilst Austria declines to do so. Germany has hitherto sent none and has only one cruiser in Cretan waters.

The Dowager Tzarina of Russia has gone to Copenhagen to join a family council to discuss the best course for the King of Greece to pursue.

It is announced that Russia will send a battery of Artillery to Crete.

The Embassies at Constantinople have agreed on the principles of the autonomy to be granted to Crete, and have cabled particulars of the same to their respective governments.

The semi-official *Journal de St. Petersburg*, announces that the continued aggressive attitude of Greece renders the blockade of the Piræus imperative, and that if Greece rushes into war the Powers will never allow her to reap any advantages therefrom.

London, April 7.

Great Britain has made pacific overtures to Greece, with a view to the removal of the present deadlock. It is believed that the decision whether to blockade the Piræus or not will depend upon Greece's answer.

The Powers, on Russia's initiative, have notified Greece and Turkey that whichever of the two countries becomes the aggressor will never be permitted to profit by any victory that it may secure.

Mr. A. J. Balfour, First Lord of the Treasury, announced the foregoing decisions in the House of Commons, and added that Great Britain will not hesitate to take part in the blockade of the Greek coast.

Sir Wm. Vernon Harcourt, leader of the Opposition, thereupon gave notice to move an Address to the Queen not to employ the forces of the Crown against either Greece or Crete.

London, April 8.

Mr. A. J. Balfour, leader of the House of Commons, has refused to name a day for the discussion of Sir William Vernon Harcourt's motion, unless it was intended as a vote of censure on the Government. This challenge, however, Sir William Harcourt ignored.

The statement that Great Britain had made pacific overtures to Greece is denied, and it is announced that Britain is only acting in concert with the Powers.

The whole of the Turkish Army is under arms on the frontier, and throughout yesterday was expecting an attack at any moment.

OXFORD BEATS CAMBRIDGE.

London, April 5.

The University Boat Race was rowed on Saturday and was won by Oxford by two lengths. The victors led all the way.

Oxford has also won the University Sports by five events to four.

INTERNATIONAL FOOTBALL MATCH.

London, April 6.

Scotland has beaten England in the Association football match by two goals to one.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.
